If Congress, the President, and the Supreme Court do not faithfully observe the principles enshrined in that written document we call the Constitution, neither our Nation nor any single human being within its farflung borders has any security against anarchy on the one hand and tyranny on the other.

The most courageous and the most intelligent decision the Supreme Court has ever handed down is *Ex parte Milligan*, 71 U.S. 3. It took great courage for the Supreme Court to hand this decision down in the troublous times that prevailed at the time of its rendition. It was at the end of the War Between the States when emotions ran high, and despite this fact the Supreme Court held in Ex parte Milligan that the individual freedoms created by the Constitution wrapped within their protection a man charged with what is perhaps the most heinous of all crimes, disloyalty to his country. This decision is remarkable not only for the time it was rendered, but also because it contains the opinion of the Court and the arguments advanced by the lawyers who appeared for Milligan, who had been sentenced to death by a military tribunal, although he was a civilian, and who had been denied the right of indictment by a grand jury and the right of trial by a petit jury in a civil court.

I mention the fact that the report of this case contains the argument of counsel because it proves, as I have always maintained, that back of every great decision of any great judge stands the argument of a great counsel. If I could be a benevolent dictator of the United States I would require every Senator, and every Representative, as well as every President to read this opinion and the argument of Jeremiah S. Black at frequent intervals.

The argument of Jeremiah S. Black explains exactly how the Constitution came into existence as a written instrument for the Government of this Nation. The great opinion of Justice David Davis explains in unmistakable fashion why the Constitution of the United States was written.

During the course of his argument Jeremiah S. Black had this to say:

> If the men who fought out our Revolutionary contest, when they came to frame a government for themselves and their posterity, had failed to insert a provision making the trial by jury perpetual and universal, they would have proved themselves recreant to the principles of that liberty of which they professed to be the special champions. But they were guilty of no such thing. They not only took care of the trial by jury, but they regulated every step to be taken in a criminal trial. They knew very well that no people could be free under a government which had the power to punish without restraint. Hamilton expressed, in the Federalist, the universal sentiment of his time, when he said, that the arbitrary power of conviction and punishment for pretended offenses, had been the great engine of despotism in all ages and all countries. The existence of such a power is incompatible with freedom.
>
> * * * * *
>
> But our fathers were not absurd enough to put unlimited power in the hands of the ruler and take away the protection of law from the rights of individuals. It was not thus that they meant "to secure the blessings of liberty to themselves and their posterity." They determined that not one drop of the blood which had been shed on the other side of the Atlantic, during seven centuries of contest with arbitrary power, should sink into the ground; but the fruits of every popular victory should be garnered up in this new government. Of all the great rights already won they threw not an atom away. They went over *Magna Charta*, the *Petition of Right*, the *Bill of Rights*, and the rules of the *common law*, and whatever was found there to favor individual liberty they carefully inserted in their own system, improved by clearer expression, strengthened by heavier sanctions, and extended by a more universal application. They put all those provisions into the organic law, so that neither tyranny in the executive, nor party rage in the legislature, could change them without destroying the government itself.

Mr. President, that is the statement of Jeremiah S. Black which portrays in a most lucid manner exactly how the Constitution came into being as a written instrument.

We have the reverse process here in the formulation of the District of Columbia omnibus crime bill. I digress to suggest that it ought to be called the "ominous crime bill."

The drafters of the bill searched through the Constitution and through the constitutional history of this Nation and through the traditions of our people to find the basic rights which will prevent the police officers of the District of Columbia and the courts from practicing tyranny on the people of the District and then proceeded to draft a bill to circumvent or nullify those rights.

"Oh," we may say, "we are just voting on a bill for the District of Columbia." But the Attorney General has made it very emphatic that it is the purpose of the Department of Justice to hold this bill up as a model for all of the States of the Union to follow. And so Senators might well recognize that when they cast their votes, they are voting for a bill which the Attorney General of the United States hopes to have imposed upon their constituents, as well as upon the people of the District of Columbia.

In his great opinion in Ex parte Milligan, Justice David Davis held that Milligan, even though he was charged, in substance, with disloyalty to his country, was entitled to the benefit of constitutional provisions which say that no person can be made to answer for a capital or an otherwise infamous crime except upon an indictment by the grand jury, and that no person can be convicted of a crime except upon the verdict of a petit jury.

Justice Davis had this to say in a statement which explains exactly why the Constitution of the United States was written. It was suggested by Jeremiah Black in his argument that the purpose was to prevent tyranny on the part of the executive branch of the Government and party rage on the part of the legislature, and he was right in so stating. But Justice Davis said this in elaboration on this point:

> For even these provisions (that is, the provisions for indictment by grand jury and trial by petit jury) expressed in such plain English words that it would seem the ingenuity of man could not deny them, are now, after the lapse of more than 70 years, sought to be avoided. Those great and good men foresaw that troublous times would arise when rulers and people would become restive under restraint and seek by sharp and decisive measures to accomplish ends deemed just and proper, and that the principles of constitutional liberty would be imperiled unless established by irrepealable law. The history of the world had taught them that what had been done in the past might be attempted in the future.
>
> the hands of government.
>
> The Constitution of the United States is a law for rulers and people equally in war and in peace and covers with the shield of its protection all classes of men, at all times, under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government. Such a doctrine leads directly to anarchy or despotism, but the theory of necessity on which it is based is false, for the government within the Constitution has all the powers granted to it which are necessary to preserve its existence.

The Constitution was intended to cover, as Justice Davis said, all classes of men, at all times, and under all circumstances. And yet we have the proposal now pending before the Senate that these words of Justice Davis be nullified and that the people who are so unfortunate as to reside in the District of Columbia be denied rights which the Constitution intended to protect all American citizens, of all classes, of all creeds,

and of all races, against oppression at the hands of government.

We are told that it is necessary for us to throw provisions of the Constitution into the judicial garbage pail in order to cope with crime in the District of Columbia. I repeat what I have heretofore stated on the floor of the Senate—that the answer to this argument was most effectively made in 1783 in the House of Commons by William Pitt who, on another occasion, opposed a proposal that those charged with collecting a tax on cider be given no-knock powers similar to those which this bill proposes to impose upon the people of the District of Columbia. William Pitt said:

> Necessity is the plea for every infringement of human liberty. It is the argument of tyrants. It is the creed of slaves.

I deny that there is any necessity for a bill containing the provisions to which we object.

We are told that all that the bill does is to codify what is now law. I challenge that statement. They tell us that the bill embodies what the law was in England. We rebelled against England, in part, because England tried to impose no-knock warrants upon the people of Boston. We wrote a Constitution to get away from some English law, and we enacted some statutory laws to accomplish the like purpose.

A few months after George Washington took his first oath of office as President of the United States, Congress enacted the Judiciary Act of 1789, and declared, as a policy of this Government, that every person charged with a Federal crime, other than a capital Federal crime, should have an absolute right to bail pending his trial.

"Oh," we are told, "some judges disobeyed this law, some judges were guilty of hypocrisy in setting bail too high to keep a man in prison." And so it is proposed that we give some kind of sanctity to the hypocrisy of judges by allowing them to imprison men without any bail whatever. The proposal is that this 181-year-old right be destroyed for any person charged with a noncapital Federal crime in the District of Columbia if a judicial officer predicts that he is dangerous to others or the community.

In the ultimate analysis, preventive detention implies that judges are to be converted into prophets, and are to have the power to put men in jail and thus deny them a reasonable opportunity to prepare their cases for trial, in case the judges fear that they might commit some future crime if they are released on bail.

We have obtained much good from the laws of England, but some of the things England offered us we have outlawed. But we did obtain from England the principle that the proud boast of our law is that every man's home is his castle. It is proposed here that we abolish that boast, that we destroy that concept for the District of Columbia; and the Attorney General of the United States, who advocates that, says that we should do so in all of the 50 States of this Union. It is worthy of repetition that when the officers of the British Crown attempted to abolish this principle and to harass the colonists of Massachusetts with general warrants similar to no-knock warrants, the people of Massachusetts rebelled against England and demanded independence from a nation which practiced such tyranny.

I do not care how much sophistry is engaged in on the Senate floor. This bill would authorize the issuance of a no-knock search warrant, which would empower an officer to knock down the doors of the dwelling houses of the people of the District of Columbia if he is willing to make a prophecy—a false prophecy, I say, because he cannot possibly know whether that prophecy will come true. But if he is willing to make a false prophecy at the time he applies for a no-knock search warrant that he knows that specified conditions will exist at the future moment when he undertakes to execute the no-knock search warrant, the bill provides that he can get such a warrant and can knock down the door of a man's house, or otherwise enter it in the manner in which burglars enter private dwellings.

There are also provisions in this bill which would authorize the prosecution and punishment of persons called habitual offenders without a bill of indictment from a grand jury, even when they are to be tried for infamous offenses or are to be subjected to infamous punishments. There are provisions in this bill which declare that habitual offenders shall be tried by the judge without a jury, in violation of two distinct provisions of the Constitution of the United States guaranteeing the right of trial by petit jury.

I could point out other unwise provisions in this bill, such as provisions for mandatory sentences. We elevate men to the high office of judge, and then propose to pass a bill that forbids them to exercise their intelligence in passing sentences, and prohibits them from taking into consideration either the circumstances of the offense or the character or record of the offender at the time they impose the sentence decreed by the legislature.

I do not believe that things of this kind are necessary. Indeed, I know they are not. This bill is based upon prophecy. Preventive detention is based upon the theory that the judge shall prophesy whether a man will commit a future crime if he is released on bail. No-knock warrants are to be issued on the supposition that an officer can prophesy what will happen in the future when he undertakes to execute it.

The proponents of the conference report even undertake to prophesy that the House of Representatives will accept no other measure than this particular bill. I find myself mentally incapable of accepting such prophecy. I do not think that the Members of the House of Representatives are a bunch of prima donnas who say, "We will not allow the Senate of the United States to exercise its judgment or intelligence in this area, and will not agree to any kind of legislation to protect the people of the District of Columbia against crime except that embodied in this particular bill."

Mr. President, I have stated that I was able to resist the temptation which that old devil, political expediency, presented to me to vote for this bill despite its inequities and its unconstitutional provisions. I learned a little poem a long time ago that has been of great help to me in times of stress:

> I have to live with myself, and so
> I want to be fit for myself to know.
> * * * * *
> I don't want to stand, at the setting sun
> And hate myself for the things I've done.

I have spent my life in the law, and I have come to venerate our Constitution. I have come to abhor tyranny. I have come to love fairplay and justice.

If I were to vote for the adoption of this conference report, I would do something which would make me hate myself at the setting of the sun, because I know that this bill is honeycombed with unwise, unjust, and unconstitutional provisions. I shall not attempt to analyze the bill completely. I have done so before in large measure.

This morning the Washington Post published a lead editorial entitled, "How High a Price for a Crime Bill." That editorial said exactly what my colleagues who are associated with me and I have been saying during the debate. The Washington Post editorial declares this conference report is too high a price to pay for this bill; that the Senate should reject the conference report; and then pass the sound provisions of the conference report which are set forth in these other two bills which my colleagues and I have introduced.

All Senators who love the Constitution and fairplay, ought to join us in voting down this conference report and in calling up these measures for passage immediately, and in thus sending them to the House of Representatives. And I predict—though I do not claim to be a prophet—that the House of Representatives will forthwith pass them.

The distinguished Senator from Maryland put into the RECORD several days ago a decision I wrote when I was a member of the North Carolina Supreme Court. I ask unanimous consent to have printed in the RECORD, not only this editorial from the Washington Post, but also my dissenting opinion and the other opinions in another North Carolina case, *State* v. *Bridges*, which is reported in 231 N.C. 163.

There being no objection, the editorial and the opinions were ordered to be printed in the RECORD, as follows:

[From the Washington Post, July 23, 1970]

HOW HIGH A PRICE FOR A CRIME BILL

Ever since the administration unveiled its anti-crime program for the District of Columbia more than a year ago, it has been clear that the cost of getting the right tools for the job would be high. The things that the District needs most—court reorganization, juvenile law reform, a working bail system, a public defender—were tied then and are tied now to a host of piggy-back riders which either conflict with enlightened thinking on crime control or infringe upon fundamental civil liberties. The question before the Senate today as it votes on the grab-bag crime bill is whether its worst features are not too heavy a price to pay for the necessary and useful tools that it also contains.

In our judgment, the toll exacted against individual rights and modern penology by the bill as it now stands is too great for the Senate to accept without a fight. A Senate that really wants to do something about crime will defeat the conference report, adopt the cleaned-up versions of the least controversial aspects of that report, get to work immediately on the most controversial matters, and put the burden back on the House of Representatives for responsible, effective crime control legislation.

The trouble with the crime bill as it emerged from conference rests not in its major provisions, most of which are admirable, but in the jokers, the pet theories, tossed in by the Department of Justice and the House District Committee. Senator Tydings labored mightily in conference to strip those jokers out and in many instances he was successful. But he fell short of the goal. In exchange for things they desperately need in the fight against crime, the residents of the District are required by this bill to diminish their individual privacy, the sanctity of their homes, the safeguards provided for their children, and the flexibility allowed their judges in trying to reform their criminals.

If this were the only impact of this legislation, the Senate might be able to hold its nose and send the bill along to the President. After all, it would only affect 800,000 or so people who are plagued with crime and why should they mind a few infringements on their rights and a few misguided provisions? But that is not the only consideration involved in this bill. Those members of Congress who normally shuck their responsibilities as legislators for this city because District bills don't matter back home ought to realize that this bill does matter back home. When the administration first proposed this legislation, it hailed its work as a model for the nation. And if Congress now blesses this particular form of preventive detention, this broad scale authorization of wiretapping, this curtailment of juvenile court, this use of mandatory sentences, and this no-knock provision, it is encouraging state legislatures to follow its lead. In that sense, a vote to apply these provisions in the so-called showcase capital is a vote to apply them sooner or later, in Phoenix and Tallahassee, in Keokuk and Kalamazoo.

What, then, is wrong with this bill? Let us begin with its handling of juveniles. Quite properly, the bill makes it easier for 15, 16 and 17-year-olds to be handled as adults, requiring principally that the juvenile judge determine that there is no reasonable prospect of rehabilitating them in specialized juvenile facilities before turning them over to adult courts. But the bill disregards this standard for *every* 16- and 17-year-old charged with first-degree murder, rape, first degree burglary, armed robbery, or assault to commit those crimes. They are, the bill says, adults, regardless of their prior records, their chances for rehabilitation if handled as juveniles, or their mental condition. Their classmates, if charged with second degree murder, second degree burglary, unarmed robbery, or plain assault, are not adults. Is this equal justice? Is it even-handed application of the principle that juveniles ought to be given the best possible, not the worst possible, chance for rehabilitation? Of course not. (This kind of provision conflicts with the federal government's own model juvenile act, the Uniform Juvenile Court Act, most state laws, the recommendations, of the D.C. Crime Commission, the District government and the Department of Public Welfare.)

That is just one example. There are others. The bill holds out to juveniles the promise of speedy proceedings and does little to ensure them. It takes away a juvenile's right to a jury trial. It authorizes preventive detention for juveniles not only when the judge decides the child needs it but unless the judge specifically decides the child does not need it. It lowers the standard of proof needed to find a child "neglected" or "in need of supervision," thus making it easier to take these non-crime-committing children into custody.

We will touch only briefly on other parts of this legislation.

Wiretapping: This bill authorizes taps not only in limited fields like national security and organized crime but also when a person is believed to have committed arson, blackmail, bribery, burglary, destruction of property, gambling, grand larceny, kidnaping, murder, obstruction of justice, receiving stolen property, robbery, extortion, or drug law violations.

Mandatory prison terms: In the face of recommendations to the contrary by the National Crime Commission, the American Bar Association, the American Law Institute and a tentative new code of federal criminal laws, this bill imposes mandatory prison terms in certain instances.

Recidivists: This bill shortcuts, perhaps unconstitutionally, the procedures used in most states which have such statutes for use against three-time offenders.

Searches: The difference between the interpretations placed on the "no-knock" provision of this bill in the House debate and the Senate debate is so great that it is hard to believe anyone knows what it means.

Preventive detention: We think a bill to permit some form of detention or closer supervision of dangerous suspects in certain situations can be written. But this is not it; the language is too broad and the possibilities for abuse too great.

These, then, are some of the reasons why we believe the costs of this particular crime bill outweigh the benefits it would bestow. They are sufficient for the Senate to be justified in defeating the conference report and following the course urged by Senator Ervin. The proponents of this bill argue that if it is killed there will be no District crime bill this year. But this need not be so. Faced with a cleaned-up version of its own legislation, the House would have to decide whether it wants a decent crime bill or a campaign issue. And the administration would be faced with the same choice.

It is hard, of course, for a senator to vote against an anti-crime bill just now. The voters are eager for action and such a vote is subject to easy demagogic attack and gross misinterpretation. But the solution is simple in legislative terms and the principles are clear. The costs of this particular anti-crime bill are too high—too high in terms of backward-looking penology, too high in terms of individual freedom.

[Supreme Court of North Carolina]

STATE v. BRIDGES, No. 436

Nov. 30, 1949

John Robert Bridges, alias Jack Bridges, was convicted in the Superior Court, Wake County, W. H. S. Burgwyn, Special Judge, of murder in the first degree, and he appealed.

The Supreme Court, Stacy, C. J. affirmed the judgment and held that the charge did not constitute reversible error.

Ervin and Seawell, JJ., dissented.

1. CRIMINAL LAW—822(1)

Charge in homicide prosecution would be viewed contextually to determine whether rights of defendant were prejudiced.

2. CRIMINAL LAW—1173(2)

In murder prosecution, charge that it was for jury to determine whether defendant was guilty of murder in first degree or of murder in second degree, following admonition that defendant was surrounded by presumption of innocence up to rendition of a verdict against him, was not reversible error, as failing to permit an acquittal in case of finding that defendant had committed no crime.

3. HOMICIDE—309(2)

Acquiescence in statement of trial court by defendant and counsel that trial judge understood that jury should not render any less verdict than that of murder in second degree manifested intent to eliminate any question of manslaughter, and did not intend to change defendant's plea of not guilty or to relieve trial court of any duty which law imposed on him with respect to charge to jury.

Criminal prosecution on indictment charging the defendant with the murder of one Keston Norris Privette.

The record discloses that on February 7, 1949, the defendant lured the deceased from his home, bludgeoned him over the head with the stock of a rifle, and buried him, while still alive, in a shallow hole or grave which the defendant previously had prepared for the purpose. He died from suffocation. The defendant and the wife of the deceased then fled to the State of Georgia. While under arrest in that State, the defendant made a confession to the officers in which he freely admitted the atrociousness of the crime and the sordid details of his illicit relations with the youthful wife of the deceased. Under this confession, which is not now challenged, a clear case of premeditated and deliberate murder is fully made out.

While the defendant entered a plea of not guilty, the case was argued to the jury on the opposing contentions, first by the State that a verdict of murder in the first degree should be returned against the defendant, and, secondly, by the defendant that a verdict of murder in the second degree would meet the ends of justice.

In opening his charge to the jury, the trial court instructed them that they were to pass upon the "guilt or innocence of the prisoner" and to say by their verdict the degree of guilt the prisoner has incurred by reason of the homicide in question, "or to say by your verdict that he is not guilty of any crime", as you may find the facts to be from the evidence in the case and under the rule of law which the court will undertake to give you for your guidance.

Then when the court came to consider the different degrees of an unlawful homicide, he addressed the following inquiry to the defendant and his counsel:

"I do not understand—and if I misunderstand I wish now to be corrected—that the defendant contends, either in his own proper person or through counsel, that this jury should render any less verdict than that of murder in the second degree: Is that correct, gentlemen?

"Mr. Holding: That is correct.

"Mr. Ehringhaus: That is correct, sir.

"The defendant bowed his head in affirmation.

"Let the record so show."

Later in the charge, the jury was again admonished that the defendant "comes into court surrounded and clothed with a presumption of innocence which remains around and about him throughout the entire case unless and until the State has satisfied you, the jury, of his guilt beyond a reasonable doubt."

Finally, the court concluded his charge to the jury as follows: "Take the case and say whether or not you find the defendant guilty of murder in the first degree and, if so, whether or not you desire to recommend life imprisonment, or if you find him guilty of murder in the second degree." Exception.

Verdict: Guilty of murder in the first degree.

Judgment: Death by asphyxiation.

The defendant appeals, assigning errors.

Attorney-General Harry M. McMullan and

Assistant Attorneys General T. W. Bruton and Ralph M. Moody for the State.

J. C. B. Ehringhaus, Jr., and Clem B. Holding, Raleigh, for defendant.

Stacy, Chief Justice.

The defendant has been convicted of murder in the first degree, without any recommendation from the jury, and sentenced to die as the law commands in such case. He appeals, giving as his principal reason the failure of the court, in his final instruction to the jury, to permt an acquittal in case of a finding that the defendant had committed no crime. For this position, the defendant relies upon the following cases: State v. Howell, 218 N.C. 280, 10 S.E. 2d 815; State v. Redman, 217 N.C. 483, 8 S.E. 2d 623; State v. Maxwell 215 N.C. 32, 1 S.E. 2d 125; State v. Hill, 141 N.C. 769, 53 S.E. 311; State v. Dixon, 75 N.C. 275. He stresses the Howell and Maxwell cases as being quite pertinent and directly in point.

[1, 2] Viewing the charge contextually, as required by many decisions, we are constrained to hold that it sufficiently meets the objection which the defendant now makes. State v. Truelove, 224 N.C. 147, 29 S.E. 2d 460; State v. Grass, 223 N.C. 31, 25 S.E. 2d 193; State v. Harris, 223 N.C. 697, 28 S.E. 2d 232; State v. Ellis, 203 N.C. 836, 167 S.E. 67.

It is true, a more formal statement of the position would have been in order, but throughout the charge, the jury was admonished that a presumption of innocence surrounded the defendant which remained with him up to the rendition of an adverse verdict against him. Considering the charge as a whole or in its entirety, we think it will do. While it might have been more specific and direct on the point at issue, we are disposed to uphold the trial in the light of the record.

[3] The meaning properly to be ascribed to the responses made by the defendant and his counsel to the court's inquiry during the charge is that there was no element of manslaughter in the case. In this, they were quite correct. There was no intention, however, to change the defendant's plea or to relieve the court of any duty which the law imposed upon him. State v. Grier, 209 N.C. 298, 183 S.E. 272; State v. Merrick, 171 N.C. 788, 88 S.E. 501; State v. Foster, 130 N.C. 666, 41 S.E. 284, 89 Am.St.Rep. 876. The immediate purpose was to eliminate any question of manslaughter. This part of the record may be put to one side as without material significance or bearing on the question here involved.

The question presented perhaps lends itself to much writing, but in the end it all comes to the interpretation to be placed on the entire charge. Construing it as without reversible error, we are disposed to overrule the exceptions and sustain the validity of the trial in the light of the whole record.

No error.

Ervin, Justice (dissenting).

The prisoner claims the right to a new trial on the ground that essential rules of criminal procedure were set at naught on his trial in the court below.

Candor compels the confession that it is not altogether easy to harken to the prisoner's plea. The State's testimony tends to show that the prisoner coveted his neighbor's wife, and slew his neighbor with rare atrocity that his physical enjoyment of the wife's person might be exclusive. The very sordidness of the evidence strongly tempts us to say that justice and law are not always synonymous, and to vote for an affirmance of the judgment of death on the theory that justice has triumphed, however much law may have suffered. But the certainty that justice cannot long outlive law give us pause; and the pause brings again to mind the ancient admonition of our organic law that "a frequent recurrence to fundamental principles is absolutely necessary to preserve the blessings of liberty." N.C. Const. Article I, Sec. 29.

The system of criminal justice which prevails in North Carolina is a precious heritance from wise law-makers of past generations, who observed that tyranny uses the forms of criminal law to destroy those that oppose her will, and who established certain basic rules of criminal procedure to protect the people against such oppression. They bottomed these rules upon the bedrock proposition that the right to trial by jury is the best security of the liberty of men, and they guaranteed such right to all defendants in criminal actions in the Superior Court by the constitutional declaration that "no person shall be convicted of any crime but by the unanimous verdict of a jury of good and lawful men in open court." N.C. Const. Art. I, Sec. 13. It has been held by this Court without variableness or shadow of turning that when a defendant on trial in a criminal case in the Superior Court pleads not guilty to the charge against him, he may not thereafter, without changing his plea, waive his constitutional right to have the jury pass upon his guilt or innocence. State v. Muse, 219 N.C. 226, 13 S.E.2d 229; State v. Ellis, 210 N.C. 170, 185 S.E. 662; State v. Hill, 209 N.C. 53, 182 S.E. 716; State v. Crump, 209 N.C. 52, 182 S.E. 716; State v. Camby, 209 N.C. 50, 182 S.E. 715; State v. Walters, 208 N.C. 391, 180 S.E. 664; State v. Straughn, 197 N.C. 691, 150 S.E. 330; State v. Crawford, 197 N.C. 513, 149 S.E. 729; State v. Pulliam, 184 N.C. 681, 114 S.E. 394; State v. Rogers, 162 N.C. 656, 78 S.E. 293, 46 L.R.A., N.S., 38 Ann. Cas. 1914A, 867; State v. Holt, 90 N.C. 749, 47 Am. Rep. 544; State v. Stewart, 89 N.C. 563.

The founders of our legal system intended that the constitutional right of trial by jury should be a vital force rather than an empty form in the administration of criminal justice. They realized that this could not be if the petit jury should become a mere unthinking echo of the judge's will. To forestall such eventuality, they clearly demarcated the respective functions of the judge and the jury in both civil and criminal trials in a familiar statute, which was enacted in 1796 and which originally bore this caption: "An act to secure the impartiality of trial by jury, and to direct the conduct of judges in charges to the petit jury." Potter's Revisal, Vol 1, ch. 452. This statute, which now appears as G.S. § 1-180, establishes these fundamental propositions: (1) That it is the duty of the judge alone to decide legal questions presented at the trial, and to instruct the jury as to the law arising on the evidence given in the case; (2) that it is the task of the jury alone to determine the facts of the case from the evidence adduced; and (3) that "no judge, in giving a charge to the petit jury, either in a civil or criminal action, shall give an opinion whether a fact is fully or sufficiently proven, that being the true office and province of the jury." This statute is designed to make effectual the right of every litigant "to have his cause considered with the 'cold neutrality of the impartial judge' and the equally unbiased mind of a properly instructed jury." Withers v. Lane, 144 N.C. 184, 56 S.E. 855, 858. Any statement by the judge from which the jury may infer what his opinion is as to the guilt of the accused violates both the letter and the spirit of this statute, and constitutes reversible error. State v. Maxwell, 215 N.C. 32, 1 S.E. 2d 125; State v. Sparks, 184 N.C. 745, 114 S.E. 755.

Those who fashioned the basic concepts of our law entertained an abiding belief that any fair system of criminal justice must insure the acquittal of innocent persons so far as that can be done by human agency. To accomplish this object, they created an unvarying rule that every defendant brought to trial on any criminal charge in any criminal case is to be presumed to be innocent of the crime charged against him. This presumption of innocence attends the accused at every stage of his trial, and shields him from conviction unless it is overcome by evidence satisfying the jury beyond a reasonable doubt of every element of the crime alleged. State v. Maxwell, supra; State v. Carver, 213 N.C. 150 ,195 S.E. 349; State v. Ellis, 210 N.C. 166, 185 S.E. 663; State v. Shipman, 202 N.C. 518, 163 S.E. 657; State v. Spivey, 198 N.C. 655, 153 S.E. 255; State v. McLeod, 198 N.C. 649, 152 S.E. 895; State Allen, 197 N.C 684, 150 S.E. 337; State v. Boswell, 194 N.C. 260, 139 S.E. 374; State v. Tucker, 190 N.C. 708, 130 S.E. 720; State v. Arrowood, 187 N.C. 715, 122 S.E. 759; State v. Singleton, 183 N.C. 738, 110 S.E. 846; State v. Windley, 178 N.C. 670, 100 S.E. 116. A judge commits prejudicial error if he gives the jury an instruction which deprives an accused of his presumption of innocence. Gomila v. U.S., 5 Cir. 146 F. 2d 372; People v. Gerold, 265 Ill. 448, 107 N.E. 165, Ann. Cas. 1916A, 636.

Another basic rule of criminal procedure is embodied in the constitutional assurance that a defendant in a criminal prosecution shall "not be compelled to give evidence against himself." N.C. Const. Art. I, Sec. 11. This clause is the linguistic offspring of the Latin Maxim nemo tenetur seipssum accusare, meaning that no man can be compelled to criminate himself. 14 Am. Jur. Criminal Law, section 144; 22 C.J.S., Criminal Law § 649. The events giving rise to this clause and similar constitutional guaranties in other jurisdictions is epitomized in Brown v. Walker, 161 U.S. 591, 16 S. Ct. 644, 40 L. Ed. 819. The object of this provision is to secure a person who is or may be charged with crime from making conmpulsory revelations which could be used against him or his trial for the offense. State v. Hollingworth, 191 N.C. 595, 132 S.E. 667; La Fontaine v. Southern Underwriters' Ass'n, 83 N.C. 132, 133.

The benefit of these procedural principles must be extended to all men with impartiality and inflexibility if the innocent are to be secured against the hazard of unjust conviction, and the State is to have a government of laws rather than one of men. Even the rain falls upon the just and the unjust alike. To be sure, these rules may on occasion delay the conviction of the guilty, or even permit them to go unwhipped of justice altogether. But that is, indeed, not too great a price to pay for so effective an insurance of the acquittal of the innocent.

This brings us to this question: Were these basic principles observed on the trial of the prisoner in the court below? My interpretation of the transcript of the record on appeal compels me to answer this inquiry in the negative.

The record proper discloses that the prisoner was arraigned in the court below with the ancient and awesome formality which obtains in trials for captal felonies in the Superior Court, and that he thereupon entered a plea of not guilty, which was not withdrawn at any subsequent stage of the trial. Furthermore, the case on appeal shows that he did not take the stand as a witness in his own behalf.

At the beginning of the charge, the court told the jury, in substance, that it was authorized to return one of three different verdicts, i.e., guilty of murder in the first degree, guilty of murder in the second degree, or not guilty, depending entirely upon what it found the facts of the case to be from the testimony adduced. This instruction was clearly correct, for there was no evidence in the case justifying a conviction for manslaughter. But it was nullified in three subsequent parts of the charge, which form the bases for Exceptions Nos. 15, 32, and 33.

Exception No. 15 is addressed to this instruction: "I instruct you, however, that you have the right to render under the evidence in this case one of two verdicts. You may find the defendant guilty of murder in the first degree, or you may find him guilty of murder in the second degree."

Exception No. 32 challenges a portion of the charge in which the court advised the jury that it would be its duty "to render a verdict of guilty of murder in the second degree" in case it did not find accused guilty of first degree murder. Exception No. 33 covers the last paragraph of the charge, which was in these words: "Take the case and say whether or not you find the defendant guilty of murder in the first degree, and if so, whether or not you desire to recommend life imprisonment, or if you find him guilty of murder in the second degree. Take the case, gentlemen."

Soon after giving the jury the instruction covered by Exception No. 15, the court paused in its charge and propounded this question to the prisoner and his counsel in the presence of the jury: "I do not understand—and if I misunderstand I wish now to be corrected—that the defendant contends, either in his own proper person or through counsel, that this jury should render any less verdict than that of murder in the second degree. Is that correct, gentlemen?" The case on appeal recites that counsel for the prisoner thereupon replied: "That is correct"; and that the prisoner "bowed his head in affirmation."

If the jury had been permitted to rely on its own judgment, it might well have had serious doubt as to the probative value of the affirmation of the somewhat unlettered prisoner that it should "not render any less verdict than that of murder in the second degree" in the absence of any indication that he had any notion as to the constituent elements of the several grades of felonious homicide. But the jury was substantially instructed by the court in later portions of the charge, to which the prisoner has reserved exceptions, that the prisoner admitted "he would be guilty of murder in the second degree upon the evidence which has been adduced by the State," and that the prisoner did not deny "that upon this testimony as introduced by the State the jury would be justified in convicting him of at least murder in the second degree."

It is manifest that substantial procedural rights of the prisoner were nullified at his trial.

The court ought not to have made its inquiry of the accused and his counsel in the presence of the jury. The question itself necessarily implied an assumption on the part of the court that the prisoner was not innocent, but, on the contrary, was guilty of no less a crime than that of murder in the second degree. When the court thus questioned the accused in the presence of the jury, it virtually forced an incriminatory admission from him notwithstanding he had refrained from taking the stand as a witness and had a constitutional right not to be compelled to give evidence against himself.

The court gave its opinions as to what the testimony proved contrary to G.S. § 1–180 in the portions of the charge which the prisoner assigns as error. This is true because the jury unavoidably inferred from these instructions that the court knew that the accused was guilty of no less a crime then second degree murder, and strongly suspected that he was actually guilty of first degree murder. Furthermore, the court charged the jury, in substance, in these same instructions that it had no legal power of acquit the prisoner, but was required by the law itself to convict him of either murder in the first degree or murder in the second degree. In so doing, the court deprived the accused of his presumption of innocence, and denied to him his constitutional right to have the issue of his guilt or innocence determined by the jury.

Neither the compulsory affirmation of the accused nor the statement of his counsel can be construed to be judicial admissions excusing such action on the part of the court. These matters did not withdraw this case from the operation of the fundamental principle that so long as a plea of not guilty stands in a criminal action on trial in the Superior Court, the jury alone is empowered to determine whether the testimony be true or false, and what is proved if it be true. State v. Hill, 141 N.C. 769, 53 S.E. 311; State v. Riley, 113 N.C. 648, 18 S.E. 168; State v. Dixon, 75 N.C. 275. The prisoner could not admit or confess away the presumption that he was innocent, or waive the constitutional necessity for having the issue of his guilt or innocence decided by a jury by anything short of a plea of guilty, and no act, omission, or word of his or his counsel could constitute a plea of guilty to any offense embraced within the indictment unless it was accepted as such by the prosecution. There is no such thing in law as an unaccepted plea of guilty. In consequence, the contention of the State that the prisoner made an unaccepted plea of guilty of murder in the second degree, and that such unaccepted plea of guilty destroyed the presumption that he was innocent and disabled the jury to acquit him is untenable both in law and logic.

The State cites State v. Miller, 197 N.C. 445, 149 S.E. 590, 591, where this language is used in the opinion: "The prisoner, who testified that he was not drinking on the day in question, tendered a plea of murder in the second degree, but this was not accepted by the state. The appeal, therefore, presents the single question as to whether the evidence tending to show premeditation and deliberation is sufficient to warrant a verdict of murder in the first degree. We think it is."

The Miller case has no application whatever to the present appeal. An examination of the original record in that action discloses that the trial judge submitted the issue of the guilt or innocence of the accused to the jury under a charge to which no exception was taken, and that the jury convicted the accused of first degree murder after a trial in which all basic procedural rules were obesrved. The only question raised by the assignments of error in the Miller case was the sufficiency of the State's evidence to support the first degree verdict, and the only decision made therein by this Court was that it was ample for that purpose. Both the original transcript and the opinion disclose the absolute accuracy of this ruling. It is true that counsel for the accused in the Miller case announced his willingness to submit his client for second degree murder during a colloquy with the court and the Solicitor occurring in the absence of the jury. This offer was rejected by the Solicitor, and was not communicated to the jury. In truth, it did not figure in the trial in any way whatsoever. The reference to the matter in the quoted portion of the opinion was evidently deisgned to emphasize that the only question under consideration was the sufficiency of the State's evidence to sustain the first degree verdict.

This cause ought to be tried anew in accordance with sound and time-honored procedural practices. It might well be that such a retrial would result in the same verdict and judgment. That possibility should not shape our action. What may be the ultimate fate of the prisoner in his case is of relatively minor importance in the sum total of things. In any event, his role on life's stage, like ours, soon ends. But what happens to the law in this case is of gravest moment. It must be realized that the consequences of the decision of this Court on this appeal will not be confined to the single prosecution which is denominated on the docket as "State versus Robert John Bridges, alias Jack Bridges." Such decision will be invoked in other criminal trials as a guiding and binding precedent. The preservation unimpaired of our basic rules of criminal procedure is an end far more desirable than that of hurrying a single sinner to what may be his merited doom. For this reason, I vote for a new trial, and dissent to the ruling which makes my vote ineffectual.

Mr. Justice Seawell has authorized me to state that he concurs in this dissent.

Barnhill, Justice (concurring).

The dissent filed herein discusses a feature of the case to which no exception was entered and upon which the defendant does not rely in his brief. His counsel excepted for that (1) the court instructed the jury they could return in this case only one of two verdicts: guilty of murder in the first degree or guilty of murder in the second degree; and (2) the court failed to instruct the jury that they could return a verdict of not guilty. These two exceptions are directed to the one assignment of error debated here, to wit, the court erred in that it did not sufficiently charge the jury that it might, and the conditions under which it should, return a verdict of not guilty. This assignment is fully discussed in the majority opinion. In the conclusion there reached I concur.

But what about the rabbit flushed by the dissent? Did the court unduly prejudice defendant in its instructions and by the colloquy with counsel during the charge? Since the defendant's life is at stake, this attack upon the validity of the trial should not go unanswered.

There was uncontradicted and compelling evidence that defendant slew the deceased. It contains no element of mitigating circumstances, and its credibility was not substantially assailed. Wisdom dictated that counsel, to save the life of their client, undertake to persuade the jury that the circumstances of the killing were not such as to establish premeditation and deliberation beyond a reasonable doubt. The record indicated that they, in conducting the defense and in their arguments to the jury, wisely pursued this course. That this was the theory of the defense was admitted here. So I understood.

The court, to be quite sure that it correctly interpreted the theory of the defense, gave counsel for the defendant full opportunity to challenge its instructions based theron, to the end that it might correct them if it was in error. Practically at the threshold of the charge the colloquy between court and counsel, quoted in the majority opinion, took place. No exception was entered then and no assignment of error based thereon is presented here.

Thus counsel, in effect, formally admitted, in open court as well as in their arguments, that the homicide was committed by defendant and that the circumstances of the killing were such as to make it murder in the second degree. To this defendant indicated his assent. In my opinion this is one reasonable interpretation to be placed on the colloquy between court and counsel.

Had counsel so stated at the beginning of the trial, it would have been binding on defendant. That it was made during the progress of the trial does not alter its force and effect. State v. Grier, 209 N.C. 298, 183 S.E. 272. It was a judicial admission made in open court and in the presence of the defendant. It was made at a time and under circumstances which afforded him an opportunity to protest. State v. Redman, 217 N.C. 483, 8 S.E.2d 623. They were authorized to speak for him. The court acted on the admission. That it did so cannot be held for error. State v. Grier, supra.

It is true the defendant did not go on the witness stand, and the colloquy took place in the presence of the jury. But the court made no direct inquiry of the defendant which put him "on the spot" and compelled, or even invited, an incriminating reply. The court did, however, by its inquiry afford the defendant full opportunity to affirm or deny the formal statement of counsel, otherwise

binding on him. This was a thoughtful and praiseworthy effort on the part of the trial judge to protect the defendant in all of his rights.

The formal admission had already been made. It did not require defendant's affirmative ratification. His silence would have given assent, but he elected to affirm. How the action of the court in affording him an opportunity to repudiate it could be prejudicial to him I cannot perceive.

In any event, whether counsel referred to the only possible verdicts to be rendered or to the question of manslaughter, the court, notwithstanding the admission, admonished the jury that it should not convict the defendant of any offense unless it was fully satisfied by the evidence that he committed the homicide charged. This feature of the charge is fully discussed in the majority opinion.

I vote to affirm.

Mr. ERVIN. I pointed out in my dissent in the Bridges case how the accused had had his right of trial by jury frustrated and his right not to incriminate himself annulled, and I concluded, with this expression:

The preservation unimpaired of our basic rules of criminal procedure is an end far more desirable than that of hurrying a single sinner to what may be his merited doom.

The people of the District of Columbia enjoy similar rights under the Constitution of the United States. This bill undertakes to rob them of these and other rights.

I assert it is much more important for the Senate of the United States to preserve these great landmarks of the law, these liberties of the people, and these individual freedoms, than it is to hurry some lawbreakers in the District of Columbia to jail. I appeal to the Senate to reject the conference report; I assure the Senate that we will immediately call up for passage these other bills, which include in their context all of the sound provisions of the report for passage. I am confident the other bills will be speedily passed because I have not heard of a single Senator who is opposed to any of their provisions.

Mr. President, I ask unanimous consent to have printed in the RECORD telegrams, letters, and other statements which I have received expressing opposition to the conference report on the District of Columbia crime bill.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MORGANTOWN, W. VA.,
July 22, 1970.

Senator SAM ERVIN,
Washington, D.C.:

Urge continued opposition preventive detention measures D.C. crime bill as clearly unconstitutional.

Rev. JOSEPH M. SNEE, S.J.,
Visiting Professor of Law West Virginia University.

NEW YORK, N.Y.,
July 22, 1970.

Senator SAM J. ERVIN, Jr.,
U.S. Senate,
Washington, D.C.:

Black Lawyers National Bar Association, in convention, unanimously urges defeat conference District Columbia crime bill.

WILLIAM E. PETERSON,
National Bar Association.

TUCSON, ARIZ.,
July 22, 1970.

Senator SAM ERVIN,
Senate Office Building,
Washington, D.C.:

We strongly support your opposition to preventative detention provision of D.C. crime bill.

C. STEELINK,
Secretary, Arizona Civil Libertys, Tucson Chapter Union.

LOS ANGELES, CALIF.,
July 23, 1970.

Senator SAM ERVIN,
Senate Office Building,
Washington, D.C.:

Support absolutely your position contra crime bill no-knock and preventative detention.

Dean Leo J. O'Brien, Dean Jerald A. Cavanaugh, Prof. George C. Garbesi, Prof. Walter Trinkaus, Prof. Quinten Ogres, Prof. William Coskran, Prof. Lloyd Tevis, School of Law, Loyola University of Los Angeles.

IOWA CITY, IOWA,
July 23, 1970.

Senator SAM ERVIN,
Washington, D.C.:

I urge you to continue your efforts in behalf of your bills, S. 4080 and S. 4081. The passage of these bills will make the District of Columbia an example for the Nation in needed court reform and strong law enforcement without infringement of personal liberties. The District of Columbia will prove that such measures as wiretapping, no-knock entry and preventive detention are not necessary for good law enforcement. Congress should adopt both Ervin bills as soon as possible.

EDWARD MEZVINSKY,
State Representative.

ITHACA, N.Y.,
July 23, 1970.

Senator SAM ERVIN,
Senate Office Building,
Washington, D.C.:

Reject preventive detention. Don't fight crime by impairing our freedom.

Prof. WM. HOGAF,
Cornell Law School.

NEW YORK, N.Y.,
July 22, 1970.

Senator JAMES O. EASTLAND,
U.S. Senate,
Washington, D.C.:

Black Lawyers National Bar Association, in convention, unanimously urges defeat conference District Columbia crime bill.

WILLIAM E. PETERSON,
President, National Bar Association.

CITIZENS COMMITTEE FOR CONSTITUTIONAL LIBERTIES URGE IMMEDIATE ACTION TO DEFEAT PREVENTIVE DETENTION IN THE DISTRICT OF COLUMBIA OMNIBUS CRIME BILL

The Nixon-Agnew-Mitchell team is using crime, fear, political and racial tensions to stampede Congress into legalizing "preventive detention"—blank check for repression and internment against the poor, the minorities, the dissenters.

A tough District of Columbia Omnibus Crime Bill has been reported out of the Senate-House conference committee (7/13/70) with "preventive detention" and other punitive measures intact—despite almost unanimous opposition from leading constitutionalists, bar, civil liberties, black, ethnic and other national organizations as well as major editorial opinions.

This provision would permit a judge to jail for 60 days, without bail, any accused he considers a "danger to the community." Allegedly a crime-control bill, it would violate any defendant's right to presumption of innocence, reasonable bail, a speedy trial and would create a further crisis in confidence in our courts and government.

"A danger to the community" is not a definition of a crime, but a political estimate to be directed against those who will repeat and repeat active opposition to the Administration policies of extending the war and cutting funds for critical urban and poverty needs.

Only with immediate action to defeat "Preventive Detention" in the D.C. Omnibus Crime Bill, can Senators and Representatives reassert their responsibility to protect constitutional guarantees.

YALE UNIVERSITY LAW SCHOOL,
New Haven, Conn., July 21, 1970.

Hon. SAM J. ERVIN, Jr.,
Senate Office Building.

DEAR SENATOR ERVIN: May I congratulate and thank you for the splendid fight you have been waging against certain very unwise, and constitutionally more than dubious, provisions of the District of Columbia Crime Bill?

I take the liberty of enclosing a copy of an article of mine, entitled "How to Beat Crime," which appeared in the *New Republic* for August 30, 1969. The first part of the article, dealing somewhat generally with the narcotics problem, has some relevance, I believe, to the no-knock provisions of the District of Columbia Crime Bill. The latter part of the article, starting on page 11, expresses my opposition to the preventive detention proposal, and my view that in most imaginable circumstances, it cannot be consitutionally applied. I hold, if anything, more firmly now than I did a year ago the views expressed in this article, and am certainly strengthened in my opinion about preventive detention by the knowledge that it parallels somewhat the opinion of so meticulous and devoted a student of the Constitution as yourself.

I happen to be in Palo Alto just now, and I have had the opportunity to discuss both the preventive-detention and no-knock provisions of the District of Columbia Crime Bill with Professor Gerald Gunther of the Stanford University Law School. Professor Gunther authorizes me to say that he has strong doubts concerning the constitutionality of both provisions.

Faithfully yours,

ALEXANDER M. BICKEL.

[From the New Republic, Aug. 30, 1969]

HOW TO BEAT CRIME

(By Alexander M. Bickel)

Mr. Nixon promised to fight crime, and Attorney General Mitchell is doing it. He is doing it, that is, on the assumption that harsh new laws will cut into the crime rate. That assumption is very questionable. The President and Mr. Mitchell will have their fight—in Congress, and even if they succeed there, then for years afterwards in the courts, since some of their proposals raise intricate and close constitutional questions. When the fight is over, the jails which the Administration is doing nothing in particular to reform and improve may be more crowded, some constitutional rights to which the innocent as well as the guilty had previously thought themselves entitled may be a bit bruised and battered, and the crime rate is likely to be about where it is now—on the rise.

The crime rate that matters most, because it puts large numbers of our people in daily fear, is the rate of street and home crime—muggings, robberies and the like. Mr. Mitchell has made two major proposals to deal with it. One is a drug-control act, which has national application, and which is rele-

vant because drug addiction under present conditions results in an insatiable need for money, and hence leads to crime. The other, effective only in the District of Columbia, authorizes preventive detention before trial of persons accused of crime in certain circumstances.

The drug bill is in large part a codification of present federal law, which punishes criminally the distribution or use of drugs for other than medicinal purposes. Nothing is plainer than that this method of dealing with drug addiction has not worked. This is not to say that the problem might not be even worse than it is if the criminal law failed altogether to condemn the use of harmful drugs. But it is clear that condemnation and jail alone have not worked. The theory of the Administration's new bill is that more condemnation and more jail *will* work.

The bill outlaws marijuana, and of course LSD, among other substances, and it authorizes the Attorney General, after opportunity for comment from the public, and upon scientific advice, to outlaw yet other drugs, as well as to exempt some now listed. Penalties are increased, and they are rough, both for distributors and users, with minimum sentences of many years in jail, and with suspended sentences or probation prohibited, except in the case of users who are first offenders. A user is someone who uses, period. A user of marijuana, for example, who gives a cigarette to a friend, or possibly a puff, is also a distributor, and he is subject for a first offense to a minimum sentence of five years, which may not be suspended, and from the service of which he may not be released on probation. And anyone over 18 who hands that cigarette to a teenager under 18 "who is at least three years his junior" gets a minimum of 10 years in jail without probation or suspension of sentence.

No doubt drug pushing is very dirty business and should be stamped out. But Draconian provisions will not stamp out the professional drug pusher, who takes very high risks for very high profits, and who will continue to do so, possibly increasing his prices as his risks rise, thus producing more street crime committed by his customers who have to meet higher costs. The pusher will be stamped out when there are no addicts, or at least when addicts who cannot be cured are given some sort of legal access to the drug they need, so that they have to resort neither to the pusher nor to crime. Pushers also seek to make addicts, to create a market, and they certainly ought to be punished. But the point is that increasing their punishment is no substitute for trying to deal with the problem of addiction and attendant crime, and may be counter-productive.

The drug bill, moreover, treats the habits of what must by now be many thousands of people in the same way as the act of drug pushing. We may feel uneasy about marijuana smoking, and suspect that it is about as bad as cigarette smoking, or even worse, but it is widespread among people who on evidence no worse than is available to Attorney General Mitchell think it harmless, and who exhibit no other criminal tendencies. To punish the act of passing a marijuana cigarette with a mandatory minimum of five years in jail is outlandish as well as brutal. Such a law (compare the Volstead Act) can only be widely unenforced. This is the administration, not of justice, but of injustice.

The other major anti-crime measure, applicable only in the District of Columbia, where alone the federal government has general criminal jurisdiction, is a preventive detention bill. At present, a person charged with any but a capital crime is entitled to be released pending trial, with or without bail, unless a judge has good reason to believe that he will flee and be unavailable for trial. Since lengthy delays before trials are common, the habitual criminal is thus given an opportunity—or at least not deprived of the opportunity—to commit further crimes. There are no very good figures to show how many persons commit crimes while at liberty awaiting trial for an earlier alleged crime, and all indications are that the number is relatively small; but some undoubtedly do, and the Administration's idea is to see that they don't, by holding on to certain categories of them. It is an idea that has also independently attracted Senator Joseph D. Tydings, the Maryland liberal Democrat. The District of Columbia is a small part of the country, even though it has its good share of crime, but if Congress passes such a statute, many states will likely follow suit.

The presumption that an accused is innocent until proven guilty may be established more in popular mythology than in our actual system of administering criminal justice, but it does essentially inform the provisions of the Constitution concerning criminal procedure; and the Eighth Amendment does say that "excessive bail shall not be required," which would suggest an expectation that bail will generally be allowed. So preventive detention of persons accused of crime is constitutionally dubious.

Yet the question in general of whether bail must be granted is an open one. Bail is traditionally denied to persons charged with capital offenses, of which there used to be a great many more than there are now. The explanation may be that no man facing the death penalty can possibly give credible assurance, it is thought, that he will stick around to face it. But the explanation may also have to do with assumptions about such a person's likely behavior while at liberty. As for the presumption of innocence, we commit the dangerously insane because we don't trust their future behavior. To be sure, this sort of preventive detention is civil in nature, not criminal, but how much is in a name? Again, bail in many courts throughout the country is in fact set high when judges and prosecutors think they have on their hands a dangerous criminal who should not be allowed to run around loose. We might as well be honest and above-board about it with a preventive detention statute, and at the same time institute more regular, open and controlled procedures than prevail when a judge follows his intuition and sets high bail. Formal hearing procedures are provided in the preventive-detention bill.

But the constitutionality of the bill is going to be tested in its application in case after case, rather than in general on its face. If it is to pass muster, the Supreme Court must be convinced that a judge who, after a hearing, imposes preventive detention on a person accused of crime has not done so merely on a hunch that he has an ugly customer before him, very likely guilty and dangerous; or merely on the basis of statistics which may prove a great deal about people in the aggregate without in the least predicting an individual's actual behavior. The Court must be convinced the judge has decided on the basis of specific facts relating to the accused, which support a rational judgment, not a guess, that if let out he will commit more crime. And there's the rub. We may be able to tell something about the dangerously insane, although less than we need. But how do we distinguish between one and another mugger or robber, so as to be able to predict rationally before trial, not only guilt with respect to the offense now charged, but proclivity to commit a further offense during a period of liberty before trial? We cannot. Hunch is bound to reign, and to enthrone King Hunch is too great a danger to the innocent; it is wrong, and hence constitutionally also more than dubious. Is it wise to go to such lengths in order to get off the street some potential criminals who, by all indications, are so few in number that the crime rate will hardly know it has been fought?"

There is a narcotic problem, and there is a crime problem. They are connected with each other and with material and psychological conditions in city ghettos. The drug problem does not call for harsher criminal penalties, but for new approaches—difficult and no doubt imperfect—to the treatment of addicts, and for careful legalization of access by addicts to the drugs they need, and will otherwise steal and kill for. Persons who are accused of crime and out on bail will commit fewer crimes in the interval before trial if that interval is shortened, so that it is a matter of days and weeks rather than months and years. That requires more prosecutors and more judges, a more efficient court system. The Administration has introduced a bill to reorganize the District of Columbia court system, which in its broad outlines is a step in the right direction. Grants-in-aid might enable the states to unclog some of their own courts also.

For the rest, until we successfully attack underlying conditions, the crime problem calls for more, better and more professional police work. Our police are ill-paid, ill-trained, ill-equipped and often ill-chosen. The federal government has undertaken to do a little bit, chiefly about training and equipment, in the Safe Streets and Crime Control Act of 1968, and the Administration's request for $297 million in the House Appropriations Committee. There must be much more, more programs and more money. That would be the beginning of a real fight, if not against the causes of crime, at least against its high incidence.

AMERICAN FRIENDS SERVICE COMMITTEE,
July 20, 1970.

To: Senator Hugh Scott, Old Senate Office Building, Washington, D.C.; Senator Richard S. Schweiker, New Senate Office Building, Washington, D.C.; Senator Michael J. Mansfield, Old Senate Office Building, Washington, D.C.; Senator Robert W. Packwood, Old Senate Office Building, Washington, D.C.; Senator Charles H. Percy, New Senate Office Building, Washington, D.C.; Senator William B. Saxbe, New Senate Office Building, Washington, D.C.; Senator Mike Gravel, Old Senate Office Building, Washington, D.C.:

Urge you vote against discriminatory, probably unconstitutional D.C. Crime Bill which sets a chilling precedent for the nation. Experience of Philadelphia indicates overzealous application of law and order techniques not in the best interest of city as a whole. Ervin bill focus on court reorganization, revision of criminal code is correct approach.

CHARLOTTE C. MEACHAM,
National Penal Affairs Program.

Hon. SAM J. ERVIN,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR ERVIN: At its Fifth Biennial Convention held in Minneapolis, Minnesota, June 25–July 2, 1970, the Lutheran Church in America went on record as opposing the inclusion of preventive detention in federal and state anticrime legislation.

The full text of the convention resolution reads as follows:

"We recognize that crime is a growing problem, and that meeting it requires new and imaginative approaches. The Lutheran Church in America views with grave concern, however, the concept of preventive detention, and expresses its opposition to proposals for allowing such a principle to become a part of the body of law of either the federal or

state court systems in the United States. We strongly urge our members to consider the dangers of possible future applications of deliberate imprisonment without conviction, if once accepted into law. We request the Board of Social Ministry to study possible further actions on this subject."

Inasmuch as a preventive detention clause is the price required for passage of the District of Columbia crime bill, I am writing to urge your negative vote on that bill.

Sincerely yours,

RICHARD J. NIEBANCK,
Secretary for Social Concerns.

P.S.—The text of this letter is one which is being sent to a number of Senators. We know, of course, of your own stand on this issue, and we support you in it.—R.N.

DAVIDSON COLLEGE,
Davidson, N.C., July 20, 1970.

Senator SAM ERVIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ERVIN: I want to commend you for your continued defense of our constitutional standards which seem to be threatened by provisions of the conference version of the District of Columbia Crime Bill. Your willingness to fight these battles has earned you the respect and gratitude of citizens of all states, and it is a source of special pride for those of us whom you represent directly here in North Carolina.

My continued appreciation and best wishes are with you in this important task.

Sincerely,

JON W. FULLER,
Assistant Professor of Political Science.

D'ANCONA, PFLAUM, WYATT & RISKIND,
Chicago, Ill., July 20, 1970.

Senator SAM J. ERVIN, Jr.,
Senate Office Building,
Washington, D.C.

DEAR SENATOR ERVIN: I hope you will oppose adoption of the preventive detention provision in the pending Crime Bill.

It seems clear that such provision would be in violation of the Constitution.

It is the kind of drastic legislation which strikes out in all directions in a panic response to an extremely difficult situation.

This is not a time for losing our heads—or our constitutional rights.

Preventive detention would be a violation of a basic right of a free people.

My thanks to you for anything you can do to defeat it.

Sincerely,

EDGAR BERNHARD.

[From the Nashville Tennessean, July 18, 1970]

CRIME BILL FULL OF DANGER

Some features of President Nixon's crime bill now being considered by Congress would strike at basic constitutional guarantees and should be rejected.

Perhaps the most dangerous recommendation is one that would permit police in some instances to enter homes without first knocking at the door or identifying themselves.

This measure is proposed for effectiveness in the District of Columbia only, but it is being advanced as a model law, possibly to be extended to the rest of the country at a later date.

If there were any valid reason for singling out the District of Columbia for the initiation of this oppressive law, it has not been made clear what it is. Certainly there is no justification for believing the nation should begin to give up its constitutional protections for the purpose of providing short cuts to law enforcement.

The no-knock measure has its supporters and detractors on both sides of the political fence. But perhaps the most effective opponent is Sen. Sam Ervin, noted conservative from North Carolina, who calls the District of Columbia crime bill "a garbage pail of some of the most repressive, nearsighted, intolerant, unfair and vindictive legislation that the Senate has even been presented."

It is too early to tell whether Senator Ervin can turn the tide against this unwise bill. But he deserves the gratitude of those who believe it is still possible to have effective law enforcement in the U.S. without chipping away at the basic principles on which the nation was founded.

YALE UNIVERSITY,
New Haven, Conn., July 17, 1970.

Hon. SAM ERVIN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ERVIN: I want to tell you how fervently I hope your opposition to the "no-knock" preventive-detention anti-crime bill succeeds. . . . The civil liberties which it invades were won after centuries of struggle against arbitrary power, both in Britain and America. To sacrifice them on the altar of "law and order" is a travesty of what law and order ought to mean.

Please accept my heartfelt thanks and best wishes.

Yours sincerely,

D. A. SMITH.

KNOXVILLE, TENN., *July 21, 1970.*

Senator SAM J. ERVIN,
Senate Office Building,
Washington, D.C.:

The Board of Directors of the American Civil Liberties Union of Tenn. strongly urge that you oppose and vote against the District of Columbia Crime Bill S2601. This bill incorporates extended police wire tapping no knock policy entry and preventive detention. All severe and intolerable infringements on individual freedom.

JOHN CLELAND,
President.
Mrs. R. W. CHILDERS,
Executive Secretary.

PHILADELPHIA, PA., *July 16, 1970.*

Re Anticrime Legislation.

Senator ERVIN,
Senate Office Building,
Washington, D.C.:

I strongly implore you and all Senate members not to vote for this legislation. More positive results may be found in the recommendation of the commission on the causes and prevention of crime chaired by Dr. Milton Eisenhower. Letter to follow.

Sincerely

JOSEPH T. BYRNE.

MILWAUKEE, WIS., *July 21, 1970.*

Senator SAM ERVIN,
Senate Office Building,
Washington, D.C.:

We strongly support your efforts to defeat conference committee report on District Crime Bill, especially preventive detention.

EDWARD M. MCMANUS,
Executive Director,
Wisconsin Civil Liberties Union.

COLUMBIA UNIVERSITY,
New York, N.Y., July 21, 1970.

Senator SAM J. ERVIN, Jr.,
Chairman, Constitutional Rights Subcommittee, U.S. Senate, Washington, D.C.

DEAR SENATOR ERVIN: I should like to congratulate you for your valiant efforts in opposing the preventive detention and "no-knock" provisions of the District of Columbia Crime Bill.

As a student of constitutional law I believe that both are of doubtful constitutionality. At least as important, however, is the fact that, whether constitutional or not, these provisions are unfair, cruel and completely out of place in a democratic nation.

There is much that needs to be done to reduce crime, both in the District of Columbia and in the nation at large. Such constructive measures as the court reorganization plan are urgently needed. What we do not need, however, are intrusions upon the civil liberties of the citizens, which in the view of most experts won't even contribute materially to a solution of the crime problem.

Very truly yours,

ALBERT J. ROSENTHAL,
Professor of Law.

ADA'S NATIONAL BOARD HITS DISTRICT OF COLUMBIA CRIME BILL

The national board of Americans for Democratic Action, beginning a two-day meeting here last night, unanimously passed a special resolution urging the Senate to defeat the D.C. Crime Bill Conference Report.

ADA said the bill would deny basic civil rights of District residents and would become a model for legislation elsewhere. ADA board members said the common assumption that Washington has the highest crime rate among U.S. cities is untrue but said the charge is being used deliberately to pass a bill which is being forced on voteless District citizens unable to mount political resistance to it.

SPECIAL RESOLUTION ON DISTRICT OF COLUMBIA CRIME BILL

ADA urges the U.S. Senate to defeat the D.C. Crime Bill Conference Report. We consider the bill both dangerous and punitive.

The bill has so many repressive provisions that no defender of citizens' rights can possibly support it. Among provisions ADA considers repressive are preventive detention, no-knock home searches, expanded wire-tap authority, mandatory minimum sentences, restricted juvenile court jurisdiction.

ADA does support the provisions for court reorganization and administration, but urges Congress to support these measures as separate legislation.

The oft-repeated lie that Washington, D.C., is the "crime capital" of the country is being used to generate an hysterical response to street crime. Such crime is high in every urban area. Neither in Washington nor elsewhere does such concern warrant a repressive bill such as the D.C. Crime Bill. This bill, being forced upon the voteless citizens of the District because they are unable to resist, would not pass a single state legislature in the country.

This bill should be defeated because it will deny elementary civil liberties to the residents of the District of Columbia, and because if passed it will be used as a prototype for bad legislation throughout the country.

Above all, the bill should be defeated because it proceeds on the assumption that the answer to crime lies in repressive measures. ADA holds steadfastly to the view that the only long-range answer to crime lies in giving every American a decent life and a real stake in our society. And, as short-run measures, we continue to support such nonrepressive programs as better trained and better paid police, speedy trials, rehabilitative prisons, gun control and the like. The D.C. Crime Bill, rejecting both these long-range and short-run measures, accepts the anti-democratic doctrine that crime can be controlled only by eroding our basic values.

[From the New York Times, July 17, 1970]

A BAD PACKAGE

After three months of consideration, a Senate-House conference committee has reported out an anti-crime bill for the District of Columbia which has been variously characterized as violative of no less than five Constitutional amendments and as "a blueprint for a police state." Twenty former Federal prosecutors have found the bill's

chief provisions of "doubtful constitutionality, questionable necessity and demonstrable ineffectiveness."

The measure passed by the House has been somewhat improved in conference, notably by the deletion of an incredible provision that would have required plaintiffs to pay the attorneys of policemen they had sued for false arrest, even when the policemen lost the case. The bill also calls for a much-needed court reorganization, designed in part to speed up the calendar—a highly desirable objective in a city with a grave crime problem and a judicial logjam.

But the bill's most dangerous and unnecessary provisions remain. Policemen would be empowered to enter houses without knocking, not just in the limited and special instances where that is permissible even now, but on what might amount to no more than a hunch that evidence might be destroyed or that those inside might make an armed attack if given notice of the police presence at the door. Shades of Chicago.

The bill would allow a judge to keep defendants in jail for sixty days if on the basis of their records he thought them likely to commit other crimes while awaiting trial. It is true that high bail permits even longer detentions now, but its imposition for reasons other than its legitimate purpose is often overruled by a higher court. The proposed bill would not replace the inappropriate use of bail in any case; it would only add to the injustice. More important, it would for the first time give legal sanction to the undoing of the most fundamental principle in Anglo-Saxon law—that a man is innocent until proved guilty.

Legislation for the reorganization of the District's courts was ready within weeks of President Nixon's inauguration. It is regrettable that Administration forces saw fit to make it part of a dubious anti-crime "package" instead of getting it enacted into law at once. Opponents of the bill in its present form, led by Senator Ervin of North Carolina, hope to defeat it on the Senate floor and start over again with a bill for court reform. That would perhaps do less to gratify the emotions of the hysterical but more to reduce crime in the District.

Mr. TYDINGS. I yield 5 minutes to the distingiushed Senator from Arkansas.

Mr. McCLELLAN. Mr. President, I support the District of Columbia Court Reform and Criminal Procedure Act of 1970. I shall vote for the conference report.

I believe that this bill is a major step forward in meeting the frightful problems that exist in the Nation's Capital. I recognize that its provisions have inspired spirited controversy. I have not participated in the debate until this time because I wanted to satisfy myself that the conference report embodied what I considered to be a constitutional and sound measure.

I recognize that there are honest differences of opinion as to the constitutionality of some provisions of this bill, and if I were convinced—if I had an abiding conviction—that any provision in this bill was unconstitutional, I would not support it. I have every respect and deference for those who may hold a different opinion and who feel that the provisions of this measure are unconstitutional.

As I said a few days ago on the floor of the Senate, when speaking about S. 30, which is now tied up in the House of Representatives in the House Judiciary Committee, where some contend that provisions of the bill are unconstitutional, we can argue here in the Senate about the constitutionality of the bill, and so we can do the same about this bill. Nevertheless, I said, if I had an abiding conviction that any provision of this bill was unconstitutional, I would vote against it. But ultimately we can only decide this for ourselves, individually, at this time. The final decision on constitutionality lies within the province of another branch of Government; and there is no doubt that, if this bill is enacted, the provisions in controversy will find their proper fate under our system, in an opinion and ruling of the Supreme Court.

Mr. President, speaking now for myself, I want to say that I have had now the opportunity to study the conference report, and I want to say that, for myself, I am satisfied that it is a good bill, meriting the support of the Senate and the Nation. The bill contains much that is beyond controversy and which is necessary for the effective administration of justice in the District of Columbia, such as court reorganization, the public defender system, and increased staffing.

In my judgment, however, the other major provisions of the bill that have occasioned much of this debate also deserve support. I believe it would be a serious mistake for the Senate to reject the bill at this time.

The wiretap provisions of the bill, in the main, are modeled on title III of the Omnibus Crime Control and Safe Streets Act of 1968, which the Senate refused to strike from the 1968 act by a vote of 68 to 12. I have since followed closely the administration of title III, not only as a law enforcement tool but also as a shield for citizenry privacy. I am satisfied that that measure has worked well. The basic structure of title III has been perfected and strengthened in this bill. Indeed, the chief differences between it and title III reflect additional safeguards for privacy recommended in the tentative draft of the American Bar Association's standards on electronic surveillance. It is also similar to legislation implementing title III that has been adopted in several States. I believe that the Senate can, without reservation, vote for these provisions, and I heartily endorse them.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. TYDINGS. I yield 3 additional minutes to the Senator from Arkansas.

Mr. McCLELLAN. I have also examined the so-called no-knock provisions of the bill. Under current law, the police are generally required, with or without a warrant, to knock and announce their identity and purpose before arresting or searching. See generally 112 U. Pa. Law Review 499, 1964. Current law, however, recognizes several exceptions to this principle of announcement. A succinct statement of the rule and its exceptions may be found in the "Restatement of Torts," section 206, comment (d), 1934. It seems to me that the no-knock provisions of this bill largely codify these traditional rules. Indeed, these provisions to protect privacy go beyond existing practice by mandating prior judicial approval where practicable. In this regard, they reflect the recent lead of a number of States—see, for example, *State* v. *Parker*, 283 Minn. 127, 166 N.W. 2d 347 (1969); N.Y. Code of Crim. Pro., section 799 (1964), constitutionality sustained, *People* v. *Delago*, 16 N.Y. 2d 289 (1965), cert. denied, 383 U.S. 963 (1966). The Senate can, I believe, without serious reservation, support these provisions. I shall, therefore, vote accordingly.

Last, I have examined the provisions of the bill that authorize the limited detention of certain dangerous offenders prior to trial. Here, too, I have concluded that these provisions are both constitutional and necessary for the public safety.

Mr. President, bail has never been viewed as an absolute constitutional right. Since the Judiciary Act of 1789, bail has been discretionary for certain offenses. In the Crimes Act of 1790—1 Statutes at Large, second edition, chapter 9, page 112—for example, such offenses as robbery, larceny of goods in excess of $50, forgery, counterfeiting, and embezzling were capital offenses, and bail could be denied at that time to those accused of these offenses. It was in this context that the Supreme Court in *Carlson* v. *Landon*, 342 U.S. 425, 545 (1952) observed:

> The Eighth Amendment does not prevent . . . Congress from defining the classes of cases in which bail shall be allowed in this country.

Only two other questions, therefore, face us, it seems to me. First, can the procedures set out in this measure be squared with traditional notions of due process, and, second, is this measure, if constitutional, necessary for the public safety?

The provisions of the bill that establish the process for holding an accused before trial are carefully and narrowly drawn. In my judgment, however, they meet the test of due process. I need not burden the record with a detailed analysis of them at this time. Only the question of need remains.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. TYDINGS. I yield 1 additional minute to the Senator from Arkansas.

Mr. McCLELLAN. Mr. President, crime committed by persons out on bail is real, savage, and significant. When Franklin Moyler, a defendant on bond from two armed robberies, critically wounded a police officer last June 18, and was himself finally killed following a third armed robbery of a liquor store, it graphically illustrates the choice that is presented to us by this bill.

Shall we do something about men like Moyler?

We must choose, I suggest, between according a future Moyler an absolute right to pretrial release and the safety of the police officer who will attempt to arrest him and the security of the liquor store proprietor who will be threatened. I think we must choose to protect the safety of our citizens and police officers and their right to be free from criminal assault and violence.

Mr. President, I do not lightly contemplate preventive detention, no-knock

searches or wiretaps, but I consider them to be the distasteful but necessary remedies that must be applied to remove the menacing and dangerous threat that violent and mounting crime presents to our internal security.

Mr. President, I add a personal note. I live in the District of Columbia. I am not voting for legislation that will apply to others but not to myself. I recognize, of course, that it is unlikely that I will be charged with a serious offense of violence or, if charged, considered a danger to the community. But I fully recognize that my apartment conceivably could be broken into by mistake, without announcement, under this statute. My phones or my conversations might well be overheard by mistake on a court-ordered wiretap under this bill. I am, however, willing to pay this price if it can help to restore, in some small measure, to the citzens of our Nation's Capital the protection from the ravages of crime that all our citizens deserve.

I have considered this matter carefully, and I conclude by repeating what I said at the outset. If I had an abiding conviction that anything in this bill were unconstitutional, I would not support it. I respect the viewpoint of others who may feel that way. Nevertheless, Mr. President, the crime situation, not only in the District of Columbia, but also throughout the Nation today has reached such crisis proportions that, as I have said on this floor many times, we must use, we must fashion every tool that we can, within the framework of the Constitution, and make them available to our law enforcement officials and agencies, so that we may begin successfully to combat the menace crime that is endangering the internal security of this Nation.

I shall vote for the conference report.

Mr. TYDINGS. Mr. President, I yield 5 minutes to the distinguished Senator from Louisiana (Mr. ELLENDER).

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The Senator from Louisiana is recognized for 5 minutes.

DISTRICT OF COLUMBIA CRIME BILL NEEDED

Mr. ELLENDER. Mr. President, it has not been an easy task for me to reach a decision as to how I should vote on the pending conference report, on S. 2601, the so-called District of Columbia crime bill.

On the one hand, there has been the obvious and even the desperate need for an effective answer to the crime wave which has engulfed our Capital City for the past two decades. We have before us a bill which deals sternly and at many different levels with a problem which makes our Nation's Capital unsafe for people to live and work.

On the other hand, there are many respectable and knowledgeable Members of the Senate who say that the bill deals so sternly with criminals and with suspected criminals as to violate their constitutional rights. The leader of this group, Senator SAM ERVIN, is one of the most highly respected men in the Senate. He has led the way in protecting the rights of our citizens from undue or unconstitutional invasion by the Government. His arguments have been well stated and are very convincing, and I have no doubt that many Senators will be persuaded by them.

In the final analysis, however, I have found it essential to side with those who see this conference report as the best possible compromise between the House and the Senate on many controversial issues contained in the bill. I understand the conferees required no less than 24 meetings to hammer out this agreement, which the House has now accepted by an overwhelming vote of 332 to 64.

Many contend, with great conviction, as I previously pointed out, that certain provisions in the bill are unconstitutional. I, frankly, do not agree. Such questions and doubts as have been raised on this point by the persuasive arguments of Senator ERVIN and others, I am prepared to refer to the courts once the bill has been enacted. I am sure that if there are provisions in the bill which do violence to the constitutional rights of individuals, the courts will so hold, with very little delay.

In recent years our courts have been all too active and "helpful" in striking down provisions in the law and procedures in our judicial and law-enforcement systems which in my opinion encouraged lawlessness. That we must remedy, and the pending compromise bill will serve well to that end.

Some say that the bill is antiblack. Statistics obtained by the District of Columbia Crime Commission initiated by the former President Johnson refutes the charge in no uncertain terms. It found that 86 percent of all District of Columbia murder victims are black; that 86 percent of all aggravated assault victims are black; that 80 percent of all rape victims are black; that 66 percent of all auto theft victims are black, and that 60 percent of all burglary victims are black.

That being the case, the stern measures contained in this bill which are directed at reducing crime will be of great benefit not to the whites of the District of Columbia but primarily to the blacks. It is plainly not an antiblack bill; it is an anticrime bill.

In those areas where unconstitutionality is charged there are already in the bill itself or in our jurisprudence, clear-cut safeguards against abuse. In addition, if the courts hold these provisions to be constitutional there will most likely be additional guidelines prescribed for their proper and safe application.

The committees of the House and the Senate which handled this bill, and particularly the conferees who worked so diligently to achieve a meaningful compromise have done the best possible job under trying circumstances. The Senate should back them.

I believe that their bill, so far as the courts will allow it to do so, should be allowed an opportunity to change the pattern by which crime has been increasing in the District of Columbia at about 25 percent per year and by which we are able to obtain convictions in only about 3 percent of the felonies committed here.

It is my considered judgment that if the Senate does not favorably, it will be an invitation to criminals to expand lawlessness in the city of Washington.

I urge favorable action on the conference report.

PRIVILEGE OF THE FLOOR

Mr. TYDINGS. Mr. President, I ask unanimous consent that the following Senate staff personnel be permitted to remain on the floor during the duration of this debate and the vote on the pending conference report:

Jim Flug, Burt Wides, Nancy Chasen, Louise Regenbogen, Stan Darling, Rick Tropp, Carolyn Johnson, Malcolm Hawk, Wesley Williams, Jr., and David Cooper.

Also from the Subcommittee on Constitutional Rights: Larry Baskir and Glen Kitner.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TYDINGS. Mr. President, I yield 12 minutes to the Senator from Vermont (Mr. PROUTY).

The PRESIDING OFFICER. The Senator from Vermont is recognized for 12 minutes.

Mr. PROUTY. Mr. President, as my colleagues know, I am not a lawyer but as a citizen and a legislator I have a deep and genuine interest in this conference report, because as a layman I feel that it will do much to alleviate problems in the local judicial system and right some grievous wrongs in criminal procedure.

For a week now, Mr. President, I have heard my learned colleagues in this Chamber debate the constitutionality, the desirability, and even the patriotism of the pending conference report. I must confess that I scarcely recognize the bill we reported from conference as it has been described. After months of conference, where we allegedly swapped "a couple of rabbits for an elephant or a donkey," we returned to the Senate with what has been described as a conference report which "kicks the Constitution all over the District of Columbia."

I gather that no Member of this body opposes those parts of the report concerning the reorganization of the District of Columbia courts. I assume that no Member objects to modernization of the court administration. Surely no Member is adverse to the creation of a Public Defender Service or the expansion of the Bail Agency. These are the so-called "good apples" we are peddling and they have found a ready market with many willing buyers. This is the bulk, in substance as well as in fact, of the conference report before us.

What we have heard attacked this week is the very small portion of the report, the so-called "rotten apples," specifically, the no-knock and pretrial detention provisions.

The opponents of the no-knock and pretrial detention provisions have trotted out in support of their position, the wise words and opinions of prophets, statesmen, philosophers, distinguished jurists, and learned men in the realm of constitutional law. The proponents of these measures have supplied endorsements for their position in equal quality

and quantity. The diverse opinions dazzle the mind and befuddle the reason. Confusion has made his masterpiece and this battle of the experts should end in a draw.

We all recognize the problem that we face. The streets and parks of this city have become a jungle of fear. Those who walk the street are the prey of the lawless and the unsuspecting victim of the predator.

We in this Chamber share a common responsibility for a constituency in the District of Columbia. The residents of this city are our constituents as much as are the residents of our home State, and they look to us to speak and act in their behalf. Their welfare is a responsibility we cannot ignore and cannot shirk.

The distinguished junior Senator from Maryland gives us frequently in the CONGRESSIONAL RECORD a list of crimes committed in the District of Columbia on any given day. I doubt that the Members of this body take little more than passing interest in those statistics because those crimes are far removed in most cases from their primary constituency, the home State. If, however, a visiting constituent from the home State meets with foul play here in our own backyard and appears on that growing list—and this is not a rare occurrence—there is an upright demand for full exercise of the law and swift justice. Do we extend to our local constituents on that list the same concern?

How do you explain to the mother of a schoolchild that the accused attacker of her daughter is freely walking the street because to jail him would be a breach of his constitutional right? How do you explain to the victim of an assault and robbery, confined to a hospital bed perhaps, that his attacker is out on the street because the court is powerless to confine him? How do you explain to the parent of a juvenile drug addict that the police know who supplies drugs to his child but they cannot break into his house and surprise him with the evidence before he has had a chance to dispose of it? What justification do you give to the banker who has been robbed by a man already under one, two or even three charges of bank robbery? The explanations about constitutional rights and protection for the accused may make sense in the hallowed halls of justice but those explanations have a cloudy reality to the crime victim outside the restricted limits of that small world.

Are the criminal offenders the only ones whose civil rights should be guaranteed? I think those who respect the law have privileges too and their rights are paramount. It is an old maxim that he who spares the guilty threatens the innocent.

It does not disturb me if a drug distributor is raided or a dangerous criminal is taken off the street. What does disturb me is the fact that a drug distributor or a dangerous criminal is permitted to continue to ply his illicit trade or stalk the streets as a threatening danger to law abiding citizens.

I am not alone in my concern. The majority of the people in this city share my concern, but in their climate of despair they are helpless to do anything about it. We here in this Chamber can do something about it. It is not only within our power to act, but it is our responsibility to act to strengthen the entire criminal law system in this city.

The people of Washington are crying out to us for help. Hear their voice. We can help them. We must help them.

It is important that we bear in mind the adamant attitude of the House conferees on this legislation. In my judgment, if this conference report is not accepted by the Senate today, there will be no court reorganization and anticrime legislation for the District this year, and nothing will have been done by us to stay the rising wave of crime in the Nation's Capital.

Mr. President, in his remarks the other day the senior Senator from North Carolina referred to a colloquy carried on with Associate Deputy Attorney General Donald E. Santarelli at hearings on S. 2600, the Justice Department's Bail Reform Act Amendments. Most of S. 2600, although changed in a few significant details, is contained in the pending conference report. For the purpose of making a complete legislative history I think it would be appropriate to include in the RECORD the full text of that colloquy which took place between Mr. Lawrence M. Baskir, chief counsel of the Subcommittee on Constitutional Rights of the Committee on the Judiciary and Mr. Santarelli. The full text of that colloquy appears at pages 311–328 of the recently printed hearings of that subcommittee. I ask unanimous consent that they be printed in the RECORD at this point.

There being no objection, the text of the colloquy was ordered to be printed in the RECORD, as follows:

STATEMENT OF DONALD E. SANTARELLI, ASSOCIATE DEPUTY ATTORNEY GENERAL FOR CRIMINAL JUSTICE, DEPARTMENT OF JUSTICE; ACCOMPANIED BY EARL SILBERT, OFFICE OF CRIMINAL JUSTICE

Mr. SANTARELLI. S. 2600?

Mr. BASKIR. Yes, sir.

Mr. SANTARELLI. Before we get to the question, Mr. Baskir, if I might make clear for the record that I have been requested to appear here following the testimony of the Deputy Attorney General to respond to specific technical questions in response to problems that have cropped up. Questions of policy were covered by the Deputy Attorney General in his past two appearances, and he has expressed his willingness to return for any further hearings you may have on questions of policy.

I would also like the record to reflect that I am accompanied by Mr. Earl Silbert of the Office of Criminal Justice to assist in the response to these technical questions.

Mr. BASKIR. Fine. It may be difficult to avoid policy questions. I am not sure where the line is. But it is my intention to ask technical questions. If questions arise which you do not feel prepared to comment on, please say so for the record.

Turning to page 14, there two classes of definitions: one entitled "Dangerous Crime" and the other entitled "Crime of Violence."

Are these described crimes all felonies?

Mr. SANTARELLI. It says on lines 14 and 15 of page 14, if the offense is punishable by imprisonment for more than 1 year, it says, similarly, on line 24, one and two of pages 14 and 15, as defined by act of Congress in a State law if the act is punishable by imprisonment for more than 1 year, it is the intent that these are felonies in the Federal system.

I believe there are some oddity offenses in the United States Code which are 2-year sentences that are called misdemeanors, and I believe there are some in some of the States. They are rarities, I understand.

Mr. BASKIR. The phrase that you mentioned, "punishment by imprisonment for more than 1 year," in both cases is meant to modify the entire paragraph and not merely the last category; in the second paragraph, for instance, not merely meant to modify "attempts of conspiracy"; is that correct?

Mr. SANTARELLI. That is correct. The language of "offense punishable by more than 1 year" is intended to modify the entire category.

Mr. BASKIR. Thank you.

Now, moving back to page four, line 17, there is a phrase, "reasonably assure the safety of any other person or the community."

I believe this phrase appears also on page 2, line 7. The second instance is with respect to setting of bail condition. The first instance that I mentioned is with respect to one of the determinations at the preventive detention hearing. There is no definition in the bill of the phrase "reasonably assure the safety of the community or other person." Is there a definition? What does the phrase mean in any particular sense?

Mr. SANTARELLI. It doesn't mean anything different from the literal meaning of the language. We intend the language to be read for what its dictionary, and reasonably believed definition ought to be, and this is the province of the courts to interpret. This is the classic kind of case where reasonable judgment by judicial officers in the course of judicial opinion and interpretation will develop a definition as they do to every other word of language used in statutes.

The plain meaning of that is, on its face, the safety of the community.

Mr. BASKIR. May I ask specific questions?

Mr. SANTARELLI. Certainly.

Mr. BASKIR. I gather "safety" means avoidance of danger and it is easier to use the word "danger."

Mr. SANTARELLI. We would have done so had we not been trapped into the drafting by sticking with the form of section 3146 of the present Bail Act and the affirmative way in which it was set out required us, if we wanted to continue to utilize that law without totally redrafting it, to phrase it in this fashion.

Mr. BASKIR. For the purposes of this discussion, let's refer to the avoidance of danger to the community; is that all right? When you talk about "danger to another person," you are requiring specific proof of a threat of danger to a specified individual, for instance a husband to a wife?

Mr. SANTARELLI. Not necessarily, although that might be the facts in a given case. The wife might appear at the pre-trial bail hearing and say, "Your Honor, he has threatened a million times, and I know he will do it because he has done it before and I am afraid." That might be.

Mr. BASKIR. But it is not required to find specific danger to specific persons. It might be danger to community or people in general?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. I take it from what you said that there need not be any proof. Or to phrase it another way, there need not be a finding of the likelihood of committing another specified crime; is that correct?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Does that also mean that an individual, let us say, who was arrested for one of those defined crimes in your bill, and who has a long history of committing other crimes of offenses which are not necessarily specified in the list on page 14, and not nec-

essarily felonies, might be considered a danger to the community nonetheless?

Mr. SANTARELLI. He might be.

Mr. BASKIR. You are aiming here at preventing not only additional crimes defined as dangerous in your bill and additional crimes defined as violent in your bill, but additional crimes of any sort whatsoever, is that correct?

Mr. SANTARELLI. Additional crimes of any sort that may be in the judicial officer's opinion dangerous to the community. They are not necessarily the offenses enumerated in the bill. The offenses enumerated are for the purposes of establishing eligibility for consideration for pretrial detention. You must be charged with one of those offenses before your record of dangerousness can be looked to.

Mr. BASKIR. I see. So the danger you are seeking to avoid is not specifically danger of the commission of one of the list of crimes designated by you in your bill on page 14 as dangerous crimes or the list of crimes designated by you as crimes of violence, but the likelihood of any kind of crime in the future that they may possibly commit that a judge feels is dangerous to the community.

Do I rephrase your statement properly?

Mr. SANTARELLI. I am not sure you do, and I am not sure we can phrase it definitely at this point. The consideration for the court is to view, the defendant in the totality of his circumstances, to review his record of conduct, to review his character and attitude and to conclude if from this prior activity and from information that can be adduced, whether or not he will engage in a course of conduct that will be dangerous to the community. That might include offenses not enumerated in the specified dangerous offense category.

Mr. BASKIR. Certainly if the judge found there was a likelihood he would commit another unlawful breaking and entering, he could then validly detain on the grounds this was dangerous?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. If the judge decided the man was, let's say, a kleptomaniac and he engaged in petty shoplifting, the judge could, under your bill, detain this person in order to prevent those subsequent offenses; is that correct?

Mr. SANTARELLI. Or—you know, the line between petty larceny and grand larceny is very difficult to tell, and from the record you don't always know. Specific facts would be adduced in the case of a narcotic addict, for example, that he lives by larceny. Though example, that armed robbery, he may not live by it. We now know that he is a larcenist each day and steals x amount of dollars. Under those circumstances, the court may reasonably conclude that that conduct is dangerous to the community.

Mr. BASKIR. Now, another question to ask—and I am not sure if that is policy or technical. Your responses suggest that certain kinds of activity which a judge might consider dangerous, but you might not, may involve, let's say, the smoking of marihuana. The judge might consider that to be dangerous. A judge might consider obscene photographs of other judges or publication of scurrilous underground newspapers to be dangerous. A judge might consider to be dangerous certain things which are practiced such as political demonstrations, dissenting, violent or nonviolent. He might under this bill consider those activities dangerous and he could make a finding; am I correct, that that is the kind of danger that he would like to correct under this bill? Is that a correct interpretation?

Mr. SANTARELLI. What a judge can do and what he ought to do——

Mr. BASKIR. I am only talking about now, what he can do.

Mr. SANTARELLI. Presumably, such evaluation or conclusion that those activities are dangerous would not be upheld under the appellate procedures here. But a proper answer to that seems to turn that around, and let's see how that operates under the present bail law.

Mr. BASKIR. I am really more interested in what the bill does. I suspect we may be slipping into policies—we are trying to get the facts.

Mr. SANTARELLI. This is a technical question, in fact, very technical.

If a court at the moment chooses, and under our bill, chooses to impose conditions on the release of the defendant, it might impose any conditions reasonably calculated to get the defendant to return to trial, or under our bill reasonably calculated to protect the community from danger.

I think it would be reasonable if the court concluded that the defendant engaged in a course, for example, of continual marihuana smoking and hung around with a number of other people that do so, for the court to impose as a condition on his release that he not smoke marihuana and that he stay out of bad company.

Mr. BASKIR. And that condition is imposed upon the theory that that course of conduct would make it likely he would not appear for trial?

Mr. SANTARELLI. Or that he may be dangerous under our bill.

Mr. BASKIR. And in your circumstances that would make him dangerous under your bill just as under the existing law that could be seen as a tendency to have him flee?

Mr. SANTARELLI. A court could consider such conduct in assessing either the likelihood of flight or likelihood of danger.

Mr. BASKIR. I see.

Mr. SANTARELLI. Now, if the defendant went out and performed the acts prohibited by the court, the court would have the authority to bring the defendant back and establish under the present law additional conditions, or under our proposal, and a recommendation of the ABA, a power to revoke and commit the defendant for violation of the condition of release. If the condition of release violation is of dangerous nature and can be upheld on that basis, then the same theory ought to apply to ab initio cases where the defendant is brought before the court and charged with an offense.

Mr. BASKIR. Under existing law the judge would have to determine that this course of activity had some impact or might have some impact upon his appearance?

Mr. SANTARELLI. Correct.

Mr. BASKIR. In your case it might be the simple conclusion that the smoking of marihuana is dangerous to society or dangerous to another person, and on the grounds of dangerousness detain him straightaway?

Mr. SANTARELLI. The court could say that a petty larcency or petty offense was dangerous to the community, the guy was a drunk driver for example, and this was dangerous to the community. Such a conclusion, however, would be simply unreasonable. I think the conclusion that marihuana smoking is dangerous is unreasonable. But I don't know of any way to prevent courts from being unreasonable.

We predicate everything here on the good faith of courts and the good faith of prosecutors not to allege such information and the good faith of courts of appeals to review these matters and be fair in their judgment. In either case, drunk driving or marihuana smoking would not be of sufficient magnitude, in my opinion, to be dangerous.

Mr. BASKIR. Is there a provision on the review of detention orders which gives a standard of review for appellate judges to use in reviewing decisions of dangerousness?

Mr. SANTARELLI. We looked to the review and saw that there was no standard for appellate judges, under 3148 of existing bail law where capital offenders may be detained under a general concept of dangerousness. We didn't think it appropriate to go beyond that in the case of noncapital offenders.

Mr. BASKIR. That means, I suppose, if a judge determined that marihuana smoking was dangerous under the terms of your bill that might be considered unreasonable. But it would have to approach something on the order of "abuse of discretion" or "gross abuse of discretion" in order to be reversed on appeal; is that correct?

Mr. SANTARELLI. No, that is not the standard presently used in the law on reviewing bail findings and results, nor would it be the standard under our statute. Our bill does not change the existing standard of review.

Mr. BASKIR. What is the standard under existing law?

Mr. SANTARELLI. Any order which results in the detention of a defendant must be supported by the proceedings. Under this standard, I believe that the appellate court merely reviews the reasoning of the trial court's findings and in a sense substitutes its own judgment for what is reasonable. See *Banks v. United States*, 414 F. 2d 1150 (D.C. Cir. 1959). If I might——

Mr. BASKIR. The standard in the act imposed upon a District of Columbia judge is "conditions that will reasonably assure the appearance of the person" before him and the appeal is based upon whether or not those conditions reasonably assure or are unreasonable in terms of assuring appearance. I am not sure how that standard would apply in reviewing a determination of dangerousness, because the determination of dangerousness is not tied to reasonable conditions assuring appearance.

There is no review on the grounds of dangerousness or reasonability of dangerousness under existing law as I see it with respect to persons we are considering here.

Mr. SANTERELLI. There is no question. Mr. Baskir, that the court of appeals of any circuit has the power to review cases under 3148 where defendants may be detained for whatever reason, either flight or dangerousness, and in fact, they do review such convictions. It doesn't say so in your 1966 act.

Mr. BASKIR. If it does not say so in the 1966 act, it will not, because you are amending it, say so with your amendment?

Mr. SANTARELLI. We provide it specifically in our law. The capital defendants detained as dangerous will have the same right of review with the same standard as the 1966 act now provides for those detained because they are likely to flee.

Mr. BASKIR. In effect, you will be relying upon existing practice for these reviews of dangerousness just as the existing law does?

Mr. SANTARELLI. No; we would authorize them specifically by statute in our bill.

Mr. BASKIR. For the record, would you point out the provision in the bill which authorizes that review?

Mr. SANTARELLI. If I might have a minute to do so—I think if you will look at 3147——

Mr. BASKIR. Excuse me, is this in the bill?

Mr. SANTARELLI. Yes, page 9, and read the language of 3147 in conjunction with the existing law. We didn't repeal it and rewrite it, we just amended it to conform to the changes we made in section 3146 and 3146A.

Mr. BASKIR. That does, indeed, provide for review of detention. We are talking about the standard of review.

Mr. SANTARELLI. That is correct.

Mr. BASKIR. And there is no standard of review in your bill. You would have to rely upon whatever standard is in the act?

Mr. SANTARELLI. We have a standard in the existing law, and we enact it to the extent that the proceedings below must support the detention just as in the 1966 law.

Mr. BASKIR. Right. The standard of review under the existing law is reasonability of conditions of release. That does provide for review. That does provide a standard for testing release conditions. But there is no existing

law with respect to standards for reviewing dangerousness.

Now, are there standards of review of dangerousness in your bill?

Mr. SANTARELLI. Under the standard of review which requires that the orders of detention be supported by the proceedings below, the courts have simply determined whether they are in fact reasonable conclusions in the light of the evidence below.

We have seen that in the District of Columbia. See *Banks* v. *U.S., supra.*

Mr. BASKIR. What you are saying is that a district judge may say smoking marijuana or participating in a political demonstration is dangerous to the community. That would be reviewable because you do provide for review?

Mr. SANTARELLI. Findings of dangerousness are reviewable on appeal.

Mr. BASKIR. The standard of whether that is abuse of discretion, that standard is not discussed in your bill?

Mr. SANTARELLI. No.

Mr. BASKIR. And that standard is not existing law. You rely on practice to make sure the standard is reviewable.

Mr. SANTARELLI. But the standard is not abuse of discretion.

Mr. BASKIR. What is the standard?

Mr. SANTARELLI. The standard used is not abuse of discretion, it is one of reasonableness, whether the order of detention is reasonable in light of the proceedings below.

Mr. BASKIR. I see. This discussion, by the way, is built into the record and if the standard is not "reasonable" under existing law, we hope this discussion will make it reasonable.

Mr. SANTARELLI. Courts don't enunciate this standard.

Mr. BASKIR. The statute does not, either.

Mr. SANTARELLI. Correct.

Mr. BASKIR. That is what I was trying to get clear.

Now, just to go back, there is no standard for the judge to use to determine dangerousness in the first instance; is that correct? On page 4, starting with line 14, the judge must find there are no conditions which will reasonably assure the safety of a person, in determining the question of safety, the judge would not have to find lack of safety by "preponderance of the evidence," "by clear and convincing evidence," or any particular standard, according to your bill?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. It could be the record taken as a whole, as low as that?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Or it could be "beyond a reasonable doubt," as high as that, depending upon the judge?

Mr. SANTARELLI. Well, the question is what is the present standard. We don't, in the statute, change the existing practice on what kind of process the court uses in arriving at its factual conclusion. If it presently looks at 3146 and considers, as in the bail law, what the general background of the defendant is to determine what conditions to impose on him or to detain him if he is likely to flee, we would have the courts continue that same process, only look to an additional factor as they now do under Section 3148, namely, dangerousness.

That is one which has got to be supported by evidence. That is clear from what we say. There has got to be some record of evidenciary findings to support the conclusion.

Mr. BASKIR. How much is not specified in your bill?

Mr. SANTARELLI. That is correct, nor in existing law.

Mr. BASKIR. In the detention hearing, also, there is another finding that has to be made, that is substantial probability the person has committed the offense. There has been some question raised in the hearings as to the use of that term and what it means. Is it a new term showing new balance of evidence or is it another reflection of the instant term?

Does "substantial probability" mean "probable cause?"

Mr. SANTARELLI. No; it means more than probable cause.

Mr. BASKIR. Clear and convincing evidence? I don't want to get into a discussion of imperfect standards, but exactly what it means would be good to get for the record.

Mr. SANTARELLI. No; rather than answer those questions, maybe it would be better to affirmatively state what we think it means, because otherwise we may get it confused with other distinctions that are made. That is, we have set it out in the Law Review article of the Attorney General, and that is that the test is perhaps best compared to the civil test for the issuing of a preliminary injunction, frequently characterized as likelihood of eventual success on the merits, comparable to the civil injunctive test.

Mr. BASKIR. All right.

Turning to page 7, line 3. Upon the expiration of 60 calendar days of detention, the defendant is returned to the bail hearing under section 3146.

Mr. SANTARELLI. Right.

Mr. BASKIR. Except if two things are occurring. One is that the trial is in progress, and the other is stated on line 2; that is, if the trial has been delayed at the request of the person.

Mr. SANTARELLI. Right.

Mr. BASKIR. Does this mean that if the defendant has asked for a continuance then the detention period will be continued; is that correct?

Mr. SANTARELLI. If he has asked for continuance on the day on which his trial was scheduled to come forward he would continue to be detained.

Mr. BASKIR. If he asked for continuance, let us say, 30 days after he was detained, and it was a continuance for one week, would he be detained 60 days plus one week?

Mr. SANTARELLI. No.

Mr. BASKIR. He would be detained only 60 days?

Mr. SANTARELLI. Yes.

Mr. BASKIR. The bill does not specify that.

Mr. SANTARELLI. We consider that to be the clear impact of the language.

Mr. BASKIR. Well, the bill may be interpreted as saying that if the defendant asks for so little an extension as one day that he will be detained indefinitely until the trial occurs. The bill may be read that way. That is why I asked the question.

In other words, his detention will continue if he asked on the 60th day, when the trial is about to begin, for an extension of time?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. His detention will continue for as long as he has asked for extension; is that correct?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. If he asked on day 60 and trial is to begin on day 60, for 1 week extension of time, he will be detained 67 days?

Mr. SANTARELLI. That is correct; if he asks for it.

Mr. BASKIR. I see. If trial is not to occur at the 60th day for some other reason, whatever it may be, and he, on the 60th day, asks for an extension for one week——

Mr. SANTARELLI. I don't understand that.

Mr. BASKIR. I am not sure what the time——

Mr. SANTARELLI. I mean, if on the 60th day his trial is scheduled on the regular calendar of the court for the 70th day——

Mr. BASKIR. That is right.

Mr. SANTARELLI (continuing). And he comes in and says he wants it delayed to the 75th day——

Mr. BASKIR. Yes; wants an extension for 5 days beyond the 70-day period, does he get detained 60 days, 70 days, or 75 days?

Mr. SANTARELLI. I do not believe he can be detained beyond that time.

Mr. BASKIR. What point?

Mr. SANTARELLI. Beyond the 60-day period. At that point.

Mr. BASKIR. In other words, the provision should read, if on the day of the trial the defendant asks for extension of time he can be detained for that additional extension. And in no other circumstance?

Mr. SANTARELLI. No; that is too narrowly read. There may be circumstances in which the defendant may ask for a continuance prior to the 60 days, in which it is an unreasonable request of a dilatory nature that the court can conclude is an unreasonable request, or that the court may not be able to get to the case by the 60th day. It would be unreasonable to make a flat absolute statement that in every case it would operate in the manner that you just discussed.

What we intend is that we be reasonably interpreted by courts to prevent defendants from taking unreasonable actions to encourage the delay of the trial beyond the 60th day and then not pay any penalty for those unreasonable acts. Timely motions, proper motions, corrections will not delay the period of time.

Mr. BASKIR. The reason I asked this question is that the bill says he is to be released at the expiration of 60 days unless the trial has been delayed at the request of the person. From our colloquy it appears that within that phrase you are talking about reasonable delays and delays which are not only asked for after 60 days.

I thought you said at first it was only delays after the 60th day that would trigger extensions—and any extension of time would extend detention for that time.

Mr. SANTARELLI. That is correct, sir. There is a question of reasonableness, Mr. Baskir.

Mr. BASKIR. This bill should read, then "unless the trial has been unreasonably delayed at the request of the person"; is that what you are reading into the phrase?

Mr. SANTARELLI. We have left it to the court's discretion.

Mr. BASKIR. Would you like it to read—because in a markup we might add the word "unreasonable"—"or if the trial has been unreasonably delayed at the request of the person"; is that the way the phrase has been designed?

Mr. SANTARELLI. No; we have preferred to leave it this way because it might be a reasonable request for the defendant on the day 60. It might be a reasonable request—I want 5 more days to do something. On the other hand, the court will say, why didn't you ask for that 5 days ago.

Mr. BASKIR. If he shows good cause for his request, would that extend his period of detention?

Mr. SANTARELLI. Probably good cause is a better test than reasonable.

Mr. BASKIR. If at any time he asks for an extension, and the judge gives it to him upon good cause shown, that request would not extend his detention; is that correct?

Mr. SANTARELLI. I would think that would be what we had in mind.

Mr. BASKIR. Is there any procedure at the end of 60 days—Let me ask you this: what is the procedure generally that will be followed when he is released from jail at the expiration of 60 days?

Mr. SANTARELLI. I think we pursued this earlier when Mr. Kleindienst was here in the beginning, and the simple answer to that is that the defendant would be brought back to court at that time, at the expiration of his 60 days, and be in the same posture as a new defendant coming before the court for the first time for consideration under section 3146 of the bail law.

Mr. BASKIR. Now, does he have to make a motion at the end of 60 days? What act does he have to make at the end of 60 days?

Mr. SANTARELLI. No act, no motions on his part.

Mr. BASKIR. If the jail records show he has been detained and it is the 60th day of that detention, he must be picked up and returned automatically as an administrative matter?

Mr. SANTARELLI. That is correct, the jail would return him to the court. His release would occur through the court.

Mr. BASKIR. Now, section 3146—which we picked up on the discussion with the deputy before and your remarks just now—section 3146, as amended, would require a judge to review the man's record and determine which conditions will assure his appearance at trial. That is existing law, section 3146, subsection (a)?

Mr. SANTARELLI. Correct.

Mr. BASKIR. Section 3146 as amended by this bill, in paragraph (a), also requires a determination of which conditions, other than financial, will assure the safety of the community under section 3146, subsection (a). This is in the first instance, and this is another determination at the bail hearing. As amended by your bill, section 3146, subsection (b) would direct the judge, in determining which conditions, if any, will reasonably assure the appearance of the person or the safety of the community, to review certain kinds of evidence. If the judge determines at this hearing that no conditions will assure the safety of the community, can the judge then go on to section 3146(a) and order a detention hearing the second time around?

Mr. SANTARELLI. Without additional facts, without additional——

Mr. BASKIR. Let us assume that we have the same facts adduced as at the original hearing——

Mr. SANTARELLI. No new facts?

Mr. BASKIR. No new facts, same danger, same determination that no conditions will reasonably assure the safety of the community. Can the judge then order another detention hearing?

Mr. SANTARELLI. No.

Mr. BASKIR. Can you point in the bill to the provision which says that on the second go-around under section 3146, subsection (b), when the judge determines that there are no conditions which will reasonably assure the safety to the community, he cannot then call another hearing for detention for additional 60-day period.

Mr. SANTARELLI. The language on page 7 which referred to earlier at the expiration of 60 calendar days is meant to be singular in its application, and——

Mr. BASKIR. Well, at the bottom of page 6 it says "any person detained shall be treated in accordance with section 3146" as it will be amended, of course, upon the expiration of 60 calendar days of detention. When you go to section 3146, as amended, it seems you are back in the original posture. The judge determines which conditions other than financial will assure the safety of the community. Now, you have determined that no conditions will assure the safety of the community?

Mr. SANTARELLI. Right.

Mr. BASKIR. Then he may order a new detention hearing. The same evidence may be adduced the second time around. To repeat, if the judge determines on the basis of that second bail hearing that detention is required, he may then order a second detention proceeding. I am not sure from the discussion before the Deputy or from our discussion now, what prevents a second ride on the merry-go-round, to use the term used earlier.

Mr. SANTARELLI. Take a look at page 6 at page 6 at the bottom, any person detained shall be treated in accordance with section 3146 of this title.

Mr. BASKIR. That is right. And section 3146, as you would amend it, has an amendment to subparagraph (a), which includes the requirement of a determination of the question of dangerousness.

Mr. SANTARELLI. Look on page 3, line 10, 3146A. That is not 3146. 3146——

Mr. BASKIR. It is reenacted, with amendments.

Mr. SANTARELLI. Continued in the statute and will continue to read 3146.

Mr. BASKIR. When I say "A," I am talking about subparagraph (a) and subparagraph (a) as you have recommended it be amended.

Mr. SANTARELLI. Subparagraph (a) and subparagraph (b) appear only under the large black letters of line 10 of page 3 of 3146.

Mr. BASKIR. That is not correct. Let us go back again.

Your bill starts on the first page. Section 3146 is amended as follows, by inserting the words of subsection (a), "or the safety of any other person or community." In other words, in setting these conditions you would include consideration of both flight and safety.

Then you also, on page 2, if you will follow me, you further amend section 3146, in subsection (b), to read as follows, and you have certain provisions in there.

Mr. SANTARELLI. Right, correct.

Mr. BASKIR. Now, an individual coming up before the judge in the first instance is covered by section 3146 as you have amended it. The first question to determine is whether or not there are any conditions of release which will assure return or protect the community. That is in 3146, subparagraph (a), as you have amended it. If he determines under section 3146, subparagraph (b), as you have amended it, that there are no conditions which will reasonably assure the safety of the community, then he moves into new section 3146A, which is a preventive detention section.

What I am asking you is, if at the end of 60 days the man is returned under the bill and under the law, as you will amend it, can he not be moved into another detention hearing? You say no, and I would like to have for the record your showing where it provides that he cannot be subjected to a second detention hearing and a second 60-day detention order.

Mr. SANTARELLI. As I understand this, Mr. Baskir, if you will read on page 3, line 7 through 9, it indicates that line 10 is to be read as a new section following existing 3146 as amended in the first two and a half pages.

Mr. BASKIR. I understand that; yes.

Mr. SANTARELLI. And that when the statute, when our statute says on page 7, page 6, lines 23, 24, that he be returned, that defendant be treated in accordance with 3146, we do not mean 3146A where the only authority to enter a detention order exists.

Mr. BASKIR. Yes. If you will read 3146A, your new section, it says whenever judicial officer determines that no condition or combination of conditions of release will reasonably assure the safety of any other person or the community he may then move into a detention hearing.

Mr. SANTARELLI. Right.

Mr. BASKIR. Let us move back to section 3146, subparagraph (b), as you have amended it. It says in determining which conditions of release, if any—now, the words, "if any" suggest that there may be none—if in 3146 (b) the judge determines there are none, then your new section, 3146A, comes into operation. What I am suggesting is that if under section 3146 the judge determines the situation is no different on day 61 than on day 1, if the man is just as dangerous as before and if no conditions will assure the continued safety of the community, he is then directed by the United States Code as you have amended it to turn to section 3146A. That says if you find no conditions which will assure safety you may then go in detention hearing.

Mr. SANTARELLI. I followed you twice down that path, Mr. Baskir.

Mr. BASKIR. What breaks the train in the circle?

Mr. SANTARELLI. No. 1, we don't read it in the way in which you do.

Mr. BASKIR. It can be read in the way I read it even though you disagree.

Mr. SANTARELLI. That is not the intent of the statute, and if I am to resort to Mr. Kliendienst's language, we would welcome an opportunity to make that clear. The fact of the matter is when we drafted the proposal and expressed it as I have explained on page 6, we did not intend that there would be any possibility of the court to return to a detention proceeding after having detained the defendant 60 days.

The commonsense reading and commonsense explanation of our bill has been to the effect that will not be permitted.

Mr. BASKIR. You know in adversary proceedings there are no commonsense readings, they are adversary. Is this a reasonable interpretation of your bill? If it is, would you suggest an amendment to make sure that on day 61 there can only be——

Mr. SANTARELLI. I do not think it is reasonable, and we would agree to an amendment making it clear.

Mr. BASKIR. Okay, Fine.

Now, the list of things that the judge is to look at in determining whether or not there are any conditions of release is identical, if I recall, to the list which now exists in law, with one exception, and that is "past conduct."

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Character and mental condition, that may not be in the original law.

Mr. SANTARELLI. I thought we added another word, too, past conduct and——

Mr. BASKIR. My question really is directed to the phrase, "past conduct."

Mr. SANTARELLI. All right.

Mr. BASKIR. Now, the existing statute does discuss the record of convictions?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. It does discuss record of appearance before proceedings or flight, and things of tha nature?

Mr. SANTARELLI. Right.

Mr. BASKIR. What is meant by the phrase, "past conduct" in addition to the things which are already in the law which you would restate?

Mr. SANTARELLI. The plain language of what it says, past conduct.

Mr. BASKIR. This is past conduct in addition to records of convictions?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Does that mean records of arrests?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Does it mean his reputation in the community for being bawdy and boisterous?

Mr. SANTARRELLI. No, I don't think that is——

Mr. BASKIR. What does it mean? I don't think his reputation for past conduct is good.

Mr. SANTARELLI. Well, you have loaded the language.

Mr. BASKIR. I am sorry. Past conduct as you phrase it does not mean only convictions. Does is mean more than record of arrest?

Mr. SANTARELLI. Yes, it means conduct in general that can be adduced in an evidentiary proceeding in one manner or another.

Mr. BASKIR. What kind of conduct other than arrest records and convictions?

Mr. SANTARELLI. Any conduct that reflects on the likelihood of defendant's flight or conduct that reflects on the defendant's likelihood of dangerousness to the community. That may be conduct, for example, established by the defendant's wife or mother-in-law or brother or neighbor coming in and saying this guy behaves in the following fash-

ion: Every Saturday night he is drunk and he starts a fight, he has a knife, he has cut people in the past, but he has never been arrested.

That is the kind of evidence that might be valuable, similarly, another person situated in the community may say this defendant is frequently out of town, he travels a great deal, he has family and relatives in other parts of the country, he is a drifter. Past conduct of that nature sheds light to the court in determining whether he is likely to flee or whether he is likely to be a danger.

Mr. BASKIR. When you talk about character, that would permit discussions as to the kind of person he is over and beyond specific things like arrests or convictions?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. Well, if you want to use the word "reputation," by character, by what he is thought to be like in the community, can be shown to be like in the community, that may show something about what his future conduct will be with respect to safety?

Mr. SANTARELLI. Character is already a consideration in the 1966 act.

Mr. BASKIR. But the flight with respect to danger.

Mr. SANTARELLI. Character would be considered also in the dangerous category.

Mr. BASKIR. Okay. Fine.

Now, there are a variety of phrases in section 1A.

Mr. SANTARELLI. Mr. Baskir, I might remind you of my time. I am 10 minutes past——

Mr. BASKIR. Where do you have to be and when do you have to be there?

Mr. SANTARELLI. I have to be—I had to be on the House side at 1:30.

Mr. BASKIR. May I extend the same invitation that was apparently extended to the Deputy Attorney General?

Mr. SANTARELLI. Mr. Kleindienst?

Mr. BASKIR. Perhaps we can continue this at the time, not quite so close to lunch.

Mr. SANTARELLI. Do you have much more? What can I anticipate?

Mr. BASKIR. I am not sure I have very many more, but it seems these have engendered some discussion.

I was interested in particular the meaning of the phrase "to the extent practical" with respect to confinement in separate facilities. Does that turn on the existence of other facilities?

Mr. SANTARELLI. No, what our concern was—we know, as a matter of fact, that defendants prior to trial are now detained in facilities separate from those defendants who are, for example, convicted in the District of Columbia. Those facilities may be just different buildings in the same complex, but they are nevertheless separate.

Our concern was that there are occasions when mixes with a convicted person would be inevitable, such as in the transportation from the jail to the court house or the place of detention to the court house, such as in the cell block behind the courtroom. There are times I would think when, because of the reality of our criminal justice system, it would be impossible to keep the defendants separated at every moment, and so that we put an escape valve in the statute to allow the executive branch or administrative officials some latitude in their detention of the defendant.

But the clear manifestation of that is that he should be kept in separate facilities.

Mr. BASKIR. Now, section 3146B discusses a number of things applicable to the person detained. It says a person who is an addict—this is A, line "e"—may be ordered detained in custody under medical supervision. Is that medical confinement, would you say, in a hospital?

Mr. SANTARELLI. No.

Mr. BASKIR. Does it mean confinement in the jail facility?

Mr. SANTARELLI. Either the jail facility or detention facility, wherever the executive officials decide that their separated facilities will be. But under "medical supervision" means with exposure to medical treatment for whatever manifestations the defendant might have during that period of pretrial detention, withdrawal, acute reactions, comas, and the like.

For the reason that one has to consider that at the present state of the art is such that there can be no meaningful treatment of addiction in such a short period of time, we were very careful in analyzing this before we submitted it and checked with experts of all kinds on the subject of treatment, and they all assured us no meaningful treatment program could be meaningfully undertaken in 60 days.

Mr. BASKIR. The medical treatment is to assist the individual with withdrawal symptoms; is that correct?

Mr. SANTARELLI. And any other manifestation of addiction he may have that requires medical treatment or that ought to have medical treatment. It may be far more than withdrawal.

Mr. BASKIR. With respect to the question of addiction and the like, one of the offenses that will trigger off this detention hearing, there is on page 14, line 12, unlawful sale or distribution of narcotics as defined in the act of Congress.

One question raised was, does that include the use of marijuana.

Mr. SANTARELLI. No, it does not. For that matter, it does not include use of any drug, only rate of specified drugs.

Mr. BASKIR. It does not include the use of marihuana?

Mr. SANTARELLI. That is correct. Marihuana is not in the definition of the act itself.

Mr. BASKIR. As defined by any act of Congress as a narcotic or depressant or stimulant drug?

Mr. SANTARELLI. No.

Mr. BASKIR. Marihuana is not one of those classes, correct?

Mr. SANTARELLI. No, and may I say I have been asked that question, and to clarify it, maybe we ought to say so in the statute. But we did not include marihuana. We didn't add it because we thought that definition was adequate. We would offer it at this point if it would clarify——

Mr. BASKIR. This is the first instance this particular bill has undergone this kind of study, and it may very well require a certain amount—I am sorry, it may very well require some markup, and that is the purpose of this little session at the moment.

Mr. SANTARELLI. I would hope it would have some markup.

Mr. BASKIR. If an individual is charged with a felony as you have listed it on page 14 in the list of crimes and through new investigation the prosecutor's office decides that he should be charged with a different crime, not one of those listed, but equally serious, what would be the procedure? What would be the conditions of that decision?

Mr. SANTARELLI. After he had been detained?

Mr. BASKIR. Yes, sir.

Mr. SANTARELLI. We provide in here that the court—page 7, please, lines four and five—whenever judicial officer finds that subsequent events have eliminated the basis of such detention, it would permit the court——

Mr. BASKIR. Is this automatic procedure? What I am saying is, what are the mechanics?

Mr. SANTARELLI. It could be. we didn't specify mechanics. The bill authorizes the judge on his own to terminate detention.

Mr. BASKIR. How is that generated, obligated on the part of the prosecution, motion by defendant—how does it happen?

Mr. SANTARELLI. We did not spell out the machinery in the statute, as most of the machinery for the administration of justice is not spelled out in the statute. Presumably the court on its own could do so as clearly the indication of that language, presumably a prosecutor who is an officer of the court and representative of society, and certainly the Department of Justice, would be compelled in his obligation to inform the court of any change in the charge, or the defendant on his own could certainly call that to the attention of the court.

All those alternatives are left open.

Mr. BASKIR. On page three, line one, it says the person detained shall be afforded reasonable opportunity for private consultation with counsel.

Mr. SANTARELLI. Yes.

Mr. BASKIR. Is reasonable opportunity—is this a determination by the judge or by the detention facility authorities?

Mr. SANTARELLI. We didn't specify that because we would allow either to do so.

Mr. BASKIR. If the detention authorities decided it was not reasonable cause, then the attorneys appear and——

Mr. SANTARELLI. Then the court should certainly——

Mr. BASKIR. Then you would rely on application of the court to see——

Mr. SANTARELLI. Correct. Of a most informal nature, too. We left that wide open.

Mr. BASKIR. It is not specified. I assumed reasonable interpretation would be informal.

Mr. SANTARELLI. We didn't want to lock it up. If we locked it up with the judge then there would be no availability for correctional institutions to exercise their own wise discretion. On the other hand, if the correctional institution is unwise in its lack of discretion, the court can order it.

Mr. BASKIR. Now, that paragraph goes on to say:

"And for good cause shall be released in the custody of marshal or some other person."

Mr. SANTARELLI. Correct.

Mr. BASKIR. Now, here is a release where the release is not at the authority or discretion of the detention authorities, it must be before a judge?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. What would be required to be shown to the judge in order to secure release?

Mr. SANTARELLI. Whatever is good cause.

Mr. BASKIR. Would this be an adversary proceeding?

Mr. SANTARELLI. They are not as a rule now, nor under this bill, will they generally be adversary proceedings.

Mr. BASKIR. What I am asking is a question that has been asked—if the defendant's counsel comes and says, I need the defendant because I have to bring him over to Joe's Bar and Grill to identify some witnesses, and if it is an adversary proceeding or the prosecution is available, the prosecution will find out what they intend to do in the way of defense.

How could you solve that problem?

Mr. SANTARELLI. I think you have made an unreasonable assumption.

Mr. BASKIR. It is not a position of opposing, it is a matter of showing good cause to the judge. Does the prosecution get to see what the good cause is?

Mr. SANTARELLI. We have not specified that it must. We have left——

Mr. BASKIR. There you run to a danger—however large or small—of good cause being for the preparation of defense, and the prosecution finding, because he is there, because he is asked to be there or because he opposes release or because he sees the papers in the file, what the defendant was going to do during his release period.

Mr. SANTARELLI. That presumes that on the part of the prosecutor, and I don't think we can presume——

Mr. BASKIR. Was the intention of the bill not to have the prosecutor either know of or oppose application of good cause?

Mr. SANTARELLI. No, the intention of the bill is to leave such matters to the sound

discretion of the administration of justice, as worked out between courts and their officers, defense lawyers and prosecutors.

Mr. BASKIR. It is impossible in application for good cause proceeding, I assume, for the prosecutor to decide this man is using——

Mr. SANTARELLI. It is possible for the prosecutor to say anything he wants to, that "the sun is coming up in the north tomorrow, your honor."

Mr. BASKIR. Would that be a reasonable thing to oppose release on the grounds there is no good cause?

Mr. SANTARELLI. It might be reasonable for the prosecution to make whatever allegation or presentation to the court it wishes to. If you will allow——

Mr. BASKIR. It is not unreasonable for the prosecution——

Mr. SANTARELLI. If you will allow me to finish, Mr. Baskir, my answer—it is not unreasonable for the prosecution to make whatever allegation he chooses to consistent with his ethical duties and responsibilities as a representative of the executive branch and the people.

It is the function of the courts to pass judgment upon what is good cause. It is the function of the judge to determine whether the prosecutor's allegations that the defendant should not be released amount to sufficient persuasion that the defendant has not shown good cause to be released.

Mr. BASKIR. Let us return to the start of this question. My question is meant to determine what the intent of the legislation is. The question has been raised in hearings that the requirements of showing good cause for release for the purpose of preparing defense enables the prosecution to get an idea of what the man intends to use for his defense.

Now, what I am asking you is, does the bill permit it? If the bill permits it, but it should not, is it the intent of the bill that the prosecution should not know?

Mr. SANTARELLI. That cannot be answered in the abstract.

Mr. BASKIR. It is a question raised. Is it a true saying that the bill as interpreted permits the defense to be disclosed to the prosecution—would it be unreasonable?

Mr. SANTARELLI. I think it would be unreasonable.

Mr. BASKIR. Is it an unreasonable interpretation of the statute?

Mr. SANTARELLI. I think it would be unreasonable.

Mr. BASKIR. In other words, it is not the intent of the legislation to permit the prosecution to discover what good cause is if good cause has to do with the preparation of defense, because you do not intend the prosecution to know what the man is doing in the way of preparation of defense?

Mr. SANTARELLI. I think that stretches the point, Mr. Baskir.

Mr. BASKIR. I asked the question. I am trying to get an answer.

Mr. SANTARELLI. I have answered it as many ways as I can. There is nothing new here. Defendants presently make such requests for temporary release and prosecutors respond. No abuse is presently cited in this regard.

Mr. BASKER. The answer is, it is left to the discretion of the reasonable decision of the judge?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. It is possible for the prosecution to discover, it would not be unreasonable for a judge to let a prosecution discover?

Mr. SANTARELLI. I do not know what would be reasonable or unreasonable for a court in the abstract.

Mr. BASKIR. Is it your intent that it be unreasonable? What does the bill intend? Does the bill intend that the judge does want it or didn't you want it under your legislation, or do you leave it up to the judge and if the judge determines it is reasonable you are satisfied with that determination?

Mr. SANTARELLI. I believe the court, in the exercise of its wisdom, can judge what reasonable information the prosecutor needs to know to make whatever response the prosecutor needs to respond to the request for release.

Mr. BASKIR. And the intention of the legislation goes along with that decision?

Mr. SANTARELLI. That is right.

Mr. BASKIR. No money bond is permitted under your bill for the purpose of assuring the safety of another person or the community?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. This is on page 2, starting line 1. Is money bond still permitted in our bill on the grounds of flight as it is on existing law?

Mr. SANTARELLI. Yes.

Mr. BASKIR. Is it possible for a judge to determine that detention cannot be justified in the provisions of our bill or would not be upheld upon review because you cannot show the man is dangerous, but the detention is necessary nevertheless?

Mr. SANTARELLI. Necessary for what, flight or dangerousness?

Mr. BASKIR. Dangerousness, and so he can, as under existing law, impose a high money bond and say this is not for dangerousness because we have no detention here, this is for flight, nevertheless the man would be detained because he cannot raise it. Is that possible under your legislation?

Mr. SANTARELLI. Abuse is always possible.

Mr. BASKIR. Is that existing practice?

Mr. SANTARELLI. It seems to be the existing practice.

Mr. BASKIR. This is what the Deputy meant by the hypocrisy situation?

Mr. SANTARELLI. That is correct.

Mr. BASKIR. And this hypocritical operation can still go on under the bill as you would amend it?

Mr. SANTARELLI. Hypocrisy by courts may go on no matter what statutes we pass. What we have done is give the courts an alternative to make a dishonest practice an honest practice, open and reviewable.

Mr. BASKIR. You can eliminate that by prohibiting money bond not only for danger but flight as well. That would—is that possible? You didn't, but that is possible?

Mr. SANTARELLI. Anything is possible, Mr Baskir. We did not do that because it is the overwhelming opinion of people that we contacted, including Members of Congress who were not of our party, and people who have subsequently spoken with us at hearings in the House, that money bond continues to have a value under general suretyship concepts, under the theory for assuring specific performance; namely, return for trial.

Mr. BASKIR. Now, would you object—I will drop that.

At any rate——

Mr. SANTARELLI. Let me add for the record specific materials Mr. Kleindienst intended to submit. They consist of three cases in which the courts of different jurisdictions have expressed opinions that we think are relevant to a consideration of this issue of bail reform and pretrial detention.

Mr. BASKIR. The chairman has asked me to adjourn these hearings until tomorrow morning at 10:30 at room 2228.

(Whereupon, at 2 p.m., the subcommittee adjourned, to reconvene at 10:30 a.m., on Thursday, June 18, 1970, in room 2228.)

Mr. PROUTY. Mr. President, I yield back the remainder of my time.

Mr. TYDINGS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Maryland has 25 minutes remaining. The Senator from North Carolina has 21 minutes remaining.

Mr. TYDINGS. Mr. President, I yield 15 minutes to the distinguished senior Senator from Montana.

The PRESIDING OFFICER. The Senator from Montana is recognized for 15 minutes.

Mr. MANSFIELD. Mr. President, on a number of occasions the President of the United States referred to the fact that he had yet to receive one of his major recommendations on crime legislation covering the District of Columbia. The President was correct.

After today it is my hope that that statement will no longer be correct. If this conference report is agreed to it will be the first comprehensive measure dealing with crime in the District of Columbia placed on his desk. I hope it is signed most expeditiously.

Much has been said about the constitutional rights of individuals; much has been said about how we ought to consider the constitutional rights of society as a whole.

But there are many who ask about the constitutional rights of the raped. About the robbed. And what about the constitutional rights of the maimed? And the murdered? Or do they have any rights?

Mr. President, I know it is fundamental that an individual be presumed innocent until proven guilty. And I know that this is a most serious measure before us. Not being a lawyer, perhaps I am unable to distinguish fine constitutional points. But I have endeavored with all of my ability to face these constitutional points fairly and honestly and to decide them accordingly. If I am wrong in my decisions regarding this conference report no one is to blame but myself. In any case as on all issues of constitutionality the matter will be taken to the courts and a decision will be rendered accordingly.

Mr. President, there is much to be said in favor of the pending anticrime measure. No one, for example, has disputed the merit of the greater share of the law enforcement tools it provides. Revamping many parts of the local criminal code, the creation of a public defender agency, an enlarged District of Columbia bail agency, an expanded and more efficient Court system, are just a few of the features that hopefully will restore needed confidence in the crime-fighting capacities of the Nation's Capital.

Of course—as I have implied already—the measure is not without controversy. And the expressions, no-knock and pretrial detention characterize what most of that controversy has been all about. Nor can these provisions be treated lightly. If they are in fact unconstitutional—as is said by some—then eventually they will receive the same fate accorded any other law enacted by Congress that has similarly been ruled to fall outside the limits of the Constitution. They will be struck down by the high court. In the circumstances and to avoid such an adverse ruling by the Court, these provisions and the others similarly attacked deserve the Senate's and each Senator's most serious attention.

From a constitutional standpoint, the provision that appears most troublesome to me deals with the incarceration of criminal defendants before trial.

Recently, along with what was contained in the debate and the report, I

reviewed an article on this subject appearing in the Georgetown University Law Journal. Its author is Mr. J. Patrick Hickey, a member of the bar of the District of Columbia. In it the whole question of so-called pretrial detention is examined with the closest scrutiny. The many questions about permitting such a procedure are discussed with a great deal of understanding. As an alternative to detention, the author clearly would prefer a procedure that would provide any defendant posing a high risk of crime on bail, a trial that would take place far more expeditiously than is obtainable in today's clogged courts. By adopting the expeditious trial procedure, it is suggested, the whole matter of preventive detention may be avoided since the accused will have had his trial presumably before he is able to commit any crime while free on bail. I ask unanimous consent, Mr. President, that this very fine article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MANSFIELD. Mr. President, unfortunately, may I say, we are not today faced with a choice of alternatives. We must consider whether on balance the Constitution would allow what is termed the "pretrial detention" section of this particular bill. I am not a lawyer and there is no need to conceal the fact that I approach the resolution of close legal and constitutional questions with some hesitancy. As I said, I have read a great deal and what has most impressed me in reviewing this particular provision in this measure is the fact that there do appear to be sufficient safeguards.

For example, there is a guarantee of a due process hearing, a guarantee of right to counsel, a preliminary determination, the availability of an appeal with dispatch from any adverse ruling and an expedited trial provision which would provide that the defendant, if so detained under this provision, would have to be tried within 60 days. With these safeguards—and I may be wrong—I feel that any constitutional impediments of this provision have been overcome.

As for the no-knock provision of the bill, it seems clear to me that what the conferees have here achieved is a codification of what is recognized as existing law in many parts of this country. Further, it is a procedure that has been upheld by the Supreme Court in the case of Ker against California as being completely compatible with the fourth amendment. In all, about 30 States have provided such no-knock authority. It is available in my own State of Montana.

I am going to support this conference report. I am going to support it because upon examination, I am convinced that the provisions that have been here challenged have been safeguarded to the extent that they are not, in fact, constitutionally impaired. I am going to support it as well because the drastically rising crime rate, Mr. President, has been documented time and time again. To say it bluntly: crime stalks the streets of this Capital and it is imperative that every effort be employed to reduce its tragic consequences.

In this Chamber day in and day out we have talked a good deal about District crime. We have passed a great number of crime proposals. So it is about time that we put together a package that can be sent to the President and again demonstrate that on this issue, the record of this body is outstanding.

Certainly the bill before us does not represent a panacea for crime in the District of Columbia. But it does offer an approach that says to the criminal in terms that are clear and simple that this Nation and this city have committed themselves to an all-out fight against crime in any shape or form. In many ways this pending measure complements the Omnibus Crime Control and Safe Streets Act of 1968. There, the Congress began its all-out effort to assist local law enforcement agencies in the fight. The tools requested were granted. More are provided by the pending measure and more still remain to be provided. Surely we can provide more funds to localities to help them carry on more effectively the fight against crime. And we can make more of an effort and devote more of our resources to rooting out the causes of crime—a matter that has hardly been touched. Even further, we can enact the broad reforms that are so vitally needed in our prisons—institutions which serve today largely as criminal breeding grounds.

I must say, that I noted with some sense of pride the provision of this bill that would impose mandatory sentences in the case of those who choose to use a gun when committing acts of crime and violence. Patterned after the Mansfield gun-crime bill which passed the Senate last November 19, this provision would make the offender serve a separate and additional sentence for the mere act of using a gun. I am delighted that the conferees accepted this provision. I believe it will serve to deter the commission of gun crimes.

Before yielding the floor, I would only add that it would be helpful at this time to again set forth the Senate's outstanding record on anticrime proposals. The Senate has now passed all major crime proposals requested and supported by the administration with a single major exception and two minor exceptions which will be considered this session without fail. The major exception is the proposal that would extend the preventive detention procedure to all Federal courts—not just to the District of Columbia. With certain individual items combined into major bills, the list of these proposals—including the District of Columbia proposals—reads as follows:

Goldwater-Mansfield Anti-Obscene Mail amendment to the Postal Reform Act (H.R. 17923);

Organized Crime Control (S. 30);

Drug Bill (S. 2637, S. 3246).

District of Columbia Court Reorganization (S. 2601);

Public Defender, District of Columbia (S. 2602);

Criminal Law Revision, District of Columbia (S. 2869);

Juvenile Code, revision (S. 2981);

Omnibus Judgeship bill (S. 952);

Federal Immunity of Witnesses (S. 2122);

Sources of Evidence (S. 2292);

Corrupt Organizations Act (S. 1861);

Criminal Justice Act amendments (S. 1461);

Illegal Gambling Control (S. 2022);

Increase Penalties, Sherman Antitrust Act (S. 3036, Senate passage expected this session);

Wagering Tax Amendments (S. 1623, Senate passage expected this session).

Mr. President, I urge as strongly as possible that the Senate complete action on this particular conference report, that the conference report be agreed to and that it be sent to the President. I hope this marks only the precursor of other major steps that will be taken; a precursor of other conference reports which will be forthcoming on this vital question in this session.

EXHIBIT 1

PREVENTIVE DETENTION

(By Patrick Hickey*)

The idea that persons accused of crime should be at liberty until a judicial determination of guilt has its roots deep in the history of the English common law.[1] Freedom, however, was conditioned by requiring that bail be posted in order to guarantee the accused's presence at trial.[2] In the United States, the Judiciary Act of 1789 affirmed this right to pretrial release on bail,[3] and the rationale for withholding the right to capital cases was that no bail would be adequate to insure the accused would appear at trial.[4] Furthermore, within days of the Judiciary Act's passage, Congress proposed the eighth amendment with its prohibition against excessive bail.[5] This guarantee has been interpreted to mean that bail not "reasonably calculated" to secure the appearance of an accused is by the fact alone "excessive" within the meaning of the amendment.[6]

Although the role of bail in the criminal justice system seems clearly established as a deterrent to the flight of an accused, it is equally clear that bail was and is used frequently to meet another assumed need of the system—protection of the community from a defendant during the time it takes the system to operate. This use of bail has been implemented tacitly through the disingenuous device of requiring money bail in an amount beyond the means of the accused,[7] on the ground that a high risk of flight demands such an amount.[8] With the defendant's incarceration thereby assured, both the presence of a "subject" upon which the criminal system can operate and the interim safety of the community from further criminal acts by that particular defendant are guaranteed.

In recent years, the risk of flight has ceased to furnish a realistic justification for most pretrial incarceration, having fallen victim to gradual changes in society, indisputable facts obtained in experimental programs, and the revolutionary Bail Reform Act of 1966.[9] Persons intimately involved with the operation of the criminal justice system became aware that even in a substantial amount, a surety bond affords a defendant scant motivation to appear, since it is nearly always posted by a professional bondsman whose fee—defendant's only personal investment—is not returned, regardless of whether the defendant appears or flees.[10] Furthermore, instances of successful flight to avoid prosecution have become less common with improvements in law enforcement, communications, and identification techniques and facilities.[11] Additonally, studies conducted by

Footnotes at end of article.

the Manhattan Bail Project[12] and by the District of Columbia Bail Project[13] have effectively demonstrated that the chance of flight is a tolerable risk. With speedy verification of certain basic facts about an accused,[14] reasonable assurance that he will appear at trial can be obtained by requiring in some cases nothing more than his personal bond to do so. As the cry for reform of the bail system became more strident, Congress' concern heightened, culminating in passage of the Bail Reform Act of 1966.

Nevertheless, efforts to deal with the problems of the bail system were undertaken in light of its traditional function—prevention of flight. No substantial attempts were made in either the Manhattan or District of Columbia experiments to evaluate the likelihood of additional crimes being committed by persons free on pretrial release.[15] Moreover, while Congress recognized that pretrial detention in order to prevent a person from committing crime while on bail was not unrelated to the topic of bail reform, it expressly disclaimed any attempt to deal with the matter in the Bail Reform Act of 1966.[16]

The time for facing this question, however, apparently has arrived. In early 1969, hearings were held before the Subcommittee on Constitutional Rights of the Senate Judiciary Committee[17] and in October 1969, before a House Judiciary subcommittee[18] to consider proposed amendments to the Bail Reform Act. Meanwhile, the Administration has endorsed preventive detention and introduced in both Houses legislation embodying the concept.[19] Because of the currently intense interest in the issues of "crime on bail" and "preventive detention,"[20] this article attempts to treat in detail certain basic aspects of these issues and to evaluate some of the legislation pending before Congress in light of that treatment. Specifically, inquiry is made into (1) whether crime on bail should be treated as a separate type of crime; (2) the proper definition, incidence of occurrence, and predictability of crime on bail; and (3) the appropriateness of preventive detension as a means to combat crime on bail.[21]

ARREST AS A SEGREGATING PRINCIPLE

In an effort to combat a spiraling rate of crime, both the Government and interested citizens have assumed that offenses committed by persons on bail constitute a separate class of crime with attendant peculiarities calling for special remedial measures. In the context of preventive detention, arrest serves as the identifying characteristic common to all crime on bail. Thus, the initial issue must be whether the occurrence of an arrest should be one decisive factor in determining whether preventive detention may be imposed.

Under the Administration's preventive detention scheme, the occurrence of an arrest has both legal and factual significance.[22] Legally, arrest is the crux of the proposal, since it is the only factor with legal significance separating those persons to whom preventive detention may be applied from other persons at least equally dangerous to the community or from the most law-abiding citizens, who are not subject to the detention procedure.[23] Factually, it is significant because it is used to establish a past act from which to predict a future crime.

The significance of arrest

Legal Significance.—Traditionally, the legal purpose of arrest has been to bring an accused into the criminal justice system in order to answer the charges preferred against him.[24] To achieve this end, taking the subject into custody generally has been thought necessary.[25] Because an arrest involves at least a temporary restraint on one's liberty[26] and because innocent people sometimes are arrested, it is necessary to determine whether arrest is a sound jurisdictional basis for a system of preventive detention. The need to make such a determination, however, does not imply that the legal relationship between the State and one of its citizens is not changed by the occurrence of an arrest. Indeed, the legal consequences flowing from an arrest are already substantial and even when the person arrested is ultimately acquitted, may have a disastrous impact upon his life. A citizen may be seized with such reasonable force as is necessary to effectuate the arrest[27] and if he flees, may even be "executed" by the arresting officer, whether suspected of a capital offense or not.[28] He also receives an arrest record[29] and may be fingerprinted and photographed,[30] the results of which remain indefinitely in the police files.[31] He therefore suffers the accompanying and not insubstantial risk that his "mugshot" will be shown to future victims of crime as a possible culprit.[32] He likewise may be searched by the police[33] and required to submit to various identification procedures.[34] Furthermore, the practical prejudice which may flow from an arrest, although not a legal consequence, cannot be ignored.[35]

The substantial protections with which the law has attempted to circumscribe the arrest power bear witness to its potentially ruinous effects on the lives of citizens subjected to its use. An arrest can be made only when there is probable cause to believe that a felony has been committed[36] or when a misdemeanor has been committed in the presence of the arresting officer.[37] When prior judicial authorization is practical, it is strongly encouraged,[38] and a prompt presentment before a committing magistrate, to determine if there is in fact probable cause to warrant further proceedings, is required.[39] Moreover, a person is permitted to resist an illegal arrest, and the officer attempting to carry it out does so at his peril.[40]

To further deter illegal arrests, the use of even the most trustworthy evidence of guilt, if obtained as a result of such an arrest, is denied to the prosecution, although acquittal of an obviously guilty defendant may result.[41] Even if an arrest is technically legal, the existence of an improper motive on the part of the arresting officer will result in the exclusion of evidence so obtained.[42]

Thus, although interference with a citizen's liberty is tolerated, every effort is made to minimize it, and even limited restrictions on freedom of movement must be supported by a strong showing of need.[43] The need to determine, through a criminal trial, whether laws have been violated justifies this interference, and once guilt has been established, punishment of the offender and prevention of future crimes may also warrant deprivation of liberty. If a principle can be drawn from the historical development of the arrest power and the present structure of the criminal justice system, it is that the right to liberty must be removed by a finding of guilt before society will accept incarceration of a citizen, presumably capable of responding to the law's commands, to prevent future crimes.[44]

There are, of course, many instances in which confinement may follow an arrest without a subsequent trial. Some obvious examples include detention of persons incompetent to stand trial,[45] commitment under some sexual psychopath[46] and hospitalization of the mentally ill statutes,[47] and confinement upon being found not guilty by reason of insanity.[48] The mental condition of such persons makes it unfair to adjudge them criminals, but society requires protection from their potential future acts. An equally important goal of such confinement, however, as the cases involving the "right to treatment" make clear, is therapy.[49] The arrests of such persons, although frequenty the first step in the confinement process, is illegally immaterial as a basis for that confinement and does not justify a curtailment of protective procedures. As one court has held, "[t]he procedure for committing an accused by unconvicted felon [to a mental institution] should contain safeguards at least equivalent to those provided in the procedures for civil commitment."[50] Even during the customary 60-day period for a competency examination in the District of Columbia,[51] the court of appeals has directed that the examination be conducted on an outpatient basis, unless the hospital makes a showing that inpatient observation is necessary.[52] Likewise, a mentally competent person may be confined for a lengthy period without conviction by setting unattainable pretrial release conditons or, in capital cases, by denying release altogether. In these cases the ostensible purpose of such detention is to insure the presence of defendant at trial.[53]

Thus, preventive detention, in its adoption of the arrest as the segregating juridical principle, breaks new ground in two areas: the purpose of the confinement is neither therapeutic nor necessary to the operation of the criminal justice system,[54] and the persons to be subjected to it suffer from no mental abnormality that would distinguish them from other citizens.[55] While the novelty of the principle does not make it per se undesirable, claims of its proponents that preventive detention has an honorable ancestry under our law[56] are at best inaccurate.

Factual Significance.—The arrest of a citizen may also have a factual significance, which increases with the tendency of the public and some officials associated with the criminal justice system to equate arrest with the commission of the acts charged.[57] Although many of the protective rules surrounding the exercise of the arrest power operate to strengthen the factual validity of an arrest,[58] it is important to recognize that such rules are not intended to establish facts as a predicate for punishment.

Quite obviously, the reason for this is that an arrest is not currently viewed as a final factual determination that the person arrested committed the offense charged. Such a finding of guilt is left to ensuing stages of the criminal justice system, specifically to the criminal trial, at which the facts are determined by a jury of citizens and the law by an independent judge. Even with the myriad procedural rights afforded a defendant as he moves through the criminal process, sufficient doubt remains that a substantial program of appellate and collateral remedies is maintained in order to confirm the accuracy and fairness of the procedures utilized. At present, there is no available data to establish with any degree of certainty whether or not most arrests are proper.[59] Nevertheless, although not admitted by its advocates, legislation embodying the concept of preventive detention would make arrest a critical factual stage in the process of determining whether to impose such detention.

The factual significance of arrest in a scheme of preventive detention seems to be its value in predicting future harmful conduct. Specifically, the occurrence of an arrest constitutes some evidence that the accused did a particular act in violation of the law, and since he did it on one occasion, he may do it again.[60] Admittedly, preventive detention proposals do not limit the basis of this prediction to the factual probability "established" by an arrest. A finding must also be made that no conditions of release will adequately assure the safety of the community.[61] It is hard to discern in this finding, however, anything more than a judge's guess that a particular defendant will commit another prohibited act in the future.[62] In some proposed detention classes there is the further requirement of a prior conviction for a similar crime,[63] thus suggesting that a similar earlier act provides additional support for the prediction of future acts.

Also required in order to detain certain classes of arrested persons is a finding that

Footnotes at end of article.

"there is a substantial probability that the person committed the offense for which he is present before the judicial officer." [64] One reason for this requirement is that it serves as an added check on the validity of an arrest—another screening process to rectify police errors. As a predictive basis, however, it is not at all clear that the most recent act is so significant that it should be singled out for searching inquiry.[65] Notwithstanding, the Attorney General has explained that this finding is "critical" not only as the "best possible evidence" of future dangerousness,[66] but also to insure that persons detained are those likely to be convicted.[67] The distressing inference from the latter rationale is that since only criminals would be subjected to preventive detention, the inequities and vagaries of the prediction are less important.

Arrest as an indicator of guilt

As is apparent, the use of an arrest as a critical factor in a preventive detention system raises several substantial questions; one of these is the extent to which an arrest for a particular crime indicates that the person arrested actually committed that crime. In this regard, available information casts substantial doubt on the validity of equating an arrest for a crime with proof that the crime was committed. For example, a major reduction in the number of persons retained in the criminal justice system occurs as charges are processed through the various stages from arrest to trial. The President's Crime Commission noted 467,000 arrests for serious crimes in 1965, but only 160,000 convictions for such offenses.[68] While there are many factors contributing to this reduction, including prosecutorial discertion, inadequate manpower to investigate and prosecute cases, and plea bargaining, it is a reasonable assumption that a substantial portion of the original arrests were in fact erroneous. If this is not the case, it might be better to inquire why so many are escaping justice after being brought into the system. Even when convictions for lesser offenses are taken into consideration, there is a marked disparity between the number of arrests and the number of subsequent convictions. Thus, only 33 percent of the arrests for burglary in 1965 resulted in a conviction of either the crime charged or a lesser offense; [69] for homicide charges, the figure was only 39 percent.[70] Moreover, the group of persons charged by the prosecutor consisted of approximately 70 to 80 percent of those arrested, and the conviction rate of those charged varied from less than 30 percent to greater than 60 percent.[71] Similarly, the D.C. Crime Commission reported that of 6,266 adult felony arrests in 1965, only 981 convictions were secured in the district court.[72] Even if one assumes that the felony cases then pending would all result in convictions, the total (1221) constitutes less than 20 percent of the total number of adult felony arrests.[73]

In addition, policemen are recognized to be under some pressure to "clear" offenses by means of arrests.[74] Moreover, the excitement and tension of the situations in which policemen frequently must operate, as well as the need for quick action, are hardly conducive to accurate fact-finding.[75] Under such circumstances, it would seem undesirable to place the added burden upon police officers that they treat the arrest of a citizen as a factual determination of guilt.[76] Moreover, arrests at times are made without regard to law violation, such as for "cooling-off" a potentially explosive situation, the safety of the arrested person himself, and the quick establishment of innocence by a lineup or other identification procedure.[77] Although imprecise, these statistics and considerations, without more, make reliance upon an arrest as the basis for establishing a reasonable certitude of guilt extremely questionable.

CRIME ON BAIL

Since the notion of preventive detention involves a substantial deviation from the usual processes of the criminal justice system, two interrelated premises must be clearly established before deciding that the deviation is warranted: (1) that the amount of crime on bail requires special measures of this nature; and (2) that the potential bail offender can be identified in advance with a sufficient degree of accuracy to make these special measures acceptable. The first premise admittedly raises the question of what incidence of crime on bail would warrant preventive detention. There is obviously no correct answer, but if the extent of such crime is "significant," a deference to legislative judgment would seem appropriate. The second premise is a practical correlative of the first; the size of the needle in the haystack may be determinative of the probability of locating and identifying it.

Defining crime on bail

In evaluating the extent to which crime is committed by persons released on bail, there are certain definitional issues that must be resolved. In the abstract, one coud say that crime on bail means any violation of the law perpetrated during the period of time in which a person who has been arrested is on release from custody with an earlier charge against him still pending in the trial or appellate courts. For crime prevention purposes, however, such a definition is too broad, because it encompasses persons with substantially different legal statuses and offenses with varying impacts upon society. A closer examination of what for purposes of a preventive detention scheme is meant by crime on bail should include an evaluation of the stage of the criminal process at which a person becomes potentially subject to detention, the original charge against him, and the bail offense or offenses sought to be prevented.

The Stage of the Criminal Proceeding.—Although for purposes of analysis potential bail offenders can be separated into three groups based upon the stage of their progress within the criminal justice system, the main focus of the preventive detention debate is upon persons awaiting trial, rather than upon those persons whose trials are in progress or convicted defendants seeking release pending appeal. Once a defendant has been found guilty, both reason and history support a different evaluation of his right to liberty.[78] Imperfect as the system may be, reversals on appeal are the exception rather than the rule,[79] and the sufficiency of the evidence and fairness of the trial procedures are generally deemed adequate.

With regard to a defendant presently on trial, the possibility of interference with the orderly functioning of the judicial process by activities such as witness intimidation or bribery has led the courts to recognize an inherent power to revoke bail and incarcerate for the duration of the trial.[80] Since this power is available for trials already in progress [81] and since the group of defendants affected is not numerically significant in assessing the amount of crime on bail, the need for special legislative treatment is obviated.[82] The relevant group of defendants, therefore, for measuring the amount of crime on bail is limited to those persons awaiting trial.

The Nature of the Original Charge.—If the purpose of preventive detention is to protect society by incarcerating those likely to commit crimes on bail, logically the particular crime for which a defendant is originally charged and for which bail is set bears little relevance to the determination of which individuals should be detained. Society has an equal interest in being protected from the homicide committed by a person awaiting trial for disorderly conduct as it does from a killer-to-be initially charged with robbery. Nevertheless, under the preventive detention schemes proposed, the charge for which a defendant is arrested is made to serve a factual function.[83] An arrest for robbery is taken as some evidence that the defendant committed the act charged, and commission of that act is thought to increase the likelihood of repetition. Assuming the validity of this analysis, preventive detent should be limited to those charges similar to the crimes sought to be prevented.

The Bail Offenses To Be Prevented.—Because the untested remedy of preventive detention deprives a citizen of his liberty on the basis of an uncommitted act, it appropriately should be used, if at all, to prevent only the most serious offenses—those involving violence to the person of the victim. Under this application the definition of crime on bail would be limited to offenses such as robbery, assault, rape, and homicide, and would not include property offenses such as larceny and forgery. Another justification for this limitation is the existence of alternative remedies to rectify injuries to property. Stolen goods can be recovered and returned,[84] insurance protection is available,[85] and in the event of conviction restitution can be ordered as a condition of probation.[86]

Other minor offenses, for which only minimal penalties are imposed, also should be excluded from the group of crimes sought to be prevented by pretrial detention. It would be patently unreasonable to justify detaining a man for months in order to prevent an offense which if committed, customarily would result in a lesser penalty; [87] nor would detention seem appropriate to prevent certain "status" offenses or "crimes without victims," since the need to protect society is less clear, and the interest to be protected less substantial.[88] Thus, vagrancy offenses should not be the type of "crime on bail" sought to be prevented. Similarly, certain gambling offenses and offenses related to private sexual behavior, for which the appropriateness of applying criminal sanctions is in itself questionable, should be exempted.

In sum, crime on bail, as it should be conceived in discussing preventive detention, would be limited to those serious offenses involving personal violence committed while a person is on pretrial release for a similar crime. With this understanding, it is appropriate to inquire as to what information is available concerning the extent of crime on bail as thus defined.

The amount of crime on bail

In 1967, the President's Crime Commission concluded that "the United States is today, in the era of the high speed computer, trying to keep track of crime and criminals with a system that was less than adequate in the days of the horse and buggy." [89] The absence of accurate factual information becomes graphically evident when attempting to assess the amount of crime on bail. Initially, it would be desirable to know at least the number and types of crimes committed by persons on bail; since, however, there is no conclusive evidence of the amount or type of crime on bail,[90] it is necessary to rely on arrest and indictment figures as an indication of the scope of the problem.

Although last year the Hart Committee noted that "estimates of crime allegedly committed while on bail range *from 6% to 70%*," [91] these figures at best reflect the statistical uncertainty of the amount of crime on bail. Giving support to the lower percentage, the D.C. Crime Commission found that only 7.5 percent of those felony defendants released on trial or appeal bonds between January 1, 1963, and October 8, 1965, were rearrested and held for grand jury action on other felony charges allegedly committed while on bail.[92] The percentage of the same group charged with crimes of violence while on bail was 4.5 percent.[93] The Hart Commit-

tee, limiting its figures to pretrial release, reported that of the more than 2,500 persons indicted in the District of Columbia in 1968, 153 (5.9 percent) were reindicted for offenses committed while on bail.[94]

Thus, while certainty is unattainable, present indications are that the total number of felony defendants indicted for other felonies allegedly committed on pretrial release is less than 10 percent of all accused felons on pretrial release. Furthermore, the number of defendants charged with and convicted of violent crimes on bail, whatever the nature of the original felony charge, is probably only about three to five percent. Although the amount of crime on bail that would continue to exist if less stringent recommendations were effected is a highly pertinent question, it is presently unanswerable.

Proponents of preventive detention have taken varying positions on the importance of present statistical evidence of the amount of crime on bail. Both the District of Columbia Crime Commission [95] and the Hart Committee [96] attempted to evaluate the amount of crime on bail in order to support their recommendations for preventive detention, and the Senate Hearings in January 1969, discussed various statistics at length.[97] In August 1969, an administration spokesman, responding to an editorial challenge to the need for preventive detention,[98] relied on both a statistical study indicating that 70 percent of robbery defendants granted pretrial release were rearrested for other offenses allegedly committed while on bond [99] and FBI figures showing that crime in general is committed by recidivists.[100] The accuracy and validity of the former study has been severely criticized as equating arrest with commission of the offense and failing to distinguish the types of bail offenses.[101] The latter information does not appear relevant to crime on bail and seems to suggest that a basic argument in support of preventive detention should be that there is simply too much crime. Although there is no denying that the amount of crime in general is increasing, such an argument avoids the question of whether crime on bail warrants specific and unusual preventive measures.

The latest statement of the Administration's position recognizes that statistics on bail crime are "fragmentary," but relies on estimates of extensive amounts of unreported and unsolved crimes to explain the absence of reliable statistics.[102] The conclusion reached is that "the problem is, by any standard, a serious one." [103] Thus, while initially conceding the relevance of an inquiry into the amount of crime on bail, advocates of preventive detention have now despaired of making a strong statistical case to support their claim of an epidemic of bail crime, and have placed their reliance on the alarming growth rate of crime in general.[104]

Identifying the bail offender

Once the policy decision has been made that preventive detention should be imposed but limited in application to certain serious offenses, the next area of inquiry is the possibility and probability of identifying in advance those persons who, if released on bail, would commit the crimes sought to be prevented. Unless society is willing to tolerate the imprisonment of large numbers of defendants on a random or statistical basis,[105] it is necessary to identify those individuals for whom a judgment can be made that the probability of committing an offense while on bail is so strong that the opportunity to do so must be removed by incarceration. Moreover, in order to instill respect for the fairness and integrity of the criminal justice system, a high degree of accuracy in this prediction must be demanded. To further depersonalize a system already resembling an assembly line would exacerbate the dissatisfaction with the administration of law felt by many citizens.[106] Thus, any decision to enact a scheme of preventive detention must be founded upon a demonstrated ability to predict specific types of future criminal activity, particularly since the person potentially affected has not been convicted of the charge against him, and in the case of a "dangerous crime," [107] may be subject to detention based only upon a policeman's decision to arrest and a hearing that leaves much to be desired.

There is also another reason why the committing magistrate's ability to predict serious crime on bail should be evidenced before implementing a policy of preventive detention. Since preventive detention in operation is a "self-fulfilling prophecy," once in effect it would be impossible to know whether an incarcerated defendant would in fact have committed a serious offense had he been granted pretrial release.[108] It does not take an oracle to predict that the amount of crime on bail will decrease if fewer defendants are released, and such "proof" of preventive detention's effectiveness in reducing crime could lead to proposals for its expanded use.[109]

Even if it can be demonstrated that potential bail offenders are identifiable, it is still necessary to determine the degree of accuracy that should be demanded.[110] Resolution of this issue turns on a variety of value judgments, involving the balance between liberty of the individual and the need for public safety, the cost of detention, the burden upon courts of making detention decisions, and the effect of detention decisions upon subsequent trials and sentences.[111] Nevertheless, the difficult question of the degree of accuracy required is reached only if there is some substantial ability to predict, and such an ability is not only undemonstrated, but instinct with perhaps unsolvable problems.[112]

Predicting that a person will commit crime on bail is further complicated by the requirement of finding that no conditions of release will "reasonably assure the safety of any other person or the community." [113] A similar test is applied currently under the Bail Reform Act for release in capital cases and cases pending appeal,[114] but the Act's broad grant of authority to the court to set release conditions [115] requires a highly speculative inquiry into the etiology of a particular crime before such a finding can validly be made. Thus, if financial motives appear to underlie a defendant's criminal offenses, a release condition requiring him to obtain and maintain steady employment may reduce the likelihood of crime on bail and danger to the community. Because of the subjective nature of the inquiry and the many intangible factors involved, it is difficult to determine what other circumstances the court should consider, such as, for example, the likelihood of a financial crisis in defendant's family as might be caused by unexpected hospitalization expenses or the availability and efficacy of counseling services for a defendant whose offenses are in part the result of psychological problems. Even for the class of persons generally considered the most predictable recidivists—narcotics addicts who commit crimes to support their addiction—the encouraging results of methadone maintenance programs suggest a possible way to break the cycle of recidivous behavior.

Notwithstanding the difficulty and subjectivity of such inquiries, which must be made under present law in assessing the danger posed by defendants in capital cases and cases pending appeal, it is not contended that the likelihood of an accurate prediction is so faint and the prediction should not be permitted. Rather, it is suggested that such speculative predictions, while tolerable when restricted to postconviction release and perhaps to release of defendants charged with capital offenses, are not sufficiently accurate to justify incarceration without conviction under less extreme circumstances.

Moreover, even when investigations have been conducted to determine the ability to predict future violence, the results have been inconclusive. To date, such investigations generally have been in connection with sentencing and parole determinations,[116] in which statistical tabulations, psychological testing, presentence reports, and psychiatric interviews are utilized.[117] Despite ready access to such information, most of which would be unavailable at a detention hearing held at the outset of a prosecution, many authorities on parole and sentencing still disclaim any ability to make a prediction of future violence.[118] Similar disclaimers can be found in the testimony of persons who have studied the crime on bail problem.[119]

Although one might expect advocates of preventive detention to proffer vigorous claims and statistics in support of the purported ability of judges to predict future criminal activity, such is not the case. Furthermore, those claims that are made amount to either unsupported hopes that such predictions can be made [120] or arguments that because predictions are made in administering other aspects of criminal justice, there is no reason not to rely on them in imposing preventive detention, particularly since procedural protections are afforded.[121] More important than the absence of claims, however, is the absence of any proof that a judge can identify those individuals who will commit crime on bail.[122] In addition, no attempt to test this ability has been made, although such tests could be administered without serious difficulty. For example, although utilizing the likelihood of flight standard in determining whether to grant pretrial release, bail-setting magistrates could be asked to indicate on a form those defendants they would have detained in order to prevent bail offenses, the basis for their determination, and any additional information thought necessary or desirable to make such a decision. For those persons released, a followup study would determine the existence and disposition of bail offense charges.[123] Given the ease with which the predictive ability of judges can be tested, it is unreasonable to abandon such a central issue of preventive detention proposals to speculation.

Appeal to the existence of other predictive decisions in the administration of criminal justice is similarly unpersuasive. Parole boards, sentencing judges, and courts setting appeal bonds deal with convicted defendants who no longer have a right to liberty,[124] and authough judges predicting pretrial flight are not dealing with persons already convicted,[125] pretrial incarceration to prevent flight is nearly to the point of being prohibited.[126] Even when detention does result from a prediction of flight, its purpose and justification are to insure defendant's presence at trial, a demonstrably important element in the administration of justice.[127] Embarking upon a system of preventive detention would constitute a significant departure from traditional concepts of criminal justice. To do so when the need is unclear would be precipitous; to do so without any showing that those persons for whom it is designed can be accurately identified would be tragic.

THE ADMINISTRATIVE BILL

Previous legislative proposals

Even before passage of the Bail Reform Act, suggestions for a preventive detention system were being discussed.[128] The D.C. Crime Commission recommended legislation authorizing 30-day detention for any felony who evidenced "a high degree of probability" that if released, he would seriously injure another or be a "grave menace to the physical safety of the public." [129] Likewise, a committee of the American Bar Association, as

Footnotes at end of article.

part of a project to develop minimum standards for criminal justice, considered, but subsequently rejected, a tentative preventive detention proposal.[130]

Under the proposal considered by the ABA committee, imposition of preventive detention for a 30-day period would have been authorized with respect to a defendant charged with (1) a felony committed on bond; (2) a felony involving infliction of or threat to inflict serious bodily harm; (3) any felony if the defendant had been convicted within the preceding five years for a violent felony; and (4) any felony if a "high degree of probability" were found that if released, defendant would inflict or threaten to inflict serious bodily harm in order to intimidate witnesses.[131] An evidentiary hearing also would have been required, at which the burden would be on the prosecution to show the need for detention by "clear and convincing evidence." [132] Furthermore, to deal with the difficulties of predicting violence and to minimize potential abuse, the proposals required that in all cases the court additionally find a "high degree of probability that the defendant, if released, would inflict serious bodily harm on another." [133] Thus, a clear and definite standard was set forth, focusing the magistrate's attention on the particular prediction he was asked to make, and the policy decision of which varieties of danger would justify use of detention was resolved in the proposed statute itself.

The ABA committee, however, in rejecting the concept of preventive detention, recognized both the lack of information concerning the extent of crime on bail and, notwithstanding the clear standard to be applied, the difficulties in predicting criminal behavior during the release period.[134] These inherent problems recognized by the ABA can serve as guidelines for an evaluation of the bills introduced on behalf of the Administration to establish a preventive detention program.

Senate Bill 2600

Classes of Defendants Eligible for Detention.—Senate bill 2600,[135] embodying the Administration's preventive detention proposal, establishes three basic classes eligible for detention: those charged with a "dangerous crime," those charged with a "crime of violence," and those who attempt to intimidate witnesses or jurors.[136] Once a person is found to be included in one of these classes and upon determinations that there is substantial probability he committed the offense and that no release conditions will assure the safety of other persons or the community, detention must be imposed.[137]

With regard to "dangerous crime," the Justice Department claims that the class is "restrictively defined to cover offenses with high risk of additional public danger if the defendant is released." [138] Nevertheless, for defendants falling within this class, neither a prior conviction nor an arrest for other violent acts is required in order to impose pretrial detention.[139] The "high risk" offenses included within this category are robbery and attempted robbery, in which force or threats are involved; burglary and attempted burglary of residences or business premises; arson and attempted arson of residences or business premises; rape, carnal knowledge; and assault with intent to commit either; taking and attempting to take indecent liberties with minors; and felonies charging sale or distribution of narcotic, depressant, or stimulant drugs.[140]

Implicit in the Administration's proposal to impose preventive detention upon those persons charged with a "dangerous crime" is the clear use of an arrest as a factual basis for predicting future violence. One might expect, therefore, a strong showing that persons charged with such offenses commit serious and violent crimes on bail. The claim made, however, is much more modest: "There is . . . some evidence that the recidivision rate among robbers and perhaps burglars is markedly higher than in other categories of crimes." [141] In addition to offering no evidence with regard to the other crimes categorized as "dangerous," by making general reference to a higher recidivisim rate such claim indicates nothing about the offense precipitating the subsequent arrest or indictment. While some meaningful limitation has been imposed upon the definition of "dangerous crimes" by eliminating the pickpocket version of robberies, some of the other "limitations" can be classified only as trivial. For example, arson is limited by exclusion of the burning of crops, fences, woods, and haystacks; [142] burglary, which is "limited" to residences and commercial establishments, presumably excludes entry into stables, steamboats, canalboats, vessels or other watercraft, and railroad cars.[143]

Furthermore, those offenses included in the class of dangerous crimes do not in themselves constitute "proof" that the persons accused would present a high risk of violence if released on bail. Burglars make every effort to enter premises when they are unoccupied. Residential burglaries nearly always occur during the daytime, and burglaries of commercial establishments generally take place at night.[144] A survey of 855 of the 904 housebreakings reported in the District of Columbia during a one-month period in 1965 revealed that only 10 homes were occupied at the time of the offense.[145] A similar survey disclosed that carnal knowledge—intercourse with victims under sixteen—was nonforcible in more than half of the cases examined.[146] With regard to drug offenders, merely witnessing "street-corner addict-pushers," who constitute the vast number of narcotics offenders prosecuted in the District of Columbia, should suggest that more substantial support is needed than conclusory generalizations of their high risk of violence.[147] It is insufficient to say "the tie between narcotics and crime is widely recognized" and "[t]hose persons involved in the sale of . . . drugs are often highly organized and can generally be considered dangerous criminals." [148]

The second group eligible for detention, those charged with "crimes of violence," can be detained only if the alleged offense was committee while on bail, parole, or probation and the prior charge was also a crime of violence; if defendant has been convicted of a crime of violence within the preceding 10 years; or if defendant is a drug addict.[149] "Crime of violence" is broadly defined to include such offenses as robbery, burglary, arson, rape, carnal knowledge, homicide, assault with intent to commit any offense, and felonious attempts to commit the aforementioned.[150] The explanation that accompanies the Administration's bill describes the category of violent crimes as one "firmly tied to past conduct justifying a generalized inference of future dangerousness." [151] Neither support for the "generalized inference" nor a definition of the "future dangerousness," however, are indicated.

Detention of the third group—those who threaten witnesses or jurors—is justified as a codification of existing case law.[152] Since it is a crime itself to threaten witnesses and may result in prosecution for obstruction of justice,[153] detention of such offenders is arguably unnecessary. Nevertheless, the reason for the abandonment of the usual procedure of arrest and prosecution for this offense is not explained. Additionally, if authority is granted to terminate release for violation of release conditions, it would seem that the circle of witness intimidation could be easily broken by simply revoking bond on the original charge for which defendant was indicted. It should be noted that for this category of eligible defendants the criterion for detention is not a prediction that defendant will intimidate witnesses, but rather a finding, based upon clear and convincing evidence, that such acts have occurred. The extent to which defendants who threaten witnesses or jurors would be preventively detained is difficult to estimate; the necessity for such a classification, at any rate, is dubious.[154]

Scope of Coverage.—It is difficult and perhaps impossible to obtain an accurate estimate of the number of defendants who would be subject to preventive detention under a proposal such as in the administration bill, but in any event the number would be substantial, almost certainly more than half of those defendants prosecuted in the D.C. federal district court.[155] Pertinent statistical data suggests this conclusion. In fiscal 1968, 1,737 criminal cases were commenced in the United States District Court for the District of Columbia, of which 1,053 cases are broken down into the following categories: robbery (363), burglary (351), sex offenses (95), and narcotics offenses (244).[156] Admittedly, these four classifications do not precisely parallel the offenses included in the Administration's definition of "dangerous crime." [157] Some of the 363 robbery cases were the pickpocket type, an offense not considered a "dangerous crime" under the Administration's proposed bill; similarly, some of the 95 sex offenses were for sodomy and thus not "dangerous crimes" according to the Administration's definition. Nevertheless, the total number of sodomy offenses was probably minimal, and most of the nondangerous robberies were probably reduced to misdemeanors and tried in the court of general sessions.[158] The great majority of the other charges, however, would be included in the classification of "dangerous crimes" and without any additional finding, result in eligibility for detention.

A substantial number of defendants also would fall within the category of those charged with a "crime of violence" who, within the preceding 10 years, have been convicted of an earlier crime of violence. Based upon a study prepared by the Stanford Research Institute, the President's Commission on Crime in the District of Columbia disclosed that 39 percent of all defendants convicted in federal district court had prior felony convictions for the same charge and that 30 percent previously had been convicted of crimes of violence.[159]

One other factor suggests that the reach of the proposed statute would be broad. Bail determinations are made at an early stage in the criminal process, generally at the time of the initial appearance before a magistrate,[160] but when charge reductions occur, as is frequently the case, it is at a later stage of the proceedings.[161] Under the administration bill, the subsequent reduction of a charge to an offense for which detention is not authorized does not necessarily result in release of a detained individual; rather it only demands that he be treated in accordance with the amended release procedures of section 3146 of the Bail Reform Act.[162] Since it is generally conceded that many judges have been ignoring the commands of section 3146 and detaining defendants by imposing high money bonds on ostensible risk-of-flight grounds,[163] it is not unreasonable to assume that a judge who has ordered a man detained pursuant to the proposed preventive detention bill will attempt to continue the incarceration on the pretext of risk of flight.

Safeguards and Required Findings.—If the problem of crime on bail is centered in a pathological few, it is difficult to justify such a broad grant of detention. Moreover, the proposed bill's procedures and standards for making the detention decision afford little protection against abuse of this power. The bill specifically provides that ordinary standards governing the admissibility of evidence

Footnotes at end of article.

do not apply,[164] and while the defendant is given the right to cross-examine witnesses at the detention hearing, this right is of little value if no such witnesses are presented and the "evidence" consists only of the U.S. Attorney's allegations. Moreover, although the bill requires "clear and convincing evidence," [165] this provision seems to have been added primarily for the sake of appearances, since it applies only to the finding that the defendant comes within the class eligible for detention.[166] Regarding the "dangerous crime" category, clear and convincing evidence can be found simply by reading the information or felony complaint, which would be difficult, if not impossible, to dispute. There would also be little problem in determining whether a defendant has been convicted of a crime of violence within the previous 10 years. With respect to the crucial finding, however, that "no condition or combination of conditions of release . . . will reasonably assure the safety of any other person or the community," [167] traditional evidentiary rules are suspended. This determination requires a prediction of neither specific future violence, as did the statue considered by the ABA,[168] nor a specific future act.

To justify detaining a defendant charged with a dangerous crime or crime of violence, a substantial probability that the defendant committed the offense for which he is under arrest must also be found.[169] Although such a finding is generally relevant to a prediction of future violent offenses, its purpose seems to be to obviate complaints that innocent persons might be subjected to detention.[170] If this is its true purpose, a serious question arises whether due process as a prerequisite to the deprivation of liberty would be violated. In addition, the finding of probable guilt need not even be based upon information disclosed to defendant or his counsel, but only upon "information presented to the judicial officer." [171]

To further protect against abuses in imposing preventive detention, the defendant is entitled to a "hearing," which affords him the right to present information and to cross-examine witnesses if the Government chooses to present any.[172] Nevertheless, defendant's probable guilt may be determined by a judge on the basis of secret information. Furthermore, although defendant has a right to appointed counsel, this right may be forfeited, since the hearing is held immediately unless defendant has the presence of mind to request a continuance until counsel is provided.[173] Thus, serving to induce waiver of the right to an attorney, a premium is placed upon the exercise of such right—immediate detention without a hearing.[174]

One additional finding must be made before detention can be imposed; a redetermination that "no condition or combination of conditions will reasonably assure the safety of any other person or the community" must be made.[175] As described by the explanation accompanying the bill, "[i]n essence this finding is the judicial officer's belief that, if released, the person will pose a danger to the community." [176] Since the danger posed is defined in terms of neither the injury to be feared nor the likelihood of its occurrence and since it is difficult to assign any meaning to the phrase "or the community" except to include protection from offenses *not* involving personal violence, the logical conclusion seems to be that the dangers, for example, of one act of shoplifting and of daily homicides are of equal dignity for purposes of imposing preventive detention. Moreover, attention is not directed to defendant's future acts, which might cause qualms about the ability to prognosticate, but to the adequacy of conditions that have already been judged inadequate to protect against bail offenses.[177]

CONCLUSION

The ABA's committee on minimum standards recognized that "the American court system has never really explored alternatives short of outright detention in an effort to curb crime while on release." [178] As a result of the lengthy study by the Hart Committee on the administration of the Bail Reform Act in the District of Columbia, specific recommendations were proposed to minimize the risk of bail offenses.[179] A year later, however, the Committee conceded that there had been little implementation of its suggestions.[180]

Both advocates and opponents of preventive detention agree that speedy trials would greatly reduce the amount of crime on bail,[181] but while the problem of count delay is substantial, indications are that improvement to the point of perfection is not required in order to reduce the amount of crime on bail. If, in fact, potential bail offenders could be identified in advance, those persons, which would be a limited number, could be selected for expedited trial. A study prepared under the auspices of the Hart Committee found that in almost 50 percent of the cases in which a defendant had been indicted for a felony allegedly committed while on bail for a previous felony offense, the second crime occurred more than 90 days after return of the first indictment.[182] Thus, if trials for those defendants posing a high risk of crime on bail could be held within three months of the first indictment, a considerable amount of crime on bail could be prevented, without the necessity of imposing a broadly encompassing scheme of preventive detention.

In spite of the clear paths available to reduce crime on bail, however, the Administration has chosen the Draconian approach of large-scale punitive detention before conviction. It has done so without any clear showing of need, without guidelines for identifying bail offenders, and without adequate procedures for protecting against abuse. In addition, through the concept of preventive detention it rejects the criminal trial as the fact-finding prerequisite for the imposition of punishment, as well as the more basic principle that imprisonment is not imposed for violations before they occur. Even if a statute in the terms of Senate bill 2600 can survive constitutional scrutiny, it seems highly undesirable as a crime prevention measure.

[5] The Judiciary Act was passed on Sept. 24, 1789, The Bill of Rights was proposed by Congress to the States on Sept. 25, 1789.

[6] Stack v. Boyle, 342 U.S. 1, 5 (1951).

[7] *See* United States v. Lawrence, 26 F. Cas. 887, 4 D.C. (4 Cranch) 518 (No. 15,577) (D.C. Cir. 1835). In *Lawrence*, Francis Scott Key, then a district attorney, urged setting of a high bond to preventively detain a defendant who, imagining himself to be the King of England, attempted to assassinate President Jackson. The prosecutor's view apparently has not changed with the passage of time. In 1969, the chief of the criminal division of the United States Attorney's Office in the District of Columbia acknowledged a general policy of holding persons accused of threats against the President on high bail until a "mental, criminal and narcotics check" had been run. Washington Post, Aug. 18, 1969, § A, at 1, col. 1. Unreasonable bail also was recently used in Chicago to detain members of the Blackstone Rangers during a "long, hot summer." D. OAKS & W. LEHMAN, A CRIMINAL JUSTICE SYSTEM AND THE INDIGENT 97–98 n. 152 (1968).

In England, the attempt of judges to negate the right to bail by setting excessive sums was one of the complaints precipitating the English Bill of Rights. 1 W. & M. 1, c. 2, § 1(10) (1689); *see* 9 W. HOLDSWORTH, *supra* note 2, at 118–19.

[8] The inequity of making imprisonment before conviction dependent upon the size of a man's bankroll has been highlighted by Supreme Court decisions striking down financial resources as a relevant factor in the administration of criminal justice. *E. g.*, Douglas v. California, 372 U.S. 353 (1963) (appointed counsel); Griffin v. Illinois, 351 U.S. 12 (1956) (right to free trial transcript). *See generally* Longsdorf, *Is Bail a Rich Man's Privilege?*, 7 F.R.D. 309 (1947). This disparity of treatment is exaggerated as delays in the trial process increase.

[9] 18 U.S.C. §§ 3146–52 (Supp. IV, 1969). *See generally* Ervin, *The Legislative Role in Bail Reform*, 35 GEO. WASH. L. REV. 429 (1967); Wald & Freed, *The Bail Reform Act of 1966: A Practitioner's Primer*, 52 A.B.A.J. 940 (1966).

[10] In some instances, bondsmen demand "collateral" in addition to the premium. Collateral, however, is not generally supplied by the accused himself, but by his family or friends.

[11] *See* Note, *Bail: An Ancient Practice Reexamined*, 70 YALE L.J. 966, 973 (1961).

[12] *See* Ares, Rankin & Sturz, *The Manhattan Bail Project: An Interim Report on the Use of Pre-Trial Parole*, 38 N.Y.U.L. REV. 67 (1963).

[13] *See* R. MOLLEUR, BAIL REFORM IN THE NATION'S CAPITAL (1966).

[14] Such factors would include length of residence in the area, employment, and relatives and friends residing locally. The interview forms used in the District of Columbia are reprinted in R. MOLLEUR, *supra* note 13, at A84–A87.

[15] A certain amount of "evaluation," however, was conducted by the various release programs in determining those offenses for which they would recommend a defendant's release. Many of the projects considered only misdemeanor defendants and some only certain misdemeanor offenses. In contrast, the District of Columbia Bail Project considered nearly all offenses as "eligible." *See* R. MOLLEUR, *supra* note 13, at 50–51.

[16] "A solution [to the problem of crime on bail] goes beyond the scope of the present proposal and involves many difficult and com-

plex problems which require deep study and analysis. The present problem of reform of existing bail procedures demands an immediate solution. It should not be delayed by consideration of the question of preventive detention." (H.R. REP. No. 1541, 89th Cong., 2d Sess. 6 (1966). A similar disclaimer was entered by the Senate. S. REP. No. 750, 89th Cong., 1st Sess. 5 (1965).)

L. REV. 1489 (1966).

[21] This article does not treat the constitutional status of the right to bail, the presumption of innocence, or the right to due process of law. For a discussion of these issues, see AMERICAN BAR ASSOCIATION PROJECT ON MINIMUM STANDARDS FOR CRIMINAL JUSTICE, STANDARDS RELATING TO PRETRIAL RELEASE 66–71 (Approved Draft 1968) [hereinafter cited as ABA MINIMUM STANDARDS]; Foote, *The Coming Constitutional Crisis in Bail: II,* 113 U. PA. L. REV. 1125 (1965); Mitchell, *Bail Reform and the Constitutionality of Pretrial Detention,* 55 VA. L. REV. 1223 (1969); Note, *Preventive Detention, supra* note 20, at 1498–1505.

[22] Unless otherwise indicated, the system for detention discussed in this article is that proposed in the administration bill, S. 2600, 91st Cong., 1st Sess. (1969). For a detailed discussion of the bill's provisions, see notes 135–77 *infra* and accompanying text.

[23] Other legal factors are relevant to preventive detention, but are not used as the justification for detention. Thus, the fact that a person is already on bond on another charge or is on probation or parole following an earlier conviction may be utilized in reincarcerating him. In such cases, however, detention is based upon violation of the earlier conditions of release.

[31] D.C. CODE ANN. § 4–137 (1967).

[32] There is some authority that upon acquittal a defendant can compel either return or destruction of his photograph. *See* Itzkovitch v. Whitaker, 117 La. 708, 42 So. 228 (1906); *cf.* Morrow v. District of Columbia, 417 F.2d 728 (D.C. Cir. 1969), *rev'g In re* Alexander, 243 A.2d 901 (D.C. 1968) (judge has authority to enjoin dissemination or use of arrest record); United States v. McLeod, 385 F.2d 734, 749–50 (5th Cir. 1967) (records of harassing-type arrests of civil rights demonstrators ordered expunged); United States v. Kalish, 271 F. Supp. 968 (D.P.R. 1967); State *ex rel.* Reed v. Harris, 348 Mo. 426, 433, 153 S.W.2d 834, 837 (1941) (innocent person may have fingerprint records and photograph returned).

[33] See Terry v. Ohio, 392 U.S. 1, 17 n.13 (1968) (description of search procedure).

[34] Appearance in a lineup may be compelled under some circumstances even though the suspect has been released on bond. United States v. Allen, 408 F.2d 1287 (D.C. Cir. 1969), *But cf.* Adams v. United States, 130 U.S. App. D.C. 203, 399 F.2d 574 (1968). Legislation recently has been proposed to require suspects for whom probable cause to arrest was lacking to appear for various identification procedures. S. 2997, 91st Cong. 1st Sess. (1969); *see* CONG. REC. Vol. 115, pt. 21, pp. 28896–28900.

[35] An arrested person may have his name associated with a crime by the press. If he has funds, he may be required to pay a substantial fee to a bondsman in order to obtain his release and to an attorney to represent him, and he runs the risk that he will lose his job prior to obtaining release. If the judge believes that he is likely to flee or desires to confine him for other reasons, unattainable bail conditions may be set, and if detained, he generally will be confined in a jail that is in worse condition than a prison. *See* J. CAMPBELL, J. SAHID & D. STANG, LAW AND ORDER RECONSIDERED 574–80 (Report to the Nat'l Comm'n on the Causes and Prevention of Violence, 1969). Professor Foote has noted ironically that after conviction, a prisoner's "standard of living is almost certain to rise." Foote, *supra* note 21, at 1144.

[36] Draper v. United States, 358 U.S. 307 (1959).

[37] Many jurisdictions have statutorily changed this common law rule for selected misdemeanors. *See e.g.,* D.C. CODE ANN. § 23–306 (1967) (possession of burglar tools, dangerous weapons, or lottery tickets); D.C. CODE ANN. § 33–402 (1967) (possession or sale of narcotic drug).

[38] Ford v. United States, 122 U.S. App. D.C. 259, 352 F. 2d 927 (1965) (en banc). *Ford* also notes that in the exercise of its supervisory power, the court can compel resort to a magistrate if "a practice of not getting warrants, even though practicable to do so, was resulting in a significant number of unreasonable arrests, inflicting an injustice upon the immediate victims as well as a strain upon the judicial machinery." *Id.* at 265, 352 F. 2d at 933.

[39] FED. R. CRIM. P. 5; *see* Mallory v. United States, 354 U.S. 449 (1957). Currently there is no procedure for testing the validity of a misdemeanor arrest, although such validity may be decided as an ancillary issue to a ruling on the admissibility of evidence obtained incident to the arrest. The D.C. Circuit, however, recently held in affirming the grant of a writ of habeas corpus that a juvenile being detained pending a hearing on a law violation charge in juvenile court is constitutionally entitled to a hearing on the existence of probable cause. Cooley v. Stone, 414 F.2d 1213 (D.C. Cir. 1969); *accord,* Baldwin v. Lewis, 300 F. Supp. 1220 (E.D. Wis. 1969) This ruling seems equally applicable to misdemeanors, although habeas corpus may be an awkward procedure when compared to a rule 5 preliminary hearing.

[40] *See* Note, *Criminal Law: The Right to Resist an Unlawful Arrest: An Outdated Concept?,* 3 TULSA L.J. 40 (1966).

[51] D.C. CODE ANN. § 24–301 (1967).

[52] Marcey v. Harris, 400 F.2d 772 (D.C. Cir. 1968).

[53] *See generally* note 4 *supra.* It is generally conceded that judges in fact set high bonds to assure confinement of individuals they consider dangerous. *See, e.g., 1969 Hearings, supra* note 4, at 289; Mitchell, *supra* note 21, at 1237. Indeed, proponents of preventive detention sometimes argue that one of its virtues will be to bring this practice out in the open where it can be controlled. The desirability, however, of legitimizing an illegal, sub rosa practice by adopting it as an express principle seems dubious. Nor does it seem likely that judges who have swallowed the camel of clearly illegal pretrial detention under the Bail Reform Act will strain at observing the procedures of the proposed detention scheme.

[54] As the name implies, the purpose of preventive detention is generally considered to be the protection of society by the prevention of future crimes. Some intent to punish those persons detained for the crimes they would commit if free and for the crime for which they were arrested, however, also appears to be involved. In either case, a strong relation-

ship exists between the purpose of the confinement and the adequacy of the procedures. *See* Rouse v. Cameron, 125 U.S. App. D.C. 366, 368 n.9, 373 F.2d 451, 453 n.9 (1966). *See also* Kennedy v. Mendoza-Martinez, 372 U.S. 144 (1963); text at notes 64–67 *infra*.

[55] One exception might be those provisions of S. 2600 dealing with narcotics addicts. *See* S. 2600 § 2[§ 3146 B].

[56] The Hart Committee stated its belief that "[p]reventive detention is an historically recognized principle and is not a novel method of protecting the interests of society." JUDICIAL COUNCIL COMM. TO STUDY THE OPERATION OF THE BAIL REFORM ACT IN THE DISTRICT OF COLUMBIA, REPORT 32 (1969) [hereinafter cited as HART COMM. REPORT].

[57] *See* Comment, *The Administration of Justice in the Wake of the Detroit Civil Disorder of July 1967*, 66 MICH. L. REV. 1544, 1573 (1968).

[58] The preliminary hearing and grand jury procedures in felony cases are examples. Their effectiveness is limited, however, since the grand jury proceeding is non-adversary, and the preliminary hearing is often waived. *See* H. SUBIN, CRIMINAL JUSTICE IN A METROPOLITAN COURT 158 (1966).

[59] Proper, in this context, means that the defendant committed the acts charged and that these acts constitute the offense charged.

[60] This inference is by no means inexorable. Thus, although the D.C. Crime Commission found that the bail offenders studied "tend to commit felonies of the same type as the original offense," it also noted that studies of convicted offenders in the District of Columbia did not indicate a significantly higher percentage of prior violent crimes when the most recent charge was an offense involving violence. D.C. CRIME COMM'N REPORT, *supra* note 20, at 136, 517. Moreover, the President's Crime Commission noted studies of recidivism showing that persons imprisoned for murder, rape, and aggravated assault were *least* likely to commit additional crimes after release. PRESIDENT'S COMM'N ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: CRIME AND ITS IMPACT—AN ASSESSMENT 79 (1967) [hereinafter cited as TASK FORCE REPORT: CRIME].

[61] S. 2600, *supra* note 19, § 2 [§ 3146A].

[62] *See* notes 105–27 *infra* and accompanying text.

[63] Under the Administration's proposal, this requirement would attach to those defendants charged with "crimes of violence." S. 2600 § 2 [§ 3146A(a)]. Nothing within the present concept of criminal justice, however, even suggests that part of the punishment for a present conviction should be future eligibility for detention.

[64] S. 2600 § 2 [§ 3146A(b)(2)(C)].

[65] *See* note 60 *supra*. Richard A. McGee, Administrator of the California Youth and Adult Corrections Authority, has commented that "[e]ven the person who has committed a violent act may stop at one." McGee, *Objectivity in Predicting Criminal Behavior*, 42 F.R.D. 192, 194 (1968). Moreover, a behavioral scientist attempting to make a prediction of future violence might well be more interested in a pattern of behavior than in a single act. If this is a better predictive basis, the required finding should be a substantial probability of particular future conduct based upon several past acts of a similar nature. *See* Minnesota *ex rel.* Pearson v. Probate Court, 309 U.S. 270, 274 (1940); Rome, *Identification of the Dangerous Offender*, 42 F.R.D. 195 (1966).

[66] Mitchell, *supra* note 21, at 1238–39. Elsewhere in the same article, however, the Attorney General notes the "almost universal experience of law enforcement officials" that persons charged with premeditated murder "are the least likely of all offenders to be recidivists." *Id.* at 1236; *see* note 60 *supra*.

[67] Mitchell, *supra* note 21, at 1238–39. The language of the proposed statute requires a substantial probability of guilt, not conviction. The analysis accompanying S. 2600 points out that the "substantial probability" of guilt requirement "is an added protection for the defendant and should bar the possibility of detention in weak government cases." CONG REC. Vol. 115, pt. 14, p. 19264). The suggestion seems to be that detention of a defendant who will be subsequently convicted is appropriate whatever the likelihood that he will commit bail offenses. It is noteworthy in this regard that less than half of all defendants sentenced by federal courts in fiscal 1968 received sentences of imprisonment. DIRECTOR OF THE ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS, ANNUAL REPORT 264 (table D5) (1968).

[89] TASK FORCE REPORT: CRIME 123.

[90] Under a recent grant from the Law Enforcement Assistance Administration, the National Bureau of Standards has been commissioned to undertake an extensive study of bail crime

[91] HART COMM. REPORT, *supra* note 56, at 18 (emphasis added). The initial experience of bail projects suggests that with regard to the group of defendants who are not likely to flee, the amount of crime on bail is negligible. In St. Louis, the rearrest rate was two percent (4/170); in Des Moines, one percent (2/160). The Vera Project in New York City found that only 20 out of approximately 3,200 persons on pretrial releases were rearrested; the District of Columbia Bail Project reported a rearrest rate of 9.5%, but with only about two percent of the total number of persons released rearrested on "serious charges." Note, *Preventive Detention*, *supra* note 20, at 1496.

[99] HART COMM. REPORT 20–21.

[100] *See generally* FBI, UNIFORM CRIME REPORTS: CRIME IN THE UNITED STATES—1968.

[101] In arriving at the 70% figure, the nature of the offenses involved was not taken into account, and arrests themselves were relied upon as proof that the offenses occurred. A partial reexamination of the data sheets from which this figure was compiled indicated that 27% of the robbery releasees surveyed were rearrested for violent crimes. HART COMM. REPORT 35.

[102] The suggestion has been made, which is undoubtedly correct, that "the precise extent of recidivism on pretrial release can never be fully documented." Mitchell, *supra* note 20, at 1241.

[103] Mitchell, *supra* note 20, at 1241–42.

[104] *But see* note 90 *supra*. According to Senator Ervin, preliminary indications are that there is less crime on bail than previously thought. Washington Post, Oct. 17, 1969, § C, at 4, col. 1

[105] Such an approach is not without constitutional pitfalls. *See* Skinner v. Oklahoma *ex rel. Williamson*, 316 U.S. 535, 543–45 (1942) (Stone, C.J., concurring).

[106] TASK FORCE REPORT: COURTS, *supra* note 20, at 29 (1967); *1969 Hearings* 352 (statement of Professor Foote); *cf.* Comment, *The Administration of Justice*, *supra* note 57, at 1627–30.

[107] S. 2600 § 7 [§ 3152(3)]; *see* notes 138–48 *infra* and accompanying text.

[108] ABA MINIMUM STANDARDS, *supra* note 21, at 69.

[109] *Cf. 1969 Hearings* 32 (statement of Chief Judge Greene, District of Columbia Court of General Sessions). Justice Jackson's warning about the danger of any principle that "lies about like a loaded weapon ready for the hand of any authority that can bring forward a plausible claim of an urgent need," seems particularly apropos in light of the use by advocates of the principle of preventive detention of figures reflecting high crime rates. *See* Korematsu v. United States, 323 U.S. 214, 246 (1945 (dissenting opinion).

[110] Professor Dershowitz has suggested that a 75% accuracy rate would be an adequate basis for a preventive detention plan. *1969 Hearings* 183–84.

[111] *See e.g.*, U.S. ATT'Y GENERAL'S COMM. ON POVERTY AND THE ADMINISTRATION OF FEDERAL CRIMINAL JUSTICE, REPORT 72–77 (1963).

[112] The problems inherent in a prediction of violent crime on bail were described recently:

"Predictions of human conduct are difficult to make, for man is a complex entity and the world he inhabits is full of unex-

pected occurrences. Predictions of rare human events are even more difficult. And predictions of rare events occurring within a short span of time are the most difficult of all. Acts of violence by persons released while awaiting trial are relatively rare events (though more frequent among certain categories of suspects), and the relevant time span is short. Accordingly, the kind of predictions under consideration began with heavy odds against their accuracy. A predictor is likely to be able to spot a large number of persons who would actually commit acts of violence only if he is also willing to imprison a very much larger number of defendants who would not, in fact, engage in violence if released." (Dershowitz, *Preventing "Preventive Detention,"* NEW YORK REVIEW OF BOOKS, Mar. 13, 1969, at 24–25, *reprinted in 1969 Hearings* 816.)

[113] S. 2600 § 2 [§ 3146A(b)(2)(B)]. The court is not required, however, to predict that the defendant will commit a specific crime if released. *See* text at notes 175–77 *infra*.

[114] 18 U.S.C. § 3148 (Supp. IV, 1969); *see* White v. United States, 412 F.2d 145 (D.C. Cir. 1968).

[115] The present authorization under the Bail Reform Act permits imposition of "any other condition deemed reasonably necessary to assure appearance as required." 18 U.S.C. § 3146(a)(5) (Supp. IV, 1969). Although the Administration's bill does authorize consideration of safety to the community in setting release conditions, it does not propose an amendment that would permit the court to fashion new conditions unrelated to appearance for trial, in order to prevent danger. *See* S. 2600 § 1(a) [§ 3146(a)].

[116] *See, e.g.*, McGee, *Objectivity in Predicting Criminal Behavior*, 42 F.R.D. 192 (1968); Thomsen, *Sentencing the Dangerous Offender*, 45 F.R.D. 175 (1968); Wolfgang, *Violence and Its Relation to Sentencing*, 46 F.R.D. 533 (1969).

[117] For an example of the diagnostic problems involved with even carefully planned tests to evaluate a potential for violence, see Sarban & Wenk, *Resolution of Binocular Rivalry as a Means of Identifying Violence-Prone Offenders*, 60 J. CRIM. L.P. & P.S. 345 (1969).

[118] Professor Wolfgang has commented that "[t]he difficulties of predicting violent behavior, even among the small and limited set of persons to be released on parole, preclude efforts to obtain much accuracy or efficiency beyond the operation of chance." Wolfgang, *supra* note 116, at 550–51.

At the 1969 hearings, one witness commented that some future bail offenders are easily identified, stating that "[i]f Dillinger came before you, anybody with three grains of sense knows he is dangerous." *1969 Hearings* 22. The example given was infelicitous: Dillinger's one-man crime wave, which ended with his death in a gun battle with FBI agents, began within months of his release on parole from the Indiana State Prison, thus suggesting that his dangerousness was not particularly apparent to the parole board. *See* D. WHITEHEAD, THE FBI STORY 103–06 (1956).

[119] *See, e.g., 1969 Hearings* 37 (Chief Judge Harold H. Greene), 60 (Bruce D. Beaudin, Director, D.C. Bail Agency), 131 (Mrs. Patricia M. Wald), 226 (H. Subin, Associate Director, Vera Institute of Justice), 227 (Chief Judge Alfred P. Murrah).

[120] *See id.* at 124, 220.

[121] *E.g.*, HART COMM. REPORT 34; *1969 Hearings* 220.

[122] An informal survey of two judges' ability to predict is described in *1969 Hearings* 69–71, 182.

[123] *1969 Hearings* 175–76, (proposal of Professor Alan Dershowitz); *1969 Hearings, supra* note 4, at 206–07 (proposal of Mrs. Patricia M. Wald).

[124] Although consideration of probable recidivism is permitted in such proceedings, between 10 and 20% of those persons released and presumably predicted to engage in future criminal activity did in fact commit additional offenses. Nationally, statistics show that 7.5% of those defendants removed from probation supervision during fiscal 1967 were removed for a "major offense violation" of their probation. The percentage of major violations while on parole for the same year was 20.3. DIRECTOR OF THE ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS, ANNUAL REPORT 154 (table 7) (1968). In fiscal 1966, the figures were 8.5% and 19.6% respectively. DIRECTOR OF THE ADMINISTRATIVE OFFICE OF THE UNITED STATES COURTS, ANNUAL REPORT 160 (table 7) (1967).

[125] Such defendants, of course, may have prior convictions, but they are not yet convicted of the charge for which release conditions are being set.

[126] Both in pretrial capital cases, and on appeal, defendants are "presumptively to be released." H.R. REP. NO. 1541, 89th Cong., 2d Sess. 15 (1966).

[127] *See* FED. R. CRIM. P. 43. On the trial court's duty to determine that the absence of defendant is voluntary, see United States v. McPherson, —— F.2d —— (D.C. Cir. 1969).

[177] Senator Tydings has introduced two bills which although avoiding some of the pitfalls into which S. 2600 has fallen, contain most of its significant defects. The prediction inherent in the bills is the commission of specific crimes, basically those involving bodily harm, robbery, burglary, or witness intimidation, but the required finding is that the probability of those crimes would create such a danger that no condition of release would "provide the necessary protection." S. 546, 91st Cong., 1st Sess. § 2(c) (1969). Both bills, as well as the Senator's statements in their support, fail to deal adequately with the need for preventive detention and with the ability of courts to identify likely offenders. Furthermore, although both bills require an "evidentiary" hearing and findings based upon "clear and convincing" evidence, apparently the rules of evidence would not apply. *See 1969 Hearings* 80, 87, 89–90. Senate bill 3034, which would apply only to the District of Columbia, was the subject of hearings before the Senate Committee on the District of Columbia in November 1969. *See* note 18 *supra*.

The PRESIDING OFFICER. Who yields time?

Mr. TYDINGS. Mr. President, how much time is remaining?

The PRESIDING OFFICER. The Senator from Maryland has 19 minutes remaining and the Senator from North Carolina has 20 minutes remaining.

Mr. TYDINGS. Mr. President, I yield 5 minutes to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, the increase in serious crimes and the fear felt by law-abiding citizens for their lives and property are among the most critical problems of the Nation. They are particularly acute in the Washington area. Serious crimes here are reported to be increasing at the rate of 22 percent a year.

In an effort to protect themselves, many law-abiding citizens have erected barriers to their homes and refuse to venture out at night. Many business establishments have either abandoned the city or revised their modes of operations in effort to avoid further robberies, burglaries, and shootings.

Better solutions than we presently have are urgently needed now to check crime and to check also the rising fear of crime. What shall we do about these problems? Certainly we need to attack more vigorously the problems of poverty, education, the crowded and indecent conditions that may be the real cause of crime. But we need also to strengthen our law enforcement and criminal justice system to make it operate fairly and swiftly if it is to serve as a deterrent to crime.

Clearly there is an urgent need for court and law enforcement overhaul here in the District of Columbia, the only particular jurisdiction in the United States where the Congress writes the criminal laws and provides for the criminal justice and law enforcement system.

The Senate is asked to vote up or down on a massive array of proposed legislative solutions which are contained in one package, the District of Columbia crime conference report. My vote reflects my judgment that, taken as a whole, the District of Columbia crime conference bill can fairly reinforce the criminal justice system; and can do so in a manner calculated to make that system serve society more effectively.

The conference report offers several provisions which I believe will be highly beneficial in strengthening the law enforcement and criminal justice system.

Presently the average time between arrest and trial in the District of Columbia is 10 months. For an average, that is too long if the criminal justice system is to be at all effective in deterring crimes. Our system of justice needs to move more swiftly and, therefore, the provisions of the bill providing for court reorganization and adding 17 judges to the Superior Court should serve the highly desirable purpose of providing for speedier trials and a reduction of the criminal case backlog.

The establishment of a Public Defender Agency to provide legal representation for indigent defendants would also serve to expedite criminal trials.

The conference report also provides for an expansion in size and of the role of the District of Columbia bail agency. Under the provision, the Bail Agency will not be limited to its present service as a provider of information about the accused for the guidance of the judicial officer in making a decision as to release conditions. It will also make recommendations on bail alternatives and most importantly, supervise the accused who may be conditionally released.

All of the foregoing provisions in my opinion will make an important contribution to crime deterrence through improving and strengthening the criminal justice and law enforcement system.

Other provisions of this crime package—particularly those involving pretrial detention and "no-knock" warrants—do raise problems as to their wisdom and constitutionality. We might prefer that they were not present in this omnibus measure but improvement has been made in both provisions over what was earlier contained in the House bill and there are also the following considerations.

Police officers today, on their own authority, can enter premises to serve search or arrests warrants without first knocking and announcing their identity, when justified by certain circumstances. As would be expected, when necessary to prevent death or serious injury to a third person, or the officer himself, or to prevent the destruction of quickly and easily destroyable evidence when the policeman's presence is already known and announcement would be useless, a police officer is permitted to dispense with notice.

The District of Columbia crime report provisions on no-knock warrants does not give police officers this authority. They already have it. What the conference report does is require that a police officer obtain judicial permission in advance when he has probable cause to believe that these exigent circumstances are likely to exist at the time of the execution of the warrant.

The goal of the pretrial detention provisions of the District of Columbia crime conference report is to protect the public and its individual members from the danger of potential criminal acts committed by persons charged with prior serious criminal offenses who are at liberty awaiting trial.

In other Western nations with civilized criminal justice systems—most notably Great Britain—pretrial detention has been practiced fairly and effectively. In England, be it murder, rape, bank raid, or the like, they do not allow the man out on bail, but keep him imprisoned if they think he may make another offense and assure that he is tried within 8 weeks—this, according to a high ranking member of England's judicial system as presented by the Senator from Maryland (Mr. TYDINGS).

The distinguished English jurist notes that in their experience—

> It is better for society that criminals or potential criminals should not be let loose pending trial. We do not let them out on bail, although we have in our bill of rights, like you, the prohibition against excessive bail being demanded.

As a matter of fact, neither the concept nor the actual practice of pretrial detention is new in the United States. It has been a long accepted practice under certain circumstances to deny bail to persons charged with capital offenses and thus to detain them prior to trial.

Under the Bail Reform Act of 1966, a Federal Court is authorized to detain prior to trial those charged with offenses punishable by death when release would pose a danger to the community or any other person.

But danger to the community or any other person is not now a factor that can be considered forthrightly by a court in setting financial or other conditions of release for persons charged with other serious and violent crimes.

While under existing law the only stated legal basis for requiring a money bond is to secure the accused's presence at trial, there may be a reason to suspect that courts do in fact consider harm to the community posed by release. When bond is set so high that it cannot be made, an accused is jailed and thus detained prior to trial.

Recent District of Columbia studies show in fact that over 40 percent of felony suspects are detained prior to trial because of inability to post bonds.

Under the District of Columbia conference report, dangerousness to the community, would be a factor for consideration by the Court with regard to release for certain classes of defendants charged with serious offenses. The determination would be based on an appealable adversary hearing of record in which the defendant would be represented by counsel.

To order pretrial detention of the accused for a period of 60 days, the court must find that no conditions under which release could be permitted would reasonably assure the safety of the community and must also find that the Government has established that there is a substantial probability that the accused committed the offense with which he is charged. The cases of persons ordered detained for 60 days must be placed on an expedited trial calendar and given priority.

The pretrial detention hearing seeks to afford due process safeguards for the accused person and at the same time seeks to give a better balance to the rights of society to be protected from the threat of repetition of crime on bail.

I present the foregoing favorable considerations of these two highly controversial provisions so as to demonstrate that they may offer the possibility of fair improvement over existing practices. If unconstitutional, these provisions certainly will be subject to review and can be nullified by the courts. Moreover it is obvious that legislation of this character cannot be perfect in the first instance. We would expect recognition in the Congress of refinements that will be needed.

I do not agree with all the provisions in the conference report, but it is clear to me that unless this legislation is adopted, there will be no legislation this year to expand and improve the courts and the law enforcement agencies that are needed for the District of Columbia.

Mr. ERVIN. Mr. President, I yield 10 minutes to the Senator from Mississippi (Mr. STENNIS).

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Wisconsin (Mr. NELSON).

Mr. NELSON. Mr. President, no matter

how artistically and eloquently the proponents of this measure defend the concept of no-knock entry, preventive detention, and the provisions for wiretapping, the fact of the matter is that the provisions do in fact compromise the constitutional rights of the people of this country, and the conference report ought to be defeated.

Mr. President, there can be no doubt that the increasing crime rate is one of the most serious domestic problems facing our country today. The latest satistics of the Federal Bureau of Investigation indicate that there has been a 13 percent increase in serious crimes in the first 3 months of 1970. This added burden of crime has fallen most heavily upon our cities.

Nowhere are the criminal statistics more appalling than in the Nation's Capital: 56,000 felonies reported in the District of Columbia in 1969; serious crime rising at almost double the national rate; reported felonies having increased 122 percent in the last 5 years. Thus it is apparent that the national commitment to reducing crime can best begin here in Washington, making the District of Columbia an example for the entire country.

S. 2601, the District of Columbia crime bill, which we are now considering, therefore, must be considered as a pilot program to demonstrate the Federal Government's fight on crime to all of the United States. With this expectation, the administration has already sent similar legislative proposals to Congress to apply provisions of S. 2601 to all Federal districts throughout the country.

The District of Columbia crime bill which emerged from conference contains many noncontroversial features that are badly needed in any vigorous system of effective law enforcement—in the District of Columbia and in every other Federal jurisdiction as well. This bill, as it now stands, also contains provisions which are so antithetical to the entire history of American jurisprudence that their inclusion makes this legislation unacceptable.

The Senator from North Carolina (Mr. ERVIN) has ably and carefully documented the constitutional flaws in this legislation. While the bill provides for badly needed court reorganization, a strengthened District of Columbia Bail Agency, establishment of a public defender for the District, and the adoption of an Interstate Compact on Juveniles, it is, in my judgment, totally compromised by the inclusion of such obnoxious features as preventive detention, no-knock entry, mandatory sentencing, broadened wiretapping authority, automatic mental commitment, changes in burden of proof in insanity pleas, procedures for the no-jury trial of multiple offenders, and expanded treatment of juveniles as adults.

It has been suggested that, because the valid and necessary features of this present bill outnumber the objectionable provision, the Senate should swallow its objections and approve the conference report as it stands. It has also been suggested that at some later time the courts can repair any violence done to the Constitution. This is a dangerous concept and ought to be summarily rejected by the Senate. It is also implied that preventive detention of persons charged with crime who may commit another crime, no-knock entry by policemen and unnamed assistants, and government eavesdropping are the prices that we must pay to reduce the crime rate.

I do not agree with these suggestions. There are alternate courses of legislative action which can be enacted in a short time and which will bolster law enforcement without objectionable erosions of constitutional guarantees. I also firmly believe that it is right and proper for the Senate to insist that anticrime proposals be consistent with longstanding American concepts of justice.

There are presently available three legislative proposals which offer effective means of giving the District of Columbia additional tools to prosecute law enforcement. I am referring to S. 4080 and S. 4081, introduced by Senator ERVIN and others as substitutes for S. 2601. These measures incorporate the worthwhile features of the court reorganization plan and changes in criminal law and procedure which were contained in the conference report on S. 2601.

The most needed and uncontroversial features of S. 4080 and S. 4081 include a new superior court which would take jurisdiction over all purely local civil and criminal cases with divisions of flexible size capable of adjusting to exact needs; a system of modern court management, with the centralization of nonjudicial, administrative duties in top-level court executives to invoke more efficient procedure that will clear away paperwork and other delays; substantial increase in judges with provisions for other means for expanding the city's judicial resources; a full-fledged public defender service for the District of Columbia, greatly expanding the size and scope of operation of the existing Legal Aid Agency; and expanded District of Columbia Bail Agency with the authority and manpower to keep a much closer watch on defendants released on bail; and restoration of the Senate's original Federal payment of $48 million to the District to carry out court reorganization and give substance to other crime programs, in particular, efforts to deal with narcotics addiction.

The third legislative proposal which would assist in reducing crime in the District of Columbia is S. 3936, the speedy trial bill. This measure would require each Federal District Court to provide trial within 60 days of indictment or information. The measure would also provide for additional penalties for crimes that are committed during pretrial release and would establish demonstration pretrial service agencies in five Federal districts, including the District of Columbia. In sum, S. 3936 provides a constitutional alternative to preventive detention.

These three bills are sensible anticrime measures for the District of Columbia which I have cosponsored and which I support as substitutes for S. 2601. In addition to excising the questionable provisions infringing on citizens' constitutional guarantees, this legislation would give the District the additional money to begin to make a concerted effort against its No. 1 crime problem—narcotics. These substitute bills deserve expedited consideration and passage in place of the measure now before us.

Since this legislation will mainly affect an unrepresented minority within an unrepresented minority—the black residents of the District of Columbia—it is a proper duty and an obligation of this body to question and object to the infringements of citizens' protections under this bill. Furthermore, we must also consider the example which this bill is intended to make for law enforcement activities in all the States. This bill has vital implications for governmental conduct in every region of the country.

Mr. President, the affairs and activities of men and governments in this country have been controlled and guided for over 180 years by the U.S. Constitution. Its provisions have withstood the tests of time and relevance to an expanding nation. Thus we are the only country in the world that has sustained any form of government under one constitution for so long a period of time.

Over the years this Constitution and its Bill of Rights have faced stiff and critical challenges. This document has remained as the framework of government and the guardian of individual liberty through these tests only because men have taken the responsibility and the opportunity to defend the Constitution all through the continuing stresses and strains of this great and important experiment of man and government.

Today, the Senate is faced with a measure which makes specific attacks upon the rights guaranteed to all citizens by the fourth, fifth, sixth, and eighth amendments to the Constitution and traditional American concepts of justice. In particular, these attacks are embodied in the no-knock entry and preventive detention provisions of the District of Columbia crime bill.

First, the no-knock authority granted in the conference report is broader and less clear than the no-knock power permitted under the Griffin amendment, which I opposed, to the Drug Control Act, S. 3246, passed earlier this year. The language of the present no-knock provision in S. 2601 is therefore at variance with both previous legislative language in S. 3246, and with case law. It has been suggested that the provision merely codifies existing law. If this is so, then why is this provision necessary at all? Also, if existing law concerning no-knock is sufficient, then why has the Federal prosecutor for the District of Columbia claimed that he now cannot do what the new law would permit?

According to the conference report, a police officer needs only a low level of proof to obtain a no-knock warrant up to 10 days before it is to be used. A magistrate must rely upon an officer's judgment which can be far removed in time and place from the point of action. In addition, the use of the no-knock warrant in the conference report is not

restricted to a specific category of crimes such as in S. 3246, the Drug Control Bill, where the no-knock provision can only be used in connection with narcotics felonies. Under S. 2601, no-knock could be used for anything from minor offenses to major felonies.

Under S. 2601, an officer may seek a no-knock warrant if he has probable cause that evidence is likely to be destroyed or an officer's life endangered. There is no reference to any certainty regarding the need for a no-knock warrant, only likelihood. This conjunction of "probable cause" and "likelihood," in effect, is a level of proof requiring only a contingent contingency and would allow an officer to conduct a no-knock search at will, or at best, a reasoned conjecture.

A most curious part of the no-knock provision is that which extends no-knock authority to "any person aiding an officer" in the execution of this warrant. Who is this "any person aiding an officer?" Is he a passer-by? Is he a vigilante? No need has been demonstrated for extending whatever right of unannounced intrusion there may be to private persons. Indeed, the language of the conference report leaves open the possibility of a self-labeled assistant breaking and entering alone on the barest suggestion from an officer or on the basis of what the aide alone interprets as an implied suggestion.

The Ker against California case decided by the Supreme Court established the current common law rules regarding no-knock searches. According to the best interpretation of this ruling, only "exigent circumstances" are sufficient for a no-knock entry. Exigent circumstances by their very nature can only be determined at the place where the search is to be conducted.

Thus the officer has to be at the scene where the search is to be executed before he can know whether a no-knock entry is justified. The words of the bill before us do not reflect this interpretation of the Ker case.

Finally, the present no-knock proposal raises the serious question of offending the fourth amendment which guarantees the right of people "to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures." There is no more important right secured by the Constitution, and no one has more eloquently stated the case against no-knock entry than William Pitt in debate in the House of Lords 204 years ago, when he stated:

> The poorest man may, in his cottage, bid defiance to all the forces of the Crown. It may be frail. Its roof may shake. The wind may blow through it. The storm may enter. The rain may enter. But the King of England cannot enter. All his force dares not cross the threshhold of that ruined tenement.

As if this no-knock provision is not offensive enough, the conference bill also contains a preventive detention provision. This provision introduces a new element to be considered in the release on bail of a person accused of a crime. Traditionally, the single issue to be considered in setting bail release conditions is the likelihood that the accused criminal will not appear for trial. Under the preventive detention provision, there is to be the further determination as to whether pretrial release in noncapital criminal cases will affect the "safety of any other person or the community." This new factor makes far-reaching changes in the purpose and intent of bail procedures.

This new consideration is an outgrowth of the great concern to keep violent criminals off the street, that is, to prevent further crimes of physical violence before a criminal is incarcerated. The language of the conference bill, however, makes preventive detention applicable to a wide range of persons accused of both nonviolent as well as violent crime. Under the bill, not only can accused murderers, rapists, arsonists, and other perpetrators of physical violence be detained, but so can those accused of "taking or attempting to take property from another by force or threat of force" and those accused of "unlawfully entering or attempting to enter any premises adapted for overnight accommodation of persons or for carrying on business with the intent to commit an offense therein." This broadens the concept of preventive detention far beyond an intent to prevent further physical violence before trial and destroys the primary intent of release on bail to insure appearance at trial. Although preventive detention may have been intended to be limited to crimes of violence, under this bill it is subject to use as a catchall street cleaning mechanism for those accused of antisocial behavior.

Reference is made in this bill to placing the case of a person preventively detained on an expedited court calendar so as to make a swift test of guilt or innocence of the original charge a part of the process, as in the English system. But there is no assurance that the accused will receive a speedly trial within the original 60-day detention period, as the British system provides. Since consecutive periods of 60-day detention are allowed under this bill, an accused person can be incarcerated for an extended period of time without either release or without trial.

Preventive detention is contradictory to the due process clause of the fifth amendment, since the arrested person is deprived of his liberty on the basis of a probability that he will commit a future crime. This detention is made before and without conviction for the first criminal charge.

Preventive detention also interferes with a person's right of access to counsel and participation in obtaining evidence and witnesses in his own defense as guaranteed by the sixth amendment.

It also violates the eighth amendment prohibition against the use of excessive bail. The historical purpose of the amendment was to make certain that bail is used to insure appearance and not to penalize the accused before conviction. Thus, by implication, the eighth amendment guarantees a right to reasonable bail for noncapital cases.

The arguments which I have considered concerning the issues of no-knock entry into private homes, the preventive detention of accused criminals who may cause further crime, and other provisions of this bill, lead me to the conclusion that there is certainly probable cause that the individual rights of citizens of the District are not only likely to be impaired, but they will be impaired. This constitutional infringement is unacceptable.

I should also like to voice my opposition to the wiretapping provision in this conference bill. With the possible exceptions of national security and organized crime, I am opposed to any use of wiretapping and the invasion of privacy that occurs in a formalized government effort to intercept wire or oral communications. The authority for electronic surveillance given in S. 2601 goes far beyond the limitations of these exceptions when the list of offenses for which wiretaps are permitted reads: arson, blackmail, bribery, burglary, destruction of property of value in excess of $200, gambling, grand larceny, kidnaping, murder, obstruction of justice, receiving stolen property of value in excess of $100, robbery, extortion, and offenses involving dealing in narcotic drugs, marihuana, and other dangerous drugs. This extends the Government's ear far too far.

Mr. President, the issue before the Senate is not whether to do something about crime. Nor is the issue one of preserving the rights of criminals. The issue is how to take strong law enforcement actions consistent with the constitutional guarantees of all citizens.

The no-knock, preventive detention, and wiretapping provisions are not only objectionable on constitutional grounds, but they are repugnant to American traditions and values. One freedom we have always honored is the freedom from repressive governmental action. Freedom from the fear that our life, our liberty, or our property may be arbitrarily taken from us by the State is a founding proposition of this country.

Millions of our citizens or their forefathers came to settle in America to escape the repressive practices in their homeland. They have known the terrible fear of "the knock at the door in the middle of the night." In contrast the United States symbolized a country where people could live in personal security and free from any threat to the security of their household.

I must cast my dissent to any possibility that this security may be compromised in any way. We have protected well against the specter of the "knock in the middle of the night"—we must defend even stronger against the fear of the unannounced breaking down of any man's door.

Nowadays, any legislation traveling the legislative route under the umbrella of "crime control" automatically receives wide public acclaim. No one wants to raise doubts or questions or vote against any such bill, because the public reaction will be adverse.

Grave doubts are being privately expressed by many who will vote for this bill because they view it as too difficult to explain to their constituents. Everyone here was elected to uphold the Constitution—not compromise it. I, therefore, register my opposition to this measure by voting against it.

Mr. President, the Senate has an even stronger alternate legislative plank to

fight crime in the District of Columbia. My support is for the alternate bills to the conference report—S. 4080, S. 4081, and S. 3936, providing speedy trial for those accused of crime.

Mr. STENNIS. Mr. President, every Member of this body, I am sure, and the people of the Nation, owe a debt of gratitude to the Senator from North Carolina (Mr. ERVIN) for the very fine exposition he has made of this troublesome and far-reaching question.

I, too, would like to support a sound bill. I am not indifferent to conditions in the District of Columbia. In a small way, I am a property owner here—of a home, at least. A member of my family has been a victim of some of the lawlessness here. So I am not indifferent to that. I am not a total stranger to law enforcement here.

I spent 5 active years as a district attorney. In that office I did everything from investigating to serving a grand jury. My duties included preparing indictments, advising, and consulting with the grand jury, presenting the evidence, and making arguments to the jury, handled many hundreds of felony cases. I am not boasting, but I got it in the "raw." It was my privilege to serve 10 years on the trial court bench as a circuit judge, with all kinds of criminal cases and with unlimited civil jurisdiction. I have no outstanding record, but I am not a stranger to this field and the problems that goes with it.

I think we are planting seeds of great disappointment in this bill. In the first place, almost everyone has doubts about its constitutionality. When those who doubt the constitutionality of statutes rely on the courts to overturn them, that does more to undermine our Constitution than anything else I know of. I refer to those who believe that the question of constitutionality is purely one for the courts and not for the Congress or State legislatures.

Passing on, Mr. President, because I do not have time to argue this question fully—and many of these very questions have been ably presented by the Senator from North Carolina—the principal argument is that we should pass the bill to help the District of Columbia. I do not think there is any doubt that we are making admissions and lowering the standards of the administration of justice if we pass this bill and it is upheld. We are lowering the standards and we are doing it because the standards have already been lowered in the District of Columbia to the point where there is little effective enforcement of our criminal law. But this bill is not the remedy, just because we have let these conditions build up. This is no excuse to desert constitutional standards. I believe that these conditions were largely caused by the unfortunate changes in the laws of criminal procedure and the administration of criminal justice by the Supreme Court of the United States in its interpretation of the Bill of Rights, such as in the Mallory case, and many others. This bill will not bring about a remedy in that field. It does not touch, topside or bottom, the constitutional questions involved.

Another question is the general widespread permissiveness we have let come about in the District of Columbia and many other places in the country to which it has spread. For years there has been no real will to enforce the criminal law. There has been no positive determination on the part of the people or, it seems to me, on the part of many of the officials. Bandits walk the policemen's beats. The policeman is ridiculed. He is criticized and blasted in public day after day. Furthermore, there is a certain type of permissiveness that has almost gotten out of hand. We should not let it go on. My point is, that condition has to be met by will and determination. Putting more laws on the books is not going to do it.

There may be a need for more judges, but my feeling is that some of the judges could put in more hours a day than they seem to put in. They could do more to pursue cases and know more about the sentences that are going to attach to those criminals than using the system now in use under which someone files some kind of report.

So I believe we are looking in the wrong direction. We want to do something for the District of Columbia, certainly—we also want to do something for the whole country. But I believe we are going to have to reform ourselves first by law enforcement, and developing the will to enforce the law that we already have.

There is no breakdown of criminal procedure, as I see it. As I say, we may need more judges. We may need more law. But I strongly back the Senator from North Carolina (Mr. ERVIN) when he offers us a law that will give immediate relief and bring matters more up to date. His proposal skips all these very highly questionable constitutional matters that are in the bill before us. There are good motives behind those who worked on them. I would not suggest anything. I praise them for the work they have done. But I believe we are going to make the people think that paradise is at hand. We will lead the people of America to believe that we have found the remedy; that we are going to apply it to the District of Columbia first; and then apply it to the rest of the Nation. There is going to be a serious breakdown and a lot of hollering and disappointment.

I think we can take the laws we have, plus the proposals of the Senator from North Carolina, and get a strong public sentiment behind law enforcement officers, and a strong public sentiment behind enforcement of the law and support for the courts.

I remember the old days when public opinion was the basis for support of law enforcement. We must have that to have the juries in the right frame of mind.

I am really disappointed, in getting into this important matter—and it is highly important—to find so little of the things that really would, in my humble opinion, afford us an appreciable remedy.

So I have grave doubts about it, in fact, I just do not believe some of these provisions are constitutional, and if those of us who believe that way are going to surrender and say, "Let the courts decide everything," then who else will stand up for these basic principles?

Another thing I find here, and I have checked somewhat, is that there is no punishment passed out, no real punishment provided for these offenses. In the District of Columbia we do not have enough houses of correction or houses of punishment, or places where the offender may feel a penalty of some kind—I do not mean excessive penalties, but in order for the offender to feel the sting for having committed a crime. I believe that is the necessary remedy. We have always believed that, until recently. But some way, we have slipped into the idea that a man's background, or some other far-off reason, is to control, and he must be more or less protected instead of really punished. I say that is simply contrary to commonsense.

We have purse snatching because it is not unprofitable to snatch purses; and we have these felonies of burglary and larceny and stealing because it is not unprofitable. There is no sting of real punishment.

The Senator from Louisiana has stated that only 5 percent of those who are charged with felonies are ever punished. My goodness alive, if that is correct—and I assume it is—are we going to use that as the justification for the no-knock provision? I think we already have, in practical effect, most of this no-knock provision anyway.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I thank the Senator from North Carolina for yielding.

The PRESIDING OFFICER. Who yields time?

Mr. ERVIN. Mr. President, I yield the remainder of my time to the able and distinguished junior Senator from Maryland (Mr. MATHIAS).

Mr. HARRIS. Mr. President, will the distinguished Senator from Maryland yield me 1 minute?

Mr. MATHIAS. Mr. President, I yield 1 minute to the Senator from Oklahoma.

Mr. HARRIS. Mr. President, Bernard Schwartz, noted constitutional authority, stated in his "Commentary on the Constitution of the United States," that the Constitution:

> Ensures to the person a privileged sanctuary within which he can live his own life, sheltered from public supervision and scrutiny . . . He can retreat therein from outsiders, secure in the knowledge that they cannot get at him without disobeying the Constitution.

Mr. President, this will be less true if the Senate agrees to the pending conference report on the District of Columbia crime bill. Since the founding of this Nation, Americans have always regarded "a man's home as his castle." This cliché establishes the moral, if not legal, basis upon which many traditional and fundamental concepts of American law are based.

Previously, I have expressed my strong opposition to certain provisions of the omnibus crime bill for the District of Columbia. Provisions for no-knock entries by police, "pretrial preventive detention," extensive wiretapping and electronic surveillance, mandatory minimum sentences for certain crimes, and revision of the juvenile code making trial as an

adult mandatory for 15 to 18 year-olds under certain conditions are inconsistent with the constitution and are repressive in both nature and effect.

Authority for law-enforcement officers to break and enter without announcing their identify or purpose has been incorporated in a number of legislative proposals during the 91st Congress, including the Controlled Dangerous Substances Act—S. 3246—the District of Columbia Court Reorganization Act—S. 2601—and the present District of Columbia crime bill—H.R. 16196.

Mr. President, these proposals raise serious questions concerning the meaning and scope of the fourth amendment's protection against unreasonable searches and seizures. On several occasions, the Supreme Court has addressed itself to the problem of "no knock" entry, first in 1958 in Miller against United States and in 1962 in Ker against California. As a memorandum issued by the distinguished Senator from North Carolina (Mr. ERVIN) states:

In *Miller* v. *United States*, 356 U.S. 301 (1958), the Supreme Court held unlawful a breaking and entering by arresting police officers where proper notice was not given. While the Court's decision turned on its application of the governing federal statute, 18 U.S.C. 3109, and not expressly upon constitutional standards, the court discussed the history of the requirement of notice. Mr. Justice Brennan wrote for the majority, "From the earliest days, the common law drastically limited the authority of law officers to break the door of a house to effect an arrest. Such action invades the precious interest of privacy summed up in the ancient adage that a man's house is his castle." Mr. Justice Brennan cited *Semayne's Case* as setting forth the common law rule concerning breaking and entering. He concluded his opinion by writing: "The requirement of prior notice of authority and purpose before forcing entry into a home is deeply rooted in our heritage and should not be given grudging application."

In *Ker* v. *California*, 374 U.S. 23 (1962), the Supreme Court for the first time directed itself to the question of the constitutionality of a "no-knock" entry. It appears that at least eight Justices on the Supreme Court at the time of the Ker decision subscribed to the view that the Fourth Amendment implicitly prohibits unannounced entry in the execution of a search or arrest. The decision of the court in *Ker* v. *California*—affirming a state court's rejection of a contention that officers' failure to give notice was violative of the Fourth Amendment—also pointed to common law exceptions to the rule of announcement. It is the basis for and scope of the exceptions to the universally acknowledged general rule of notice that is specifically at issue in the various legislative proposals for "no-knock" entry.

In this case, the Supreme Court affirmed a California court decision which found sufficient circumstances to justify an exception to the constitutional requirement of notice, held to be incorporated in a California statute. Mr. Justice Clark quoted from *People* v. *Maddox*, 46 Cal. 2d 301 P. 2d 6:

". . . since the demand and explanation requirements of section 844 are codification of the common law, they may reasonably be interpreted as limited by the common law rules that *compliance is not required if the officer's peril would have been increased or the arrest frustrated had he demanded entrance and stated his purpose.*"

The close 5-to-4 vote in the Ker against California case significantly diminishes the majority decision. Justice Brennan and three other Justices held that the majority had recognized "a new and unsupportable exception to the common law and constitutional requirement of notice." Justice Brennan further wrote:

I have found no English decision which clearly recognizes any exception to the requirement that the police first give notice of their authority and purpose before forcibly entering a home.

English and American Courts have both cited the 1603 Semayne's Case as the leading judicial interpretation and application of the maxim that "every man's house is his castle." In that case the Court said:

The Sheriff (if the doors be not open) may break the party's house, either to arrest him or to do other execution of the King's process, if otherwise he cannot enter. But before he breaks it, he ought to signify the cause of his coming, and to make request to open the doors.

Mr. President, the cases clearly refute the arguments advanced by proponents of the no-knock provision of this bill.

Many people, correctly or incorrectly, believe that these provisions threaten their privacy and justify their resistance to law enforcement officers in such cases of forcible, unannounced entry. To be sure, this will not be to the benefit of law enforcement officers or the citizens of our Nation's Capital.

The "preventive detention" provision of this bill also raises grave questions of public policy. It gives cause for serious constitutional questions when considered in light of the eighth amendment guaranteeing "reasonable bail"; the fifth amendment providing for "due process"; and the sixth amendment guaranteeing "access to counsel and the opportunity to participate in the preparation of a defense."

The issue of "preventive detention" fragments current efforts for bail reform. Under existing law preventive detention is already practiced in many instances by the establishment of extremely high bonds. The extraordinary overcrowding of the District jail provides ample support of this fact.

In English law criminal suspects are presumed innocent unless proven guilty. The present bill will subject such individuals to a pre-trial for possible detention which, if such persons are detained, could seriously jeopardize their chances for a fair trial when he is brought before the court. This practice could also add additional burdens to the District's courts which already have substantial backlogs of pending cases.

Further, Mr. President, the Justice Department released a report on April 7 which had been conducted by the Bureau of Standards in connection with the need for preventive detention. The report showed that only 5 percent of all defendants charged with a violent crime during a 4-week study were also charged with a second violent crime while awaiting trial. Another 12 percent of those charged with violent crimes were rearrested while awaiting trial but for less serious offenses. This means then, that 83 percent of those persons committing a violent crime for the first time, were never charged again for a second offense while awaiting trial.

It would seem that accelerated court trials would be far more useful in resolving the kind of programs preventive detention is designed for. Such measures are provided under legislation for reorganization of the District's court system which is also a part of this bill. Additional use could also be made of "third party" supervisors for persons on pretrial release.

Mandatory sentencing provisions are contrary to experience in traditional law and at best, are likely to be counterproductive from the standpoint of law enforcement and corrections. In the area of corrections this provision could have the effect of reducing a prisoner's primary incentive for good behavior and self-improvement, especially when he knows that he has no opportunity for an early release as a result of good behavior.

I am equally concerned about the wiretap and electronic surveillance authority provided for in this bill, and the provision relegating a larger number of juvenile offenders to adult criminal procedures when facilities at the District jail and the Lorton Reformatory are already overcrowded.

Finally, Mr. President, I believe very strongly that it is possible for this body to enact legislation which will provide an effective response to the problems this bill is proposed to solve, and at the same time respect the principles of individual liberty and due process. This can be done if the controversial provisions of this bill are deleted. However, since they are contained in the bill now before us, I will vote to reject the conference report.

The PRESIDING OFFICER. Who yields time?

Mr. MATHIAS. Mr. President, I yield 2 minutes to the distinguished Senator from Massachusetts.

Mr. BROOKE. Mr. President, the decision we face regarding the conference report on the District of Columbia Court Reform and Criminal Procedure Act is a grave one. One of the most telling measures of the values of any society is the manner in which it treats those who violate its laws and standards. This Nation aspires to a justice rare in human society, a justice which recognizes the precious rights of every individual and which accords humane treatment even to those convicted of the most serious crimes. In seeking to maintain a civilized system of justice and to protect our citizens against the dangers and injuries inflicted by those who flout the law, we must strike a complex and delicate balance. In deciding the fate of this legislation, we are once again obliged to weigh that balance carefully.

All of us know the long and arduous efforts which many Senators and Congressmen have devoted to producing this conference bill. Its provisions for court reorganization and other improvements in the law enforcement mechanisms of the District have justly won the approval of the community and of both Houses of Congress. These elements of the bill ought to be approved forthwith in order

to relieve the critical situation which has persisted for too many years in our crime-plagued National Capital.

I favor most of the provisions of this bill. In the interests of the people of the District, I think we should enact the most effective anticrime program we can devise. I emphatically agree, as a former law enforcement officer, that innovations are required to curb the growing pattern of criminal behavior in this city. Coupled with long-term programs of social reform and development, more potent law-enforcement techniques can reverse the swelling tide of crime which afflicts us all.

Yet the bill before us includes a number of sections which properly invite close scrutiny and which have provoked bitter controversy. The conference committee has certainly made an earnest attempt to meet the objections raised against such provisions as those regarding pretrial detention and the so-called no-knock entry by police.

Nevertheless, serious questions of policy and of constitutionality remain. Particularly in regard to pretrial detention, the concept appears so novel and its potential implications are still so dimly understood that it is difficult to render a confident judgment on precisely what effect such procedures would have. It may be that this procedure would do less damage to our traditional principles of the presumption of innocence in criminal cases and of the requirements of due process, than the procedures which are now being applied through devices like high-money bond and extraordinary delays in trials. But it is possible—and the possibility is too threatening to be dismissed—that this provision would open the way to abuses that are worse than those we seek to correct.

In my opinion, it is quite possible that a suitable procedure of this kind can be drawn—indeed, it is even possible that, if properly interpreted, the present proposal could prove both constitutional and helpful to the twin goals of effective law enforcement and individual liberty. However, doubts remain and I am not personally satisfied that this is the appropriate vehicle for this purpose.

Given these doubts and the extreme importance of the issues at stake, I believe the sound course for the Senate is to reject the conference report and to seek passage of the principal features of the bill which command the support of wide majorities in both Houses. Surely we are agreed that the substantial upgrading of the District's law enforcement and judicial capabilities will, in and of itself, do much to alleviate the intolerable delays in processing criminal cases. Speedier trials will themselves contribute immensely to that expeditious justice which is the heart of an effective program to combat crime.

I think we should reserve for fuller study such concepts as pretrial detention. By severing them from the bill and addressing them through additional hearings and debate, we may be able to satisfy our concerns and to design provisions of this sort in which this community can have high confidence.

At the moment, however, so intense is the division on these issues and so widespread the misunderstanding of the provisions of this bill, that passage of this legislation in its present form would not be wise.

Let us instead take one step at a time. Let us move to provide facilities and resources to assure prompt disposition of the heavy caseload in the District and to improve the law enforcement system's overall capacity to meet the challenge of crime in this troubled city. But let us not further undermine confidence in the system of justice we seek to serve by prematurely introducing procedures which are poorly understood and which could surely benefit from more extensive analysis by the Senate and its standing committees.

In casting my vote against this conference report, I profoundly hope that its rejection will not result in a deadlock between the Senate and the House. I cannot believe that reasonable men on both sides, recognizing the vital need to pass potent anticrime legislation, would sacrifice the essential and accepted provisions of this bill in a senseless contest over debatable proposals which obviously affect the most fundamental realms of individual liberty and constitutional government.

Should the bill pass in its present form, we can expect important court tests in the near future. None of us who questions one or another aspect of this bill should assume that today's vote will settle the issues in any final way. The judicial review to which many provisions of the bill will be subjected affords important reassurance to the community and to the Congress that constitutional rights will be safeguarded. On this occasion, as so often in the past, the splendid strength of our system of checks and balances should encourage all of us to rely on forthcoming judicial evaluations of the dubious provisions of this bill. Men may well differ on the merits and effects of this legislation and we do well to view this measure, not as an inflammatory act of repression, but as exactly what it is—a controversial approach to the problems of criminal justice which we all seek to resolve. I am sure that, should the bill be enacted, the courts will be quick to correct any features which flout the Constitution.

On the basis of my own analysis, I urge the Senate to reject the conference report and to adopt a new bill built principally on the major provisions previously enacted by this body.

Mr. MATHIAS. Mr. President, as we approach the end of this debate, I wish there were time to summarize fully the concerns that have led me to oppose the conference report, and that have led three of the seven Senate conferees to oppose the report and to support alternative legislation to improve the administration of justice and reduce the level of crime in the Nation's Capital.

As President Nixon stated in January 1969, the most urgent need of law enforcement in Washington is court reform. In his first message to Congress on the District of Columbia, the President gave top priority to reforming and reorganizing the court system of the District to eliminate its crippling backlogs, prevent future delays, and insure that justice will be both swift and sure.

After extensive hearings, the Senate District of Columbia Committee responded to the President's request and the city's need by reporting a massive court reform bill, which was approved by the Senate without objection on September 18, 1969. The Senate also passed measures last year to improve procedures for handling juvenile cases, make limited changes in local criminal law, strengthen the District of Columbia Bail Agency, and establish a full-time public defender.

Unfortunately, this enlightened legislation has undergone many substantive changes. These changes create issues which should not be swept under the rug of court reform. They should be considered separately and voted up or down on their own. Yet, the conference report procedure today gives us only two choices: to reject the report, or to swallow it whole. If we reject the report, we can proceed at once to take up the substitute bills which other Senators and I have introduced—bills which would restore top priority to court reform, and would enable us to debate no-knock, preventive detention, juvenile procedures, and other issues point by point. To me this is the course of wisdom, and I, therefore, urge the rejection of this report.

It is the concern of many Senators, as expressed on this floor and privately, that defeat of the conference report would mean that the President's request for court reorganization would be deferred until next year, or that there would be no anticrime bill for the city—a city that has now been awarded the title of national crime capital by bipartisan agreement.

Mr. President, that is a groundless fear. There can be a bill for court reform and it is on each Senator's desk in the form of S. 4080. There can be a bill for revision of criminal and juvenile law, and it is on each Senator's desk in the form of S. 4081. There will be no delay for research and development. The research and development has been done. The bills are in the pipeline. They are ready to go. They can be adopted immediately and sent to the other body, and that is what we ought to do.

Mr. President, this is serious business. The level of crime in Washington rose by over 20 percent this year. We have to address ourselves to the best possible way of eliminating the pollutants of crime and fear of crime from the city of Washington.

Mr. President, some Members of the Senate have devoted impressive amounts of time, energy, and thought to this legislation. I want to commend in particular the contributions of my colleague from Maryland, Senator TYDINGS, and the senior Senator from North Carolina, Senator ERVIN. I also want to note the essential contributions of many tireless staff members.

In considering this bill, we are acting in our capacity as the local legislature for the District of Columbia. I happen to

believe that the residents of Washington should be empowered to elect their own legislators, but as long as we deny the citizens of the Nation's Capital the right of self-government, we have a special obligation to insure that they are not denied any other rights, such as privacy or due process of law.

And I say, Mr. President, that if we were debating this kind of bill for our own States, this would be a different debate. Or if this were nationwide legislation, we would be dissecting it clause by clause. We would be insisting—and our constituents would insist—that we produce a measure which would curb crime without suspending the Constitution. We would consider a man's right to be secure in his home as important as his right to be safe on the streets. We would want to zero in on the real problems of law enforcement, rather than waving a blunderbuss at a whole community.

This body has spent just 7 weeks deciding that the Constitution does not stop at the water's edge. Today, I hope we will decide that it does not stop at the District line.

Mr. TYDINGS. I yield 1 minute to the distinguished Senator from Nevada.

Mr. BIBLE. Mr. President, 1 minute is not much time, but I spoke at length on Tuesday urging full support of this conference report.

The conference report—the bill it brings to the Senate has been thoroughly discussed. The questions raised by the bill have been exhaustively debated. There is no questioning the fact that the proposed court reorganization is urgently needed. The deplorable crime situation in the Nation's Capital will not be stemmed unless the processes of criminal justice are speeded up. This bill will provide the wherewithal to assure swift, fairly administered justice. I think it is a sure step toward making this city a safer place to live and do business. Two issues—no-knock and preventive detention—have raised concerns respecting their constitutionality. These questions have been argued long and thoroughly. I have examined them carefully, and I subscribe to the viewpoint that they are soundly conceived and constitutional.

I urge adoption of the conference report.

Mr. PASTORE. Mr. President, will the Senator yield for a question?

Mr. TYDINGS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator has 7 minutes.

Mr. TYDINGS. I yield to the Senator from Rhode Island.

Mr. PASTORE. There is a rumor prevalent that the manager of the bill resisted these two very crucial amendments in conference; is that true?

Mr. TYDINGS. The manager of the bill has introduced a pretrial detention provision prior to that introduced by the Department of Justice. The conference report perfected the House provision in a manner in which the chairman of the Senate conferees thought was best, and the House receded and adopted the Senate version of no-knock which passed without a dissenting vote in the Senate last year and passed again in two other legislative forms in the past year as well.

Mr. PASTORE. The next question: Is the Senator convinced, after thorough study, that both these provisions are consistent with our Constitution?

Mr. TYDINGS. I am convinced.

The PRESIDING OFFICER. Will the Senator suspend for a minute?

Mr. TYDINGS. Yes.

The PRESIDING OFFICER. The time is now approximately 5 minutes to the time the Senate is to vote on this issue.

In compliance with the order previously agreed to, the Sergeant at Arms is directed to clear the Chamber and the lobbies of all staff personnel except the staffs of the Secretary of the Senate, the Sergeant at Arms, the secretary to the majority, the secretary to the minority, their assistants, the aides to the leadership on both sides of the aisle, staff personnel associated with the manager of the conference report, and the personnel of the two policy committees, and that such staff remain off the floor and from the lobbies until the vote is announced, at which time they may be permitted to return to the Chamber.

Mr. JACKSON. Mr. President, I have followed closely the debate on the conference report on the District of Columbia crime bill. I have concluded with some regret that the proponents of this conference report have been unable to demonstrate that the many merits of the bill outweigh its obvious defects. I am not convinced that the introduction of such concepts as preventive detention will substantially advance the cause of crime control in the District, but I do know that they raise serious questions of due process which have not been answered to my satisfaction. On balance, there are too many aspects of the bill which raise constitutional and other issues to warrant our acceptance of the conference report.

Legislation has already been introduced in the Senate which deals with the problems of crime and court reform in the District without, at the same time, introducing dubious constitutional concepts. I am cosponsoring this legislation and see no reason why it cannot win the early approval by Congress.

Mr. President, I ask unanimous consent to have printed in the RECORD a statement by my colleague from Washington (Mr. MAGNUSON), opposing the conference report on the District of Columbia crime bill, S. 2601.

There being no objection, the statement by Senator MAGNUSON was ordered to be printed in the RECORD, as follows:

Mr. MAGNUSON. Mr. President, while there can be little argument over the rise in crime in the District of Columbia and the subsequent need for a D.C. anti-crime bill this year, I cannot in good conscience vote for a bill containing provisions which I believe to be unconstitutional. Therefore, I oppose the acceptance of the Conference Report on the D.C. Crime Bill (S. 2601).

While I have grave reservations about the wisdom and efficacy of certain provisions in this bill, I am particularly concerned about the preventive detention sections of the bill. After a long and diligent study of both case and common law, it is my belief that preventive detention would violate the "due process" clause of the 5th Amendment and the 8th Amendment's provision that "excessive bail shall not be required." In addition, I have serious questions as to whether or not preventive detention violates a defendant's right to a speedy trial as provided for by the 6th Amendment. At such, I believe preventive detention is unconstitutional, and for this reason I would vote against accepting the Conference Report.

Mr. President, as a former County Prosecutor in the State of Washington and as a current resident of the District, I am well aware of the need for an anti-crime bill in the District of Columbia this year. Thus it is my hope and expectation that the Senate will expeditiously pass the many other fine provisions of this bill, as provided in S. 4088 and S. 4081 which I am cosponsoring and which include sorely needed court reorganization and the establishment of a Public Defender program, so that the streets will once again belong to the people, rather than the criminals.

Mr. SPONG. Mr. President, notwithstanding my reservations about certain of its provisions, I will support this conference report because I believe it represents the only realistic chance we will have in this Congress to begin doing something about crime in the District.

As one of the Senate conferees, I can testify to the strenuous efforts that were made to eliminate such questionable items as pretrial detention and mandatory minimum sentences. But, even though we succeeded in improving the original House provisions, in the end, we were faced with a choice of having a less than perfect bill or no bill at all.

In my judgment, it is the same choice the Senate is called upon to make here. I do not believe we can avoid it by passing another bill which preserves only programs which are acceptable to the Senate conferees. For, just as surely as it passed this report by a better than 5-to-1 margin, the House would amend the new bill to put back those provisions we took out. We would have gained nothing for the exercise except further delay.

Mr. President, although I continue to have reservations about pretrial detention and mandatory minimum sentences and would vote against those measures were they to be acted on separately, I am forced to make an overall judgment on the entire package before us. And, on balance, I find the good far outweighs the bad. In such specific provisions as court reform, expansion of the bail agency and creation of a full-fledged public defender system, I believe the bill makes a valuable contribution to the system of justice in the District.

Mr. President, the need to come to grips with the crime problem in the District is too compelling for there to be any further delay in passing this legislation.

Mr. HATFIELD. Mr. President, the problem of crime in the Nation's Capital has grown to such an extent that it demands the immediate action of Congress without further delay. Many of us and our staffs, regrettably from personal experience, are well aware of this urgent need. Comprehensive reform of the criminal justice system is necessary.

The District of Columbia Court Reform and Criminal Procedure Act of 1970, referred to as the District of Columbia crime bill, represents an attempt to provide that reform. It provides for a reorganization of the court system designed to improve its efficiency and ef-

fectiveness. It increases the number of judges, their tenure and salary. The bill contains a comprehensive revision of the code of juvenile procedure. The criminal code of the District of Columbia has been completely revised and updated. The bail agency has been expanded and the District is provided for the first time with a full-fledged public defender rather than the pilot project it now has.

I wholeheartedly support these reforms of the criminal justice system in the District of Columbia. They are the kinds of reforms which I have long advocated as necessary for the District and, indeed, elsewhere to help the fight against crime.

Mr. President, I am fully aware that this bill also contains some highly controversial provisions, particularly those relating to pretrial detention and so-called no-knock. In view of the widely divergent views people have today concerning crime and how best to cope with it, it is not surprising that such provisions as these are controversial and that opponents have challenged their constitutionality. In today's period of change in court interpretations of criminal laws and the Constitution, I believe that almost any new legislation in this area would be open to conflicting arguments regarding their constitutionality.

I have carefully studied these provisions and the arguments of their supporters and critics. Despite some reservations I have about these two provisions, I intend to vote in favor of the conference report. Delay in enacting legislation is simply not tolerable.

It is my hope, Mr. President, that those responsible for the administration of justice—the police, the prosecutors, and the courts—will use these controversial provisions with wisdom and restraint. Should application of these controversial provisions demonstrate unwarranted infringement of the constitutional freedoms of the citizens of the District of Columbia, I shall support their prompt repeal. I do not expect this to happen. Employed with sound discretion, all the provisions of this conference report will contribute to the improvement of the criminal justice system in the Nation's Capital.

Discussion of this bill has brought out another facet of this problem—that of our corrections system.

Many speeches have been given about our penal system in recent weeks. As Governor of Oregon, I worked to improve our State corrections system, and today we have a women's prison unit, a minimum-corrections complex, juvenile rehabilitation centers, halfway houses and work-release programs. All of these work very well at the State level, and I hope that we could expand work in these areas at the Federal level.

I hope that the discussions on this bill will give needed impetus to the various proposals offering substantial improvements in our penal system. The present allocation of our funds—with the great majority going to the apprehension of criminals and very little to their rehabilitation—must not continue. I hope the Senate can vote in the near future on needed improvements in our penal system.

Mr. TYDINGS. Mr. President, in a few moments the Senate will vote on the conference report on S. 2601, the President's District of Columbia crime legislation.

I am confident the Senate will approve this bill by a substantial majority. In doing so, it will send to the President the first of his major crime proposals to pass the Congress.

I am proud of the Senate's role in this legislation. We passed the Senate version of these bills in prompt order last fall, within weeks of their submission by the President. We worked hard in a long and difficult conference to achieve this sound and effective conference report.

Of the major items of difference between the two Houses, the Senate prevailed on more than a full half; the House on a third; and the balance were resolved by compromise legislation. We successfully eliminated from this legislation virtually all the controversial provisions which the House had added to the President's proposals.

During the past week, we have spoken at great length on the provisions of this bill and the urgent need for its enactment.

No one doubts the need for prompt action on National Capital crime legislation. More than 56,000 felonies were reported in this city last year, but scarcely more than 1,400 felony convictions were obtained in the District's courts. The number of felonies reported in the District has risen 122 percent in the last 5 years, but the percentage of convictions obtained each year has actually decreased during the same period.

This conference bill is a sound, effective, constitutional, and fully safeguarded answer to this crime crisis.

As I predicted when the Senate discussion of this legislation began, debate has centered on the pretrial detention and no-knock sections of the bill. I believe we have demonstrated that these provisions are improvements on the present state of the law.

We have demonstrated how the no-knock provision simply writes down what is already the law as declared by the Supreme Court for the whole United States. The Senate version of no-knock, passed without a dissenting vote in this body last fall, prevailed in the conference and is incorporated in this bill we are about to pass. The conference version of no-knock, like the Senate version, improves on the present law in the District of Columbia, by requiring prior judicial supervision of proposed no-knock entries in every possible case.

We have explained our belief that the pretrial detention provisions of this bill, which are based on the centuries-old British practice, under a bill of rights bail provision identical to our own, are a vast improvement over the unconscionably hypocritical subterfuge of high money bond now in use in every State of the Union, and in the District of Columbia as well, as a pretext to detain dangerous defendants prior to their trial.

We have called attention to the recent National Bureau of Standards study which shows that fully 40 percent of all felony defendants in the District are in fact detained today. This conference report merely proposes that, when a defendant is to be detained because the judge believes he may be dangerous if released, that defendant must be given a full and fair hearing as to his dangerousness, with the right to counsel and to present evidence; that he should have an immediate appeal from any adverse finding; and that he should have an absolute right to release or trial within 60 days of any detention order.

This proposal is not only constitutional, but an enormous reform over the hypocrisy which now pervades American pretrial detention practice.

I believe we have met the reasoned arguments by the critics of these proposals.

But much of this debate has been cast in unfortunately emotional and inflammatory terms. We have heard some well-meaning critics assert that this bill is antiblack. To those who say this bill is anitblack, I say crime in this 70-percent black city is antiblack. President Johnson's District of Columbia Crime Commission tells us that 86 percent of all District of Columbia murder victims are black; 86 percent of all aggravated assault victims are black; 80 percent of all rape victims are black; 66 percent of all auto theft victims are black;and 60 percent of all burglary victims are black. In fact, the only crime of violence which afflicts blacks and whites equally in this city is robbery.

I find no cause to abandon the people of this city or any segment of our population to the morass of crime simply because it may be expedient or fashionable to do so. The most controversial provisions of this bill are among the most vital for protecting the residents of this city from the grinding terror of the dangerous defendant and the malignant pervasion of the city's drug traffic.

We have heard some others, ignoring the 90 percent of this bill which is without controversy, oppose this bill as repressive. There is repression in this city; but it is not repression by the Government and it is not repression by this bill. It is the repression of fear and crime and violence which is destroying homes and families and businesses within the shadow of the Capitol itself. It is the repression which drives people to bar their windows and flee the streets at dark. It is the repression which forces people to keep arsenals and police dogs in their homes for fear of being assaulted, not by the police, but by vicious killers, rapists, and thieves.

We have heard it claimed that this bill should not be enacted because it might serve as a model for the Nation. We have heard the bill described as an "experiment in repression" by critics whose own States sanction no-knock search and pretrial detention practices broader and far less safeguarded than this bill provides. We have heard it described as a "model" for other States by critics who overlook the fact that more than half the States now permit no-knock searches and practice virtually

unlimited pretrial detention through money bond, without the safeguards of this bill.

We have seen the wiretap and second-offense mandatory sentencing provisions attacked as unprecedented by critics who forget Congress authorized this same legislation, without the new safeguards this bill provides, for the entire Nation in the Omnibus Crime Act and the Gun Crime Control Act of 1968.

This legislation will be an example to the Nation, but not by reason of its provisions, which are based on the experiences and practice of other States and prior Federal laws. The example Congress will provide today is the clear message that a government by free people has the determination, within the sacred limits of its time-tested Constitution, to take reasoned, safeguarded steps to meet and defeat a plague of lawlessness destroying the very fabric of its society.

Some Senators have suggested we should defeat this conference report and send to the House a watered-down version of this legislation. They suggest that in adopting the conference report we are somehow knuckling under to the other House.

Having led the Senate conferees, I can guarantee this body that the other House will never accept this suggested alternative. But I do not offer that as a reason to pass this report. We should approve this conference report because it is a sound, constitutional, and effective answer to the crime crisis facing this city.

We have an enormously difficult and tragic crime problem to deal with in this city. Its victims know it better than any of us ever can. Our responsibility is to address that crime problem rationally, calmly, and deliberately, and to formulate effective answers to it within the framework of our Constitution and our concept of individual rights and liberties. This bill is that kind of response.

We have done our job. We have met the President's request. We have provided the bill necessary to answer the crime problem in this city. I urge the adoption of the conference report.

Mr. PASTORE. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

The PRESIDING OFFICER (Mr. (BELLMON). All time on the conference report has now been yielded back. The question is on agreeing to the conference report.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. YOUNG of Ohio (after having voted in the negative). On this vote I have a pair with the Senator from Nevada (Mr. CANNON). If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withdraw my vote.

Mr. LONG (after having voted in the affirmative). On this vote I pair with the Senator from Washington (Mr. MAGNUSON). If he were present and voting, he would vote "nay." If I were at liberty to vote I would vote "yea." I withdraw my vote.

Mr. INOUYE (after having voted in the negative). On this vote I have a pair with the Senator from New Mexico (Mr. MONTOYA). If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withdraw my vote.

Mr. KENNEDY. I announce that the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. DODD), the Senator from Tennessee (Mr. GORE), the Senator from Washington (Mr. MAGNUSON), the Senator from New Mexico, (Mr. MONTOYA), the Senator from Rhode Island (Mr. PELL), and the Senator from Georgia (Mr. RUSSELL) are necessarily absent.

Mr. GRIFFIN. I announce that the Senator from New Hampshire (Mr. COTTON) is necessarily absent.

The Senator from South Dakota (Mr. MUNDT) and the Senator from Maine (Mrs. SMITH) are absent because of illness.

If present and voting, the Senator from New Hampshire (Mr. COTTON), the Senator from South Dakota (Mr. MUNDT), and the Senator from Maine (Mrs. SMITH) would each vote "yea."

The result was announced, yeas 54, nays 33, as follows:

[No. 248 Leg.]

YEAS—54

NOT VOTING—10

Cannon	Magnuson	Russell
Cotton	Montoya	Smith, Maine
Dodd	Mundt	
Gore	Pell	

So the report was agreed to.

Mr. TYDINGS. Mr. President, I move that the vote by which the conference report was agreed to be reconsidered.

Mr. MANSFIELD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. There will be order in the Senate. The galleries will please be as quiet as possible. The Senate will be in order. The Senate is not in order. We will suspend until we have order in the Senate.

The Senator from Florida is recognized.

Mr. HOLLAND. Mr. President, I have just voted to approve the conference report on S. 2601, a bill to reorganize the courts of the District of Columbia and for other purposes. I want the record to show that I have studied the situation presented by this conference report at great length and with deep misgivings. My respect for the distinguished senior Senator from North Carolina is such and in particular my recognition of his unexcelled capability in the field of constitutional law is so great that I was unwilling to vote for said conference report in view of his deep and expressed conviction as to the unconstitutionality of several portions of that bill in the absence of a conviction of my own as to its usefulness and the very great existing need for many unquestioned provisions of the measure. I think there is substantial reason to expect that the courts may rule in accordance with the convictions and able arguments of the Senator from North Carolina, to eliminate certain sections of the bill as unconstitutional and to limit certain other sections which I shall not discuss at length.

My reason for voting for the conference report, however, is that the bill does contain so many provisions which, in my opinion, will strengthen the enforcement of law within the District of Columbia and that such strengthened enforcement of law is so greatly needed not only for the protection of residents of the District but also for the protection of millions of Americans who visit here every year and the protection of thousands of guests from other nations who come here either as visitors or as officials representing their several countries, that I feel profoundly that these helpful provisions of the bill should be enacted notwithstanding the fact that in my own mind there are serious doubts as to several of its provisions which as I have already said may be eliminated or limited by the opinions of the courts.

It is clear to me, however, that under applicable law and under the structure of this particular bill these questionable provisions, from the constitutional standpoint, are separable—separable—from the main body of the bill which is so badly needed to improve the enforcement of law and the protection of the law-abiding public within the District of Columbia. From the standpoint of better organization of the courts, better jurisdictional and procedural machinery for the courts, and in many respects improvement of the substance of the criminal laws applicable in the District of Columbia I feel that this measure should become law.

I may add that in reaching my decision on this serious question I have not only studied the record of the debate and carefully considered my own convictions, but I have also discussed with some of our colleagues in the other body the possibility of eliminating or limiting in further conference or in separate legislation some of the questionable provi-

sions which have disturbed the Senator from North Carolina as well as other Senators and myself. I have reached the conclusion that the soundest course available was to enact the conference report and I have therefore voted to do so.

ORDER FOR ADJOURNMENT TO 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 o'clock tomorrow morning.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

MILITARY PROCUREMENT AUTHORIZATIONS, 1971

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate turn to the consideration of Calendar No. 1020, H.R. 17123, that it be laid before the Senate and made the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to the consideration of the bill, which had been reported from the Committee on Armed Services with an amendment to strike out all after the enacting clause and insert:

TITLE I—PROCUREMENT

SEC. 101. Funds are hereby authorized to be appropriated during the fiscal year 1971 for the use of the Armed Forces of the United States for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, as authorized by law, in amounts as follows:

AIRCRAFT

For aircraft: for the Army, $292,100,000; for the Navy and the Marine Corps, $2,337,700,000; for the Air Force, $3,225,500,000.

MISSILES

For missiles: for the Army, $1,031,600,000; for the Navy, $932,400,000; for the Marine Corps, $12,800,000; for the Air Force, $1,479,400,000.

NAVAL VESSELS

For naval vessels: for the Navy, $2,276,900,000.

TRACKED COMBAT VEHICLES

For tracked combat vehicles: for the Army, $182,200,000; for the Marine Corps, $47,400,000.

OTHER WEAPONS

For other weapons: for the Army, $67,200,000; for the Navy, $2,789,000; for the Marine Corps, $4,400,000.

TITLE II—RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

SEC. 201. Funds are hereby authorized to be appropriated during the fiscal year 1971 for the use of the Armed Forces of the United States for research, development, test, and evaluation, as authorized by law, in amounts as follows:

For the Army, $1,609,200,000;

For the Navy (including the Marine Corps), $2,194,300,000;

For the Air Force, $2,718,000,000; and

For the Defense Agencies, $445,000,000.

SEC. 202. There is hereby authorized to be appropriated to the Department of Defense during fiscal year 1971 for use as an emergency fund for research, development, test, and evaluation or procurement or production related thereto, $50,000,000.

SEC. 203. (a) Funds authorized for appropriation to the Department of Defense under the provisions of this Act or any other Act shall not be available for payment of independent research and development, bid and proposal, or other technical effort costs unless the work for which payment is made is relevant to the functions or operations of the Department of Defense and unless the following conditions are met—

(1) the Secretary of Defense, prior to or during each fiscal year, negotiates advance agreements establishing a dollar ceiling on such costs with all companies which during their last preceding fiscal year received more that $2,000,000 of independent research and development, bid and proposal, or other technical effort payments from the Department of Defense, the advance agreements thus negotiated (A) to cover the first fiscal year of each such company beginning on or after the beginning of each fiscal year of the Federal Government and (B) to be concluded either directly with each such company or with those product divisions of each such company which contract directly with the Department of Defense and themselves received more than $250,000 of such payments during their company's last preceding fiscal year;

(2) the independent research and development portions of the advance agreements thus negotiated are based on company submitted plans on each of which a technical evaluation is performed by the Department of Defense prior to or during the fiscal year covered by such advance agreement;

(3) no payments for independent research and development, bid and proposal, and other technical effort costs are made by the Department of Defense to any company or product division with which an advance agreement is required by subsection (a)(1) of this section, except pursuant to the terms of that agreement; and

(4) the total dollar value of the advance agreements negotiated prior to or during a given fiscal year as required under subsection (a)(1) of this section does not exceed a ceiling to be established annually by the Congress.

(b) In the event negotiations are held with any company or product division with which they are required under subsection (a)(1) of this section, but no agreement is reached with any such company or product division—

(1) no payments for independent research and development, bid and proposal, and other technical effort costs shall be made to any such company or product division during the fiscal year for which an agreement was not reached, except in an amount substantially less than the amount which, in the opinion of the Department of Defense, such company or product division would otherwise have been entitled to receive; and

(2) the amount of money received by that company for independent research and development, bid and proposal, and other technical effort costs during its last preceding fiscal year shall be included in determining compliance by the Department of Defense with the ceiling established by Congress, pursuant to subsection (a)(4) of this section, for the fiscal year in question.

(c) The Secretary of Defense shall submit an annual report to the Congress on or before January 31, 1972, and on or before January 31 of each succeeding year, setting forth—

(1) those companies with which negotiations were held pursuant to subsection (a)(1) of this section prior to or during the preceding fiscal year, together with the result of those negotiations;

(2) the manner of his compliance with the ceiling established by Congress for the preceding fiscal year pursuant to subsection (a)(4) of this section; and

(3) the latest available Defense Contract Audit Agency statistics on the independent research and development, bid and proposal, and other technical effort payments made to major defense contractors whether or not covered by subsection (a)(1) of this section.

(d) The provisions of this section shall apply only to contracts for which the submission and certification of cost or pricing data are required in accordance with section 2306 (f) of title 10, United States Code.

(e) The ceiling to be established pursuant to subsection (a)(4) of this section for fiscal year ending June 30, 1971, shall be $625,000,000.

(f) Section 403 of Public Law 91-121 (80 Stat. 204) is hereby repealed.

SEC. 204. None of the funds authorized to be appropriated by this Act may be used to carry out any research project or study unless such project or study has a direct and apparent relationship to a specific military function or operation.

SEC. 205. (a) There is hereby established an interagency advisory council to be known as the Interagency Advisory Council on Domestic Applications of Defense Research (hereinafter in this section referred to as the "Council").

(b) The Council shall be composed of the following members:

(1) One member from the Department of Defense, to be designated by the Secretary of Defense.

(2) One member from the Department of Health, Education, and Welfare, to be designated by the Secretary of Health, Education, and Welfare.

(3) One member from the Department of Housing and Urban Development, to be designated by the Secretary of Housing and Urban Development.

(4) One member from the Department of Transportation, to be designated by the Secretary of Transportation.

(5) One member from the Office of Economic Opportunity, to be designated by the Director of the Office of Economic Opportunity.

(6) One member from the Department of Labor, to be designated by the Secretary of Labor.

(7) One member from the Department of the Interior, to be designated by the Secretary of the Interior.

(8) One member from the National Aeronautics and Space Administration, to be designated by the Administrator of the National Aeronautics and Space Administration.

(c) The member of the Council designated by the Secretary of Housing and Urban Development shall serve as Chairman of the Council.

(d) Three members of the Council shall constitute a quorum; and a vacancy in the Council membership shall not affect its powers but shall be filled in the manner in which the original appointment was made.

(e) It shall be the function of the Council to study and evaluate proposed research programs and projects submitted to it pursuant to this section. The Council shall accept for consideration research projects that are of mutual interest to the Department of Defense and one or more of the participating departments or agencies, and, subject to section 204, such other categories of research bearing on important national needs as the Council may specify, including but not

limited to such fields as housing, education, transportation, and pollution.

(f) The Council shall advise the Director of Defense Research and Engineering of the Department of Defense regarding research proposals submitted to it for consideration pursuant to subsection (e) and shall make such recommendations to the Director as it deems appropriate as to the merits of proposals submitted to it for consideration.

(g) The Council shall review the results of research conducted under its auspices and shall advise the Director of Defense Research and Engineering of the Department of Defense as to the desirability of continuing, modifying, or terminating such research activities.

(h) The Secretary of Defense is authorized to make grants to colleges, universities, and other not-for-profit institutions engaged in research and/or development activities sponsored by the Department of Defense for the purpose of supporting selected research programs and projects promising significant domestic benefits. Proposals for such research shall be submitted to and reviewed by the Council. The decision of the Secretary of Defense with respect to which, if any, research proposals approved by the Council will be sponsored shall be final.

(i) The total amount in grants made under this section in any fiscal year shall not exceed an amount equal to 5 per centum of the total funds expended in such fiscal year by the Department of Defense under contracts entered into with colleges, universities, and other not-for-profit institutions for the performance of defense research.

(j) In no case shall any one institution receive more than $5,000,000 under this section in any one fiscal year.

(k) Research grants made by the Secretary of Defense under this section shall be made subject to such rules and regulations as the Secretary of Defense may prescribe after consultation with the Council.

TITLE III—RESERVE FORCES

SEC. 301. For the fiscal year beginning July 1, 1970, and ending June 30, 1971, the Selected Reserve of each Reserve component of the Armed Forces will be programed to attain an average strength of not less than the following:

(1) The Army National Guard of the United States, 400,000.

(2) The Army Reserve, 260,000.

(3) The Naval Reserve, 129,000.

(4) The Marine Corps Reserve, 47,715.

(5) The Air National Guard of the United States, 87,878.

(6) The Air Force Reserve, 47,921.

(7) The Coast Guard Reserve, 10,000.

SEC. 302. The average strength prescribed by section 301 of this title for the Selected Reserve of any Reserve component shall be proportionately reduced by (1) the total authorized strength of units organized to serve as units of the Selected Reserve of such component which are on active duty (other than for training) at any time during the fiscal year, and (2) the total number of individual members not in units organized to serve as units of the Selected Reserve of such component who are on active duty (other than for training or for unsatisfactory participation in training) without their consent at any time during the fiscal year. Whenever any such units or such individual members are released from active duty during any fiscal year, the average strength for such fiscal year for the Selected Reserve of such Reserve component shall be proportionately increased by the total authorized strength of such units and by the total number of such individual members.

TITLE IV—ANTI-BALLISTIC MISSILE CONSTRUCTION AUTHORIZATION; LIMITATIONS ON DEPLOYMENT

SEC. 401. (a) Military construction for the Safeguard anti-ballistic missile system is authorized for the Department of the Army as follows:

(1) Technical and supporting facilities and acquisition of real estate inside the United States $322,000,000;

(2) Research, development, test, and evaluation facilities at the Kwajalein Missile Range $3,200,000;

(3) Military Family Housing, four hundred units, $8,800,000:

Malmsrtom Safeguard site, Montana, two hundred units,

Grand Forks Safeguard site, North Dakota, two hundred units.

(b) There are authorized to be appropriated for the purposes of this section not to exceed $334,000,000.

(c) Authorization contained in this section (except subsection (b)) shall be subject to the authorizations and limitations of the Military Construction Authorization Act, 1971, in the same manner as if such authorizations had been included in that Act.

(d) Within the amounts of the authorizations for military construction for Safeguard, the Secretary of the Army or his designee is authorized to provide for, under such terms and conditions as he may determine, two hundred and twenty-five units of temporary family housing for occupancy on a rental basis by military and civilian personnel of the Department of Defense and their dependents at each Safeguard site in connection with any military construction and installation and checkout of system equipment which is or may hereafter be authorized at a Safeguard site, if the Secretary of the Army or his designee determines that such temporary housing is necessary in order to perform the construction and installation and checkout of system equipment, and that temporary housing is not otherwise available under reasonable terms and conditions.

SEC. 402. None of the funds authorized by this or any other Act may be obligated or expended for the purpose of initiating deployment of an anti-ballistic missile system at any site other than Whiteman Air Force Base, Knobnoster, Missouri; except that funds may be obligated or expended for the purpose of initiating advanced preparation (site selection, land acquisition, site survey, and the procurement of long lead-time items) for an anti-ballistic missile system site at Francis E. Warren Air Force Base, Cheyenne, Wyoming. Nothing in the foregoing sentence shall be construed as a limitation on the obligation or expenditure of funds in connection with the deployment of an anti-ballistic missile system at Grand Forks Air Force Base, Grand Forks, North Dakota, or Malmstrom Air Force Base, Great Falls, Montana.

TITLE V—GENERAL PROVISIONS

SEC. 501. The Congress views with grave concern the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from such involvement which cannot be ignored by the United States. In order to restore and maintain the military balance in the Middle East, by furnishing to Israel the means of providing for its own security, the President is authorized to transfer to Israel, by sale, credit sale, or guaranty, such aircraft, and equipment appropriate to use, maintain, and protect such aircraft, as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East. Any such sale, credit sale, or guaranty shall be made on terms and conditions not less favorable than those extended to other countries which receive the same or similar types of aircraft and equipment.

SEC. 502. Subsection (a) of section 401 of Public Law 89-367, approved March 15, 1966 (80 Stat. 37), as amended, is hereby amended to read as follows:

"(a) (1) Not to exceed $2,500,000,000 of the funds authorized for appropriation for the use of the Armed Forces of the United States under this or any other Act are authorized to be made available for their stated purposes to support: (A) Vietnamese and other free world forces in support of Vietnamese forces, (B) local forces in Laos and Thailand; and for related costs, during the fiscal year 1971 on such terms and conditions as the Secretary of Defense may determine.

"(2) No defense article may be furnished to the South Vietnamese forces, other free world forces in Vietnam, or to local forces in Laos or Thailand with funds authorized for the use of the Armed Forces of the United States under this or any other Act unless the government of the forces to which the defense article is to be furnished shall have agreed that—

"(A) it will not, without the consent of the President—

"(i) permit any use of such article by anyone not an officer, employee, or agent of that government,

"(ii) transfer, or permit any officer, employee, or agent of that government to transfer such article by gift, sale, or otherwise, or

"(iii) use of permit the use of such article for purposes other than those for which furnished;

"(B) it will maintain the security of such article, and will provide substantially the same degree of security protection afforded to such article by the United States Government;

"(C) it will, as the President may require, permit continuous observation and review by, and furnish necessary information to, representatives of the United States Government with regard to the use of such article; and

"(D) unless the President consents to other disposition, it will return to the United States Government for such use or disposition as the President considers in the best interests of the United States, any such article which is no longer needed for the purposes for which it was furnished.

The President shall promptly submit a report to the Speaker of the House of Representatives and the President of the Senate on the implementation of each agreement entered into in compliance with this paragraph. The President may not give his consent under clause (A) or (D) of this paragraph with respect to any defense article until the expiration of fifteen days after written notice has been given to the Speaker of the House of Representatives and the President of the Senate regarding the proposed action of the President with respect to such article. As used in this paragraph the term 'defense article' shall have the same meaning prescribed for such term in section 644(d) of the Foreign Assistance Act of 1961. In order to allow a reasonable period of time for the Department of Defense to comply with the requirements of this paragraph, the provisions of such paragraph shall become effective sixty days after the date of enactment of this section."

SEC. 503. Of the total amount authorized to be appropriated by this Act for the procurement of the F-111 aircraft, $283,000,000 of such amount may not be obligated or expended for the procurement of such aircraft until and unless the Secretary of Defense has (1) determined that the F-111 aircraft has been subjected to and successfully completed a comprehensive structural integrity test program, (2) approved a program for the procurement of such aircraft, and (3) certified in a written report to the Committees on Armed Services of the Senate and the House of Representatives that he has made such a determination and approved such a program, and has included in such written report the basis for making such determination and approving such program.

SEC. 504. (a) Of the total amount authorized to be appropriated by this Act for the procurement of the C-5A aircraft, $200,000,000 of such amount may not be obligated or

expended until and unless the Secretary of Defense has submitted to the Committees on Armed Services of the Senate and the House of Representatives a plan for the expenditure of such $200,000,000 and such committees have approved such plan. In no event may all or any part of such $200,000,000 be obligated or expended except in accordance with a plan approved by such committees.

(b) The $200,000,000 referred to in subsection (a) of this section, following the approval of a plan pursuant to such subsection, may be expended only for the reasonable and allocable direct and indirect costs incurred by the prime contractor under a contract entered into with the United States to carry out the C–5A aircraft program. No part of such amount may be used for—

(1) direct costs of any other contract or activity of the prime contractor;

(2) profit on any materials, supplies, or services which are sold or transferred between any division, subsidiary, or affiliate of the prime contractor under the common control of the prime contractor and such division, subsidiary, or affiliate;

(3) bid and proposal costs, independent research and development costs, and the cost of other similar unsponsored technical effort; or

(4) depreciation and amortization costs on property, plant, or equipment.

Any of the costs referred to in the preceding sentence which would otherwise be allocable to any work funded by such $200,000,000 may not be allocated to other portions of the C–5A aircraft contract or to any other contract with the United States, but payments to C–5A aircraft subcontractors shall not be subject to the restriction referred to in such sentence.

(c) Any payment from such $200,000,000 shall be made to the prime contractor through a special bank account from which such contractor may withdraw funds only after a request containing a detailed justification of the amount requested has been submitted to and approved by the contracting officer for the United States. All payments made from such special bank account shall be audited by the Defense Contract Audit Agency of the Department of Defense and, on a quarterly basis, by the General Accounting Office. The Comptroller General shall submit to the Congress not more than thirty days after the close of each quarter a report on the audit for such quarter performed by the General Accounting Office pursuant to this subsection.

(d) The restrictions and controls provided for in this section with respect to the $200,000,000 referred to in subsections (a) and (b) of this section shall be in addition to such other restrictions and controls as may be prescribed by the Secretary of Defense or the Secretary of the Air Force.

SEC. 505. Section 412(b) of Public Law 86–149, as amended, is amended by inserting immediately before the word "unless" the following: ", or after December 31, 1970, to or for the use of the Navy for the procurement of torpedoes and related support equipment".

SEC. 560. (a) None of the funds authorized to be appropriated by this Act shall be used for the procurement of delivery systems specifically designed to disseminate lethal chemical or any biological warfare agents, or for the procurement of delivery system parts or components specifically designed for such purpose, unless the President shall certify to the Congress that such procurement is essential to the safety and security of the United States.

(b)(1) Section 409(b) of Public Law 91–121, approved November 19, 1969 (83 Stat. 209), is amended—

(A) by striking out "or the open air testing of any such agent within the United States" in the material immediately preceding paragraph (1) and inserting in lieu thereof the following: "the open air testing of any such agent within the United States, or the disposal of any such agent within the United States";

(B) by striking out "transportation or testing" each time it appears in paragraphs (2), (3), and (4) and inserting in lieu thereof "transportation, testing, or disposal"; and

(C) by inserting "or disposal" immediately after "such testing" in paragraph (4)(A).

(2) Section 409(c)(1) of such public law is amended—

(A) by striking out "deployment, or storage, or both," and inserting in lieu thereof "deployment, storage, or disposal"; and

(B) by striking out "deployment or storage" immediately after "unless prior notice of" and inserting in lieu thereof "deployment, storage, or disposal".

(c)(1) The Secretary of Defense shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a comprehensive study and investigation to determine (A) the ecological and physiological dangers inherent in the use of herbicides, and (B) the ecological and physiological effects of the defoliation program carried out by the Department of Defense in South Vietnam.

(2) Of the funds authorized by this Act for research, development, testing, and evaluation of chemical warfare agents and for defense against biological warfare agents, such amounts as are required shall be available to carry out the study and investigation authorized by paragraph (1) of this subsection.

(3) In entering into any arrangement with the National Academy of Sciences for conducting the study and investigation authorized by paragraph (1) of this subsection, the Secretary of Defense shall request that the National Academy of Sciences submit a final report containing the results of its study and investigation to the Secretary not later than January 31, 1972. The Secretary shall transmit copies of such report to the President and the Congress, together with such comments and recommendations as he deems appropriate, not later than March 1, 1972.

Mr. MANSFIELD. Mr. President, this is the so-called military procurement bill. The opening speech on the bill will be made tomorrow, after the conclusion of the morning business.

Mr. President, there will be no votes tonight that I know of.

ORDER FOR RECOGNITION OF MR. SYMINGTON TUESDAY MORNING NEXT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate meets on Tuesday next, the distinguished Senator from Missouri (Mr. SYMINGTON) be recognized after the disposition of the Journal for not to exceed 30 minutes.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. SCOTT. Mr. President, I would like to inquire as to the further order of business after the military procurement bill. I realize that there is some amount of optimism in the inquiry. But I would be curious to know whether it is contemplated that conference reports may be taken up from time to time or other business which would require the attention of Senators, even though there will be a period of debate on the military procurement bill.

Mr. STENNIS. Mr. President, may we have order. I ask that the Senate suspend until we do.

The PRESIDING OFFICER. The Senate will be in order. The Senator may proceed.

Mr. MANSFIELD. Mr. President, in response to the question raised by the distinguished minority leader, it is anticipated that the conference report on the education appropriations bill will be taken up some time on Monday next.

It is hoped, when appropriation bills are reported by the full Appropriations Committee, that on those occasions we will go back on the double shift basis and, late in the evening, take up those appropriation bills so that we can become as current as possible in that respect.

As Senators can see, the Calendar is pretty clear. The Senate committees have been working assiduously. The Senate is up on its work. That is about the best I can say at the present time.

Mr. SCOTT. Mr. President, I thank the Senator.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14705) to extend and improve the Federal-State unemployment compensation program.

The PRESIDING OFFICER. The Senate will be in order.

SENATE PENSION STUDY GETS UNDERWAY

Mr. JAVITS. Mr. President, pursuant to Senate Resolution 360 which, among other things, authorizes the Committee on Labor and Public Welfare to conduct a general study of pension and welfare funds, the Senate Labor Subcommittee, under the joint direction of its chairman and ranking minority member, Senator WILLIAMS of New Jersey and myself, has prepared a detailed 32-page survey from which is being mailed to the administrators of some 1,500 private pension plans representing a broad and varied sample of the private pension industry.

The initiation of this survey is a major step forward in securing key information concerning the structure and operation of the private pension plan system. Much of this information has never been gathered before and yet it is essential if there is to be an intelligent and rational legislative approach to the problems of the private pension industry.

The survey form, which incidentally is designated "Pension Study: Form P–1," specifically explores four vital areas which, in my judgment, will illuminate in an unmistakable fashion what is right and what is wrong with the private pension system. These four areas are: First, the nature of the retirement benefits promised by the plan; second, the requirements that must be met to obtain

these benefits; third, the likelihood of an employee under the plan actually receiving such benefits; and fourth, the adequacy of the funding arrangements made by the plan.

This P–1 form is the product of intensive efforts extending over a period of several months and involving the assistance of experts both in and out of the Government.

In an article written by New York Post Correspondent Anthony Prisendorf, which appeared in the New York Post on Wednesday, July 15, 1970, the form was described as a "unique nationwide survey." Mr. Prisendorf's article, as well as a current series of articles by Associated Press writer Dick Barnes, which are appearing in the Buffalo Courier-Express and other newspapers throughout the country, illustrate in convincing detail the problems that have prompted great concern over the private pension system. As Mr. Barnes points out, thousands of Americans retire each year only to find that they will receive no private pension plan benefits from the plan they may have worked under for many years. The reason is that these private plans are, "a mishmash of low benefits, superstrict qualifying rules, lack of information, and in a few cases, misuse or mismanagement of funds."

I am not surprised to see an escalating concern over a social problem of such appalling dimensions. Since 1967, I have urged the Congress to enact legislation which would bring about minimum standards of fairness in private pension plans and end the self-perpetuating, self-destructive characteristics of the system. About a month ago, I presented statistics compiled by the Bureau of Labor Statistics from which the inference can be drawn that the risk of loss of benefits in private pension plans is abnormally high, so high that but for the fact that the pension issues, as Mr. Barnes points out in his article, are dry and complex, there would doubtless be—and should be—an overwhelming public demand for congressional action to reform these plans.

I recognize, however, that the Congress should not rely on inferences alone, no matter how well-founded, in considering legislative proposals of such major impact. The survey initiated by the Senate Labor Subcommittee will answer this need. It will, for the first time, pin down in precise detail essential facts relative to the adequacy of employee benefit protection under the private pension system.

The continuing spectacle of substantial numbers of retired workers having lost anticipated pension benefits despite having been covered under private pension plans for many years, is a matter that can only be ignored by the business community, labor, pension planners, and the Government at their peril. As United Auto Workers President Leonard Woodcock has perceptively observed in an eloquent letter to all Members of Congress, there is great danger in emphasizing the critical security needs of business—dramatized by recent events involving the collapse of the Penn Central Railroad—while ignoring the equally desperate security needs of the worker. Such a lack of justice in ordering our priorities would inevitably be interpreted, as Mr. Woodcock aptly remarks, as "a politics of class verging on the classic Marxian strain."

As a matter of fact, we have already witnessed a Penn Central debacle in the private pension field. In 1963, Studebaker Corp. closed its operations in South Bend and as a result some 4,400 workers with vested pension rights were cut adrift with only 15 cents for every dollar of pension benefits they had earned, and no meaningful opportunity to earn a private pension elsewhere and there are other cases like Studebaker although perhaps not of the same magnitude.

It is time we stopped thinking about pensions as an esoteric specialty reserved for a select "priesthood" of actuaries, consultants, insurance experts, and other technicians, and started thinking about pensions in human terms. On June 18, 1970, I addressed the International Executive Board and Staff of the Steelworkers on the subject of pension plan terminations and the need for reinsurance which my bill, S. 2167, would provide. In that speech I noted that "the problems of forfeiture of benefits by reason of restrictive requirements or terminations of one sort or another is a very real one, which is exacerbated by the fact that the employees who are being shortchanged by these plans have foregone wage increases in favor of obtaining these retirement benefits." In recent testimony before the House General Subcommittee on Labor, the distinguished president of the United Steelworkers Union, I. W. Abel, stressed:

> That the failure to pay promised and *earned* pensions is as much the exploitation of labor as are long hours and low wages, and that nothing can drain life and hope out of a worker faster than the denial or loss of a pension after a lifetime of labor.

Mr. President, our country has been characterized as an affluent society; yet today there are untold thousands of retired workers living perilously close to the poverty level who feel deceived, betrayed, and even gyped by a private pension system in which they had placed their hopes and their trust. Only the most brutally cynical can now say to these hapless victims: "Well—you should have read the fine print in your pension plan. If you had, you would have realized that your chances of actually obtaining retirement benefits were really quite remote."

There is only one way to answer the mounting cries of resentment and despair over a system that, even assuming the best of intentions, so persistently ignores the human equation. And that is to enact legislation which establishes essential standards of equity for the workers covered by these plans and provides the mechanisms by which their hard-earned pension credits can be protected against economic misfortune. Let us not wait for massive tragedies like the Studebaker closing to proliferate before we are convinced of the necessity for such action. By then our constituents may be asking us to dismantle the private pension system. Let us act now to preserve it.

Members interested in the pension study form of questionnaire—form P—can get a copy from me or Senator WILLIAMS.

I ask unanimous consent to have printed in the RECORD the various newspaper articles and other pertinent material on this subject, including my speech to the United Steelworkers.

There being no objection, the material was ordered to be printed in the Record, as follows:

SENATE UNIT CHECKS PENSION PLANS

(By Antony Prisendorf)

WASHINGTON.—Throughout the country there are probably thousands of retired men and women who, to their utter dismay, found out too late that they didn't meet the fine-print requirements of their private pension plans.

How many such people there are, who they are, and how long they contributed a portion of their salaries to a plan under the misguided assumption that upon retirement they would automatically begin receiving regular benefits—these are some of the questions to be answered in a unique, nationwide survey being made by a Senate subcommittee.

In most cases that have been recorded or brought to an individual Congressman's attention, pension benefits are withheld from retired employes because the workers did not fulfill the demanding longevity requirements for "vesting" rights.

These "vesting" rights represent a worker's non-forfeitable share in the pension plan to which he has contributed over the span of his employment.

ENTITLED TO PENSION

Once vested, the employe is entitled to his pension benefits after retirement, even if he is fired, laid off or otherwise severed from his present job.

But all too often, Senate investigators have found, an employe doesn't attain "vested" status until he has worked steadily for the same employer for 10 years—a relatively infrequent occurrence because of this country's highly mobile and fluid labor force.

Hypothetically, these investigators report, if such an employe worked steadily at the same job for nine years, 11 months and 29 days and was then abruptly fired, he would forfeit all benefit rights to the pension plan to which he had contributed regularly during that time.

A second, less frequent form of retirement trauma occurs when a mismanaged or insufficiently funded pension plan goes bankrupt—as was the classic case at a Studebaker plant in Indiana in 1964—and the employes, though "vested," received little or none of their rightful benefits.

What makes the subject one of growing interest to members of Congress is its dimensions. At present there are an estimated 30 million American workers participating in 33,000 private pension plans.

(The word "private" distinguishes them from the public pension plans offered by the federal government to its employes or even Social Security.)

Of even greater interest to some members of the Senate is that these private pension plans have combined assets of 126 billion, which one specialist on Capitol Hill described as "the largest aggregate to essentially unregulated funds in the country."

Efforts to impose some form of federal regulation are at the heart of the current survey being made by a Senate labor subcommittee, of which Sen. Williams (D-N.J.) is chairman, and Sen. Javits is the ranking minority member.

Subcommittee staff members are now in the process of mailing detailed, 32-page questionnaires to the administrators of more than 1000 of the private pension plans.

"We hope to determine, among other things," the two Senators said, "what benefit rights an employee gets under a plan, what funding arrangements are provided to pay benefits, under what circumstances an employe forfeits his benefit rights, and how likely he is to do so.

"Much of this information has never been compiled before," Javits and Williams went on, "yet it is essential to full understanding of the many problems that confront private pension funds."

According to one knowledgeable Congressional source, little has been done so far because of "massive pressures" brought by just about every side—organized labor as well as the administrators of the pension plans.

Congressional specialists in the area of pension plans are relatively certain that their private misgivings will be supported by the results of the survey.

So, they are already planning to propose, as Javits has in the past, that a uniform vesting requirement be adopted nationwide.

Under the Javits formula, an employee would begin acquiring vested rights after six years in graduated 10 per cent increments each year until he reached full vesting after 15 years.

Moreover, a federal pension commission would be established to administer the programs and to consolidate the piece-meal regulatory functions now performed by the Treasury, and Labor Depts. and the Securities and Exchange Commission.

[From the Buffalo Courier-Express, July 13, 1970]

FEW WORKERS ARE DESTINED TO REAP PENSION HARVEST

(By Dick Barnes)

WASHINGTON.—Thousands of Americans retire each year only to find they'll get no money from the private pension plan they may have worked under for years.

The reason, an Associated Press study shows, is that many of the nation's 33,000 private pension plans are a mishmash of low benefits, superstrict qualifying rules, lack of information and, in a few cases, misuse or mismanagement of funds.

Many other plans are progressive and generous in benefits, so thousands of workers do get the retirement check they expect, particularly if they worked most of their career for one employer in a well-paid industry.

Although the majority of plans are prudently run, criminal activity dots the field.

Mafia names have cropped up in New York trials involving kickbacks for loans from a Teamsters pension fund. Grand juries in Chicago and Los Angeles are probing other pension fund loans.

Beyond such attention-grabbing cases, weaknesses in some pension fund operations leave the elderly with disappointment instead of a retirement check and sometimes a forced shove into poverty rolls instead of economic stability in their waning years.

One expert, for instance, found that only one of every 10 workers covered by pension plans in several low-waged industries would ever receive pension benefits.

Example of frustration abound:

A sheet metal worker from the Northwest who for years alternated between two union locals because of work availability found when he reached age 70 he would get a pension from neither.

A retired hat worker in Manhattan was notified by her pension plan that payments would be suspended for a year because the fund was not taking in enough money.

A business executive quit his firm after 18 years, thinking he had pension benefits he could draw at age 65. But when he went to work for a competitor, his original company canceled the pension right.

A woman who worked 37 years in New York was forced out of her job by a shop shutdown and was told to temporarily withdraw from her union. Later, when she sought her pension, she was told the withdrawal had cost her the pension.

Letters full of such claims of unfairness, broken promises and misunderstandings come regularly to government agencies and officials.

A few of the writers can be helped.

Most can't.

There is little federal or state regulation of private pension plans or their $126 billion in assets.

Annual financial reports must be filed with some agencies. The Internal Revenue Service must approve a fund if it is to be tax-exempt. And federal law prohibits some flagrant types of financial mismanagement.

But funds set their own benefit levels. They determine their own qualification rules. Many select their own well-paid lawyers, consultants and advisers, and make their own investments.

A federal grand jury in Chicago is examining the loans an investment adviser negotiated for the Barbers Union pension fund. Loans with a total face value of $7 million are delinquent—and the fund only has $21 million in total assets.

A Federal grant jury in Los Angeles is probing a $14.5 million involvement by the Teamsters Union's Central States, Southeast and Southwest Areas Pension Fund in a Los Angeles land development. City officials also are involved.

Not all cases involve loans.

For example:

The Employees Savings and Profit Sharing Fund of the Kropp Forge Co. of Chicago purchased 206,318 shares of the company's stock from two departing company officers for $3 a share. The stock was worth $1.875 a share at the time, according to a report the fund filed with the Labor Dept.

The United Mine Workers' welfare and pension fund deposited $67 million one year in a non-interest-bearing checking account in a bank the union controlled, costing the fund more than $3 million in lost interest.

The administrator of the Painters Pension Fund of Suffolk County, N.Y., was indicted on charges of embezzlement and bribery in connection with the purchase of fund office equipment. The same fund paid $19,184 in insurance commissions to a man whose wife worked for the fund. He had little previous insurance experience.

Pension trustees who also were officers of the McCrory Corp., which maintained the plan, purchased shares of McCrory stock for the fund while they sold their own holdings. When the fund quit buying, the stock prices dropped by two-thirds. The fund lost $4.5 million in this and other securities transactions.

A local Teamsters' fund contracted for land in a remote area to build housing for retired people but couldn't get a federally guaranted loan after the government found 20 of the 26 acres were under water and nearly half the rest consisted of a rock outcropping.

Legislation to tighten the fiduciary responsibility of pensions trustees and administrators and to prohibit various self-dealing practices is moving toward passage in Congress.

Some advocates of pension reform are trying to win simultaneous passage for provisions dealing with the broader and stickier issues of vesting and funding.

Vesting refers to the process and qualifications under which a worker becomes entitled to an eventual pension even if he quits his employer before retirement age. Funding refers to the manner in which money is paid into the the pension fund to meet its retirement check obligations.

Vesting and funding issues are dry, complex and subject to wide dispute—yet their human impact is far broader than the more isolated cases of fraud and misuse.

About 30 million workers, less than half of all private wage and salaried workers, are covered by retirement plans. About 3 million retired persons now receive private pensions.

The bulk of uncovered workers is in small businesses.

More than 90 per cent of pension plans are run by the employer.

Almost all of the rest are run jointly by representatives of a union and representatives of a number of small employers who deal with the union.

The employer makes all contributions in nearly three-fourths of the plans. Both employers and employes contribute in about one-fourth, and employes alone contribute in only 1 per cent.

Courts today increasingly label these employer contributions as simply a deferred wage earned by the worker—not a gift from the employer as early pension benefits were considered.

But with this trend has come growing concern about whether the deferred wage will be there when the worker retires.

Thomas R. Donahue, an assistant secretary of labor during the Johnson administration told the Senate Labor Committee:

"In all too many cases the pension promise shrinks to this: 'If you remain in good health and stay with the same company until you are 65 years old, and if the company is still in business, and if your department has not been abolished, and if you haven't been laid off for too long a period, and if there's enough money in the fund, and that money has been prudently managed, you will get a pension.'

"It is utterly indefensible in a society as affluent as ours that an individual's economic security in his later years should rest on such a flimsy foundation and be so endangered by such an incredible list of 'ifs' and 'maybe,'" said Donahue.

Mario Impellizeri, a New York pension consultant, testified before the House general labor subcommittee this year that his study of 10 plans covering 60,000 low-paid workers "discloses that less than 10 per cent will ever receive a pension benefit."

He found that to be eligible for a pension, a worker had to compile at least 20 years of continuous service ending with his retirement at age 65. Yet annual turnover in the industries studied averaged 25 per cent, Impellizeri said.

Only about one of every six employes covered by the mammoth Western Conference of Teamsters pension plan will qualify for a pension, according to fund officials, despite the fact that they can transfer among any of 13,000 employers and can qualify for some pension rights if they have 15 years of service at age 52.

Merton C. Bernstein, an Ohio State University law professor, gave a Senate committee this interpretation of how pension plans work:

"The losses of many provide the funds with which the pay-off is made to the lucky few—just as at any honest race track."

He listed business failures, reorganizations, mergers, government contract losses and employe turnover all as factors in eliminating workers from pension plans before they qualify for benefits. He estimated that "as few as one out of five may reach the winner's circle."

James Curtis, a Seattle actuary on the board of the National Foundation of Health, Welfare and Pension Plans, Inc., told a congressional subcommittee he thought a pension qualification rate of "one out of two people is going to be more accurate than one out of nine"—a figure cited often by pension reform advocate Rep. John Dent,

D-Pa., chairman of the House general labor subcommittee.

Even for those retirees who do get their pensions, the size of the checks seldom guarantee luxurious living.

A Social Security Administration report predicts that in 1980, 74 per cent of couples and 83 per cent of unmarried persons who get pensions will receive less than $2,000 a year. Not counting Social Security benefits only 2 per cent of couples and 1 per cent of single people will get more than $4,000 annually.

An 11-year study by the Bureau of Labor Statistics shows that an average of 22,500 employees a year are in pension plans which terminate. Some are absorbed into other plans through corporate merger and some are paid accrued benefits. But others are left with nothing.

The biggest termination in recent years followed the shutdown of the Studebaker plant in South Bend, Ind.

Studebaker workers with at least 10 years of service who were 60 or older lost no benefits. But after they were taken care of, there was only enough money left in the funds to give 15 per cent of the accrued value of their benefits to workers with 10 or more years of service who were between 40 and 59 years of age. Workers who were younger or who had less than 10 years of service got nothing.

One Studebaker employe who got only 15 per cent of his benefits was 59 years old. He had worked for the firm since he was 16.

LETTER FROM UNITED AUTO WORKERS PRESIDENT LEONARD WOODCOCK TO ALL MEMBERS OF CONGRESS URGING PUBLIC REINSURANCE OF ACCUMULATED PRIVATE PENSION RIGHTS

JULY 2, 1970.

DEAR CONGRESSMAN: I am writing to you and to the other members of the Congress to urge that at least as much consideration be given to public reinsurance of the accumulated private pension rights of workers as is being given to bailing out both Wall Street speculators whose brokers go bankrupt and the stockholders of the Penn-Central Railroad.

In his June 17 televised addess on the state of the economy, President Nixon told the nation that we are in transition from a wartime to a peacetime economy. Senator Mansfield and economic indicators suggest that the word for our situation is recession. We in the UAW are struck by the fact that whether we are in an economy of war, peace or transition, in recession or what passes for prosperity, the conduct of government and economic affairs remains too largely in the grip of a double standard: all Americans are equal, but some Americans are more equal than others. Walter Reuther used to refer to this double standard as Park Avenue socialism for the rich and free enterprise for the poor. The President's program "specifically addressed to help the people who need help most in a period of economic transition" reflects that double standard. Mr. Nixon called for:

"Establishment of an insurance corporation with a Federal backstop to guarantee the investor against losses that could be caused by financial difficulties of brokerage houses. . . ."

Yet he made no reference to and indicated no support for a long-pending proposal to provide similar insurance to meet the urgent need of wage-earners and lower-salaried workers who stand to lose the protection of privately negotiated pensions if the companies they work for should go out of business before their pension programs are fully funded. Yet the closing of plants and the wiping out of workers' pension rights are an obvious potential consequence of a transition from war to a peace economy, while it is difficult to see any necessary connection between such a transition and trouble in brokerage houses.

Again, the collapse of the Penn-Central Railroad has brought on the spectacle of Administration figures falling over each other in their haste to shore up the managements and to protect the stockholders of the Penn-Central and other threatened lines through massive infusions of Federally guaranteed loans. The Secretary of Transportation admitted that such action to help the Penn-Central management would be "gambling" on "high-risk loans." Nevertheless he attempted to panic the Congress and the country with the hobgoblin of nationalization of the railroads if the risk were not taken. And the President himself, in his June 17 speech on the economy, authorized the gamble by calling for:

"Legislation that will enable the Department of Transportation to provide emergency assistance to railroads in financial difficulties."

We in the UAW are not in principle critical of financial aid to stricken corporations. Nor are we necessarily opposed to action to protect investors or even speculators from losses stemming from financial difficulties of brokerage houses. Yet we ask: Are these people—the well-heeled managements of conglomerate corporations and others affluent enough to be able to speculate in Wall Street—among "the people who need help most in a period of economic transition"?

We think not. These people may need help, but they certainly need help less than the poor, the unemployed, and millions of aging Americans for whom retirement brings a severe slash in income that frequently means ending their days in poverty.

The President gave a thought to these older Americans in his economic speech, proposing that the Congress tie Social Security benefits to the cost of living. This would be helpful, but tying a poverty retirement income to the cost of living would merely guarantee an unruffled prolongation of poverty.

It is the gross inadequacy of Social Security benefits that has given privately negotiated pension rights such critical importance in workers' hopes and plans for retirement. Yet the President was silent with respect to the plight of the many American workers who own no railroads and possess no stock portfolios to speak of, only a private pension promise that offers them hope of a standard of life in retirement beyond the bare minimum possible under Social Security. Public reinsurance of private pension funds—similar to the insurance provided since the 1930s for bank deposits and akin to the backstop Federal protection the President asks for investors—would bring all of us closer together and nearer to fulfillment of the American dream of which Mr. Nixon spoke to such applause in his address to the Junior Chambers of Commerce.

The number of persons dependent upon private pension plans is far greater than the number of Wall Street speculators and Penn-Central stockholders whose problems have generated the urgent concern and precipitate haste of an army of would-be rescuers. Some 28 million persons are presently covered by private pension plans and it is forecast that 42 million will be covered by 1980.

In contrast to the handful of brokerage firms that have experienced difficulties and the one railroad recently forced into receivership, some 4,000 pension plans were terminated in the United States between 1955 and 1965. These terminations, all too frequently, subjected affected workers to the double tragedy of lost jobs and loss of substantial prospective pension rights at a stage in life when they had little or no opportunity to earn further pension entitlement.

We in the UAW have been pressing since 1961 for an insurance program to protect private pension funds. Delegates to a UAW convention that year, comparing the promissory nature of bank deposits and pension plans, declared:

"Pension plans also represent private promises, this time by employers, which they may not be able to keep if they get into deep financial difficulties before the plans have been fully funded. These plans are so widespread and private pensions to supplement social security have become such an integral part of our system of providing for retirement that their protection must also be accepted as an essential feature of public policy. The catastrophe to the worker who sees the security which his pension rights represent to him swept away by the failure of an employer is just as great as the catastrophe of the depositor who loses his lifetime savings in a bank failure. The solution is essentially the same."

Congress in the relatively prospering early 1960s was not impressed by the reality or urgency of this problem and failed to enact legislation which would have shored up the security of workers' pensions. Then, 5 days before Christmas 1963, the last car came off the South Bend line of the Studebaker Corporation, and as a result some 4,400 workers between the ages of 40 and 59, who had earned a vested pension right through ten or more years of service to the corporation, found that right meaningless when their plant shut down with only enough money in the fund to provide pensions to workers age 60 and over. As a result, workers with as much as 40 years of seniority who, even if they found another job, were too old to start acquiring new pension credits from another employer, were left stranded.

The collapse of Studebaker dramatized the predicament of its workers and of workers in other companies who might also find the paper promises implicit in unfunded pension rights repudiated as a result of plant closings. Still the Congress failed to enact a pension reinsurance law, leaning heavily on the argument that great technical difficulties in framing such a law stood in the way.

As of February 26, 1970, when Walter Reuther made a plea for a pension reinsurance law in one of his last statements to the Congress, the opposition no longer rested on technical difficulties; it was more or less conceded that, as Mr. Reuther said, for a small premium cost spread universally over all plans, they could be protected. The argument had now shifted to the claim that there was no need for such a protective mechanism, since only a small percentage of workers were affected in what was after all but an "incidental failure" of the present system.

Mr. Reuther stated that this is the logic to be expected from a computer but not from a human being. He called for:

"A balanced combination of adequate public and private pension plans, with appropriate public support assuring the fulfillment of expectations of the private sector . . ."

And he stated:

"As the richest nation in the world we cannot continue to deny our older citizens their measure of economic justice and human dignity. We must act now to assure society's promise to present retirees and to avoid the potential failure for even a small number of the millions of workers rightfully anticipating a secure retirement."

The closing down of plants or operations is not a rare occurrence in any industry in our economy. In our own industry, we think of Hudson, Studebaker, Packard, Kaiser-Frazer as well as a host of smaller companies. Nor has it been rare in recent years for plants to close or operations to end, wiping out the hopes of security in retirement for men and women too old to start from scratch on other jobs. In recent years the UAW has been

obliged to close out negotiated pension plans for a variety of reasons: a fire totally destroying the plant; the close-out of a smaller plant bought by a larger company; part of an operation discontinued because an obsolescent plant had become uneconomic. The latest closing of a plant under contract to UAW took place on July 1, 1970, with its pension plan 11 years away from full funding. Among the victims of that closing were a man and a woman, both 52 years old, each with 37 years of service. Because of their age, their entire 37 years with the company were washed out as far as pension benefits are concerned.

When plants are closed down, there is apt to be talk about "the price *we* pay for progress"—yet that price is too often inequitably distributed, entailing, for example, a more efficient operation for the employer but unemployoment and a wiped-out pension promise for the worker. Certainly from the fruits of the progress that we are all supposed to enjoy, assurance can be given that the security of pension benefits will be maintained.

The President speaks of the people who need help in a period of economic transition. But it should be clear that for wage earners and to a somewhat lesser extent for salaried workers, the "transition economy" is not a sometime thing but a permanent aspect of their lives. Blue-collar workers particularly work and live all their lives on the cutting and bruising edges of technological and economic change, in war and peace, in sickness and health, in youth and age. A special White House panel that studied the problems and needs of blue-collar workers has within the last few days transmitted a report to the President urging Administration action to deal with the economic and social needs of such workers, whom the report described as economically trapped and socially scorned. It is primarily these workers and their families, rather than railroad managers and speculators, who need help.

We detect a disproportion in the rationing of the President's concern, a show of preference for a kind of Wall Street or Easy Street welfare state which if indulged by the Congress would come dangerously close to—if it did not actually arrive at—a politics of class verging on the classic Marxian strain.

In this disturbing situation, we feel that the Congress has a stronger role to play and a considerable responsibility to play it. The question of establishing a pension reinsurance system has been in Congressional limbo for years. The President of the United States has asked the Congress to produce legislation to insure investors against their losses. We earnestly hope that the Congress will now see the substantive and symbolic merit of enacting a pension reinsurance law without further unseemly delay. Having thus offered assurance of retirement security to American workers, the Congress could then go on with good grace to consider the security needs of Wall Street speculators.

If we are to bring this country together, we are going to have to curb the impulse of Wall Street socialism in favor of much larger doses of Main Street and back-street democracy—on both sides of the railroad tracks. Treating Americans more equally would facilitate our progress not only toward a peacetime economy but toward a more peaceful society as well. Enactment of a law to protect negotiated pension funds would be one firm step in that direction.

Sincerely yours,

LEONARD WOODCOCK,
President, International Union, UAW.

PRIVATE PENSION PLAN REFORM

The issues involved in pension reform, I know, are of critical importance to you, and your union has been a leader in advocating the correction of serious defects in the private retirement system.

I also know that the Steelworkers Union has been a pioneer in the development of vesting in the pension plans you negotiated so that your members are not subject to total forfeiture of benefits after long years of service, as is so often the case in other industries. And it comes as no surprise to me that your leadership is backing pension plan reinsurance, which I also support. For it is the vested plan which really needs reinsurance the most; there the workers have something to lose. On the other hand, the collapse of a plan in which few if any workers have vested rights is only a "loss" of benefits the workers never had in the first place.

As many of you are aware, I have a strong and abiding interest in the subject of pension reform, having introduced the first comprehensive legislation on the subject, and my desire to secure needed standards with respect to the operation of the private pension system has not diminished. In fact, my conviction that basic regulation is required has become increasingly firm since I first introduced my bill in 1967.

Yet, there has been a growing marshalling of forces aimed at frustrating pension reform legislation. These forces—which include substantial segments of the business community and even some international unions—are quite formidable and it will require great unity and perseverance on the part of the trade union movement if effective reforms are to be realized. This union is to be commended for its effort to communicate to its members and the people the serious dimensions of the private pension issue. But, labor has not at this point sufficiently knit together on the pension reform issues. To counter the opponents of pension reform effectively will require much greater efforts by labor than has been the case so far; this union with others will need to come together to furnish the backing that is required if this legislation is to get off the ground.

Your President has specifically asked me to speak tonight on the subject of pension reinsurance and I intend to do that. But before I do, I wish to give you my general impressions with regard to the pending proposals.

CURRENT OUTLOOK

As you know, there are now pending in Congress fiduciary bills amending the Welfare and Pension Plan Disclosure Act—one of which I introduced in the Senate on behalf of the Administration—and some broader proposals dealing with vesting, funding, reinsurance, etc., including my own comprehensive bill. Hearings on both the fiduciary bills and the broader legislation are being held by the House Subcommittee on Labor. The Senate Labor Subcommittee has not gotten around to holding hearings on this subject, but I have every expectation that such hearings will be held this session.

The Senate Labor Committee is, however, engaged in a study of the United Mine Workers Welfare and Pension Fund, and I am making every effort to see that this study goes into the broader issues of pension reform. I think a substantial body of evidence has been built up in the last few years which amply justifies the necessity for fiduciary standards and, in my judgment, gathering further examples of fiduciary abuses in other funds would simply be cumulative. There is a fairly broad consensus that fiduciary standards are necessary. Even so, whether such a fiduciary bill can be enacted this year remains uncertain; a decisive opportunity certainly would be presented if the House should pass such a measure.

The enactment of fiduciary legislation, however, is just the beginning. There are those who have urged that fiduciary legislation only be enacted as part of a package which covers the other issues of pension reform i.e. vesting, funding, reinsurance, etc. On the other hand, there are those who undoubtedly are willing to go along with enactment of fiduciary legislation provided that nothing further be accomplished. This latter group will probably say that having accomplished fiduciary reform, which as I indicated is not all that controversial, Congress ought to wait and see what happens before doing anything further. This tactic is similar to that employed in prior legislative efforts directed to regulation of pension plans. You may recall that the original Welfare and Pension Plan Disclosure Act was a very weak measure. At that time it was argued that Congress should take just a little step at a time and not rush in all at once. That Act proved to be so worthless that it had to be amended in 1962, and even now it requires further strengthening if it is to be effective; yet nothing has happened for twelve years.

As I indicated when I introduced the Administration's fiduciary proposal, I think the proposal is fine as far as it goes, but I don't think it goes far enough. With respect to matters of vesting, funding, reinsurance, etc., the Administration's bill adopts a "truth-in-lending" approach. New disclosure provisions are proposed which would require pension plans to inform participants as to their rights under the plan, the nature of the vesting provisions, if any, where the plan stands in terms of funding and what the participant would receive if the plan terminated. I think these are good provisions and a worthy improvement to existing law. But they will not cure the more serious deficiencies in the private pension system. "Truth-in-lending" is fine but there have to be usury laws as well.

It is for this reason that, favorably impressed as I am by the Administration's fiduciary proposal, I will continue to work for broader legislation, as represented by the comprehensive bill, including funding and vesting which I have offered.

The pension plan system has achieved great success much of which is due to unions, like the Steelworkers. Certainly the sheer size of the system in terms of accumulated assets is rather awesome.

Latest S.E.C. studies show that as of 1969, pension fund assets, both insured and noninsured, soared to $126.2-billion. These funds are expected to accumulate over $200-billion by 1980.

Paradoxically, there are disturbing defects in this vast system. Chief among these is the fact that, according to the testimony of former Secretary of Labor Shultz, approximately one-third of the 29-million participants covered by private pension plans will never receive a pension from these plans.

At first impression, this stunning disclosure seems incongruous with the statistics revealing the vast resources accumulated by these funds. Closer inspection, however reveals that there are two principal factors responsible for this paradox: First, at least one-half to two-thirds of the plans in existence contain requirements—late vesting for example—with regard to qualification for retirement benefits that are sufficiently restrictive to preclude many participants from any realistic hope of obtaining any benefits; second, layoffs, plant closings and business or technological circumstances resulting in plan terminations often cause participants to lose some or all of the retirement benefits they had anticipated.

PENSION REINSURANCE

The rate of formal plan terminations potentially effecting loss of benefit rights has been estimated by former Secretary of Labor Shultz at about 500 a year, affecting approximately 25,000 participants. I think these estimates may be too low because they are based on formal plan terminations reported to the Treasury Department. I do not believe that they fully reflect the extent of instances sometimes characterized as "partial

terminations," where through plant closing, lay-offs, corporate mergers, etc., a substantial number of participants are separated from the scope of the plan with loss of benefit rights even though the plan continues in existence.

In any event, the problem of forfeiture of benefits by reason of restrictive requirements or terminations of one sort or another is a very real one, which is exacerbated by the fact that the employees who are being short-changed by these plans have foregone wage increases in favor of obtaning these retirement benefits. Regardless of whether the current rate of termination is viewed as large or small in proportion to the total number of pension plans in existence, it doesn't take too much foresight to be concerned about the magnitude of loss that would result if we were to experience a prolonged period of severe economic distress.

A harbinger of what might be in store is represented by current conditions in the aerospace industry. The large lay-offs that have occurred in that industry due to massive cutbacks in defense and aerospace contracts has resulted in an extreme curtailment of pension expectations for many of those who have been unfortunate enough to have been separated from their employment.

I believe that the federal government has a clear responsibility to take into account the effects of its programs on employees engaged in industries dependent upon government contracts. About all the government does now is to see to it that the pension plans of these contractors meet Treasury Department standards and that the employers' contributions to the plans are reasonable. If these standards are met the Government permits the contractor's contributions to be included as a reimbursable item of cost with respect to the defense and aerospace contracts it negotiates.

Since the Government is also indirectly subsidizing the plans in these industries—by tax indulgence—it follows that the Government should insure that these plans are realistically structured and that the pension expectations of the employees are made more secure than is presently the case. I think it is incumbent on those agencies involved to consider ways and means of requiring more adequate standards for pension plans of Government contractors. Among the obvious possibilities are earlier vesting, compulsory participation in reciprocal arrangements and pooling of funds by contractors in the same industry to minimize the risk of termination. There is ample precedent for the use of Government's contracting authority as a basis for setting such standards, and I urge the Administration to take active steps along the lines I have suggested.

The Studebaker closing was the archtype of termination demonstrating the need for reinsurance. It is a dangerous misconception to conclude that reasonable vesting and funding provisions will eliminate Studebaker-type cases. The Studebaker plan had a 10-year vesting provision and 30-years funding. At the time the plan was terminated however, it was only 10 years old, and therefore was not fully funded. That situation can and does still occur, in connection with complete as well as partial terminations, and the only way to provide protection for employee pension rights when it does occur is through a reinsurance scheme such as that provided in my bill. The Steelworkers were among the first to recognize this fact, and I commend you for doing so. I would add that reinsurance cannot stand alone either; funding and fiduciary standards are preconditions for reinsurance.

Also, in the merger-acquisition situation, I understand that, at least in the context of unionized employees, the acquiring company usually has the obligation under the National Labor Relations Act to continue in effect the pension plan and collective bargaining agreement of the company it acquires, and not to terminate either plan or agreement without bargaining it out with the union. I think it is most unfortunate that non-union employees in the merger situation do not have any protection from sudden termination of pension plans and consequent loss of benefits if the plan is not fully funded. The reinsurance provisions of my bill would give such protection, and would also protect your members in those situations where the National Labor Relations Act does not have the effect—because of structural business changes resulting from a merger or acquisition—from precluding plan terminations.

No one is certain, of course, what effect this reinsurance plan would have in the long run upon corporate planning or collective bargaining. If past experience is any guide, the cost of reinsurance should be very low, because the rate of termination of pension plans is relatively low.

If, however, reinsurance should turn one to create terminations and "milk" the reinsurance fund we may well decide, on the basis of that experience, that pension plan liabilities for unfunded pension credits should be made a lien upon the assets of the employer in the merger situation. I believe reinsurance will handle the situation at minimal cost, but we will, no doubt, want to watch very carefully what happens after reinsurance is enacted into law.

It may also be necessary that the regulatory agency concerned with reinsurance possess some authority to prevent the splitting of plans when such a result would penalize substantial numbers of participants, or, to require the merger of plans in certain circumstances where that is feasible, which might be the case in a conglomerate situation. Powers somewhat similar to these have been given to the Federal Deposit Insurance Corporation which is authorized by law, for example, to facilitate a merger or absorption of a distressed bank by another insured bank whenever it can be shown that the disruptive effect and potential losses could be minimized.

To accomplish the goals of pension reform will not be easy. However, much can be done to straighten out the misconceptions of those who believe that further regulation would be an unmitigated disaster for the private pension system. In fact, precisely the contrary is the case. To be perfectly frank, I believe that, for the most part, it does not ultimately matter to the ordinary employee where his retirement income comes from, as long as it is an adequate income and he is not compelled to adopt a standard of living in his old age which is at or below the poverty level.

Accordingly, the life expectancy of the private pension plan system is directly related to whether that system together with Social Security will produce an adequate retirement income for the bulk of our labor force. If the private pension system together with Social Security fails to meet this objective, no amount of rationalization will save it from drastic modification or even replacement. Already, there are critics who would like to see the private pension system entirely jettisoned. I do not agree with these critics. I see great strengths and virtues in the system and I believe it is well worth preserving. But I think that the handwriting is on the wall, and that unless fundamental reforms are undertaken to improve the chances that persons covered by private pension plans will receive an adequate retirement income, there will come a time, not too far away I think, when those who want the system abolished may have their way.

I am hopeful that with your help we can accomplish these basic reforms before it is too late.

UNITED STEELWORKERS OF AMERICA,
Washington, D.C., June 22, 1970.

Mr. EUGENE MITTLEMAN,
% Senator JACOB JAVITS,
U.S. Senate,
Washington, D.C.

DEAR GENE: The Senator gave a very good speech to our staff on Pension Reinsurance. I thought it would be appropriate if he could introduce his speech into the Congressional Record accompanied by I. W. Abel's testimony before the House Education and Labor Committee.

Sincerely,

JOHN J. SHEEHAN,
Legislative Director.

PRIVATE WELFARE AND PENSION PLAN LEGISLATION

(By I. W. Abel)

My name is I. W. Abel. I am President of the United Steelworkers of America. I am testifying in support of urgently-needed federal legislation to protect the pension rights of workers.

My remarks primarily concern the concepts of vesting, funding and re-insurance which are incorporated in H.R. 1045. We wholeheartedly support these proposals which most of my statement concerns but we are also seriously concerned about additional federal regulations to cover the obligations of trustees of private pension plans.

However, I do want to emphasize this point: The passage of the bills covering fiduciary responsibilities is no substitution for the enactment of the principles of reinsurance of private pension plans. The enactment of H.R. 1045, therefore, is of primary importance.

I want to state a few facts about our Union which underscore the reasons for our great concern in this vital area of pensions. No union in the world has as many members covered by private pension plans as does the United Steelworkers of America. Currently we have some one million members who are covered by pension plans negotiated by our Union. Almost 175,000 of our members are now being paid pensions under these negotiated plans. Since our first pension agreements were won in 1950, 275,000 Steelworkers have retired under their provisions. The pension payments under these pension plans are around $125 million a year. Reserves have been accumulated in excess of $3 billion. While these are impressive totals they are not impressive enough to fully guarantee the ability of many pension plans to meet all their obligations if we go into a prolonged period when the economy does not expand.

The federal government has established its concern and responsibility for the protection of workers' private pension rights by the enactment of legislation affecting pension plans. However, this concern has been directed almost wholly at assuring the honesty of pension plan administrators and trustees. This is well and good, and it is necessary, but this does not solve the problem. By all means we should provide for the proper administration of pension plans but—above everything else—we should guarantee that such plans meet their obligations as they fall due. In short, make certain that the pension money is paid when it is supposed to be paid to someone who has worked his lifetime for that pension.

We respectfully urge that three basic features be included in any legislation to insure the soundness and integrity of private pension plans. These proposals go beyond the primary measures needed to insure the proper "housekeeping" of pension plans. We believe our proposals go to the heart of what is required to provide essential protection of workers' pension rights.

Our three basic proposals are as follows:

1. Every pension plan must provide that any worker who leaves the employment of a company will have a vested right to a pension when he retires, based on his years and months of service for the company. This is what we term a deferred vested right.

2. Every plan must be funded so that when a worker becomes eligible for his pension, enough money will have been accumulated in the pension fund to pay him his pension for the rest of his life. This we call pension security.

3. Every worker is entitled to this pension security when the operations of his employer are permanently discontinued. This would be done by a federal pension re-insurance system.

Now, I would like to say a few words about each of these three proposals. First, deferred vested rights.

Pension rights are an integral part of the total compensation a worker receives for his labor. More and more an increasing share of compensation consists of deferred benefits. The best known deferred wage payments include holidays, vacations, insurance and pension benefits. No employer is permitted to avoid or evade the payment of immediate wages. We say that deferred compensation is entitled to the same protection of law because when we negotiate these benefits we do it on the same basis as we do wage benefits.

Second, we believe a worker's right to freedom of movement is seriously compromised if his mobility deprives him of part of his standard of living in retirement. If pension rights are deferred wages, a man who loses these deferred wages because he changes his employment, or has his employment changed, has been unjustly deprived of what is rightfully considered part of his savings. Pension rights accumulated in a pension fund have the same cash value as that part of his wages a worker deposited in a savings account in a bank.

As Professor James Shulz put it in a publication of the Senate Select Committee on Aging: "The older worker who loses his job, for one reason or another, after many years of service but before qualifying for a private pension benefit, has suffered a retroactive pay cut."

Third, the effect of depriving a man of part of his compensation when he changes jobs, is to enrich the employer who was—or should have been—contributing money into the pension fund for the worker's eventual retirement. The proper solution to this area of concern is a proper vesting provision in the law.

Now, to turn to pension security for a moment. What has been included as part of an economic settlement should not be permitted to be used for anything other than what it was intended to be used for. When an employer has agreed to provide an employe with a pension of $300 a month when he has reached retirement age of 65, he has, in effect, agreed to pay him an annuity worth approximately $35,000. Pension negotiations would be a shambles if the value of any pension agreement was not arrived at on the basis of actuarial estimates. An employer who agreed to pay a worker $100 a week for his services and then paid him only $50, would be liable for his failure to live up to his agreement. Why should an employer who agrees to pay a man $300 upon his retirement not be held liable for failure to fulfill his agreement, if he does not regularly put aside the money necessary to meet that agreement?

If Congress fails to provide for the funding of pensions by law, there will be more and more workers who will discover that much of their lifetime of labor will have been in vain if the promised and anticipated pension is not there. There can hardly be anything more crushing to the human spirit, than to labor thirty, forty years—looking forward to retirement with dignity—and then to learn that the hopes and dreams of a lifetime are not to be realized after all. I would also say that, in the event of serious economic problems, the disappointed hopes of millions of Americans who labored in vain anticipation of lifetime pensions will surely prove as powerful social dynamite as any other deeply felt grievances suffered by other segments of our Nation.

Now, for the most important proposal we have made to Congress—legislation to protect workers' pensions by the establishment of a federal pension re-insurance system. A homeowner purchasing his home on time payments surely has the right (if not the obligation) to insure the repayment of the full face value of his loan in the event of his premature death. Otherwise, his family might find themselves homeless even though a part of the indebtedness had been repaid. Our proposal, in essence, adopts the same principle with respect to pension re-insurance. If for example, a company terminates its pension plan prematurely—usually as the result of a permanent shutdown—and if all the payments necessary to fully fund each worker's pension rights have not been made, the re-insurance fund would pay the unfunded benefits. We believe the costs could be properly charged against all pension plans enjoying tax-exempt status. Pension re-insurance premiums should be based on the extent of each pension plan's unfunded liabilities. As the amount of unfunded liabilities decreases, the amount of premiums should also be decreased. Thus, the worker and the employer would both be rewarded: The worker with pension security; the employer with declining premium costs.

It has occasionally been argued that pension re-insurance will discourage the voluntary funding of pension plans. The argument is that there will be no incentive to do so if an employer knows that any unfunded liabilities will be satisfied by the payment of a relatively small premium to the re-insurance fund. The answer to this argument is two-fold: First, as we have proposed, all plans must be required by law to fund their unfunded liabilities by formulas which provide minimum funding standards. There is considerable evidence that most employers are *already* rapidly funding the unfunded obligations of their pension plans. Therefore, the effect of the law will be to compel a minority of employers to do what the majority of soundly-managed enterprises are already doing. Second, a soundly designed program of premium charges will provide for reduced premiums as unfunded liabilities are reduced. However, if neither of these measures eliminate fraudulent schemes, the law should provide for criminal penalties. The penalties should apply to employers who willfully fail to fund, or who terminate a pension plan to secure payments from the re-insurance fund to which their pension plan was not entitled to.

It also has been suggested that unscrupulous pension fund managers will be encouraged to deliberately gamble their pension funds on high-risk ventures. If the gamble pays off, there will be large gains and reduced future contributions. If all is lost—so what? The pension re-insurance fund will take care of everything. I believe this line of argument only strengthens the demand for strictly limiting the types of securities in which pension funds may be invested. This kind of limitation is an essential part of any law governing fiduciary obligations and standards of conduct. Even without pension re-insurance, pension fund investments are presently being mishandled. I doubt, therefore, that a pension trustee who would use pension funds to speculate with other people's retirement benefits, needs pension re-insurance as an excuse for doing so.

Now, I want to conclude my oral testimony with a few, brief comments.

The benefit levels and costs of pension plans are bound to continue to increase in the future. Present pension plans cost in the area of 50 or more cents an hour. The value of these deferred wages alone justifies prompt action by the Congress to establish minimum standards of financial responsibility, and to enact legislation protecting the accumulated pension rights of workers.

I strongly disagree, Mr. Chairman, with those who advocate more study of this serious problem. This Committee, in our opinion, already has enough information to act during this session of Congress.

I concur in the following statement by the Bar Association of New York City:

"Comprehensive federal regulation of pension plans has been shown by actual experience to be necessary. Despite that evidence, regulation has hitherto expired in Congress, primarily, we believe, because important segments of management and labor fear disruptive effects on existing plans and have expressed their fears in Washington. The deep disappointments suffered by individual employes tend to be under-emphasized, particularly when a legislator is led by a continously expanding economy to conclude that those disappointments are not likely to reoccur. We believe that prudence calls for a different conclusion. If a lengthy recession occurs or a single industry founders . . . the effects can be catastrophic . . . Once it is clear that Congress should act, it seems to us just as clear that it should act promptly."

If the Congress were to delay action, it would be disregarding the gathering storms. I cannot underscore enough our feeling of great need for prompt action by the Congress.

I also want to underscore the point that the failure to pay promised, and *earned*, pensions, is as much the exploitation of labor as are long hours and low wages.

By enacting the measures we have proposed, the Congress will recognize that just as there can be no exploitation of a worker when he is a child, or when he is an adult, there can be no exploitation of the worker when he has retired.

I have attempted to emphasize the human element in my remarks because I believe this is the primary consideration. I also have tried to emphasize that nothing can drain life and hope out of a worker faster than the denial or loss of a pension after a lifetime of labor. I would respectfully ask you to think of your own feelings if you suddenly were confronted with the news, upon your own retirement, that the pension money just wasn't there.

Therefore, in conclusion, I again emphasize the importance of prompt action by the Congress.

I deeply appreciate this opportunity to appear before you and to present my views and the beliefs of the United Steelworkers of America on this most vital topic.

SOCIETY'S RESPONSE TO SCIENTIFIC ADVANCE: THE HARD QUESTIONS AHEAD

Mr. JAVITS. Mr. President, with the new emphasis on defining national goals and priorities, and focusing on the issues likely to arise in the foreseeable future, I find it most interesting and reassuring that the Society of Sigma Xi—the Nation's scientific honorary society—recently invited a practicing lawyer, Daniel M. Singer, Esq., to address the society's annual meeting on a subject which might at first seem to be purely scientific but which on closer examination reveals a real need for interdisciplinary discourse.

Mr. Singer raises some really new and puzzling issues, and their implications

are surprising and substantial. Suppose, for example, that a sudden breakthrough in biological science through genetic alteration, drug therapy or organ replacement makes it possible to extend the lifespan of man to 120 years—which is, I believe, a very real possibility. What would that do to our society—which would then be a society in which men and women at "retirement age" would have, nevertheless, an additional 50 or 60 years? What would become of the structure of our business and professional leadership in the context of young men entering fields of endeavor in which their "elders" had another 80 years before retirement? Indeed, what would become of our whole system of public and private pension and retirement plans, which might collapse in bankruptcy if a sudden change in lifespan revolutionized the actuarial assumptions on which the system is based?

Mr. Singer's remarks point up the need for a much closer cooperation and dialog between the social and scientific professions. I take some real satisfaction in the fact that it is a member of my own legal profession who is pointing the way, and I ask unanimous consent that Mr. Singer's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

SOCIETY'S RESPONSE TO BIOLOGICAL ADVANCE: AN OPPORTUNITY FOR SELF-CONSCIOUS CHOICE

(By Daniel M. Singer)

When Professor Holzberg dipped down (or reached over) into the community of practising lawyers to find someone to address the Society of Sigma Xi, I felt flattered and cheerfully accepted. And I concluded that at least Professor Holzberg was prepared to listen to mere words, without the benefit of lantern slides, statistical disquisitions or, indeed, the rest of the paraphernalia of traditional scientific discourse. The rest of you will have to bear with me.

Since the law plays an important role in harmonizing social change, perhaps more important than any non-lawyer is willing to admit or to accept cheerfully, it is not wholly inappropriate for me to speak this evening about the impact on society of the new and developing technologies arising out of increasing scientific knowledge. In particular, I want to suggest that the outlines of the impact of advances in the biological sciences can be reasonably well foreseen and that the impact will very likely require major changes in society. Most important, I want to suggest that perhaps uniquely in the history of mankind we have both the time and the wit, if we care to use them, to assess rationally the ethical or value choices inevitably posed by our new technologies, and, if appropriate, to act in accordance with that assessment. I would estimate that we have something more than 14 years in which to do so, but science exhibits an almost predictable fickleness that makes me worry that Orwell may have been overly generous.

(Let me digress slightly to note that I do not believe this to be our most immediate public policy issue. If we cannot do justice domestically, make major strides with regard to environmental pollution and limit drastically our capability for instant and very sophisticated genocide, everything I say tonight will doubtless be moot—save that perhaps the next crowd that makes it out of the second primordial ooze may eventually face the same problems.)

For our present purposes, I think it is sufficient to define "technology" as the harnessing of scientific knowledge to perform tasks perceived by the harnesser as useful.

There are at least three points in the process of technological change where socially relevant choices appear to be possible.

First, there are decisions by individual or very small groups of basic scientists, applied scientists or engineers whether to pursue A or B as a line of inquiry.

Second, having pursued A successfully, there is the choice whether to introduce the New Thing, and if so, how? Historically, the marketplace made or prevented the making of this decision.

And third, having introduced the New Thing into use, society reacts. But society rarely if ever rejects the New Thing. We still cling to the optimistic Nineteenth Century notion that all change is progress and that all progress (especially progress in technology) is good—despite mounting evidence to the contrary. After all, whatever limited success the "good guys" (including me) may have had in slowing down the SST, for example, I doubt that anyone here really believes that we will remain free of SST—indeed we'll probably all choose to fly it when it goes into service. [It should be noted that whatever limited impact U.S. citizen groups may have had in throttling back a domestic SST, their counterparts in France and Russia were even less effective, even though no one but air frame manufacturers and proponents of *la gloire de la patrie* really responded affirmatively to the question "does anyone need it?"]

Let me comment briefly on the first two steps in the process of technological change and then focus the balance of my remarks on the third step—namely, the response of society to the introduction of a new technology—specifically, to advances in biological or biomedical technology.

With regard to the choices by scientists or engineers as to which lines of inquiry seem fruitful or rewarding, there are probably certain ideas whose time has come. The work of others in the past seems (at least from vantage point of the future) almost naturally to require the next step to be taken. And this, I suspect, includes the "bright idea" which historically crops up more or less simultaneously in several places. We all know the story of the decade-long race between the United States and the Soviet Union to concoct a hydrogen weapon. And those of you who have read "The Double Helix" will recognize the joust between Watson and Crick, on the one hand, and Linus Pauling, on the other, as recent evidence for the proposition.

Furthermore, the process of choosing and the pursuit of choices may well be relatively independent of the level of funding. The process and the pursuit are probably much more a function of the peculiar kind of zeal, drive, imagination, dedication and curiosity of the community of scientists than a function of external support. Mendel tended his peas; E did equal Mc; $_2$ and Watson and Crick managed to construct a double helix several years before Sputnik, Congressman John Fogarty and Senator Lister Hill rained manna on the heads of the research community, especially on the biomedical research community. [I recognize, in the current days of budgetary stringency, an element of arch heresy in my suggesting to scientists—especially those in basic research—that they will "do their thing" even without public money. This is not quite my view, given especially the nature of the demands that rob money from education and research. The rate of change may indeed respond to fiscal policy especially in the big hardware technologies and in considering the lead time in the supply of research workers. Suffice it to say that I think my argument is unaffected by alterations of the relevant time scale by a generation or two in either direction.]

For the very same reasons—reflecting the peculiar nature of scientists—it is likewise true, of course, that governmental action has been similarly ineffective in *prohibiting* the inexorable efforts of scientists to describe and explain the natural order. Word did get out, despite papal edict, that the earth was not the center of the universe.

To the extent that I have any personal experience with the working of the minds of researchers, I believe that scientists choose first of all to "do" science, and their choices whether to describe the structure of the double helix or to unlock the information system of the gene are dictated largely by happenstance—"I wonder how it works" or "what will happen if I do thus-and-so?" are the approaches far more common than: "If I do thus-and-so, I can make a light bulb," or "If I learn how it works, I will improve the lot of mankind." Decision-making by individual scientists in this respect is not necessarily rational, nor is the time-scale for doing the work perceived generally as critical. But the decisions are well-informed decisions. They are not, however, self-conscious. such decisions purport to be made without any consideration whether there is a good social end-use—or any end-use—for their efforts. Indeed, any such consideration is probably impossible.

The second step in technological change requires choices whether to put a new discovery (basic or applied) to some practical and public use. Here the marketplace becomes relevant (broadly defined to include producers, consumers, advertising agencies, etc.), and time and money are major factors. Up until quite recently the choice—at least in the private sector—have almost always been made automatically in favor of employing the new technology. Such choices have not been made with any broad participation by those affected by the choice.

And, in general, the option to proceed in a direction most people call "forward" has been exercised with less than precise evaluation of adverse consequences. More importantly, perhaps, it seems always to be the case that doubts with respect to introduction of new technology are resolved in favor of introduction. Of course, there are exceptions, such as when the immediate impact is demonstrably adverse to an important and relevant economic interest (as in the case of the permanent light bulb). I do not know what peculiar characteristic of mankind requires us to act like seven-year olds, and to accept or demand prompt benefits in the absence of meaningful knowledge or risks and costs. (This is not to deny that recently more attention is being given to the consequences of a new technology, generated in part I suspect by the physical crowding we now endure and by the fact that many more people are not only affected by new technologies, but are aware that they are affected.) The point, however, is that decision-making in the marketplace, which should by definition be self-conscious, has in fact been uninformed or ignorant.

Let me now move to my more specific concerns arising out of the truly colossal increase in biomedical knowledge and the readily foreseeable conversion of that knowledge into uses in the public arena. I have no doubt that biochemists and geneticists will continue to tell us more about how living things work and that the public will demand of the government and of an acquiescent industrial establishment that some use be made of this new knowledge. Frankly, it strikes me as quixotic to rail against scientists for learning too much or against the business community for converting that learning into digestible (or indigestible) commodities and offering those commodities to us—unless one is prepared to accept political coercion much more repressive than any we

have considered viable in the past. With some rather obvious and shocking exceptions, no government has for very long prevented its people from doing what they wanted to do. And certainly no technology-based society has successfully prevented (save by inadvertence) the development of new technology, although political or economic policies may have on occasion delayed the utilization of the technology.

I believe the problem we will face with increasing urgency is not how to distinguish rationally between the new technological commodities we should accept and those we should reject. Rather, our problem will focus on the technologies we must accept and adapt, control, or otherwise learn to live with—all within an imperfect political structure where we place a high value on individual freedom and on broad participation in and consent to the governmental process.

Let me start with a rather simple example that has already become of concern to the legal profession. Criminal justice is based in large measure on the notion that, within fairly broad limits, individuals are responsible for their own conduct and, therefore, one's moral sense is not shocked by imposing blame or punishment on persons who elect to violate the established and generally-accepted norms. In addition, it is ideally both possible and desirable to isolate the violators for a period of time so that they may learn, through techniques of criminal rehabilitation, to elect in the future not to violate those norms again. This process takes place after the fact—that is, the law (or, at least, the ideal of law in Western Civilization) assumes that until the norm has been violated the future criminal is entitled to the same measure of freedom from coercive governmental action as are all other people in the community. We have simply not accepted the notion of locking up *potential* criminals, even if we could identify them in advance of their criminal conduct. (The isolation of Japanese-Americans during the Second World War is now widely regarded as an unmitigated outrage and this year Congress will likely repeal the Attorney General's power to repeat that episode.)

However, several geneticists suggested in the mid-1960s, on the basis of their studies of a few prison and mental hospital populations, that there may be a statistically quite significant correlation between the presence of an extra Y chromosome in certain males (who are also tall, pimply and mentally dull) and the occurrence of violent conduct by such males. Can these XYY types be held criminally responsible in any traditional sense, assuming it can be shown that their genetic makeup is such that they are not free agents capable of choosing? If that were the only question, the answer might be fairly straightforward—we simply put them in hospitals (perhaps forever) as we do with other mentally unfit persons whose criminal acts were the product of a mental disease or defect.

But there is more to the problem. It has been suggested that we can predict, with statistical confidence, that an XYY will commit a particularly offensive type of crime. Should society be powerless to act in advance of murder? Shouldn't all males be promptly tested at birth for the presence of the extra Y? Or, why wait until birth—why not test *in utero* and compel an abortion?

I have chosen the XYY phenomenon as the first example for several reasons.

First of all, the example is not hypothetical but quite real and immediate. Criminal defense attorneys interpreted the scientists' suggestion of correlation at much more than face value and quickly "XYY" became legal jargon. Recently a French court convicted a man accused of murdering a prostitute even though he was an XYY. But the sentence was for only seven years. And in Australia a jury acquitted on the grounds of insanity a young XYY who stabbed a 77-year old widow; a doctor had testified for the defense that every cell in the man's body was abnormal. And the lawyers for Richard Speck (the nurse-murderer in Illinois) are claiming now that he is not blameworthy because he too is an XYY.

Second, the social impact of the XYY problem appears to be readily understandable and manageable. If the high correlation is eventually confirmed, rationalizing the new data may require only a little adjustment in the way we handle criminals. The mind does not boggle at such adjustments and no major values or interests of large numbers of people appear to be threatened. And, if the science involved proves to be wrong, society would very likely accept or insist upon the restoration of the *status quo ante*.

Third, it illustrates the inadvertent way in which new knowledge—even without a technology—may force the public to respond. In the early 1960s, studies in Swedish mental hospitals showed an unusually large number of XYY males among hard to manage patients. The data were confirmed in 1965 in Scottish hospitals and maximum security prisons. And in 1968 we had the criminal cases I just mentioned. But I doubt that any of the initial investigators was directly or even indirectly thinking about the fact that the new information might cause disruptions in our criminal justice system.

Last, the example highlights the fact that some choices cannot be ducked or postponed or the data involved carefully analyzed before any action is taken. Courts and juries must decide pending cases. They cannot pick and choose from among all the cases the ones which should be decided and the ones which should be postponed.

A further thought on XYY may put matters in a broader context where very self-conscious societal decision-making is required.

We already know that there will be some number of XYY men who will never commit a crime. Are we to dispose of them as criminals or as insane simply because their numbers are small and, therefore, upon some theory of the greater good, we are willing to compel them to sacrifice their freedom? Does it matter that the statistical correlation is, say, .84 rather than 1.0?

Let me suggest that the statisical difficulty raises several important issues: One issue is the level of certainty of benefit or harm we will require before embracing or delaying introduction of a new technology. It will probably remain true that society will frequently act in a way which, by hindsight, will seem precipitate. But how does one justify failing to act when the probabilities are very high but are less than 1.0? Where we attempt to alter the existing balance of individual freedom and social coercion, we must remain sensitive to the fact that probability statistics will help us predict the outcome of a series of similar events, but will tell us very little indeed about the outcome of particular events. Do you really believe the old story about the man with one foot in boiling water and the other foot packed in ice? When asked how he felt, he responded: "On balance, I feel okay."

Other issues highlighted by—but tangential to—statistical difficulties are common to human experimentation generally. For example, what responsibilities if any, does society have to the necessary mistakes or accidents of medical research and experimentation? What of the casualties of introduction of a compulsory new technology, like fluoridation or PKU tests? One also wonders what ethical norms must be protected and enforced in obtaining the informed consent of human experimental subjects? As life-saving technologies burgeon—especially expensive technologies involving substantial commitment of trained craftsmen—we will be unable for long to avoid the question: "Who shall live and who shall die?" The rich? The smart? The beautiful? The young? or the old? or some of each? and how many? and who decides? and what known value calculus or ethical system is available to guide either the public at large or the Platonic guardians in making such cost-benefit analyses?

The XYY phenomena is a miniscule episode which puts some of the issues in what appears to be a manageable dimension. But the issues raised are common to much of which I will say later and it may be useful to keep them in mind.

Let us now turn to problems not yet upon us which will require far broader adjustments than mere tinkering with the criminal justice system. Until quite recently only life insurance company actuaries and the Census Bureau cared about population grouping at various age levels. All that has now changed. We know that about half the people in the United States are under twenty-five, and some political styles take that fact into account. Likewise people here are generally living longer, and much attention is now paid politically to senior citizens and medically to geriatrics. Science, too, is interested in how we grow old. In several biological research laboratories there are well-advanced cellular studies on the process of aging. I have no doubt that within a decade or two (or perhaps three or four, it really doesn't matter which is correct) through some form of genetic alteration, drug therapy or organ replacements, it will be possible to extend the life span of most people to 100 or 120 years of reasonably good health.

If it should be the case that the life extending technology is relatively expensive, the ethical problems just mentioned will certainly surface as soon as the technology has ceased to be experimental. Who should be permitted to extend his life abnormally? Should some be required to do so? Picasso? The Beatles or John Wayne? Think of the Republican reaction if such an opportunity had been available to FDR? My examples here are facetious only because it may help sharpen the ethical choices inevitably exposed by an expensive technology.

The same issues are evident now in our concerns about delivery of medical services. How can we justify public financing of kidney dialysis or organ transplants for a few people when millions of people could be served prophylactically by the talent and money expended in esoteric medical-techniques?

The facts are, I believe, that the world has become too small and too crowded and people too well-informed and, if you will, too outspoken to suffer that only the rich will have access to a much longer life (or, for that matter have access to psychoanalysts or, closer to home, to lawyers). And these facts force us to examine and articulate our *collective wisdom* to answer the question: "Who shall live?" I stress the words "collective wisdom" because our democratic ideals and sense of fundamental fairness require no less. In addition, much of our future technology will be developed with public funds, and thus the taxpayers and their representatives will have a rightful claim to share the burdens of decision; they will demand it. And, at least absent a major political revolution in this century, any allocation of scarce resources will have to attract a broad consensus to be viable. I have no trouble conjuring up hospital sick-ins to prevent life-lengthening surgery for some rich, powerful, but unpopular person.

But if, on the other hand, it should turn out that our life-extending technology is cheap, the planet as a whole will face a really unprecedented population crisis. (I say "planet" advisedly, because cheap

technologies are not to be contained by national boundaries.) If "who shall live?" is answered: "anybody who wants to," then within a very short time the world population would likely be doubled or tripled, since it is inconceivable that anyone capable of choosing would elect not to take the "life-extending pill" which would assure a substantial extension of a reasonably healthy life.

Assuming we could somehow wrestle with the "gut" survival issues of food and shelter, the economic dislocations would nonetheless be enormous. If the extra years lengthened the retirement years, every pension fund and social security system would very quickly go bankrupt. And if we lengthened the working years, what would all those people do? Unemployment would be substantial, even without considering the funeral directors, casket makers and others who would be technologically unemployed because for several decades nobody would die of natural causes. And, one step further, consider that life-extension might include an extension of childbearing years. Or, alternatively, assume we are unable to extend the span of female fertility but do still further extend the span of male virility. Will we have truly sired a race of old men leching after young women?

I don't pretend to have any answers to those questions. But the facts will force major changes in the way we live; what efforts are perceived as useful, how we spend our leisure and what our values are. In addition, there will be wholly unpredictable consequences. Consider, those of you over 30 with children: What will happen to the ambition and attitudes of young people in a society where parents seem to live forever? My list of questions is by no means exhaustive—a single New England spring afternoon spent in reflection would suggest many more.

I have thus far suggested two examples of science forcing us to think anew about the nature of our social order—the XYY phenomenon, involving no massive research effort or technology but merely a putting together in an unexpected way of existing data, furnishing a new bit of knowledge we can hardly ignore—and the second, life extension, probably involving a substantial technology for which the demand will immediately be universal.

Let me now turn to two examples of what in our youth we called "science fiction" but which we no longer dismiss so casually. The first of these latter examples suggests that what we do in the way of therapy will almost certainly develop for us techniques of prediction, manipulation and control far beyond the therapeutic realm for which those techniques were designed. And my final example—nuclear transplantation—points to the apotheosis of control—and man's infinite capacity for mischief.

I am confident that one of the other things the biomedical community will deliver to us its comparative freedom from disease—not only from the common cold, cancer, heart and lung diseases and epidemics and public health problems of various kinds. We will also be delivered from the range of already known and still unknown genetic abnormalities.

[We will learn, too, a great deal more about presently-known psychological disorders and how to treat them. But I assume that if we retain any creativity or ambition, new forms of mental disorder will occur to keep our psychiatrists and our hospitals well-occupied.]

In speaking about freedom from genetic diseases. I want to borrow heavily from a talk given to the AAAS in December, 1968 by Robert L. Sinsheimer, Professor of Biophysics at Cal. Tech. Sinsheimer does elegant science and is reasonably cautious in projecting the progress of science into a future technology. Let me quote selectively from his remarks, as follows:

"There is today much talk about the possibility of human genetic modification—of designed genetic change, specifically of mankind. A new eugenics has arisen, based upon the dramatic increase in our understanding of the biochemistry of heredity and our comprehension of the craft and means of evolution. . . . For the first time in all time a living creature understands its origin and can undertake to design its future.

"This is a fundamentally new concept. Even in the ancient myths man was constrained by his essence. He could not rise above his nature to chart his destiny. Today we can quite soberly envision that chance—and its dark companion of awesome choice and responsibility. . . .

"I want to use the phrase 'genetic change' in a broad sense—in the sense of altering some physiological and psychological process which we presently believe has been programmed into us through out inheritance. And I will assume that such change might be achieved either in a strictly genetic mode through a change in our inherited characteristics or in a somatic mode, possibly through a change in the time or place or degree of action of our inherited genetic components, or possibly through the somatic addition of genetic components. . . .

"There are in the United States today some 4,000,000 clinical diabetics. Many of these people are kept alive only by repeated frequent injections of the hormone insulin. It is believed that there are likely several million more sub-clinical, not clearly recognized cases with marginal symptoms in the United States. Without these recurrent injections of insulin many of these people would perish. While it keeps them alive the injection of insulin is not the full equivalent of a normal physiological function. Such diabetics are known to be more susceptible to disease, to heart and circulatory illnesses, etc.

"My thesis is that what we might call genetic therapy offers the promise of a much more elegant, and indeed more satisfactory, physiological solution to this ailment."

Sinsheimer then discusses at some length the nature of the protein insulin, the state-of-the-art of synthesis of the gene that directs the pancreas to manufacture insulin, and the clever ways scientists will have for inserting and turning on the gene. He also outlines the prospect that the genetic make-up of the diabetic's children will not be similarly impaired. Sinsheimer concluded his remarks in part as follows:

"The old eugenics required in principle a continual selection—for breeding of the fit, and a culling out of the unfit. The new eugenics would permit in principle the conversion of all of the unfit to the highest genetic level.

". . . The horizons of the new eugenics are in principle boundless—for we should have the potential to create new genes and new qualities yet undreamed. But of course the ethical dilemma remains. What are the best qualities and who shall choose?

* * *

"I know there are those who find this concept and this prospect repugnant, those who fear with reason that we may unleash forces beyond human scale, and those who recoil from this responsibility.

"But I would suggest to those who feel this way that they do not see our present situation whole. They are not among the losers in that chromosomal lottery that so firmly channels our human destinies. This sort of response does not come from the 250,000 children born each year in this country with structural or functional defects, of which it is estimated 80% involve a genetic component. And this figure counts only those with gross evident defects outside those ranges we perforce choose to call natural. It does not include, for example, the 50,000,000 'normal' Americans with an IQ of less than 90.

Sinsheimer concluded by putting on us—namely, on "those who were favored in the chromosomal lottery"—the burden of choosing on behalf of the human race whether, on the one hand, "we will continue to accept the innumerable, individual tragedies inherent in the outcome of this mindless, age-old throw of dice," or whether, on the other hand, "we will assume the responsibility for intelligent genetic intervention."

Sinsheimer's prose is graceful and compassionate. I wish only that he might expand on his repertoire of skills and teach a course in expository writing.

One final example will suffice: until now mankind has had to rely on a rather old-fashioned but quite acceptable method for getting enough information into a female egg to cause that egg to grow into a new human being. We will shortly have a new method which, while not as friendly or interesting, will do the job just as well. The polysyllabic label of this new method is "nuclear transplantation" and was described as follows by Antonie W. Blackler, Professor of Zoology at Cornell, as part of the same AAAS symposium at which Sinsheimer spoke. Blackler said:

"Nuclear transplantation is a technical device which essentially shortcircuits sexual reproduction and permits the generation of species which normally practice sexual reproduction by an artificial form of a sexual generation. The theory of the technique is very simple. The object is merely to replace the normal nucleus of a mature but unfertilized egg with a nucleus taken from a cell of a single parent organism. The technique has been carried out, to date, using salamanders and frogs, and recently the fruit fly *Drosophila* . . .

"In the practice of the technique, a small piece of tissue is taken from the donor animal and chemically disaggregated into its constituent cells. The cells, one at a time, are sucked up into a micropipette such that the cell membrane is shattered. Subsequently, each cell nucleus with associated cytoplasm is injected into an unfertilized egg whose own nucleus has been either manually removed or rendered functionless by ultra-violet irradiation. If all goes well, the egg now develops in the same way as if it had been involved in fertilization.

"The extension of the technique to mammalian material has not so far been performed. Yet I should like to make it clear to you that, while this extension will require something rather more sophisticated than is the case for working with amphibia, and will probably require a term of six or more research scientists, there does not exist any technological barrier which appears insuperable. . . .

"If the technique of nuclear transplantation can be extended to mammals and to birds, then quite definite economic advantages and applications can be looked forward to. Since clones [that is, progeny] of transplant animals have the same genetic character as the original donor, then in the same environment we might reasonably except those animals to be replicates of the parents in terms of their morphology, function and behavior. This would mean that desirable agricultural attributes that turn up from time to time in champion bulls, meat-bearing cattle, milk production and egg-laying could not only be perpetuated in transplant strains, but at least theoretically countless individuas having all the desired qualities could be produced. . . .

"Finally [still quoting from Blackler], the extension of nuclear transplantation to man himself should be mentioned. The production of replicate humans . . . might, from some standpoints be considered entirely suitable. . . . [A] sterile woman could produce her own child, and a handicapped baby might be born anew and whole via a transplantation (provided, of course, that the baby was abnormal not due to some genetic defect but by some developmental accident). Equally,

untrammeled exploitation could lead to bad ends . . .

"At this point we seem to depart from basic science into the world of science fiction. Unfortunately, science fiction has an uncomfortable habit of becoming tomorrow's science."

And now, less than 18 months after Blackler spoke, nuclear transplantation has been achieved in mice—that is, in mammals. We will doubtless soon add to "which person shall live?" the question. "what shall he look like?" And, of course, along with those questions we have a third: "who shall decide?"

Let me return briefly to a footnote I dropped earlier in discussing life-extending technologies. I noted that if the technology turns out to be inexpensive the problem would not be containable by national solutions; some international solutions (or parallel national solutions) would be required. So, too, for regulation of the nuclear transplantation technology. I doubt this nation would for long ignore information that, for example, millions of Chinese women were carrying male fetuses programmed to be tall, bland, aggressive, blue-eyed warriors.

I have referred frequently tonight to the stresses the new biological knowledge will impose on our value systems and on our ethical choices. I do not believe society will opt for anarchy for any long period of time. Society will demand some form of regulation and, in constructing the regulatory scheme, choice becomes inevitable. Will we accept, for example, a society in which the normal condition is sterile, and where one can have babies in the old-fashioned way only by taking a fertility pill—dispensed free by a government, no more than two to a couple? We must somehow decide how much freedom we require and how much coercion we will endure. We will be in the position of the courts in my XYY example—there comes a point where choice cannot be postponed. And what will guide us in choosing will be our capacity to articulate our values—what is fair? what is good? is there some level of suffering required to reserve artistic creativity?—and also our capacity to quantify our values—how many beautiful, or smart, or strong people do we want? and what level of risk or error is tolerable?—or to reject consciously anyone's right so to quantify.

This talk could not properly end without some mention of the role of religion. Historically, one principal function of religion was to articulate society's ethical standards. Confronted with new imperative choices, that role may well expand. In recent years, in both the peace movement and the civil rights movement, religion has attempted to guide public decisions with arguments based on notions of right and wrong in man's relation to man. That experience may be useful in the years to come as others are forced to join in the ethical colloquy.

It is with some trepidation that I have been a mite dogmatic tonight in predicting with carefree abandon the certain course of scientific development. It's a bit outside the lawyer's normal realm, and perhaps another instance of "fools rush in." But one must try to make predictions, and hope for better luck than a distinguished group of scientists and social scientists had in 1937. At that time a Federal National Resources Committee examined the role of science as a national resource, and said:

"Though the influence of invention may be so great as to be immeasurable . . . there is usually opportunity to anticipate its impact upon society since it never comes instantaneously without signals. For invention is a process and there are faint beginnings, development, diffusion, and social influences, occurring in sequence, all of which requires time. From the early origins of an invention to its social effects the time interval averages about 30 years."

The report also sought to evaluate the unprecedented date of technological change during the first third of the twentieth century and discussed the social consequences of the new technologies which had come into being. The scientists also attempted to predict the course of technological progress which could be anticipated in the second third of the century. Their report includes not even a hint of the possible emergence of nuclear technology, radar, computers, or the jet engine, although these came into practice within a few years. In fact, the report suggested that aviation technology had by 1937 largely run its course, and that future developments would lie in safety and comfort rather than speed.

Making predictions is indeed dangerous sport.

I hope that you do not resent my having painted rather broadly in my discussion tonight. Or that I have failed to acknowledge appropriately that most of what I have said tonight was first said or thought of by many others of far greater renown. But I was warned that there is a time limit—and rather than write a book (and read it here tonight) my purpose was to provoke others to do so either to fill the interstices in my argument, or to demolish it. I do hope we have begun a discussion which may, over the years, equip and guide the body politic in coping with some very major problems.

I hope also that you do not resent my having delivered such a lecture to a dominantly scientific group. I recognize that in recent times guidance to the body politic has (or has purported to) come from social scientists, historians, lawyers, economists and practitioners of those arts—called politicians—men who are accustomed to making value choices. And there is a certain comfort in the belief that "there is nothing new under the sun"—that somehow society will adjust without too great strains or hardships to new requirements for survival—in much the same mindless way it has in the past. I happen not to think that observation particularly helpful. Large parts of this planet did suffer through several hundred years we now call the Dark Ages. But those were very different times. Soon, we will no longer be at the mercy of the elements or chance. We will have a qualitatively different power to alter our future. Indeed, I would argue that the quality of life in 1800 A.D. was closer to the quality of life in 1800 B.C. than it will be to the quality of life in 2000 A.D.

I would also argue that the scientific community must play an active role in making the inevitable ethical choices, partly to fulfill the scientist's ancient role as society's principal philosopher, but more importantly because it is essential that the public get the facts straight—what can be done, what can't be done, what may be done, what mistakes are very likely, what uncertainties are sure to haunt any predictions we may make, and what risks are inherent in our choices. Getting the facts straight is surely the minimum scientists should be willing to contribute to the public discourse.

Furthermore, whether they like it or not, scientists are also *part of* the body politic—not above, below, or outside of it. Laymen, standing at a respectful distance, tend still to regard scientists with some degree of awe. At closer range, scientists are very much like people. And while scientists may have a near monopoly on talent, they clearly have no monopoly on wisdom, insight, sensitivity or other humane values. But scientists constitute a growing fraction of the articulate population and what they do affects them and the rest of us. They cannot remain aloof and greet each new public problem and misapplication by abdication. They have a responsibility to become involved as citizens in the sometimes unpleasant business of public argument and decision-making.

Last, I think that, for the health of the scientific community itself, scientists must become engaged now in public undertakings. If scientists—who will continue to startle us with their damnable cleverness—cop out on the problems they create, the public may turn on them and/or they will share the fate of physicists who (probably through no fault of their own) have for a generation been wringing their hands and donning hair shirts to expiate their guilt. The Eahn-Strassmann experiments of late 1938 were, via Meitner and Frisch, reported to the scholarsly American Physical Society by Bohr and Fermi in January, 1939 and six months later Szilard had drafted Einstein's famous letter to Roosevelt. By early 1940 the secrecy curtain (urged by Szilard a year earlier) had foreclosed any public consideration or understanding of the impact of the developing nuclear technology. The people remained ignorant, and the physicists were barred from informing them.

But the fate of the physicists need not be shared by the community of biological scientists. Recent biological advances have suffered (if "suffered" is the right word) from a surfeit of publicity ranging, for better or worse, over all the media. We have been warned and titillated to a fare-thee-well. As I said at the outset, "we have both the time and the wit, if we care to use them." We must now stop protesting the inevitable and commence a disciplined, creative and public effort aimed at articulating our values and harnessing our technology to serve those values. If we fail to grasp the nettle and wrestle the problem directly, we will have only ourselves to blame.

Mr. SCOTT. Mr. President, I now suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. COOK). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

INSERTION IN THE RECORD OF STATEMENTS RELATING TO SENATORS

Mr. MANSFIELD. Mr. President, the RECORD for Wednesday, June 10, on page 19124, carries a statement by the junior Senator from Oklahoma (Mr. BELLMON) with certain attached news items.

This insertion in the RECORD by Senator BELLMON is highly unusual, first, because it is critical of another Senator, the distinguished senior Senator from Oklahoma (Mr. HARRIS), and, second, because it apparently was not read openly in the Senate by the junior Senator from Oklahoma but was handed by Senator BELLMON to the Senate Parliamentarian for printing in the RECORD without notice to Senator HARRIS.

Senator HARRIS feels very deeply that the war in Indochina must be brought to an end, but he is one of those who have worked most diligently to keep this from becoming a partisan issue.

The first newspaper item which was attached to the statement by Senator BELLMON and which referred to Senator HARRIS has as its apparent purpose the establishment of an impression that Senator HARRIS only began to speak out

against the Vietnam war during the present administration, when the truth is that he spoke out against it during the last administration, at that time calling for a bombing halt and de-escalation.

The second item referring to Senator HARRIS attached to the statement by Senator BELLMON was a column in which the columnist had quoted Senator HARRIS as saying, "We will hold Nixon responsible if he turns South Vietnam over to the Communists," indicating that Senator HARRIS, as chairman of the Democratic National Committee, was trying to make political capital of the war for his party, whichever way the war went, when the truth is that Senator HARRIS never made any such statement, and the columnist, himself, in a later column, acknowledged Senator HARRIS' denial.

The trouble is that this insertion in the RECORD by Senator BELLMON is of the type which is often made for reprint purposes. Since Senator HARRIS was given no notice and the statement was not read publicly in the Senate, there was no chance to object to the statement or to correct the erroneous impressions it gives. Thus, it is possible that someone could have Senator BELLMON's statement and attachments reprinted and circulated among persons who will have no way of knowing that Senator BELLMON's charges are not accurate and have been answered.

It may be said that the regular procedures for notifying a Senator concerning an attack to be made upon him personally might not apply in this instance, since Senator HARRIS was once chairman of the Democratic National Committee, while also serving as a Member of the Senate.

Many Senators speak outside the Senate and some hold other positions. Each must, obviously, defend his actions and his words.

But when one Senator chooses the forum of the Senate floor and the CONGRESSIONAL RECORD to attack another Senator personally, for whatever reason, then the fundamental procedures of the Senate should be followed, with full prior notification and opportunity for response before such statements and attachments, seemingly uncontroverted, are printed in the RECORD. Basic fairness is required.

Senator BELLMON, himself, once served in the highly partisan position of campaign manager of candidate Richard Nixon's presidential campaign. Another Senator might just as easily place material critical of him in the RECORD because of these activities without giving him notice or an opportunity to answer. I would oppose such procedure.

The procedures of the Senate have grown up in order to prevent one Senator from taking such advantage of another who is absent from the floor. The special method devised for having a statement and attached materials printed in the RECORD without it having to be given orally is purely for the convenience of Senators, and it will have to be discontinued if it is going to be abused. I have notified the Parliamentarian that, in the future, no statements or attached materials are to be received at the desk for printing in the RECORD if they are critical of another Senator, unless they are read openly on the Senate floor, and I admonish Members of the Senate that so much of our orderly operation in this body depends upon procedures which exemplify civility, that criticism by one Senator of another should not be spoken except in strict accordance with the rules of the Senate and only where there is full notice in advance and opportunity for response.

As far as I am concerned, this would apply—and has applied—to all Senators regardless of party.

Mr. BELLMON. Mr. President, as a Member of the Senate, I certainly have no desire to enter into a personal attack on another Senator. However, as a member of the President's party, I feel a responsibility to help keep the record straight. Therefore, I feel that when the President is criticized by the chairman of the opposition party, it is entirely proper and even necessary to speak out.

I do not consider the statement I entered into the RECORD on June 10, 1970, as a personal attack on another Senator. The statement was intended to call attention to the reported intention of the national chairman of the Democratic Party to take partisan advantage of the Vietnam war. My remarks were based on certain published material, including an article by Roscoe and Geoffrey Drummond, dated October 5, 1969, and distributed by the Los Angeles Times Syndicate. It has been alleged that a statement attributed by the Drummonds to the former chairman of the Democratic National Committee was inaccurate and had been retracted. I have corresponded with the Drummonds and they have informed me that there was no retraction of this column or any of its content.

I have in my hand a copy of the letter I wrote to the Drummonds concerning this matter and a copy of their reply. I also have a copy of the column which they had written on this subject and the column which purported to retract the statement in the earlier column. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JULY 2, 1970.

Mr. GEOFFREY DRUMMOND,
Mr. ROSCOE DRUMMOND,
Washington, D.C.

DEAR SIRS: On June 10, 1970, I inserted into the *Congressional Record* references to one of your columns concerning certain comments made about President Nixon's Vietnamization policy. Subsequent to that time a charge has been made that your column contained inaccuracies and that it had been retracted. If this is true, I was unaware of it, and I would appreciate being provided with a copy of a retraction, if one was made.

Your assistance will be greatly appreciated.

Sincerely,

HENRY BELLMON.

LOS ANGELES TIMES SYNDICATE,
Washington, D.C., July 8, 1970.

Hon. HENRY BELLMON,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR BELLMON: We are pleased to respond to your letter of July 2.

We have enclosed our column of Oct. 5, 1969 which apparently is the one you refer to in your letter to us.

There was no retraction of this column or any of its content.

In a column of Nov. 25, 1969 (enclosed) we did refer to the earlier column. Please see last paragraph as marked.

Hope this helps.

Sincerely,

ROSCOE AND GEOFFREY DRUMMOND.

DYNAMITING THE PEACE

(By Roscoe and Geoffrey Drummond, Los Angeles Times Syndicate, October 5, 1969)

WASHINGTON.—The leaders of the Democratic Party are playing with political dynamite in trying to force President Nixon to withdraw U.S. troops from Vietnam so rapidly as to throw away all prospect of negotiating a peace. They may be the ones who get blown out of the water. That's not important. What is more important is that the United States of America would be hurt—grievously hurt—by this shortsighted, reckless, perilous undermining of what the President is doing to end the war by seeking a fair peace.

No one is suggesting that those who want peace at any price, those who want to withdraw all American forces immediately, regardless of the consequences, should still their protests. All the President and others who are earnestly seeking disengagement *and* a decent peace are asking is that for a reasonable period congressional critics should stop telling Hanoi that it doesn't need to negotiate, that all it has to do is to wait and they—the congressional critics—will see that the U.S. government accepts a no-peace policy.

The Vietnamese war has never been a partisan issue, and attempting to bring it to an end with a fair peace is not a partisan issue. But leaders of the Democratic Party are now trying to make it so. Senator Fred R. Harris of Oklahoma, Chairman of the Democratic National Committee, disclosed this strategy in a candid remark to the press last week. "We will," he said, "hold Nixon responsible if he turns South Vietnam over to the Communists." But simultaneously Senator Harris and Democratic senators like Kennedy, McGovern, McCarthy, Fulbright are continuing to demand such a rapid pull-out of U.S. troops that the end result would be to give the Communists control of South Vietnam. Thus, the national chairman of the Democratic Party is not only acting to make Vietnam a pay-dirt partisan issue but is also seeking to put President Nixon in such a box that no matter what he does he's bound to lose. What he's up to is now in the open. He wants to give the Democratic Party all the dividends he can by joining in the pressure on Mr. Nixon to get American troops out of Vietnam fast. But Harris doesn't intend that the Democratic Party should take any responsibility for an imprudent speed-up of withdrawal. He proposes that if a President gives in to the demand for imprudent speed-up he—not the advocates of speed-up—should be held to blame. In other words, Senator Harris' neat formula is to make Mr. Nixon punishable by the voters if he doesn't yield to pressures to get out quick and also if evil consequences come from yielding to such pressures.

Senators and Congressmen have special responsibility. They know that the President has the constitutional duty to conduct foreign policy and that negotiating peace is the most difficult and delicate act of foreign policy. Heckling and harrassing the President is delaying the peace, not hastening it. Have the Democrats forgotten so soon that Richard Nixon is acting to end a war which he inherited from his Democratic predecessor and which they helped to authorize? Harris and those Democrats he is rallying to put

the voice of his party behind the peace-at-any-price student faculty protests October 15 are playing with fire. It wouldn't matter, if they weren't also undermining the chances of negotiating a just peace.

[From the Philadelphia Inquirer]

NEGRO VOTING TREND BOOSTS REPUBLICANS

(By Roscoe and Geoffrey Drummond)

We want to add a postscript to a recent column in which, though our notes at the time read to the contrary, national Democractic chairman Harris feels we inaccurately stated his views on holding President Nixon responsible no matter what happens in Vietnam.

"What I tried to say and what I have consistently been trying to say," Sen. Harris writes us, "is that I feel the Democratic Party should help to create a climate which will enable the President to bring us out of the war and bring the boys home—without fear of recrimination on the part of the opposition party."

That's good. The test will come when the event takes shape.

Mr. BELLMON. Mr. President, the majority leader's action to require that statements mentioning names of other Senators to be read into the RECORD certainly is appropriate and I support him in his decision. I would have no objection to reading my statement of June 10 into the RECORD. The other method was used to save the time of the Senate and for no other purpose.

Mr. SCOTT. Mr. President, will the Senator yield for a clarification?

Mr. BELLMON. I yield.

Mr. SCOTT. As I understand it, what the Senator from Oklahoma put in the RECORD was a column by the Drummonds, and it was that column which quoted another Senator. The Senator from Oklahoma (Mr. BELLMON) was not himself quoting the other Senator, but was quoting a column which quoted the other Senator from Oklahoma; is that correct?

Mr. BELLMON. The Senator from Pennsylvania is correct.

Mr. SCOTT. Then the Senator from Oklahoma (Mr. BELLMON) inquired of the columnists, the two Messrs. Drummond, whether they retracted the column and the quotation, and they said they did not retract them. They did publish the denial by the Senator from Oklahoma (Mr. HARRIS); is that correct?

Mr. BELLMON. I read the letter that the Drummonds wrote in response to my inquiry. The letter is dated July 8 and it reads:

DEAR SENATOR BELLMON: We are pleased to respond to your letter of July 2.

We have enclosed our column of Oct. 5, 1969 which apparently is the one you refer to in your letter to us.

There was no retraction of this column or any of its content.

(Disturbance in the galleries.)

Mr. SCOTT. Mr. President, I demand that those in the galleries causing the disturbance be removed from the galleries.

(Further disturbance in the galleries.)

Mr. SCOTT. Mr. President, I demand that they be removed.

The PRESIDING OFFICER (Mr. COOK). The Sergeant at Arms will remove the demonstrators.

Mr. BELLMON. Mr. President, the final paragraph of the letter reads:

In a column of Nov. 25, 1969 (enclosed) we did refer to the earlier column. Please see last paragraph as marked.

The paragraph they referred to reads:

We want to add a postscript to a recent column in which, though our notes at the time read to the contrary, national Democratic chairman Harris feels we inaccurately stated his views on holding President Nixon responsible no matter what happens in Vietnam.

"What I tried to say and what I have consistently been trying to say," Sen. Harris writes us, "is that I feel the Democratic Party should help to create a climate which will enable the President to bring us out of the war and bring the boys home—without fear of recrimination on the part of the opposition party."

Then the Drummonds conclude by saying:

That's good. The test will come when the event takes shape.

Mr. DOLE. Mr. President, will the Senator from Oklahoma yield?

Mr. SCOTT. Mr. President, I will defer to the Senator from Kansas.

Mr. DOLE. Let me say that I have read the remarks of the Senator from Oklahoma, and also the quotations from the Drummond column just referred to.

I also recall that on September 27, 1969, an article appeared in the Washington Post where, again, the senior Senator from Oklahoma was quoted as saying:

It is time to take the gloves off on the Vietnam War.

This led to a request by the distinguished Republican leader, the Senator from Pennsylvania (Mr. SCOTT) for a moratorium on making this a partisan issue. He was joined in that request by the distinguished assistant Republican leader, the Senator from Michigan (Mr. GRIFFIN).

I have reviewed the material, and certainly feel that the Senator from Oklahoma (Mr. BELLMON), as indicated by the Senator from Pennsylvania, did not transgress that fine line, covered by rule XIX. I agree with the majority leader that nothing should be inserted in the RECORD which refers to a colleague, unless it is read on the floor. I agree with that. But I would point out that the statement from the Washington Post attributed to the senior Senator from Oklahoma on September 27, 1969, was commented on by a Member of this body, the distinguished Senator from Idaho (Mr. CHURCH), who indicated:

I want no part in any strategem to convert the Vietnam War into a political club for Democrats to use against Republicans.

The statement was also quoted by the distinguished Representative from Illinois, the Honorable JOHN ANDERSON, a Member of the House of Representatives.

But despite that, I agree the war should not be a partisan issue. We have endured it now for some time under three Presidents, and I think we all recognize that President Nixon is attempting to disengage from Southeast Asia. There has been deescalation of the Vietnam war, and every Member of this body hopes for an early end to the war, whether the President be a Democrat or a Republican, and regardless of our own party.

Several Senators addressed the Chair.

Mr. BELLMON. Mr. President, I yield to the Senator from Tennessee.

Mr. BAKER. Mr. President, I have no desire to unduly prolong this debate, and I shall not. I would make this observation: We have the rules of the Senate, as well as the precedents and traditions of the Senate, to insure that 100 men and women can, in good conscience, try to get along with one another. Speaking from my short experience of 4 years, I think it is remarkable that the system works so well, especially when we are dealing with difficult and complex issues that bring out the heat and passion of conflict. It is really a remarkable commentary on the Senate that, during its history, there has been so little conflict or so few injured feelings between its Members.

There is no written rule, that I am aware of, that requires a Senator be present on the floor when some other Senator makes a remark about him. I certainly know of no rule that requires a Senator to notify another Senator when he refers to printed matter regarding the other. All of this is in the second or third degree. All of these things are more or less unspoken rules of the Senate, and I respect them. I think they serve a purpose.

But I would point out that the provisions themselves are just as obscure as the situation is here. The distinguished majority leader has made the statement, if I understood him correctly, that the statements referred to in the Drummond column as having been made by the distinguished senior Senator from Oklahoma were not made, or words to that effect. I have no desire to enter into this conflict on its merits. I do not know what the merits are.

I do know, however, that there is room for reasonable minds to differ, and I took it on myself to call Roscoe and Geoffrey Drummond and talked with them, to find out whether or not these statements were made and whether or not they honestly believed them to have been made, and that, therefore, there was reasonable basis for the distinguished junior Senator from Oklahoma to have made the insertion in the RECORD of the Drummond column.

It turns out that the alleged conversation took place at a breakfast, I believe sponsored by Godfrey Sperling of the Christian Science Monitor. There were a number of people there, and, according to Geoffrey Drummond, who was present, both his notes and his recollection were in accordance with the column he printed, which the junior Senator from Oklahoma had printed in the RECORD.

I do not offer that to try in any way to take sides in the argument, but to point out that, just as rules of conduct sometimes involve a close decision, so this issue is not all one way or the other, and there is room for reasonable minds to differ.

Mr. MANSFIELD. Mr. President, will the Senator yield to me?

Mr. BELLMON. I yield to the Senator from Montana.

Mr. MANSFIELD. The point is that there is nothing in the written rules and regulations of the Senate which calls upon or makes it mandatory for one Senator to notify another Senator if he is to be mentioned in any manner which might be considered derogatory, degrading, or demeaning; but, as the Senator from Tennessee has pointed out, a precedent has been established in that respect, and precedent and custom oftentimes achieve the effectiveness of law.

As the Senator has further pointed out, we get by in this body on the basis of amity and comity. I have had the Speaker of the House of Representatives call me several times about remarks made by Members of the Senate relative to Members of the House of Representatives, and the incorporation of such remarks in the RECORD. I have understood the Speaker's point of view and those of Members of the House of Representatives. I have gone to Senators, both Republican and Democratic, and brought up to them the situation as explained to me by the Speaker. They have understood my awareness of it and the need for rectification. They did not do it again. Most of them had been under the impression that this custom and precedent applies only to the Senate and among Senators.

But this body gets by on understanding, cooperation, and a spirit of trying to work together for the benefit, not of our parties primarily, but of the Republic basically; and if we ever lose that sort of feeling between our Members, then I think the institution of the Senate will suffer a tremendous loss.

So I would hope that the Senator would keep in mind that if another Senator is to be mentioned, he at least should be given the courtesy of being notified; as, for example, the Senator from Mississippi, the chairman of the Armed Services Committee, speaking on some subject on which the Senator from Wisconsin had spoken yesterday, did notify the Senator from Wisconsin that he was going to speak about his remarks on yesterday, and, had the Senator from Wisconsin desired to do so, he could have been in attendance and been prepared to answer his remarks.

It is a small thing, but it is an important thing, and means a great deal in the conduct of the affairs of the Senate. It is not simply that the Senator from Oklahoma would be the one who might use a statement of this kind; it might be someone else, because, after all, the RECORD is a public document.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. BELLMON. I am happy to yield to the Senator from Nebraska.

Mr. CURTIS. I ask my distinguished friend, is the alleged statement complained of one that the newswriters wrote without any corroboration?

Mr. BELLMON. Mr. President, I am not sure whether the Senator from Nebraska was in the Chamber when I called attention to the letter that the columnist had sent me in response to my request as to whether or not the statement had been retracted.

Mr. CURTIS. I heard the reference to that. But my point was, did Mr. Drummond, who wrote this column, write it without any corroboration as to what was said?

Mr. BELLMON. Mr. President, there are two Drummonds. Both of them signed the letter. Both of them apparently——

Mr. CURTIS. I mean the two of them.

Mr. BELLMON. There are two of them; yes.

Mr. CURTIS. Yes. My question is this: Did they have any corroboration with reference to the statement that is now questioned? Did anyone else hear it?

Mr. BELLMON. Mr. President, I have not talked with the Drummonds. I have written them a letter. I have their answer. I understood the Senator from Tennessee to say he had talked with the Drummonds, and that there were others present at the meeting. I have no knowledge of this personally.

Mr. CURTIS. The Senator has had no communication with the Drummonds in regard to that?

Mr. BELLMON. Not on that point.

Mr. CURTIS. I thank the Senator.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. BELLMON. I yield.

Mr. ALLOTT. Mr. President, I think this is an appropriate time to discuss this matter a little more fully. Since we seem to be sort of straining at gnats in an attempt to place the junior Senator from Oklahoma in an embarrassing position—I should not say "we" because I am not a part of it—I think we ought to perhaps review a little other of recent history.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. MANSFIELD. I think it should be brought out that, so far as the Senator from Montana was concerned, he kept both the Senator from Oklahoma and the minority leader fully informed, because this is not a very pleasant task, I assure the Senator from Colorado.

Mr. ALLOTT. I am sure it is not.

I recall that just 2 days ago I informed the majority leader that I was going to discuss his statement on finances.

Mr. MANSFIELD. That is correct.

Mr. ALLOTT. He said, "Go ahead," and I did.

But I think this is the time to look at this matter. I agree basically with the thoughts that have been voiced by several Senators, including the majority leader. We live here in a goldfish bowl. We live under great strain and great stress. I do not suppose that there is a Senator who has not at some time said something on the floor which strained the bounds of what he really intended to say.

However, I am reminded that a few short weeks ago, while I was involved in a conference committee on a supplemental appropriations bill, of which the Senator from Rhode Island (Mr. PASTORE) was the chairman, and we were involved in a very heated debate in the old Supreme Court Chamber, the junior Senator from South Dakota took the floor and, during the course of his discussion, called the actions of the senior Senator from Colorado crude, cynical, and political.

As soon as I could get back to the floor, I got a copy of the transcript from the official reporter and made a few remarks and later took some steps, which I will discuss at this time, for a reaffirmation of the record.

I have in my hands Webster's New Collegiate Dictionary. I hope the fact that it is "collegiate" will not cause anybody here to say it is not a valid dictionary. At least, I just picked it up off the table, and it purports to be a true Webster's Collegiate Dictionary. Under the situation in which we find ourselves, I have checked the word "crude," and I find the word defined here as follows, after the pronunciation of it:

> From CRUDUS raw; in a natural state; not cooked or prepared by heat; raw; also not refined; unripe; immature; wanting finish, grace, tact, taste, or other quality characteristic of maturity or culture; rude; a crude substance, specifically petroleum as extracted from the ground in crude oil.

Then I looked up the word "cynical" in this dictionary, and I find the following, after the pronunciation key:

> Fault finding; captious; currish; having the attitude of temper of a cynic; contemptuously distrustful of human nature and motives.

I have not bothered to look up the word "political," because, heavens knows, everyone in this body is here because he is political.

Now I refer to rule XIX of the Senate:

> No Senator in debate shall, directly or indirectly, by any form of words impute to another Senator or to other Senators any conduct or motive unworthy or unbecoming a Senator.

These words were used about the distinguished Senator from Colorado—I hope he is distinguished—and no voice was raised in the Senate about the use of these very harsh and brutal words in a characterization of the senior Senator from Colorado.

I cannot imagine myself saying to any Senator that he is crude; and if I tell him that he is cynical, I think I am directly attacking his motives. I do not see what other interpretation can be put on it.

So I think we should look at this matter in context, and I would have hoped that at this time we would have had the same high regard for the ethics and the conduct of Senators in the U.S. Senate that we are discussing here today, and in which I completely concur.

There is one other thing: Subsequent to that, I discussed this matter—which was the subject matter of the speech of the junior Senator from South Dakota—with the Parliamentarian. During the course of the debate on that matter subsequently, I called the Parliamentarian of the Senate to the floor and, notwithstanding the ruling of the Parliamentarian, before I ever made a move toward calling up that amendment—notwithstanding the ruling of the Parliamentarian that once an amendment is laid

before the Senate it has no status and that it is the property of anyone in the Senate to call it up if he wishes to do so—the implication was made, on and off the floor, that the Senator from Colorado had somehow done something underhanded in trying to give the Senate a chance to vote on this very, very important amendment—an amendment that has been very divisive in the life of our country.

I now ask the Presiding Officer whether he will inquire of the Parliamentarian if the substance of what I have just said concerning the status of an amendment at the desk is true or untrue.

The PRESIDING OFFICER (Mr. COOK). The Parliamentarian assures the Chair that the remarks of the senior Senator from Colorado are correct: that once an amendment is presented to a bill and it is printed, to lie on the table, it is the prerogative of any Member of the Senate to call that amendment up; and the senior Senator from Colorado is correct.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLOTT. Mr. President, I have the floor, but I am happy to yield to the Senator from Montana.

Mr. MANSFIELD. Is that the usual procedure?

The PRESIDING OFFICER. The Chair is not sure that that is a proper question to be directed to the Parliamentarian.

Mr. MANSFIELD. Let me say that I do not think that is the proper procedure, that the rest of the Senators usually recognize the priority which the introducer of the amendment usually has; and I am sure the Senator from Colorado would agree with that thesis.

Mr. ALLOTT. I would agree with the distinguished Senator from Montana that it is not the usual procedure. But a lot of things are unusual in the U.S. Senate; and I say, frankly, that I resent having the imputation that the Senator from Colorado somehow did something underhanded. That is the reason I asked for the reaffirmation, as to the status of any amendment at the desk, regardless of who introduces it.

Now, having said that, Mr. President, I do not know who was on the floor at that time, because I absolutely could not be here. But, I was told that I was being attacked on the Senate floor. The Senator from Rhode Island was in a very bitter and critical debate over some items in that bill. The distinguished majority leader knows what the items were. I was supporting him. One of the items, incidentally, was one in which the majority leader was greatly interested.

Mr. MANSFIELD. Yes, indeed.

Mr. ALLOTT. It was impossible to leave the conference at that time. I did come to the floor. I only wish that I had a fine friend on the other side of the aisle who was present at that time who would have thought that it was wrong to say that the actions of the Senator from Colorado were crude, cynical, and political. Perhaps he had not read the dictionary recently. In that case, of course, he might not have realized the whole implication of what the words mean when they are looked up in the dictionary.

I thank the distinguished Senator from Oklahoma very much for yielding to me.

Mr. BELLMON. I thank the Senator from Colorado.

Mr. MANSFIELD. Mr. President, I hope that this colloquy on the floor of the Senate this afternoon will prove to be beneficial in future relationships among all Members.

I would point out again—this is reiteration—that we get by, not so much on the basis of our rules and regulations but on the basis of the unwritten rules and the unwritten regulations—the custom, the precedents, which have grown up and which have been tried and tested and found to be true, not only over the decades but over the years as well—and, pretty soon, it will be over the centuries.

It disturbs me when anything of this nature develops because there are no people I value more than my 99 colleagues in this body, regardless of whether they are Democrats or Republicans. As majority leader, I know that it would be impossible for the Senate to function if the minority leader and I were not to get a certain amount of cooperation, understanding, and flexibility. That has been forthcoming. We think it keeps the Senate from becoming an anarchic institution, which it could easily become because of the tremendous powers inherent in the position of any one Senator—the newest or the oldest.

So now that this is out of the way, I want to assure my colleagues that I will be on the lookout for any future infractions and will not hesitate to publicize them; but may I say that I do not expect there will be any more infractions of this kind. Hopefully, out of this conversation and colloquy will come a better understanding of the Senate and a stronger institution as a result.

ADJOURNMENT TO 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 a.m. tomorrow morning.

The motion was agreed to; and (at 4 o'clock and 5 minutes p.m.) the Senate adjourned until tomorrow, July 24, 1970, at 11 a.m.

CONFIRMATION

Executive nominations confirmed by the Senate July 23, 1970:

DIPLOMATIC AND FOREIGN SERVICE

John G. Hurd, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of South Africa.

The nominations beginning Helmut Sonnenfeldt, to be a Foreign Service officer of class 1, a consular officer, and a secretary in the diplomatic service of the United States of America, and ending La Rue H. Velott, to be a consular officer of the United States of America, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on March 11, 1970.

HOUSE OF REPRESENTATIVES—*Thursday, July 23, 1970*

The House met at 11 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Restore unto me the joy of Thy salvation: and uphold me with Thy free spirit.—Psalms 51:12.

Almighty God, unto whom all hearts are open, all desires known, and from whom no secrets are hid, make Thy presence known to us throughout the hours of this day. Fill our minds with wisdom, our hearts with love, and our spirits with the desire to walk humbly in the way of Thy commandments.

We are glad that we are American citizens and that we live in this blessed land of liberty. Let no violence, no prejudice, no discord dim our vision of a free people living together harmoniously, working for peace in our world.

Bless our President, our Speaker, our Members of Congress, and all who work under the dome of this Capitol. Bless every individual citizen that the sacred rights of a free people may be ours forever.

In the name of Him who keeps men free we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17619) entitled "An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes."

The message also announced that the Senate agrees to the amendments of the House to the amendments of the Senate numbered 3, 5, 14, 25, 26, 33, 34, 38, 42, 53, 56, and 60 to the foregoing bill.

CONFERENCE REPORT ON H.R. 14705, EMPLOYMENT SECURITY AMENDMENTS OF 1970

Mr. MILLS. Mr. Speaker, I call up the conference report on the bill (H.R. 14705) to extend and improve the Federal-State unemployment compensation program, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of May 5, 1970.)

Mr. MILLS (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the statement at this point in view of the fact that there will be an explanation offered.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

CALL OF THE HOUSE

Mr. BOW. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 230]

Anderson, Tenn.	Edwards, La.	Mailliard
Ashley	Erlenborn	Murphy, N.Y.
Baring	Farbstein	Ottinger
Blatnik	Feighan	Patman
Brasco	Fish	Pollock
Bray	Gallagher	Powell
Brock	Gibbons	Price, Tex.
Brooks	Gilbert	Pryor, Ark
Burke, Fla.	Gray	Quillen
Burton, Utah	Green, Pa.	Rarick
Byrne, Pa.	Hanna	Reid, N.Y.
Caffery	Hawkins	Rhodes
Celler	Hébert	Rogers, Colo.
Chisholm	Hogan	Roudebush
Clark	Hosmer	Ryan
Clay	Ichord	Scheuer
Conyers	Jones, Tenn.	Sikes
Cramer	King	Stokes
Cunningham	Kirwan	Stratton
Daddario	Koch	Tunney
Davis, Ga.	Kyros	Weicker
Dawson	Long, La.	Widnall
Dent	Lukens	Wilson, Bob
Diggs	Macdonald, Mass.	Wyatt
Dorn	MacGregor	

The SPEAKER. On this rollcall 357 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

MAKING IN ORDER CONSIDERATION OF A JOINT RESOLUTION MAKING FURTHER CONTINUING APPROPRIATIONS, 1971

Mr. MAHON. Mr. Speaker, the present continuing resolution expires at the end of this month. Therefore, I ask unanimous consent that it may be in order on any day next week to consider a joint resolution making further continuing appropriations for fiscal year 1971.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

CONFERENCE REPORT ON H.R. 14705, EMPLOYMENT SECURITY AMENDMENTS OF 1970

The SPEAKER. The gentleman from Arkansas (Mr. MILLS) is recognized.

Mr. MILLS. Mr. Speaker, I yield myself 10 minutes.

Mr. Speaker, there were a number of points of difference between the House and the Senate versions of H.R. 14705. However, most of the differences were largely technical. Many of them were necessary in order to take care of problems arising merely from the passage of time since the House acted on the bill last year.

There were, however, several matters in conference which I believe deserve some explanation.

The first two of these relate to the broadening of the coverage under the unemployment compensation program, that is concerning the coverage of small firms and farmworkers under the unemployment compensation program.

The last two concern matters unrelated to the bill.

Mr. Speaker, with respect to the coverage of small firms, the Senate deleted the provision of the House bill which amended the definition of the term "employer." Under present law an employer is defined as a person or firm that employs four or more workers in 20 weeks in any calendar year. The provision of the House bill changed the definition to include persons or firms that employ one or more workers during the 20 weeks in the calendar year, or pay wages of $800 or more in a calendar quarter. The Senate deleted this provision from the bill, retaining the present test of four or more employees in 20 weeks.

The House provision was adopted by the conference report, with an amendment increasing the alternate tax from $800 to $1,500 a year. So in this instance the House prevailed on the basis very largely of the language of the House bill.

Now, Mr. Speaker, with respect to farmworkers who are presently excluded from mandatory coverage under the Federal law, the Senate adopted an amendment extending coverage to persons, other than certain aliens, who work for employers who employ eight or more farmworkers in 26 weeks in a calendar year. The Senate receded on this amendment.

Mr. Speaker, it is my understanding that the gentleman from Michigan (Mr. O'HARA) intends to offer a motion at the proper time to send the conference report back to the conference committee with instructions to include in the bill the language of the Senate amendment relating to the coverage of farmworkers.

Let me say at this point that the House members of your conference committee took a strong position on this issue in view of the fact that there was no provision covering agricultural labor in the version of the bill as it passed the House and because of the experience which the House members in the conference committee had gained in working upon this issue during executive sessions of the Committee on Ways and Means. The Committee on Ways and Means spent many, many hours attempting to agree upon a provision extending employment coverage to farmworkers. Because of the many problems the committee encountered it was unsuccessful in its attempt to adopt a workable provision.

Mr. Speaker, the peculiar nature of the agricultural labor force, which is made up of many migrant and sporadic workers, is the principal cause of most of the difficulties that the committee encountered. Serious objections relating to costs and administration presented themselves due to the makeup of the farm labor force.

Recognizing the many problems that have to be dealt with in order to extend unemployment compensation coverage to farmworkers, the conferees modified another section of the bill to provide that in conducting the research program authorized under the legislation, first attention—now, bear this in mind—first attention be given to coverage of agricultural labor under the unemployment compensation program.

Mr. Speaker, I believe—and I am refering to this requirement for a study—that this is the most prudent course of action that could be taken on this issue at the present time. Although the issue of coverage of farm employment under the unemployment compensation system has been discussed for many years, the problems relating to it have never been adequately dealt with. Even the limited data we have obtained, based on the experiences gained in those few States that have covered agricultural workers under their programs, has not been analyzed as I think it should be. I therefore feel that we should have the benefit of a concentrated study of the issue before we take legislative action to require the States to cover farm workers.

I am sure that we will learn a great deal from such a study, and that on the basis of the knowledge we gain from it we will be able to draft legislation specifically designed to cover such employment under the system in a manner that will take into account the unique nature of farm employment.

Mr. Speaker, let me interpose at this point to point out that under the Senate provision, first of all, in order for a farmer to qualify for coverage it is necessary for him to have at least eight employees working for him in each of not less than 26 weeks in that year. But those are not the only employees who would be covered when once this trigger is released. All of his employees would be covered—not just those eight—but all of them would be covered.

We had no real problem in the committee—we had no real problem in the conference—about covering those employees of the larger farm operations who are permanently or almost permanently employed by the same farm employer, but we had a great deal of difficulty in the coverage of the other sporadic employees who would come under the program as a result of a particular employer being covered.

Now, about half of your farm laborers

are employed in the State of California, and in that State the department of employment has made a study for a State legislative committee, and it is one of the very few that have been made. They point out in the study that short-term and intermittent workers play a major role in the production of California's crops and that even among the farmworkers who are firmly attached to the labor force there is chronic unemployment.

Under the California unemployment tax the farm employers are not paying fully for the benefits received by unemployed farmworkers because the tax rates do not go up as high as the benefit cost rates for such workers. Now, that means, then, that the other employers within the State under the provisions of the Senate amendment would have to pick up the tab for a substantial portion of the cost of covering these farm employees. I feel that this is highly unfair to the other employers in the State.

From information given to us by the Department of Labor in connection with our executive sessions, the benefit cost rate to provide benefits for unemployed farmworkers in California was estimated to be 9.5 percent, while the benefit cost rate for all industries in California was 2.4 percent, and bear in mind there is a top tax rate in that State of 3.7 percent permissible under the law. It would clearly appear from this that the benefit outgo in that State for farm coverage would amount to approximately $40 million per year, whereas agricultural employers, even at the maximum permissible tax rate, would contribute only $20 million toward that cost. Thus, other California employers would have to pick up the tab for the difference.

That is just an instance of one of the many problems that exist in this whole area where we think it is much better for us before we finally legislate to have far more information than we presently have. And that we will have, in our opinion, as a result of the study that the conference report directs shall be made.

Mr. Speaker, there is one amendment that we rejected in the conference that I am afraid—if we go back to conference—we well might have to take in order to have a bill at all.

That has to do with the amendment that was offered, which is not germane to this subject matter, but on which the Senators were most insistent in the conference. That would require the Secretary of the Treasury to issue a special type of savings bond paying—mandatorily paying—6 percent interest.

The Senate in this instance receded. But, if we go back, I am concerned very much about what might happen in conference on this amendment.

Now why am I opposed to the amendment? In the first place, the amendment will drain out of savings accounts which are largely held by your savings and loan institutions many of the deposits in those institutions because none of them that I know anything about have a rate of interest over an extended period of time of 6 percent for the duration of these savings bonds that we have in this amendment.

I think many, many people will go to the extent of taking money they have from their savings out of the savings and loan industry and deposit that money in these bonds at higher interest rates and thereby further reduce the amount of money that is in the savings and loan institutions that can be used for housing.

From what members of the Committee on Banking and Currency tell me, that industry is already in enough of a depression without adding to it by the acceptance of this type of amendment.

The second of the unrelated provisions added by the Senate amends the Securities Act of 1933 and the Securities Exchange Act of 1934 to provide that industrial development bonds the interest on which is excluded from gross income under section 103 of the Internal Revenue Code of 1954 are to be exempted securities. The House receded with an amendment to exclude from the coverage of the Senate amendment bonds substantially all portions of which are to be used to provide residential real property for family units or for the acquisition or development of land sites for an industrial park, unless such bonds would qualify under section 103(c)(6) of the Internal Revenue Code relating to exemption for certain small issues. The conferees did not intend to require registration of any security which is exempt from registration under existing law. Thus, the amendment will not change the exempt status under section 3(a)(2) of the Securities Act of 1933 or section 3(a)(12) of the Securities Exchange Act of 1934 of bonds or other obligations issued by housing or mortgage finance agencies of States or local governments where the programs of these agencies are administered by the agency or by the State or local government.

Mr. Speaker, let me emphasize, if I may, the fact that the conference report we are voting upon today represents the culmination of many months of work on the part of both Houses of Congress and particularly on the part of the Committee on Ways and Means. The legislation contained in this bill was fashioned during many months of work on the part of our committee over a period which started 5 years ago. The committee first took up this legislation in 1965 when it held several weeks of hearings on what was the administration's proposal at that time. The committee went into executive session early in 1966 and rewrote that legislation, producing its own bill—H.R. 15119—which was adopted by the House and later passed by the Senate. That legislation unfortunately died in conference over the problem of Federal standards. The Senate conferees were adamant in their position that the provisions relating to Federal standards that the Senate had adopted should remain in the bill. The legislation we are now acting upon is basically the same as the 1966 bill. I might point out that the 1966 bill passed this House by a vote of 374 to 10 and the present bill passed the House on November 13, 1969, by a vote of 337 to 8.

Mr. Speaker, the legislation contained in the conference report enjoys broad support throughout the Nation. If the conference report is not adopted, it would be a great loss to everyone concerned. The reforms contained in the bill relating to unemployment compensation coverage, the extended benefit program, judicial review, and the bill's other provisions are desired by labor, business, and the State agencies that have responsibility for administering the unemployment compensation program. I, therefore, urge my colleagues in the strongest terms possible not to jeopardize this legislation but to vote against any motion that may be made to send the conference report back to the conference committee.

Mr. Speaker, I think the conference report should be adopted. I do not think it should be returned because there is always the danger that you cannot come back with a conference report that would be satisfactory to all of us because this matter has been before the Congress now for 5 years.

Mrs. GRIFFITHS. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentlewoman.

Mrs. GRIFFITHS. Mr. Speaker, I would like to congratulate the gentleman on this report.

While I have sympathy for those who do not have unemployment compensation, I have been advised that there are 62,000 workers in the State of Michigan who have exhausted their benefits and this bill is needed at once.

Mr. MILLS. The gentlewoman is referring to the extended benefit provision of the bill, which we worked out?

Mrs. GRIFFITHS. Yes.

Mr. MILLS. It will be of tremendous help in the event we have an increase in the amount of unemployment in the years to come.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from Ohio.

Mr. VANIK. Mr. Speaker, I would like my distinguished chairman to tell me about the new provision added to the bill to eliminate the taxation of industrial bonds.

Mr. MILLS. It does not do that at all. That was done heretofore up to the extent of $1 million with one alternative and $5 million with another alternative when a city votes bonds for industrial purposes.

What this amendment does has nothing to do with taxation. It merely says when such an issue is made by a city for this specific purpose, this is not included within the requirement of the Securities and Exchange Commission. The Commission tried to find a way under the existing law to eliminate these bonds from this prolonged and tedious requirement for approval.

But, it could not do so. They said, if the Congress wanted that done, then the Congress would have to legislate. The Senate was most insistent upon this provision. You know the feeling of the House conferees about adding matters that are not related to the bill passed by the House. This is not related to it. The Senate had receded on the bond issue. The Senate was most insistent on this particular provision being included

and it has nothing to do with taxation on those bonds, I will say to my friend.

Mr. VANIK. Mr. Speaker, will the gentleman yield further?

Mr. MILLS. I am glad to yield to the gentleman.

Mr. VANIK. Can the gentleman tell me if there is any Treasury loss under this new provision?

Mr. MILLS. Not at all. It has nothing to do with taxation. It merely states the fact that these particular bonds are to be registered within the commission under the Securities and Exchange Commission Act. It has nothing to do with taxation whatever. That was taken care of earlier.

Mr. VANIK. I thank the gentleman.

Mr. MILLS. Mr. Speaker, I urge the adoption of the conference report.

The SPEAKER. The gentleman from Arkansas has consumed 14 minutes.

Mr. O'HARA. Mr. Speaker, as the distinguished chairman of the Committee on Ways and Means has indicated, it is my intention when the previous question has been agreed to on the conference report to move to recommit the bill to conference with instructions to the managers on the part of the House to agree to the Senate amendment which would provide unemployment insurance coverage of employers of farm labor who employ eight or more workers during each of 26 or more weeks a year. It has been suggested by the chairman that a good deal of the hesitancy of the membership of the Ways and Means Committee and others who entertain doubts about this proposal was occasioned by their fear that the cost of the proposal would be excessive, and there was testimony before the committee to the effect, and I quote that testimony:

> If Unemployment Insurance were extended to nonseasonal farmers, costs could run from 10 to 15 percent of taxable payrolls.

That allegation was based on an experience in North Dakota. I think it is worthwhile to examine some information about that experience that was not available when this question was before the committee.

The North Dakota experience, on which this dire prophecy has been based, involved 121 farmers, that is all, and the 121 farmers altogether employed 148 workers. Not a single one of those 121 North Dakota farmers whose experience serves as the basis for this charge of excessive cost—not a single one of them would be covered by the proposal that I will make today. They were small farmers who would not be covered under this proposal. In fact, costs do not run anywhere near that high in States where we have more experience.

In Hawaii, the only State in which there is full coverage of farm workers under unemployment compensation insurance, you cannot say with exactitude what the cost has been for all of them, but among the portion of them which have chosen to be self-insured, the cost has been very low—less than 2 percent of taxable payroll.

In California, where a large number of big growers have elected coverage, the cost has been 4.5 percent of taxable payroll. And a California study just a few years ago suggests that if all California farmers were covered, large and small, the cost would be less than 10 percent.

But even if we accepted this prophecy of high cost, is that a good reason to deny coverage? If the costs were going to be high, why would they be high? They would be high because unemployment is a frequent occurrence among those workers. They would be high for the same reason they are high for the construction industry: Because their workers are more apt to be unemployed. Are we going to adopt the philosophy that the only workers who ought to be covered by unemployment insurance are those who are unlikely to need such protection?

It has been suggested also that a study will be conducted to see the best way of going about this. The Department of Labor in a letter signed by the former Assistant Secretary for Manpower, Arnold Weber, who has gone over to the White House staff with the former Secretary, Mr. Shultz, has indicated in response to a question about the need for further study:

> The Department felt that there was sufficient data available from earlier studies and experience to demonstrate the feasibility of coverage of large farms. And Secretary of Labor Shultz so advised the Senate Committee on Finance in his testimony on February 5, 1970.

Mr. Speaker, the unemployment insurance system was enacted into law in 1935. Thirty-five years ago the farm workers were excluded from coverage. I would think that 35 years, Mr. Speaker, is a long enough time to study the problem. Perhaps what we ought to do now is to provide just a little bit of coverage, and maybe that is the way we can learn more and the proposal I make provides very little coverage indeed. Less than 2 percent of all farms in America would be affected by this proposal.

Mr. BINGHAM. Mr. Speaker, will the gentleman yield?

Mr. O'HARA. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Speaker, I thank the gentleman for yielding.

Could the gentleman tell us how many employees and how many farms would be affected by this? I am impressed that the gentleman is talking about farms of only very considerable size.

Mr. O'HARA. The Department of Labor has advised us that 276,000 farmworkers would be benefited by this proposal. I cannot from memory give the gentleman the number of farms, but it would be less than 2 percent of all farms.

Mr. BINGHAM. Mr. Speaker, I thank the gentleman.

Mr. O'HARA. Finally, it has been suggested, Mr. Speaker, that adoption of this change—what I am proposing is to ask the managers on the part of the House to go back to the Senate conferees and take just one more provision from their bill—would somehow endanger the entire bill. Mr. Speaker, if I thought there was the slightest danger that this proposal would endanger the passage of this bill, I would not be in the well of the House at this minute.

As the gentlewoman from Michigan has pointed out, unemployment is today a very serious problem. According to the Governor of Michigan, there are 62,000 Michigan workers who are about to exhaust their unemployment benefits who need the passage of this legislation. I can assure the Members that I feel that need just as deeply as any Member of this House, and I would not make a proposal which would endanger the passage of this bill. Indeed this proposal does not do so. The Senate could hardly object to the House conferees saying we want to take one more provision of your bill that we did not take before. That could hardly endanger this proposal.

Mr. Speaker, the time has long since passed when we ought to show some indication of concern about the systematic exclusion of farmworkers from the laws that we have enacted to protect other workers in this country.

Even though the farmworker is more apt to be disabled on his job than almost any other worker, he is covered by workmen's compensation in only five States.

Even though the farmworker receives the lowest wages of any industrial worker, only some of them are covered by Federal minimum wage laws and those who are covered are covered at a rate 30 cents lower than other workers.

Even though the farmworker is engaged in hard physical labor, the child labor laws which apply to every other industry do not apply to agriculture.

Even though the farmworker is part of the economically weakest group in America, he has no legally protected right to organize and bargain collectively for himself, and a farmworker can be fired or blacklisted for union sympathies.

Even though the farmworker is more apt to be out of work than any other worker in America, he is covered by unemployment compensation only in Hawaii and Puerto Rico.

This is a modest proposal we are making here today. It is unfortunately a water-down version of the Nixon administration proposal of last year. It would cover all too few farmworkers, less than half of the total.

But it would be a beginning, Mr. Speaker, a beginning that is long overdue.

Mr. WATTS. Mr. Speaker, I yield 10 minutes to the gentleman from Wisconsin (Mr. BYRNES).

Mr. BYRNES of Wisconsin. Mr. Speaker, for a long time now the unemployment compensation laws of this country have been in need of revision and change. We tried to move in that direction in 1966, when we passed a bill in this House. At that time the Senate also passed a bill, but no agreement could be reached in conference, so the much needed changes went by the board.

We began the effort again last year, recognizing that some very important changes should be made in the program. Now we have reached an agreement on legislation. It passed the House by an overwhelmingly large margin—337 to 8. The Senate also passed legislation, and we went to conference on the differences.

We have worked out the differences. We come here now with a good confer-

ence report and ask this House to accept it and not endanger enactment of these needed improvements by further conflicts or controversies.

It is all well enough to say, "This is a matter that has been agreed to as a Senate amendment." But let us understand there were other changes which were made in conference, which all become opened up, if the motion to recommit with instructions is agreed to. This will not go back to conference with the conferees limited only to this area. Let us remember that.

All the differences that were ironed out—and I believe they were ironed out, so far as the House position is concerned, in a most satisfactory way—will be open again. I believe that the need for the changes we are making in this bill are so great that we should not jeopardize its enactment into law.

One of the most important changes, in addition to increasing coverage for 4.7 million workers, involved in this legislation is the provision for automatic extended unemployment compensation benefits. The chairman and I have been working for years to try to get this program written into the basic law of this Nation. This will finally have been done if we adopt this conference report today. Let us not jeopardize this goal by sending the report back to conference.

I speak to you as one who tried in the committee to make a start in the area of covering farm workers. There is no question but that this is a most serious problem. I was hopeful we could make a start and experiment with at least covering employees who are comparable to the industrial employees already covered. However, we could not arrive at a satisfactory method for doing so. I tried again in conference to arrive at a reasonable method of covering this type of farm employee.

At the conference we were unable to reach an agreement on this issue. Let me emphasize that the Senate provision for covering farm employees has many problems. Yet if you adopt this amendment to recommit, you instruct us to take verbatum the amendment that the Senate adopted. Yet the Senate amendment is not a satisfactory basis for taking this first step toward coverage of farm employees—a step that I want to take as soon as we can. As I said, I do not see any difference between a large farm operation that has eight or 10 full-time employees throughout the year, and a nonfarm business establishment with the same number of employees. Let us remember, though, that the Senate bill is much broader than that. It covers the full-time employees, but in addition, taxes the employer on a lot of employees he may have on a temporary basis that will never qualify for benefits.

I think the gentleman from Michigan should recognize the difference between the question of requiring an employer to pay a payroll tax on an employee, and the question of whether that employee is going to qualify for a benefit. In agriculture, we have a large number of individuals who work but a very short time during the year—not only a short time for any one employer but in any employment. It is estimated that in 1968 some 70 percent of farm workers worked less than 75 days during the course of the year. They were students and others who may simply have helped out at harvest time. Additionally, 44 percent worked less than 25 days a year, and averaged about 10 days a worker during the year. You can say that you are going to cover them, but all you are doing is imposing a payroll tax on an employer for an employee who is never going to be eligible for benefits. Let us recognize that many of the employees who would be covered would never receive any benefits. Now, that is a good way to promise something and not deliver it. I believe we have to do something better than that. We cannot work out those problems today.

Mr. Speaker, I do not believe it is appropriate to place an additional tax on an already overburdened agriculture unless we are providing a meaningful solution to the problem. I do not think that the Senate bill does that. I hope that the studies and data that will soon be available—some of them under the terms of this bill—will provide a basis for covering agricultural employees with a continuity of employment.

Mr. Speaker, let me point out another problem. The administrative problems are most difficult in covering agricultural employment, particularly with reference to the interstate movement of many workers. Our attention has been directed to the experience of the State of Hawaii. However, the State of Hawaii does not have the problem of workers moving from State to State, which involves determining which employers and what State funds will be charged for benefits, and which State law will govern the amount and duration of benefits. Those are problems that have to be worked out if this Congress is going to take sound action and exert sound judgment in this area.

Mr. Speaker, I speak to you as one who feels most sincerely that we have to make an effort to solve this problem, but I do have to say I think what happened——

The SPEAKER. The time of the gentleman from Wisconsin has expired.

Mr. MILLS. Mr. Speaker, I yield the gentleman 5 additional minutes.

Mr. BYRNES of Wisconsin. I thank the chairman of the committee for this additional time.

Mr. Speaker, let me say that I think the debate this afternoon on the motion is a good thing. It points out the interest in this subject. In my opinion it gives momentum to an effort to cover our farmworkers on a sound basis. Certainly, many of them need our help and assistance. They are in a sad plight. As one who wants to do that, let me say that it would be a mistake to place this entire bill in jeopardy by sending it back to conference to accept a provision, written into the bill by the Senate, that is not in my judgment a satisfactory solution.

Mr. Speaker, if we had latitude and time, perhaps, we could work something out, but that is not what is being given us. The action recommended by the conferees requiring the Labor Department to give priority attention to studying the problems of extending coverage to agricultural workers is the course we should now pursue.

There are other studies being made, also. Ohio State University and the University of Connecticut are making studies in cooperation with the Department of Labor on the problem of covering the farmworker under unemployment compensation.

Mr. O'HARA. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Michigan.

Mr. O'HARA. Mr. Speaker, I would like to just suggest to the gentleman, if I might, that I think the problems are not quite that difficult. The States decide, of course, who is covered and who is not covered, and we would not want to try to cover anyone who is not employed.

Mr. BYRNES of Wisconsin. Not if we say agricultural workers have to be covered. They have to cover agricultural workers if we require it, just as they are going to have to cover the workers in an establishment with one or more employees in 20 weeks. The States can go further than this; but they must at least meet the requirements of Federal law

Mr. O'HARA. If the gentleman will yield further, we do not propose to change the work test, that is, the individual worker's test, and in California he has to have earned $750 during the base period.

Mr. BYRNES of Wisconsin. And that is why they would not get any benefits. The Senate amendment would tax the employer, but it would not do anything for this poor worker whom you and I both want to do something for.

But I do not think it is a good argument to say just because a tax is going to have to be paid on his wages that he is going to receive benefits, because he still has all the other tests to comply with.

Mr. O'HARA. If the gentleman will yield further, I just think that of course we would not want to cover the housewife who goes out to a farm to work for a few days, or a schoolboy who goes out to work on a farm for a few days; that is not the broad coverage we are after.

Mr. BYRNES of Wisconsin. But why tax the employer, then? Why tax the employer on that person for that person's services? Why put that burden on agriculture?

Let me yield to the chairman, if I may.

Mr. O'HARA. Mr. Speaker, if the gentleman will yield further for just one moment, so that I can make just one concluding statement concerning this—and I appreciate the sincerity of the gentleman on this matter, but I think if the problems were as difficult as the gentleman has described them to be here he would not have supported this proposal the way he has.

Mr. BYRNES of Wisconsin. I never did support the Senate proposal. I tried in conference to develop a workable basis for achieving coverage. I opposed the Senate language and the amendment that the gentleman now wants us to be directed to accept. I opposed that. But

I did try in conference to see if we could not work out some compromise.

Mr. O'HARA. The gentleman did support the administration proposals, did he not?

Mr. BYRNES of Wisconsin. No, I did not. No, I did not. I thought there were problems involved with the proposal, but I thought we might possibly find a proposal we could agree on. I think at one time we did come fairly close to a provision that the administration generally agreed with, and I thought it was pretty much in keeping with what I could agree to.

But if you are talking about the Senate version and about the conference, I did not support the amendment as adopted by the Senate.

The SPEAKER. The time of the gentleman has again expired.

Mr. MILLS. Mr. Speaker, I yield 2 additional minutes to the gentleman from Wisconsin.

Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Arkansas.

Mr. MILLS. Mr. Speaker, I merely want to attest to the fact that I remember distinctly that the gentleman from Wisconsin offered certain amendments to the administration's proposal for the inclusion of farmworkers. The gentleman did not vote to support the administration's proposal just as it was presented to us. The gentleman and I both voted for amendments to that proposal, trying to work something out.

Mr. BYRNES of Wisconsin. That is right.

Mr. MILLS. Something that would cover these people who are involved here, but not all of the other people whom the gentleman from Michigan himself says he is not trying to cover, but are covered, as far as the tax is concerned.

Mr. BYRNES of Wisconsin. That is the important part.

Mr. MILLS. That is why we tried to emphasize why we needed some study of the language as to just how we should do this. I think that people who are fully employed and employed for this length of time should be covered, frankly, by these larger operations. I do not think that, because they are covered for these people, that now they shall be automatically taxed for everybody else who works, even if they work one day a year.

Mr. BYRNES of Wisconsin. That is right.

Mr. CORMAN. Mr. Speaker, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from California.

Mr. CORMAN. Mr. Speaker, I wonder if the gentleman could tell us specifically the differences in the Senate version and the version which the Committee on Ways and Means voted down, and a version which admittedly was different from the administration's, but more restrictive?

Mr. BYRNES of Wisconsin. I must confess to the gentleman I would not trust my recollection now to state the differences between them. As far as I was concerned I was trying to produce something that was workable, not something that was necessarily part of the administration proposal.

Mr. CORMAN. Mr. Speaker, will the gentleman yield further?

Mr. BYRNES of Wisconsin. I yield to the gentleman.

Mr. CORMAN. As I understand it, the Federal law defines "employer" and we leave it to the State law to define the length of time an employee must be employed to be a beneficiary.

I do not recall that in the Committee on Ways and Means we had legislated as to a definition of "employee." Our effort was as to the "employer" admittedly. The motion nearly carried.

Mr. BYRNES of Wisconsin. If the gentleman will remember, we were trying to develop a formula covering employers, based on the number of employees they had for a specific time. The actual tax liability of covered employees would have been further limited by exempting wages during a quarter that fell below a specified minimum. A higher proportion of employees on whom a tax was paid would, therefore, have a chance to qualify for benefits if unemployed. Under the Senate amendment, if an employer has eight employees for 20 weeks and then they have at some point 100 more persons for 2 weeks, he would be taxed on those 100 employees who are never going to get any benefit.

Let me just conclude by saying that I think it would be an error now to jeopardize all of the work that has been involved for at least 3 years by sending this back to conference.

The SPEAKER. The time of the gentleman has expired.

Mr. MILLS. Mr. Speaker, I yield 5 minutes to the gentleman from California (Mr. SISK).

Mr. SISK. Mr. Speaker, representing a district which would probably be affected to a greater extent than almost any district in America, I rise to support the motion which will be made by the gentleman from Michigan (Mr. O'HARA).

As one who represents a very large agricultural area, and a substantial part of the largest agricultural producing State in America, I recognize that there are problems in this situation.

My particular area is under considerable attack at the present time and has been for several years in connection with farm labor. We have had peddled across this country a great deal of misinformation about the way we handle our farm labor and the wages we pay.

I may say very frankly that I, for one, vigorously opposed the boycott which has been levelled, and I think most unfairly, against a group of innocent California producers. Yet, on the other hand, for all too long I think we have swept under the rug the problem of farm workers, the people who furnish the labor to make it possible for us to be the best-fed Nation in the world.

This is a subject that I have discussed at great length for a period of a number of years with the farmers who have to pay those taxes we are talking about here this morning.

Unfortunately, the decision made by the Committee on Ways and Means at the time that this matter was under consideration was predicated upon very poor information.

I am not being critical of the gentleman from Arkansas nor of the gentleman from Wisconsin (Mr. BYRNES) because I appreciate the efforts they have both made. They have both talked to me about this and I have discussed this with other members of the Committee on Ways and Means. I appreciate the efforts that have been made.

Unfortunately, their decision was finally predicated upon, and decided upon, bad information pertaining to the State of North Dakota.

Over a period of 16 years, this is the first time I have appeared before the finance committee of the other body. I did on this occasion.

I am not sure that I had any particular influence but I do appreciate the fact that they did insert the Mondale amendment which frankly is far more restrictive as to coverage than that proposed by the Nixon administration.

So it seems to me today that after some 35 years, as has been recited by the gentleman from Michigan, there has been a lot of study in this area, a lot of thought given, and there has been experience. We have had experience in California. Frankly, the experience in California in connection with those farmers who have elected to be covered has been such as to show a far lower cost than that pertaining to the processing industries themselves. At present in my State all the processing areas are covered, the food processing plants, the packing plants, and yet, if you are familiar with them, they operate a few months in the year and they are closed down the balance of the year. Yet those people are covered.

We have shown from experience in California a lower cost for those farmers who have elected to be covered and for farmers who would fall under the provisions of this proposed amendment than the construction industry has in connection with unemployment insurance.

There are a lot of facts, there has been a lot of study given, and I just feel that it is unfair to say in connection with the farmworkers, "Well, we have got to continue to look at it, we have got to continue to study it, we have got to sweep it under the rug."

Let me say in conclusion that we are faced with a situation nationally in which we are simply going to have to recognize that these people are human beings. They are Americans. They are entitled to consideration.

We in California, of course, are faced with a serious situation today, and we have been faced with it for the last several years. I realize other areas of the country have escaped, but your time is coming. These people are entitled to some consideration. Our farmworkers are going union very rapidly. I think they have a right to bargain collectively. As the gentleman from Michigan has indicated, in most cases we have exempted them from various other laws. Now it seems to me that this tiny step should be taken, and the time has come to take

it. I just feel that the excuses that have been offered are excuses that we should no longer have to live with, and that this experience should be gone through with this very narrow coverage of less than 2 percent of the large farms in America.

As I have said, my district is covered on a per capita basis by more of these farms than any other district in America and, therefore, I urge the adoption of the O'Hara motion in order that we might move ahead to correct some of the injustices of the past.

Mr. McFALL. Mr. Speaker, will the gentleman yield?

Mr. SISK. I yield to my colleague from California.

Mr. McFALL. I wish to commend my colleague from California for his statement and for his diligent work on this issue and to say that I join him on this amendment. Our districts have the same characteristic. We are contiguous. We share the same problems, and I believe we need this unemployment insurance coverage for farmworkers.

Mr. MILLS. Mr. Speaker, I yield 5 minutes to the gentleman from Hawaii (Mr. MATSUNAGA).

Mr. EDWARDS of California. Mr. Speaker, will the gentleman yield?

Mr. MATSUNAGA. I yield to the gentleman from California.

Mr. EDWARDS of California. Mr. Speaker, today I plead with my colleagues to recommit the conference report on H.R. 14705, the unemployment compensation bill, with instructions to accept the amendment covering a token number, approximately 22 percent of farmworkers. This is a modest proposal and I use the word "plead" advisedly. I would happily deliver these remarks on my knees if that would make them more persuasive and would not offend the decorum of this august place. For I tell you there is not a single action this House could take today that would do more to alleviate human suffering in our land and to erase an ancient injustice. And there is not one argument against this action that will stand up under close scrutiny. But our action today will be scrutinized—and judged—by those who are familiar with the terrible hazards that are part and parcel of the daily lives of our farm working families, by those who are wondering whether such barnacle-encrusted institutions as this can comprehend and treat the illnesses of our society, by that sea of young people to whom we recently extended the vote. But rather than appeal to the political instincts, I would direct this plea to that which is highest and best in each of us—to our concern for our fellow men.

Perhaps my colleagues read in the Washington Post this week the story of the infant migrant child with pus draining from its ear, sucking from a bottle of sour milk. Born of migrant farmworkers, in total innocence, in the very beginning of its life, it was condemned to death or to a life of misery and incalculcable hardship. In weighing the question before us, it would be well if my colleagues would keep this image in mind, the picture of the dying migrant child. In a very real sense, our society is responsible, we are responsible. The child's fate is a consequence of our neglect and abuse. The migrants are the most neglected and abused group in our society, and the most impoverished.

The question now is whether to extend unemployment compensation insurance to some 275,000 farmworkers on 2 percent of the Nation's farms, whether to extend to them the same protection enjoyed by more than three-quarters of the workers in the United States.

At this moment the attention of the Nation is being focused on the plight of our migrant farmworkers, so I will not belabor you here with more descriptions of the hardships and hazards of their lives. I will use the time to answer the objections that have been raised against this measure.

First, the cost. The objection is that it would be too expensive to administer. There is no evidence the cost would be out of line with other industries where coverage is taken for granted. But that question aside, a nation that pays out $3.2 billion annually in farm supports cannot in good conscience deny this minimum benefit to its farmworkers. In California's Central Valley last year, seven major farm corporations received an aggregate of $14 million in farm supports. The Washington Post story referred to above pointed out that the Federal Government spent $419,000 on migrant health services in two counties in Texas during fiscal 1967. During that same period, in the same area, the Government spent $3,564,000 on eradication of disease in animals. In fiscal 1969, the disparity was even greater—$564,677 for migrant health and $5,502,000 to control animal diseases. Such shameful comparisons are plentiful. Since only 2 percent of the Nation's farms would be affected, hardship to the farmer is hardly a valid objection. The third and final objection—that the mobility of the migrant would make it difficult if not impossible for State and Federal agencies to administer the program—is equally invalid but deserves to be answered in some detail.

The popular conception of the migrant farmworker is that he is continuously on the road. That is not the case. Most migrant families travel only 4 or 5 months of the year. The remaining 7 or 8 months they maintain a permanent or semipermanent residence in their home State. Furthermore, 67 percent of all man-days of agricultural employment are attributed to regular and year-round farmworkers. Many of those who do not work full time on large commercial farms find employment in nonfarm jobs near their homes to complete their year-round employment. The migrant farm family, then, is mobile but not rootless. It seeks as much stability as its perilous occupation will allow. By extending unemployment insurance to this group the Government would enhance its stability. The long range benefits both to the farm working families and to society as a whole are obvious. By increasing their stability we would enable their children to have the same continuity in education that the children of other workers enjoy—a continuity that is essential to scholastic success and eventual upward mobility.

Mechanization is further disrupting the migrant way of life, forcing families out of the migrant stream and into urban ghettos where, if they cannot compete successfully for the limited number of unskilled jobs available, they must go on welfare to survive. For many this marks the beginning of family demoralization and distintegration, with all of the attendant social evils of "generational dependency" and delinquency. From a social point of view, from a government point of view, from a human point of view, this is a far more expensive course than the one proposed. We can help break that pattern by extending to these farmworkers unemployment insurance. It will give them the stability all people need to better their circumstances. It will help them to become full-fledged members of a permanent community.

No occupation is more hazardous than that of the farmworker, who must often take his wife and sons and daughters into the fields to eke out enough income to survive the full year. In 1967 there were 2,700 fatal accidents and 230,000 disabling injuries in agriculture. The percentage increase in fatalities and disabling injuries in farmwork led all other industries during the past 10 years. In California, a major agricultural State, the occupational disease rate among farmworkers in 1967 was more than 50 percent higher than the next leading industry and three times higher than the average of all other industries.

But neither statistics nor rational arguments will prevail against closed minds and hearts, so once again I appeal to the humanity of my colleagues. The cost of our failure to act will quite literally be paid in human lives. The cost of our approving this action will be small compared to the benefits to farmworkers and to the larger society.

Mr. MATSUNAGA. Mr. Speaker, as a Representative from the only State which extends unemployment compensation to agricultural workers on a mandatory basis, I rise in support of the motion to recommit to be offered by the gentleman from Michigan (Mr. O'HARA) with instructions to accept the Senate amendment.

Mr. Speaker, the proposal is a modest one, less extensive, in fact, than what the administration itself has proposed. Only farm employers with eight or more workers each, employed for 26 or more weeks would fall under the coverage. The so-called family farm will not be included.

The major objection to this proposal is not that farmworkers do not deserve to be covered, for the virtues of farm workers have been extolled unanimously by Members of this body. It is not that the program would be difficult to administer, for the administration itself has proposed an even more extensive program. The objection is that the cost will be too high.

Let us, then, look at Hawaii's experience. Hawaii's experience shows that the cost to the farm employer has been less—I repeat—has been less than to

the nonfarm employer. In 1964, for example, it was 1 percent to the farm employer on the basis of percentage of the payroll, as compared to 1.6 percent to the nonfarm employer.

In 1965 and 1966 the figures were 1 percent for farm employment and 1.3 percent for nonfarm employment. In 1967 and 1968, for farm employment 1.1 percent of payroll, and for nonfarm employment 1.6 percent. So the experience of the only State, which for 11 years now has had mandatory unemployment compensation for agricultural workers, shows that the cost is far less in the agricultural industry than in nonagricultural industry. This, I believe, ought to dispel all fears on the part of Members who feel that this program would be too costly to be borne by farm employers.

Mr. MEEDS. Mr. Speaker, will the gentleman yield?

Mr. MATSUNAGA. I gladly yield to the gentleman from Washington.

Mr. MEEDS. Mr. Speaker, there has been much ado made here over the fact that once the employer is covered, he is going to have to pay for employees who do not reach the coverage stage themselves, but is not the same thing true with the industrial employers today who are covered? Once they reach the coverage, they pay for all their people based on their payroll and not on how often people work. Is that not true in industry too?

Mr. MATSUNAGA. The gentleman is correct. In that connection, I might point out that the law presently covers building and road construction workers, and the cost is as high as 10 percent of the total payroll, including seasonal workers. Certainly no one would suggest that coverage of these construction workers should be discontinued because of the high cost.

Even with 15,463 seasonal workers in the pineapple industry in Hawaii, the cost to the employer has been as low as 1.1 percent. This low cost experience in Hawaii's 11-year history of unemployment compensation for agricultural workers would seem to indicate that the cost of extending coverage to agricultural workers as proposed in the Senate amendment would be far less than in the construction industry. For this reason, Mr. Speaker, the agricultural worker should be granted equal consideration.

Acceptance of the Senate amendment would be a prudent but important first step toward giving equal treatment, long overdue to the agricultural worker who forms the backbone of our Nation's economy.

Mr. CORMAN. Mr. Speaker, will the gentleman yield?

Mr. MATSUNAGA. I yield to the gentleman from California.

Mr. CORMAN. Mr. Speaker, I thank the gentleman for yielding.

I have refreshed my memory on what was said by the gentleman from Wisconsin. There is a difference in the Senate version from that which we voted on in the committee, there was a substantial support in that committee for covering employers who employed eight employees for 26 weeks. Second, we did restrict the people covered to those who earned at least $750 per quarter. There would be almost no hardship to anybody with or without that limitation. Certainly it is a badly needed improvement in the field of farm labor. If we are going to be able to solve our farm labor problems in an orderly fashion, we are going to have to extend the same kind of protection to them that we do to the industrial workers.

Mr. Speaker, I urge a yes vote on the O'Hara motion.

Mr. WATTS. Mr. Speaker, I yield myself 8 minutes.

Mr. Speaker, we passed this bill, as has been said heretofore, through this House by a large majority. It was passed by the Senate and, among other things, an amendment was put in it, that was ill-conceived, which covers farmers. Certainly everybody recognizes that there are many farm laborers who, under the right kinds of conditions and after appropriate legislation has been enacted, are entitled to the same coverage as some employees of other industries. But this motion that shall be made will adopt a hodge-podge amendment put in by the Senate that will not do what its proponents think it will do and will work a tremendous hardship on the farming industry.

Mr. Speaker, we went to conference. We agreed unanimously, both the Senate and the House, on a conference report that extends coverage under our unemployment compensation system to practically 5 million more people.

In our report we ordered that the Department of Labor make an expenditious and extensive study of the proper way to cover farm labor, so that it will not be a tremendous impediment to our farmers and so that it will do something to help those farm laborers who work for long times and then are laid off from work.

I am sure that they will come forth with a sound program, and perhaps one we can live with.

In addition to that, in Connecticut a university is making a study of the same situation. Ohio University is making a study of the same situation.

I beg the Members not to go off half cocked and adopt something that all of us are going to be sorry was adopted.

Certainly, to put the farmers under unemployment compensation would cost a tremendous sum of money, close to 10 percent of payroll. I do not know anything about the situation in Hawaii. Perhaps there is plenty of work there for the farmers the year round. But that is not the testimony before us by all the State agencies. The Interstate Conference, which represents all the administrators of employment security, meets, and they adopt recommendations that Congress should enact and that the States should enact. They testified before our committee and they said that of all the propositions that were before that conference the one which was most certainly adopted was to not put farmworkers under compensation at this time until a further study was made and a sound method had been developed for putting them under it.

What would be done if we put the big farmers under it? Right off the reel, there will be a big scramble such as is going on today for farm labor. Nearly all of our farm labor has moved to industry as it is. What will happen is that there would be four or five big farmers in a little community, perhaps under it, and all the rest of the farmers, the little ones like me, would be out from under it. The little ones will have the toughest problem in the world of getting any part of that farm labor to work for us, because the other boys are going to have unemployment compensation. They are going to flock to the places where, after they work for a series of farmers for 13 weeks—and farming is the most seasonal of all occupations—they can then draw unemployment compensation for 26 weeks.

I want to reiterate again that once a farmer gets under this, under the Senate amendment, every child and every woman that he employs even for 1 day or 1 week, outside of the eight who qualified him, he is certainly going to have to pay for, as the gentleman from Wisconsin (Mr. BYRNES) correctly stated. He will pay a tax on them, but they cannot draw anything unless they work for him and other farmers long enough to qualify, say, for example, for 13 weeks.

The point was made that this is the same as it is in other industries. Certainly it is. But the farming industry is a very seasonal industry, whereas an industrial-type industry is not. People usually do not shut down plants during the course of a year.

But in respect to harvesting, the wheat harvest, the grape harvest, the tobacco harvest or whatever harvest one might have, it is necessary to call in a lot of extra help. They must have them at that time. They may not need them throughout the year, and they do not need them. But they will have to pay a tax on them just the same, and the workers will get no benefit.

Or, if they are able to work for a total of 13 weeks, which would probably take them through that harvest season, then what would happen? They would immediately be out of work and they would draw unemployment compensation for 26 weeks. Then they could rest for 13 weeks more, and that year would be gone. Then probably they can get another job during the harvest season to cover 13 weeks, and you go through the same rigmarole. There are a great many complications, but after we get the information we need it can be worked out. The time is not right now, until we get the benefit of these studies. If you put them under it now, it will just create chaos. The farmers cannot afford to pay the 10 percent. So what are you going to do? You will make tremendous deficit employers out of them, and you will take every little merchant and every manufacturer and everybody else now under unemployment paying taxes and you will have to go back to the States and precipitately raise those rates of unemployment tax on people who are not creating the problem in order to pay for those seasonal workers who as soon

as the harvest is over are out of work. Moreover, any State that wants to do it today can do so. They can put farmers under it. But that is different from forcing them under it. The Interstate Conference action shows that none of them wanted it. It has been tried and found wanting and will not work. I say to you it would be a mistake to do it and to run the risk of delaying this conference report when many States today are practically out of unemployment compensation. We do have a triggering device for extended benefits in here that will be badly needed, if it is not needed now, in many instances.

Mr. TUNNEY. Mr. Speaker, I am voting today to recommit H.R. 14705, the unemployment compensation conference report, with instructions to extend coverage to farmworkers.

The unemployment insurance coverage which was proposed to the Congress on July 8, 1969, would affect more farm employers and farmworkers in California than in any other State. Nearly half of the workers who would be covered are employed in California.

Thus I think that it should be of substantial interest to the House that farm employers in California are increasingly in favor of Federal unemployment insurance coverage of farmworkers.

There are a number of reasons for the increasing support for unemployment insurance coverage on the part of California farm employers. An important factor is their concern that they may be placed at an interstate competitive cost disadvantage in selling their produce, if California passes a farm coverage law or if they elect to cover their workers.

Thus, in a statement submitted to the House Ways and Means Committee on behalf of approximately 12,000 citrus and avocado producers in Arizona and California, the executive vice president of the Agriculture Producers Labor Committee stated:

> One argument in favor of extending farm coverage on a national basis is that California's cotton, meat, poultry, cheese, wine, citrus, tomatoes, vegetables and melons must be marketed in competition with the same products from other states; that national coverage will eliminate an element of unfair competition between the states in the marketing of these products.

Also, many California employers have found that unemployment insurance is a highly worthwhile part of their labor-management relations. Hence, some 765 farm employers have voluntarily elected to cover their 18,000 workers. They have found that unemployment insurance stabilizes their labor force and results in reduced costs of recruitment and turnover. In other words, their experience has been similar to that of nonagricultural employers. And, these employers have found that the cost of unemployment insurance coverage for their workers has been moderate. In 1968 the benefit cost rate was only 4.5 percent of taxable wages. They have found that they are better able to compete with nonagricultural employers in attracting workers.

Coverage under unemployment insurance would properly place the cost of fluctuations in farm employment on the unemployment insurance program which was designed for that very purpose. Unfortunately, much of the cost of farm unemployment is now met under the welfare program. I know that the House is deeply bothered by the rapidly rising costs of that program.

A change to farmworker coverage under the unemployment insurance program would place covered farmworkers in a more equitable position vis-a-vis the great majority of other workers, in that entitlement to income during spells of unemployment would be an earned right under an insurance program, rather than a welfare grant based on need.

I urge that H.R. 14705 be amended to provide for coverage of agricultural workers, at least to the extent recommended by the President.

Mr. TALCOTT. Mr. Speaker, my State of California provides more benefits for the farmworker, permanent and migrant, than any other State. Working conditions, living conditions, housing, and wages are better in California than most every other State. Even so all of these factors could be improved—and should be.

There should be a system of unemployment compensation for farmworkers—all farmworkers.

I have introduced legislation to provide benefits for farmworkers throughout the United States comparable to the benefits provided in California.

The gentleman from Michigan (Mr. O'HARA) has made an emotional appeal for unemployment compensation for farmworkers. In the past his recommendations in the farm labor field have prejudiced the farmworker and agriculture in general.

This problem is urgent. Legislation is necessary. But facts are more persuasive than emotional oratory.

California has studied this problem seriously for some time and has not yet devised a satisfactory system. Before we pass a Federal law on this subject, we should know a lot more about the facts.

I therefore oppose any parliamentary motion which on the face appears to benefit farmworkers, but which in fact is ill considered, inadequately studied, and not ready for deliberation by the House.

The chairman, the gentleman from Arkansas (Mr. MILLS), and the ranking member, the gentleman from Wisconsin (Mr. BYRNES) have made persuasive arguments for considering the subject of unemployment compensation for farmworkers at a later time to avoid jeopardizing this important bill which is so necessary to so many unemployed workers.

For those who really want to help the unadvantaged farmworker, they can advocate and vote for many other well-known working benefits—minimum wage, disability insurance, better hours and working conditions—which are wholly inadequate in most States.

The proposal for nationwide unemployment compensation for farmworkers is not ready for passage today. It requires more experience and study—but I hope it will come soon.

Mr. LEGGETT. Mr. Speaker. I have here in my hand a resolution by the Associated Farmers of California, Inc. It says, in part:

> Whereas, farm labor in California falls into two general categories: the permanent worker and the seasonal or migratory worker, and
>
> Whereas, the former does not need unemployment insurance and the seasonal worker's motivation would be lost with unemployment insurance,
>
> Now therefore be it resolved that the Associated Farmers of California, Inc. will vigorously oppose in principle any legislation designed to include farm workers under any program of Unemployment Insurance.

I have heard untenable arguments before, but I must say this one wins the mink-lined bathtub.

The farmers say permanent agricultural workers do not need unemployment compensation because their jobs are permanent. Clerks and engineers and civil servants and a lot of other people have "permanent" jobs too, but sometimes they turn out to be not all that permanent. That is what unemployment compensation is for. If we were to follow the Associated Farmers' reasoning, we would have to cancel the entire compensation program for everybody.

The second reason given, that seasonal workers would lose their motivation, is just as ridiculous. The payments will be better than nothing, but they will be small indeed. And they will not continue for more than half a year.

If anyone feels that farmworkers are naturally lazy, that they will work less if unemployment money is available to them—I suggest you try this kind of work for awhile. It is the most grueling, backbreaking work I know of. Whatever else one may say about farmworkers, they are not lazy.

Before I go any further, I do not want to appear to be attacking farmers in general. The Associated Farmers are only one group. Others are more humane and enlightened. The California Farm Bureau in Yolo County, for example, favors a national compulsory unemployment insurance program.

Mr. Speaker, this is something the country needs, and it is a disgrace we did not have it a long time ago. I commend President Nixon and the Labor Department for their stand.

The treatment of farm laborers in this country is something none of us can regard with anything but shame. If there is anyone who was not aware of the inhuman conditions under which farm laborers live and work, Senator MONDALE'S current hearings should be eye openers.

We all know there is only one reason why farm laborers get the short end time after time: they are not powerful politically. We have kept them uneducated, poor, disorganized, and beat down, and there has not been much they could do to press their case. They cannot throw cocktail parties or contribute to campaigns. Most of them cannot even

vote. This is going to change, and as far as I am concerned, the sooner the better.

But right now, we have to give them this unemployment insurance. It will not solve their problems. But it will help. They need it and, as a matter of justice, there is no defensible reason for denying it to them.

The SPEAKER. All time has expired.

Mr. MILLS. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

MOTION TO RECOMMIT OFFERED BY MR. O'HARA

Mr. O'HARA. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the conference report?

Mr. O'HARA. I am, in its present form, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. O'HARA moves to recommit the conference report on the bill H.R. 14705 to the committee of conference on the disagreeing votes of the two Houses with instructions to the managers on the part of the House to agree to Senate Amendment No. 9 extending unemployment compensation to agricultural labor employed by persons who employ eight or more workers during each of 26 or more weeks.

Mr. MILLS. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. O'HARA. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 170, nays 219, not voting 42, as follows:

[Roll No. 231]

Dorn	Lukens	Stratton
Dowdy	MacGregor	Symington
Edwards, La.	Mailliard	Weicker

So the conference report was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Daddario for, with Mr. O'Hara against.

Until further notice:

Mr. Long of Louisiana with Mr. Brock.

Mr. Murphy of New York with Mr. Cunningham.

Mr. Edwards of Louisiana with Mr. Burton of Utah.

Mr. Gallagher with Mr. Hosmer.

Mr. Gray with Mr. King.

Mr. Pickle with Mr. Cramer.

Mr. Dorn with Mr. Lloyd.

Mr. Caffery with Mr. Burke of Florida.

Mr. Rarick with Mr. MacGregor.

Mr. Rogers of Colorado with Mr. Rhodes.

Mr. Ryan with Mr. Weicker.

Mr. Stratton with Mr. Roudebush.

Mr. Hanna with Mr. Mailliard.

Mr. Davis of Georgia with Mr. Pollock.

Mr. Jones of Tennessee with Mr. Dowdy.

Mr. Ichord with Mr. Baring.

Mr. Kirwan with Mr. Powell.

Mr. Ottinger with Mr. Symington.

Mr. O'HARA. Mr. Speaker, I have a live pair with the gentleman from Connecticut (Mr. DADDARIO). If he had been present, he would have voted "yea." I voted "nay." I withdraw my vote and vote "present."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. MILLS. Mr. Speaker, I ask unanimous consent that all Members desiring to do so may have 5 legislative days in which to revise and extend their remarks on the conference report just adopted.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

ELECTION TO COMMITTEE ON HOUSE ADMINISTRATION

Mr. GERALD R. FORD. Mr. Speaker, I offer a privileged resolution and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1158

Resolved, That John G. Schmitz of California be, and he is hereby, elected a member of the standing committee of the House of Representatives on House Administration.

The resolution was agreed to.

A motion to reconsider was laid on the table.

DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE, AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. FLOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 18515, with Mr. HOLIFIELD in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read down to and including line 2 on page 12 of the bill and there was pending an amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

Mr. MICHEL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, our bill is $167,632,000 over the budget, for these programs itemized in the substitute offered by the gentleman from Massachusetts (Mr. BOLAND).

To summarily increase this bill for just these items by another $360 million—or 47 percent—makes a mockery of the deliberations of our subcommittee.

Figures in the gentleman's amendment would appear to bring each of these items up to the full authorizing level, but we have heard the arguments of these full-funding enthusiasts before.

There is always the temptation when this bill comes to the floor for Members to be the champions of a variety of very special causes. And there are some of us who can and have been awarded some very beautifully worded citations and handsomely engraved placques for our efforts. But I am reminded of what our good friend JOHN BYRNES, the ranking member of the tax-writing Ways and Means Committee said just the other evening. He could not recall any instance when a member of his committee or this House was given any kind of special award for raising the taxes to provide all these goodies we are going to bestow upon the people.

Now a large part of the money in the gentleman's amendment is for aid to medical schools, but there is an enormous

amount of money in this bill which will ultimately go to medical schools.

There is $150.6 million for institutional support. A significant increase over the $128.9 million appropriated last year.

There is $91.9 million for student assistance, another increase over the $68 million available for 1970.

There is $126.1 million for construction of teaching facilities.

For the health manpower training program of the NIH, the budget proposed fiscal 1971 appropriations of $382 million, an increase of $31 million over the 1970 funding level. Our committee added another $18.7 million for manpower training, bringing the 1971 amount for this purpose to $401 million—$50 million more than the comparable 1970 figure.

This is not the training of scientists for research work, but the training of professional and paraprofessional personnel who will work directly in patient care.

More than half of the total increase—$26 million—is in the area of student assistance. Under the student loan programs, for example, we will provide loan funds for 19,250 health professions students and 22,300 nursing students. In both instances, the number of students who may be assisted exceeds the budget request by more than 8,500.

But that is not all, Mr. Chairman. Let me continue. There is $1,107,048,000 in this bill for the National Institutes of Health.

That is $72.5 million over the budget and $131 million over 1970. Now a very large share of that research and training money goes to medical schools.

I wonder how many of you actually realize that the Federal Government now provides over 50 percent of the annual operating expenses of the Nation's medical schools.

Let me turn to some of the other specifics of this amendment. It would add money for student loans, but our committee has already added $16 million over the budget request for medical and nursing student loans.

The amendment would increase funds for traineeships, but we are already providing for $22 million plus.

The gentleman would add money for the National Heart and Lung Institute, but we have already added $6.7 million over the budget, and this is $17.4 million over the 1970 level.

The amendment would add money for a special children's dental program, but there is already money in this bill to get this program started.

As for the additional amount for medical libraries, we have $19.8 million in this bill for medical libraries which is double the figure carried in the bill just 5 years ago. So that should give clear indication that our subcommittee has been more than generous over the years on this item.

The amendment would add money for staffing community mental health centers, but our committee has already added $20 million over the budget giving us a total of more than $80 million, an increase over last year of $32.5 million.

And finally, Mr. Chairman, with respect to the add-on for Hill-Burton funds, there seems to be a widespread misconception that Hill-Burton grants are the only form of Federal assistance available for the construction and modernization of hospitals and other medical facilities. This is simply not true.

HEW estimates that approximately $300 million per year is being paid for depreciation reimbursement to hospitals and other facilities through the medicare and medicaid programs. These payments relate directly to capital financing.

The Department of Housing and Urban Development administers a program of guaranteed loans—without an overall authorization ceiling—for the construction of nonprofit hospitals.

In enacting, over the President's veto, the Medical Facilities Construction and Modernization Amendments of 1970, the Congress authorized loan guarantees with interest subsidies for the construction and modernization of nonprofit health facilities.

This Hill-Burton appropriation for fiscal 1971 must be considered against this backdrop.

The newly authorized loan guarantee-interest subsidy program is especially important. Beginning in 1971, the Federal Government, through the Secretary of Health, Education, and Welfare, will guarantee loans made to private nonprofit organizations for the construction or modernization of health facilities at a total amount of loans guaranteed of $500 million per year. This $500 million will be allocated among the States in accordance with their population, financial need, and respective need for construction and modernization of facilities. The Federal interest subsidy is established by law at 3 percent per annum.

Under the bill as reported by our committee, $500 million would be allocated among the States in fiscal 1971.

As in the older Hill-Burton grant program, however, the State Hill-Burton agencies will not approve firm commitments against the entire State allocation during the first year in which it is available. This is comparable to the situation in the construction grant program, where grant funds are allocated to the States in the fiscal year in which they are appropriated, but the majority of these funds are not actually committed at the State level until the following fiscal year. Of the $500 million loan guarantee program, the administration estimates that firm commitments approximating $166 million will be made by June 30, 1971. The remainder of the $500 million is available by law through June 30, 1973.

To summarize, then, our Appropriations Committee has approved: Hill-Burton construction grants amounting to $172.2 million; and, a $500 million loan guarantee allocation for fiscal 1971, of which $166 million is expected to be committed with the $5 million provided for interest subsidy.

I would urge Members to support your committee and vote down this $360 million add-on.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman.

Mr. GIAIMO. I agree that what the gentleman is suggesting should be done in the interest subsidy program and also in the FHA guarantee for hospitals program. But, the fact of the matter is that these are hopeful desires and, in fact, we have no proof that they are going to work effectively, particularly in these days of high interest rates. For example, in the case of the FHA hospital program, the fact of the matter is, and the testimony developed in our appropriations committee this year, shows that this program has been very slow in getting off the ground and as of today there are a total of six insurance commitments, that add up to a total of $42 million.

I know that the gentleman knows there are hospitals in this Nation which could each alone use $42 million for expansion. So this FHA program, although it sounds good and although the purposes are meritorious, are really not making much of an impact on the $11 billion shortage.

Mr. MICHEL. The gentleman well knows if there is a choice between grants and loans, everyone is going to take the grant.

We are just embarking here on a new approach.

You say it is long in coming. And I say let us get on with it as provided in the new enabling legislation. There have been some delays, but I submit it is a good program and we ought to move forward with it and give it a chance to operate.

Mr. GIAIMO. In effect, what we are doing in these programs is to compel them to go out and borrow money at anywhere from 9 to 10 percent, which based upon the millions of dollars involved, means that the hospitals will be paying literally millions of dollars in interest each year when in fact under a direct grant program the Government could get the money cheaper.

The CHAIRMAN. The time of the gentleman has expired.

IN THE OVERALL BEST INTEREST OF THE INDIVIDUAL CITIZEN

Mr. MAHON. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Texas is recognized.

Mr. MAHON. Mr. Chairman, I would like to approach the pending problem from the broad basis of the Nation's welfare, encompassing the 50 States and the more than 200 million American citizens.

The gentleman from Illinois (Mr. MICHEL) spoke of the difficulty of securing loans. Loans are difficult to secure—in significant measure—because overspending by Government has contributed to inflation, tight money, and high interest rates. What is proposed in the pending amendment will, in my opinion, serve to aggravate the already serious situation.

THE NATIONAL DEBT

Twenty-three days ago—on June 30—the national debt was $373 billion. In the

last 4 years—from June 1966 to June 1970—it has gone up by $53 billion. No wonder you cannot get loans for programs. The national debt is now crowding $400 billion. Earlier this year, we voted a $395 billion ceiling.

BUYING POWER OF THE DOLLAR

The buying power of the dollar lost 6 percent last year, calendar year 1969. That is for all of us, including widows, orphans, the rich and the poor—everybody. In the last 3 years, calendar years 1967–1969, the dollar lost 13 percent of its buying power. The buying power of the dollar of the rich and the poor is fading each month, and there are those who would seemingly seek to erode it further.

RECENT BUDGET DEFICITS—APPALLING

Budget deficits in recent years have been appalling. Omitting the trust funds such as those for social security and highways—because they are collected for and pledged only to trust fund purposes—the deficit in Federal funds in the fiscal year 1967 was $9,869 million. In fiscal 1968, it was $28,379 million. In fiscal 1969, it was $5,490 million. In fiscal 1970, concluded just 23 days ago, the latest official executive branch estimate—issued May 19—is $11 billion. It may well be higher when the final tally is made.

For the current fiscal year 1971, $10 billion is the tentative estimate of the executive branch as of last May 19.

For the 5 years, 1967–1971, the Federal funds deficit on this basis is over $64,700 million. And it could very well prove to be $10 billion more than that when the fiscal year is closed out.

There is a distinct possibility that the Federal funds deficit for the current fiscal year 1971 could go as high as $20 billion.

The budget for fiscal year 1972, which will come to Congress next January, could, according to official administration spokesmen, reflect a "massive deficit."

OVERSPENDING—A DISSERVICE TO THE NATION'S BEST INTERESTS

What has all of this to do with the pending amendment and the bill before us? It has a lot to do with it. It has a whale of a lot to do with it.

Sponsors of the amendment assert that they are supporting the poor and the helpless. They say the question is, "Do we favor money considerations or do we favor human values?" I plead that we favor human values above all other considerations, and act in the best interests of the 200 million Americans who rely upon us for leadership.

The inflation to which governmental overspending has contributed mightily and is still contributing tends to destroy the poor. The rich can, and in a measure are, protecting themselves. We vote Federal workers pay raises to help discount inflation. Well-organized union workers can, in part, take care of themselves. But the poor people in the ghetto, the poor people in the rural areas, the people on pensions, the poor migrants, and the great middle-class generally—what about them? Who will take care of them? Will we continue to make their grocery dollar buy less and less for them and their children? Will we?

That is what we are doing as of now.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(On request of Mr. FLOOD, and by unanimous consent, Mr. MAHON was allowed to proceed for 5 additional minutes.)

Mr. MAHON. I thank the gentleman from Pennsylvania. I shall not use the 5 minutes.

THE INDIVIDUAL'S STAKE

What about the stock market? The latest figures I have seen show that one out of every six Americans owns stock of some kind. Why have people lost billions in the stock market? Why have your neighbors lost so much? Why are stocks so low? Many people believe that it is largely because of fiscal uncertainty, inflation, overspending by the Government—not sufficiently heeded by those who are unwilling to lay the hand of restraint upon the appropriation of Federal funds.

If we do not preserve the economic stability of our country, the people who will be hurt most are the underprivileged, the undereducated, the poor and the sick, and the great middle class generally.

An enlightened vote for the poor and the needy and the Nation's welfare is against the $362,000,000 add-on to this $18 billion bill.

I do not see why any Member of this House could not satisfactorily explain his action in the interest of the American people to his constituents, by voting against this proposed add-on to a bill which is already $92 million above the budget requests.

I repeat what has been said in effect by others: I favor restraint not because I wish to save money but because I wish to save people.

As we approach the vote on the amendment, I hope we will keep in mind not just the people who send telegrams—because they have been asked to—and not just certain problems which are difficult to deal with, but as we cast our votes today, let us think of all the people and the Nation next month and next year and 10 years from now.

We must lay the hand of restraint upon our actions lest we falter and fail in the Nation's great hour.

Mr. BOW. Mr. Chairman, I move to strike the requisite number of words.

I believe there is little I can add to the excellent presentation of the gentleman from Illinois (Mr. MICHEL) and the fine address that was made yesterday by the Chairman of the Appropriations Committee the distinguished gentleman from Texas (Mr. MAHON) as well as his remarks of today.

I call the attention of my colleagues to the fact that this bill already provides increases for programs that the gentleman from Massachusetts proposes to further increase. We used to hear so much discussion about how more funds went for defense than for human resources, but today—in the Nixon budget for 1971—human resources are receiving more support than defense. Priorities have been changed, but this isn't the only problem.

Mr. Chairman, the people of America are faced with a real fiscal crisis. We must stop inflation—and every effort is being made by this administration to stop it. No one, I am certain, doubts that inflation also contributes very substantially to the financial problems that face our hospitals, mental health centers, and medical schools. This inflation is the result of 10 years of deficit spending.

If we can stop these deficits, so that interest rates decline, then hospitals will be able to obtain necessary funds through the combination interest subsidized loan and grant programs that are provided in this bill.

There is contained in this bill $172 million for grants, and $5 million for interest subsidies that generate another $166 million in construction loans. This is $348 million available for hospital construction under the Hill-Burton program.

I urge my colleagues to support the committee, which has done such a commendable job. There are volumes of testimony that was heard by this subcommittee that clearly support this bill. This is a record that took hours and hours, day after day, to hear and the recommendations that resulted merit our respect and approval.

Mr. ANDREWS of Alabama. Mr. Chairman, will the gentleman yield?

Mr. BOW. I am glad to yield to the gentleman from Alabama.

Mr. ANDREWS of Alabama. The figures cited by the distinguished gentleman from Ohio and by my distinguished chairman are frightening. This country is bankrupt. The interest on the national debt, just the interest alone, is $20.8 billion.

Mr. BOW. I appreciate the gentleman calling our attention to the amount of the interest—$20.8 billion. Let us reduce this to an amount everyone can understand. We do not always appreciate the magnitude of billions of dollars. But every time the second hand goes around on that clock—every minute—we are spending almost $40,000 for interest on the national debt.

Those who are concerned about human resources should consider what $40,000 every minute would do in housing, hospitals, or whatever else might be important.

It is because of the spending we have done, because of the great debt we have built up that $40,000 every minute is being lost.

I urge my colleagues to support the committee and defeat this amendment.

Mr. GIAIMO. Mr. Chairman, I rise in support of the amendment.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto end in 30 minutes.

Mr. MOSS. Mr. Chairman, reserving the right to object——

The CHAIRMAN. Does the gentleman from Connecticut yield to the gentleman from Pennsylvania for the purpose of making a unanimous-consent request?

Mr. GIAIMO. I yield to the gentleman from Pennsylvania for that purpose.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto end in 45 minutes.

Mr. MOSS. Mr. Chairman, reserving the right to object, let me point out that not one single member of the authorizing committee of this House on either side of the aisle has been permitted to utter one word during the debate upon this legislation. There are some of us who are informed and are interested. To cut us off, after the members of the Appropriations Committee have been permitted to extend their time, without objection, for at least an additional 5 minutes, is in my judgment improper.

I therefore object, Mr. Chairman.

The CHAIRMAN. The gentleman from California objects.

MOTION OFFERED BY MR. FLOOD

Mr. FLOOD. Mr. Chairman, I move that all debate on this amendment and all amendments thereto end at half past 3 o'clock.

The CHAIRMAN. The question is on the motion offered by the gentleman from Pennsylvania that all debate on this amendment and all amendments thereto conclude at 3:30 p.m.

The question was taken; and on a division (demanded by Mr. ROSENTHAL) there were—ayes 51, noes 26.

So the motion was agreed to.

Mr. MOSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred twenty-nine Members are present, a quorum.

Mr. YATES. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. YATES. Mr. Chairman, I hope this discussion is not coming out of the time of the gentleman from Connecticut.

The CHAIRMAN. I am afraid it is. The gentleman yielded to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Chairman, I ask unanimous consent that the time of the gentleman from Connecticut not be taken from that 1 hour.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. GERALD R. FORD. Mr. Chairman, I do not intend to object and, in fact, I strongly favor the action taken by the gentleman from Pennsylvania, but we have consumed an extra 5 minutes through parliamentary maneuvering. I think it would be a good idea to add 5 minutes to the time limitation and make it 3:35.

The CHAIRMAN. There being no objection to the request of the gentelman from Pennsylvania, the gentleman from Connecticut will be recognized for 5 minutes.

PARLIAMENTARY INQUIRY

Mr. YATES. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GIAIMO. Mr. Chairman, it seems to me that I only yielded to the gentleman from Pennsylvania (Mr. FLOOD) for the purpose of making a unanimous-consent request and did not realize that all of this would come out of my time.

Mr. YATES. The time had not been announced.

Mr. GIAIMO. I refuse to yield further on my time.

Mr. MOSS. Mr. Chairman, there was a unanimous-consent request made.

Mr. GIAIMO. Mr. Chairman, I refuse to yield.

Mr. MOSS. And, I reserved the right to object.

The CHAIRMAN. The Chair asked if there was an objection and there was no objection.

Mr. MOSS. Mr. Chairman, I registered an objection and I reserved the right to object.

The CHAIRMAN. The gentleman's objection came too late.

Mr. MOSS. I reserved the right to object and the gentleman to the left of me and the gentleman in front of me heard me reserve the right to object.

Mr. GIAIMO. Mr. Chairman, I refuse to yield further.

The CHAIRMAN. The Chairman ruled on the matter.

Mr. MOSS. It is not a matter of the Chair ruling. I was on my feet and I reserved the right to object very specifically.

The CHAIRMAN. The Chairman wants to be fair.

Will the gentleman state his objection?

Mr. MOSS. I reserve the right to object.

The CHAIRMAN. The gentleman reserves the right to object to what?

Mr. MOSS. To the request of the gentleman from Pennsylvania that the gentleman now in the well be permitted to proceed for the 5 minutes, notwithstanding the fact that his time had, in fact, expired because he had yielded to the gentleman from Pennsylvania and the time had been consumed in parliamentary maneuvering.

The CHAIRMAN. If the gentleman insists that he was seeking to reserve the right to object, the Chair will again put the request.

Mr. MOSS. I do so insist, Mr. Chairman.

The CHAIRMAN. Is there objection to the request of the gentleman?

Mr. MOSS. Reserving the right to object——

The CHAIRMAN. The gentleman has already reserved the right to object.

Mr. MOSS. That is correct. Then you should ask the gentleman to address himself to his reservation.

Mr. ROSENTHAL. Mr. Chairman, a parliamentary inquiry.

Mr. WAGGONNER. Mr. Chairman, a point of order. The gentleman from California made the reservation.

Mr. MOSS. I want to state my point, if the Chair will permit it.

The CHAIRMAN. Reservations to object are entertained only in the prerogatives of the Chair. The Chair does not recognize the gentleman from California, Mr. Moss, any further unless he objects.

Mr. MOSS. Of course, the gentleman is not going to object to a request to accommodate the Chair and he thanks the Chair for the courtesy accorded him.

The CHAIRMAN. The Chair thanks the gentleman from California.

PARLIAMENTARY INQUIRY

Mr. ROSENTHAL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ROSENTHAL. Has the Chair announced the names of the Members who were standing?

The CHAIRMAN. Does the gentleman from Connecticut yield for a parliamentary inquiry?

Mr. GIAMO. The gentleman from Connecticut, with all due apologies, refuses to yield further.

Mr. ROSENTHAL. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and twenty-nine Members are present, a quorum.

The gentleman from Connecticut (Mr. GIAIMO) is recognized for 5 minutes.

Mr. GIAIMO. Mr. Chairman, I rise in support of the emergency health amendment offered by the gentleman from Massachusetts (Mr. BOLAND) because I believe that we are facing an emergency in health, health services, and health delivery in the United States.

There is no question—I repeat—there is no question that sufficient amounts of money are not available for our health services. The great subcommittee, chaired by the gentleman from Pennsylvania (Mr. FLOOD) has recognized this fact and has added moneys to the budget requests of the administration. We are not progressing and going forward in our health efforts. We are going backwards.

Reference was made earlier to the fact that we have increased the programs involved in this appropriation—forgetting for the moment the fact that last year, in the parliamentary involvement with education and those other items in the Labor-HEW bill; many of these programs were inadvertently cut down in conference. Therefore, in effect, what we are doing by restoring and by increasing moneys that the administration asks for is merely standing in the same position rather than progressing and going forward. And make no mistake about it—there is a health crisis in the United States. It is here now.

We talk of $172 million for Hill-Burton hospital construction. Is that a lot of money? That is a drop in the bucket, I submit. In my own city of New Haven there is one hospital which today and for the last year has been seeking $30 million; that is one hospital in one city alone, and here we have $172 million for the entire country.

Talk about the loan guarantee programs of FHA, talk about the interest subsidy programs of 3 percent, but they

will not work in today's highly inflationary money markets. In effect, what you are saying to those health institutions is that they are going to have to spend $2 and $3 and $4 million a year; not for health services, not for paramedical personnel, not for beds and buildings, but for interest to banks, insurance companies and other people whose business is the lending of money. Is this going to provide health services to the American people? It is not.

Now, we are told—and I am reminded of the famous line from history, which I will paraphrase, "Oh, economy, how many sins are committed in thy name?"—that we must be economical. We are told that we understand there is a need for more money, but we have to save money. Why do we not hear these same arguments made for limiting the spending of untold billions of dollars for a very questionable defense system like the ABM? Why are not the same arguments made when we are asked to spend billions in farm subsidies, and in other subsidies in this Nation? Right in this bill there is a very questionable appropriation, $2 billion for the OEO. I say to my colleagues, $2 billion for one of the most disgraceful and questionable programs that we have ever enacted into law in this Congress. And yet we are told that we cannot come up with $300 million more in moneys for the greatest priority need of the American people—to improve the quality of American life, the one priority which supersedes housing, the one which supersedes education, and the one which supersedes job opportunities—health care, adequate health care and better health care for the American people.

This is what we are trying to do with this amendment. This is what we are suggesting. This is why we must adopt the Boland amendment.

Last night I was with a group of doctors from the county medical association in my own State of Connecticut, and they told me about the research projects which have had to be curtailed this year, after 5 and 6 and 7 years of work, because of the fact that NIH and the other Federal agencies have literally run out of funding money to continue these projects.

Mr. Chairman, I submit that wisdom demands that we recognize this need as a top priority, and accept this amendment.

The CHAIRMAN. The time has been limited to 3:30 o'clock. The Chair has noted the names of Members who were standing at the time the limitation of time was called.

PREFERENTIAL MOTION OFFERED BY MR. ROSENTHAL

Mr. ROSENTHAL. Mr. Chairman, I offer a preferential motion.

Mr. YATES. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The Clerk will report the preferential motion.

Mr. YATES. Mr. Chairman, the Chair did not announce the time that each Member is going to be recognized for.

The CHAIRMAN. The Chair will announce the time after the preferential motion.

The Clerk will report the preferential motion offered by the gentleman from New York (Mr. ROSENTHAL).

The Clerk read as follows:

Mr. ROSENTHAL of New York moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken out.

The CHAIRMAN. The gentleman from New York (Mr. ROSENTHAL) is recognized for 5 minutes in support of his preferential motion.

Mr. ROSENTHAL. Mr. Chairman, the situation we face now is a classic example of what is wrong with this House.

I suggest, with all humility, and I feel it is presumptuous of me to make this kind of remark to senior Members of the House, but I can only say that I want to share my disgust with everyone who is present on the floor. Many of us have waited for 2 days to speak on this amendment. Many of us have worked for many months, and I, particularly in the field of medical education, on matters we consider of great importance to this Nation. For the last 2 days, Members of the House, and I really find no fault with it, chose to leave the floor at 4:30 o'clock in the afternoon for reasons best known to themselves. Now, when those of us who have equal constitutional rights to speak in this body are allotted a minute of time on a bill of this importance, I think we ought to show our displeasure with this procedure and what we should do is to fold our tent for the week and go home. Maybe over the weekend we can reflect on what we have done. We can reflect on the integrity of the House of Representatives.

How can anyone who shares responsibility in this House move at this time to close off debate when more than 20 Members were standing and asking to speak. Each of them are allotted a minute. It is an absolute disgrace—it is the ultimate abuse of arbitrary power.

None of us can hold our hand up to take our oath of office next time around, if we are lucky enough to be elected, if we engage in this process.

So I would suggest that the wisest and calmest and coolest thing we can do, and so far as I am concerned I want to do it, is to close down for the week. Maybe when we come back on Monday we can, all of us, have a fair amount of time to discuss amendments that we have thought about for weeks, if not for months.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. For what purpose does the gentleman from Pennsylvania (Mr. FLOOD) rise?

Mr. FLOOD. Mr. Chairman, I rise in opposition to the motion and yield to the gentleman from California (Mr. Moss).

Mr. MOSS. Mr. Chairman, I thank the gentleman from Pennsylvania for yielding.

Mr. Chairman, I oppose the preferential motion because I support the amendments that are now pending before this committee. I support them as a member of the committee that has given equal attention to that given by the subcommittee on appropriations to the consideration of each of these items.

For 14 years, I have served as a member of the Committee on Interstate and Foreign Commerce which has authorized these programs and which has placed the ceilings above which appropriations may not go. We did not act idly. We did not act in ignorance of the needs of this Nation, nor did we act irresponsibly. We are not bleeding hearts nor are we knights in shining armor with amendments hanging on our lances as pendants, as we have been characterized.

I think perhaps the words used by our late beloved colleague, John Fogarty, just 4 years ago, in this Chamber, when he quoted from John Webster, should be requoted:

Gold that buys health can never be ill spent.

It was true then, it is true now, and there is not one man on this floor, on appropriations or otherwise, who will tell me that we are supplying in this program adequate assistance to manpower training, to the construction of medical educational facilities, because they cannot support such a statement. We are not providing. There is a desperate need in this Nation, and as we have been running rapidly in recent years, we have slipped continuously behind. We are not keeping pace with the need. It is a critical need.

Remember, that every person who is ill is a drain on the economy of this country. It is time that we deal with these problems, that we assign them the priorities they must have.

This Nation has the wealth if we use it wisely. We have heard about the boondoggles in defense, SST, and many others. Let us look at a bunch of the weapon systems where we have had tremendous overruns, overruns which would wrap up the entirety of cost of this program. The distinguished chairman of the Committee on Appropriations has spoken about inflation and the stock markets. I happen to chair the Commerce and Finance Subcommittee. I know something about the commodity and security markets of this Nation. Let one tell you that whether you use Government loans, whether you use municipal bonds, whether you use mortgage debt, you are going to be competing in the money market. It is the pressure to construct the infrastructure that puts the pressure on the inflationary factors in our economy. We cannot step back in these fields of health. We must build, and we are going to have just as much, if not a greater inflationary impact—if we go the route of municipal bonds, and with the very high cost of mortgages—10 and 11 percent in my State of California in some areas—or if you go to Government-guaranteed loans, loans which some financial institution must make, I think we ought to look at all the facts. The unmet needs are the

measure of our successes and our failures.

The fact that we can say we are doing more than last year or more than 5 years ago does not prove that we are doing an adequate job.

The CHAIRMAN. The time of the gentleman from California has expired.

The question is on the preferential motion offered by the gentleman from New York (Mr. ROSENTHAL).

The question was taken; and on a division (demanded by Mr. ROSENTHAL) there were—ayes 6, noes 72.

So the preferential motion was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. SANDMAN).

Mr. SANDMAN. Mr. Chairman, I share the feelings of the gentleman from New York. I have been waiting for a whole day to say something on this subject, because I think I have something to add—something to add in the sense that I am not opposed to this because it adds $360 million to an already-high appropriation. I am opposed to it because it cannot possibly do what the sponsors of the amendment want it to do. If you add a billion dollars in this amendment to train more doctors, it would not produce a single doctor more in the coming year or the year after that. I know what I am talking about because I come from a State that has over 7 million people and we produced only 70 doctors last year. That is all we produced, mainly because those in charge of the State university establishment there would rather build monuments to themselves than try to train doctors in greatly needed numbers. A change in the system of training medical professional people is sorely needed throughout the country.

The popular course would be to vote for the amendment. The responsible course is to oppose it. This is not an issue as to who is more humane or who cares more about sick people, because I am absolutely convinced that every Member of this House wants to do everything that he can to assure adequate dental and medical care for all Americans.

The gentleman from Massachusetts presented a most articulate, heart-rending plea and I agree with all that he has to say in regard to our national shortcomings for medical, dental and institutional care and I am just as interested as he in correcting those deficiencies. However, those deficiencies cannot be corrected overnight even if every American dollar in the Treasury was appropriated for that purpose today. A real reason exists as to why we do not have enough doctors, dentists, nurses and medical technicians.

A plea was made for more scholarship and loan money and I favor more scholarship and loan money, but if we appropriated a billion dollars for more scholarships and student loans for medical schools it would not produce a single doctor more for the simple reason that every medical school in the country, according to the best information available to me has its September classes filled now and tens of thousands of students throughout the country who wanted to go to medical school have no school to go to.

Let us place the blame exactly where it belongs and in this case I am only going to talk about my own State where we did not even have a State medical school until 1963. Where in 1969 a State of more than 7 million people graduated only 70 doctors and 80 dentists. How did that happen? I can tell you how it happened. It happened because the State turned down a thousand bed hospital-medical school complex in Jersey City that it could have had for $1 and instead chose to build an entire new complex at a cost of more than $100 million. This meant that for 5 long years, while the new complex was under construction—and, Mr. Chairman, that takes us up to the present time—one of the largest States in the Union in population produced practically no doctors.

It has been argued that we need 150,000 more registered nurses in the country and I think that is a low figure. It is a known fact today that if we had no practical nurses, half the hospitals in the Nation would close. We were told 6 years ago in New Jersey that we needed 10,000 more registered nurses and 6 years ago in New Jersey we tried to do something about it. Would you believe, there were fewer nursing schools in New Jersey then than there were 20 years before that date. In 1969 New Jersey had hundreds of R.N. trainee vacancies in hospitals and nursing schools that were not filled. There were 1,000 young women more could have been trained in New Jersey in 1969 under existing programs than were trained. This deficiency was not caused by a lack of money or a lack of facilities—it was caused by a lack of applicants. In these days of prosperity our young women are seeking more glamorous positions and are not as interested in the nursing field as they used to be. This condition, I am told, exists nationwide. So, if we are going to do something here we have to do something to make girls more interested in nursing.

This amendment has a very nice name. It no doubt will be well received by the press, especially the more liberal segments and those of us who oppose it no doubt will be branded as being against the proposition of keeping Americans healthy. I can prove that all the loans provided for in this amendment and all the scholarships provided for in this bill will not produce one more professional in medicine, dentistry, osteopathy, optometry, podiatry, pharmacy, and nursing because with the exception of the field of nursing we already have more applicants than we can take care of.

Addressing ourselves now to the capital construction needs provided for in the amendment and at the outset let me say I would vote for many times the amount requested if it could be prudently handled and build the facilities that are needed or if they could even obligate that much money in fiscal year 1971 under contract—which I know is impossible and so does every Member of this House. This is one of those amendments that is popular, has a nice name, and just as pure as motherhood itself. To oppose it is not politically smart. But the gentleman from Pennsylvania said that his committee, who listened to hundreds of witnesses during months of hearings, provided all the capital funds than can be used in fiscal year 1971. I am sure the gentleman from Pennsylvania and his committee would have approved many times the amount sought by this amendment if the objectives sought by the sponsors of the amendment could be accomplished with more money. For these reasons I have chosen the responsible course of action. I will support the committee bill and oppose the Boland amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Chairman, it is unfortunate that very few were in the Chamber the day before yesterday when the chairman of the Appropriations Committee spoke of the precarious fiscal situation. He posed the issue correctly. It is not as simplistically suggested—a question of according a higher priority to human needs than financial consideration.

Was it Carlyle who spoke of economics as dismal science? This debate has spawned a familiar argument. If you are talking about a program—sufficiently worthwhile when measured in terms of its goals and objectives—forget about the threat of inflation; ignore economic considerations.

The results would be dismal indeed if we followed that prescription. We simply do not need the stimulative effect of a $20 billion deficit in the context of the present situation when many of us feel we are at a turning point.

The majority whip is critical and says we rely too much on monetary policy. That is not so. It is precisely because we see the necessity of a proper mix and we do not want to impose too great a burden on monetary policy, that we are counseling fiscal restraint now.

It is not that we are less mindful of human needs, or oblivious to the crisis we are approaching in the delivery of health care services.

We need new programs—better programs—but those on this side of the aisle live in a very unreal world where they counsel an add-on above the budget of more than a third of a billion dollars. If we commit now in 1970, resources that we simply do not have, we are going to undercut the very effort we would like to make as soon as possible, hopefully in fiscal 1972, to come up with programs to make basic improvements in our present system of delivering health-care services.

It would be nice if we could wall off, or seal off, inflation in some kind of watertight compartment and say, you can't affect this section of the economy. That simply isn't possible.

Let me give you some concrete exam-

ples of what it has done since 1965 in this very area of health care:

Listen to these figures from the Journal of the American Hospital Association on the average expense per patient day between 1965 and 1970.

The information contained below was secured from Miss Dorothy Rice and Miss Mary McGee of the Division of Health Insurance Studies of the Social Security Administration. They secured this information from hospitals, the Journal of the American Hospital Association—AHA—and the AHA testimony at the October 28, 1969, hearing of the House Ways and Means Committee.

In 1965, the "average expense per patient day" in an American hospital was $44.48. The estimated cost for 1970 is $74.24.

The table below gives the "average expense per patient day" between 1965 and 1970:

1965	$44.48
1966	48.15
1967	54.08
1968	61.38
1969 (estimate)	67.59
1970 (estimate)	74.24

Now hospitals are for the most part nonprofit corporations. They are not out to gouge the public. Their rates are rather the result of general inflation of the increased costs of labor and material, but mostly of personnel costs.

Now listen to these figures on recent hospital construction costs—$57 per square foot.

I believe it is critically necessary that we exercise the kind of fiscal restraint that the President called for last weekend. If we ignore his admonition, the average American is going to get even less in the way of health care.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. SCHEUER).

Mr. SCHEUER. Mr. Chairman, we heard a few moments ago from the distinguished chairman of the Appropriations Committee, who spoke about the human values involved in the Boland amendment. I would like to speak about the monetary and financial values, because I think they are important, too.

I am concerned about inflation. I am concerned about the effectiveness of the billions of dollars we spend every year for remedial programs under title I of the Elementary and Secondary Education Act to help our kids learn in school, to help the young people learn a trade, learn skills so that they can become employable, because we all want to get them off the welfare rolls and onto the job rolls and the tax rolls.

Experience teaches us that under title I of the ESEA we have to spend enormous amounts of money on health care, in giving our young children from deprived families the medical and dental care they have shamefully lacked, so they can learn in school before we begin the attempt to educate those kids. And in the Job Corps and other elements of the poverty program we are forced to spend a very great percentage of anti-poverty funds on health care before we can help these young men and women develop their talents and learn a trade.

If we really mean business in our efforts to educate properly all American kids, if we really mean business in our antipoverty efforts to help our young people become economically productive by acquiring the technical skills necessary to hold down a good job, then their health needs must become our first order of business. Unless we provide the health services and facilities to provide a healthy mind in a healthy body—mens sana in corpore sano—we are literally wasting in a futile effort much of the billions of dollars we are spending annually on our remedial education job training and employment programs. We are dooming these programs and these people to substantial and continuing failure.

Such a waste of taxpayers' dollars would be an unthinkable burden on the taxpaying public, and an injustifiable addition to inflationary pressures. Let's provide for America's health needs, if for no other reason, for the reason of simple economics—we simply cannot afford the luxury of doing otherwise.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. WILLIAMS).

Mr. WILLIAMS. Mr. Chairman, I rise in opposition to this amendment. I will not take the time to cover the individual medical and health appropriations contained in title II of this bill as these were clearly described yesterday by the distinguished gentleman from Texas (Mr. CASEY). Neither will I take the time to cover the increases which have been made in various items of title II which will improve medical and health care in this country as these increases were clearly described yesterday by the distinguished gentleman from Iowa, Mr. NEIL SMITH.

I do want to ask the Members of this House to take a clear look at what the adoption of this amendment really means, and I do want to refute some of the totally erroneous statements made on the floor of this House yesterday.

Title II of this appropriation bill, which is the title providing for appropriations for HEW, is $2,119,302,000 above the fiscal year 1970 appropriation and is $134,100,000 more than the sum provided for in the budget for fiscal year 1971. To add an additional $360,450,000 to the expenditures under title II of this bill would be the ultimate in fiscal irresponsibility.

It is very thoughtful of the sponsors of this amendment to label their amendment as the "emergency health amendment." This is a very catchy phrase, but it is not truly descriptive of the situation in this country today. The fact is that medical and health services are better in this country than ever before. In some cases, medical schools are not accepting all of the students that they could really accommodate and the overwhelming majority of applicants for admission to medical colleges are able to pay their own tuition. In addition, thousands of medical clinics have been established by the medical profession and communities throughout this country where medical attention is available on a prompt and reasonable basis.

I do not believe the figures we heard yesterday about the projected personnel shortages which will exist in future years in the medical and health fields, as these figures were projected by those who have a special interest in these fields. Only several years ago, we were receiving from HEW officials dire predictions about the great shortage of teachers that would exist in the future. This shortage has never developed. Today, in many sections of this country, elementary school teachers, and even secondary school teachers, are having difficulty in obtaining positions.

The fact is that the appropriations contained in this bill will adequately meet the health needs of our country when it is properly supplemented as it should be by State and local money. A comment was made on the floor of the House yesterday to the effect that local governments have reached their maximum capacity to tax. Such a statement is totally unsound because the Federal, State, and local governments receive their tax money from the same sources, the American taxpayer, whether that taxpayer be an individual or a company or a corporation. A more proper statement would be that the American taxpayers have reached a limit of taxation regardless of whether the taxation comes from the Federal, State, or local government.

Further, it is possible for community interests or medical interests, or such interests working together, to build profit-making hospitals and operate these hospitals more efficiently and at a lower cost than non-profit-making hospitals. An example of this occurred in my own congressional district.

A group of doctors got together and each put up a certain sum of money and they built a 50-bed profit-making hospital. Their operation was so successful that they have now expanded to a 200-bed hospital. This hospital pays corporate taxes, local real estate taxes, and all of the other taxes which any corporation pays. At the same time, their costs are actually lower than many nonprofit hospitals in the same area. Also, nonprofit hospitals in my congressional district have been enlarged with only some assistance from the Federal Government. This shows what can be done without soaking the taxpayer.

Also, hospital costs have been dramatically increased but this is largely due to poor administration of hospitals and will not be corrected by appropriating more Federal tax dollars.

Continued deficit spending, as represented by this amendment can only lead to continuing inflation. We have just started to get inflation under control and down from the 6- to 8-percent annual inflation increase we have been suffering, and more deficit spending will accelerate inflation. This inflation did not start with the Nixon administration. We have been suffering from inflation

during successive, prior administrations, to continue the course we are now on in deficit spending will ultimately result in the U.S. dollar being worth little more than the paper on which it is printed.

What do the sponsors of this amendment think will be the plight of the American people when this occurs? If they do not know, I will tell them. Continuing devaluing the American dollar can only destroy our economy, increase unemployment to an all-time high, and make it impossible for our people to obtain proper medical treatment and other necessities of life which they must have. In last night's news media, a respected columnist made the statement:

> Inflation continues around the world but all eyes are on the United States. For if its economy can become adjusted, the effect should be felt in many countries abroad.

Continued Federal deficit spending is the one thing which will prevent our economy from becoming adjusted, and make no mistake about it.

At one time, the full faith and credit of the Federal Government of the United States meant something. It meant that our Government could float bonds for a term of 25 years at interest rates of 4¼ percent and less. The full faith and credit of the Federal Government of the United States today—due to continued deficit spending on the part of successive, prior administrations—means so little that our Treasury Department is being forced to sell bonds and other Federal obligations on terms of 3 years or less and at an interest rate of 7⅝ percent. The deficit spending policies forced on our Federal Government by the Congress is the reason for high interest rates.

While it is fashionable on the part of some Members of this House to blame the "big bankers" for high interest rates, this is just a fallacy. The big banks today are unable to lend money even to their preferred customers when the collateral proposed to be posted for such loans is 110 percent of the amount of the loan.

It is the fact that our Government is borrowing money to refinance over $110 billion of maturing Federal obligations and borrowing billions of dollars of new money, all of this at 7⅝ percent interest, to pay for deficit spending that is causing tight money and high interest rates. In fact, just this week, Federal agencies like the Federal National Mortgage Association, Fannie Mae, borrowed money on the open capital market at a rate of 7.95 percent and is lending this money out in mortgages at 9.2 percent interest rate and charging 4.85 points. This means that when a developer of Housing for moderate-income families borrows $1 million from Fannie Mae, he actually receives $951,500 and pays 9.2 percent interest on the entire million dollars.

It is these conditions, developed by deficit spending which is denying money for housing, pollution control, the redevelopment of our cities, and all of the other programs which are so important to our people.

We heard here yesterday that President Roosevelt helped to get us out of the 1929 depression through the policy of pump-priming, of course, this was at a time when the full faith and credit of our Federal Government meant something and we could easily borrow money. If we have another depression or severe recession, we will not be able to apply the pump-priming process because there will not be any money to borrow and we are already in debt for a sum of money exceeding $374 billion.

Also, who will be hurt the most by the deficit spending represented by this amendment. The people who are being hurt the most are those who can least afford it. We have learned from brutal experience that Mr. Average American Workingman must pay the overwhelming bulk of the taxes and in just 2 years, the annual interest rate on the money we owe will exceed $30 billion as a continuing, increasing item in each annual budget. Deficit spending is actually robbing the great bulk of our taxpayers of money they need to provide for their families.

I urge the Members of this House who have any concern about our economy, sound fiscal programs, and concern about our overall social programs to vote down this amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Washington (Mr. MEEDS).

Mr. MEEDS. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts.

THE NATION IS FACING A MASSIVE HEALTH CRISIS

Mr. Chairman, I rise in support of the emergency health amendment to the Labor, Health, Education, and Welfare appropriations bill for 1971, which in my view constitutes a minimum response to obvious needs. The Nation is facing a massive health crisis which could well lead to a total breakdown of our health delivery system. Obviously we cannot permit this to happen. We must do something, and we must do it now.

On June 22 President Nixon chose to veto a 3-year extension of the Hill-Burton program despite the fact that there is a $16 billion backlog in health facility construction and that there is a need for 250,000 more hospital beds, 893 public health centers, 872 diagnostic and treatment centers, and 388 rehabilitation facilities. In addition, 460,000 hospital beds must be modernized.

In view of the enormous need for additional health facilities and for modernization of existing facilities, I was pleased that the Congress was able to override the President's veto. The problem now facing us, Mr. Chairman, is one of providing the necessary funding not only for the Hill-Burton program but for the various Federal programs which help train the necessary personnel for existing health facilities and for those to be built in the years ahead.

This is no easy task. It takes many, many years to produce good doctors and dentists. And yet we currently need 50,000 more doctors, 18,000 more dentists, 150,000 more nurses, and over 260,000 more allied health personnel. As our population grows and as we reduce the backlog in health facilities, the need for staffing will become more acute. Indeed, the situation will probably deteriorate before it begins to improve.

In the meantime, Mr. Chairman, the average American must continue to put up with less than adequate medical attention. In fact, in certain areas of the country and among some segments of our population medical and dental care is just not available.

One would think that with the unquestioned need for more health personnel, the number of students being assisted under the student loan program would be increasing. Unfortunately, however, this is not the case. During 1969, 36 percent of students in the health professions received loans. During 1970 the figure was 19 percent. And in 1971 it is estimated that only 13 percent of the students will receive such loans.

Rather than decreasing Federal funds for the student loan program, we need to dramatically increase such assistance. In addition we need to increase funds for scholarships and for work-study programs. How else are we going to encourage the poor and the black to consider careers in the health fields?

As we all know, the inventory of figures which I, and many of my colleagues, have employed in support of the emergency health amendment is only a mathematical representation of our crisis in health care. All too often we limit our discussion to the bricks and mortar issues, but the shortages and the inadequate Federal support are felt in much more human terms. Savings are wiped out; visits to the doctor are avoided; and humans suffer and die for want of prompt medical attention.

Restraining Federal spending is a worthy cause, Mr. Chairman, but is there a higher priority than human health or life itself?

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. THOMSON).

(By unanimous consent, Mr. THOMSON of Wisconsin yielded his time to Mr. SHRIVER.)

The CHAIRMAN. The Chair recognizes the gentleman from Kansas (Mr. SHRIVER).

Mr. SHRIVER. Mr. Chairman, I do not intend to repeat what has previously been said in this debate but some items need reemphasis.

It has been repeatedly stated that our bill is way above the budget. It needs to be restated—so Members of the House will be able to vote responsibly on the pending amendment which would add $360 million to the subcommittee bill.

First, I emphasize that our bill represents an increase of $2.3 billion over last year's appropriation.

Second, our bill is $92.9 million above the President's budget.

Now it is proposed to add $360 million which would bring the total of the bill to over $450 million over the budget.

Mr. Chairman, I submit that our Appropriation Subcommittee and the full Appropriation Committee have done a good job with this bill and with all of

the hundreds of items included in the Department of Labor and the Department of Health, Education, and Welfare. We have made needed increases. We have exceeded the President's budget. We have acted responsibly.

Chairman MAHON called our attention during general debate to the absolute need of holding the line on spending and practicing fiscal restraint.

He called our attention to the fact that as of May 19, the Federal funds deficit projection is up to $10 billion.

He called our attention that the Federal funds deficit in this current fiscal year could go as high as $20 billion.

Our committee spent weeks and weeks of time—seven large books of testimony, 7,400 pages of hearings, with scores of private and public witnesses.

Who would know better than those of us charged with the responsibility as to where to make increases—the priorities of allocations of funds and this budget as it relates to all other appropriation bills—both Republican and Democrat.

We are unanimous in our support for the committee bill and in opposition to the Boland amendment.

We urge you to sustain our position.

One-half of that requested as an increase is for construction—bricks and mortar—$100 million for health, education facilities and $80 million for Hill-Burton. This $180 million of increase probably would not be used. This—our committee has found from long, past experience—has been the practice when fiscal restraint is needed.

All of us are aware of the appeal of adding money for buildings and manpower for health care.

The members of our subcommittee have complete information of the needs of better delivery of health care.

As our colleague, the gentleman from Iowa yesterday so well stated, before we go into a crash program to increase numbers of doctors and medical personnel, the system needs change.

I want to direct my colleagues' attention to the testimony presented by Dr. Egeberg on pages 19 through 25 of part 2 of the hearings, available at the committee tables. No one is attempting to deny the serious shortage of doctors in our country today. The point that is being missed, and which is very well stated by Dr. Egeberg, is that we have not found the most effective way to alleviate this shortage. In simple terms, merely pouring more money into a system which has proved ineffective will do more harm than good. By adding more money, we will be telling our citizens that we are attacking this shortage, when in fact we are not.

Until medical schools and our entire medical system is reoriented toward meeting modern priorities and alleviating geographical and professional shortages, more money will merely extend a stagnant situation. Why should these schools change their curriculum and requirements if they receive increasing amounts for the status quo? There is enough money already in this bill for medical school emergencies, that is, to keep them open. I assure you that if individual emergencies arise which cannot be handled from this appropriation, this subcommittee stands ready to consider supplemental requests.

The committee has been asked by the gentleman from Illinois (Mr. YATES) what is sacred about the budget request figures, and I agree with his answer that they should not be sacred. The committee recognized this; we recommended increases in certain areas and decreases in others. That is our responsibility. That is why we had 14 weeks of hearings. At the same time, what is so sacred about the figure of $360 million, which would be added to the committee's increase? On what hearings is this figure based? Where are the already effective systems of health manpower training which are not working because of a lack of this $360 million?

This is not a political question. This is not a regional question. This is an opportunity for the House to act responsibly and wisely. This is an opportunity to look further and deeper into a problem than to just take the easy road of throwing money at it and feeling self-satisfied.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. ROSENTHAL).

Mr. ROSENTHAL. Mr. Chairman, I rise in support of the Boland amendment.

Mr. Chairman, the emergency health amendments we now consider may be the most important legislation before Congress this year. This importance reflects both the substance of the programs—medical care—and the form of the dispute with the administration: Shall Congress have a role in setting national medical policy?

These amendments interpose a judgment, backed by the Nation's medical experts, that we must now reverse a disastrous trend of temporizing and economizing which has brought us to this situation:

In the 1970–71 school year, medical schools across the country will be accepting or rejecting students on the basis of their ability to pay. This situation has never before developed in the history of American medical education.

A prominent medical school in New York City has removed from its 1970 catalog a statement it has contained for 50 years. That statement assured students that no one would have to leave the school of medicine solely for reasons of inability to pay the tuition.

In the fiscal year 1970 Federal program for loans to medical students, only 35.8 percent of the money requested by students was available to lend them.

Let me remind my colleagues that we are not talking about grants or scholarships. We speak of loans to students who must find, after college, between $20,000 and $25,000 for medical school tuition. If we do not greatly increase the funds proposed by the administration, and even increase the amount recommended by the committee, the situation will be immeasurably worse next year.

Last year, we were told by the administration that another Federal program, the guaranteed student loan program, would take up the slack created by underfunding of the medical student loan program. This has not happened in the past year and it will not happen next year.

Why? Medical students report from across the country that bankers are reluctant to grant loans to students in general in a period of tight money. They are also unwilling to give money to poorer students, to those from rural areas—remote from the banking centers—and to students whose families have not had bank accounts. In short, bankers treat these student loans like any other loans. In a competitive money market, students lose out.

Mr. Chairman, we are in desperate need of remaking our entire medical care system. We must also reconstruct the means of financing medical education and of selecting medical students. Ultimately, we should develop a system which would provide free medical school tuition in return for several years of public service by young doctors.

Until we make those basic changes, however, we cannot let our medical manpower gap increase. The Department of Health, Education, and Welfare estimates that we will need by 1975 40,000 more doctors than our present production plus immigration of foreign doctors will produce. These 40,000 doctors will not be produced either magically or painlessly.

We will start producing more doctors today if we pass these expensive but vital amendments which our country needs so desperately.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. Moss).

(By unanimous consent, Mr. Moss yielded his time to Mr. BOLAND.)

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. CORMAN).

Mr. CORMAN. Mr. Chairman, I rise in support of the emergency health amendment. I would especially like to address my remarks to the three phases of the amendment which will provide increases in funding for the dental care projects for needy children, the community mental health centers, and the traineeships for students in health professions.

The dental care pilot projects for needy children authorized under section 510 of title V of the Social Security Act are a small item in terms of cash investment but highly significant in terms of long-term yield. These projects have a double purpose: to give care that is desperately needed by American children and to permit experimentation in methods of delivery in order to discover the most efficient, economical alternatives that are available.

There are literally millions of children in this Nation—in inner cities, in rural areas, and elsewhere—who are receiving no dental care whatever. Nearly half the children in the Nation under the age of 15 have never seen a dentist; we read in yesterday's paper of the terrible depri-

vation suffered, in this regard, by children of migrant workers.

We need to remedy this situation and we need to discover the best ways of doing it. Section 510 is explicitly designed to accomplish both purposes. It was approved by the Ways and Means Committee and this House 3 years ago; it has sat on the books ever since; it has never been implemented. The House Appropriations Committee, last year, issued a clear call for implementation of these projects, but still nothing was done.

What are we talking about in terms of implementation? Six million dollars in the first year. Contrast that, if you will, with the fact that more than $110 million dental care dollars, on the Federal level, are annually paid out under medicaid. Much of that money is spent to repair damage that need not have occurred and would not have occurred if programs like section 510 would be vigorously pursued. It is purely and simply a heedless waste of money. We have approved section 510; we have strongly suggested it be implemented.

It is now time, in my opinion, that we insist that the waste of money stop and that the proper agencies in the executive branch be explicitly directed to get moving on section 510, title V and thus begin a more rational and more economical approach to public expenditures for dental care.

In the mental health field, previous appropriations have allowed mental health centers across the Nation to begin working toward their goal of providing more efficient out-patient care. Without additional funding, their initial progress will be lost and the centers will not be able to continue in operation.

In the 22d Congressional District which I represent, Federal aid from the community mental health program has enabled the San Fernando Valley Child Guidance Center to increase its patient visits per year from 3,000 to 20,000 in a 5-year period. The same facility has been able to increase its hours of concentration to the supporting community from 3,500 hours to 18,000 hours in the same 5-year period.

In addition, staffing grants received under this program have contributed immeasurably to training some 17 psychiatrists, 15 social workers, 12 mental health nurses, and five psychiatric residents at the child guidance clinic—personnel which are the key to the success of the entire program.

A third area which is in desperate need of funds is the program which provides traineeships to selected students of public health, nursing, and the allied health professions.

As the needs for health manpower continue to rise, additional emphasis must be focused on the value of enlarging our allied health program. This is a program which has demonstrated great potential for extending the availability of health services and has indicated potential for providing a substantial return on the money required to implement it.

Casa Loma College, which is also in my district, has recently entered 86 students into its fall program for allied health training. If even one student completes the program, he will earn enough in his lifetime to more than pay for the entire grant received by the college. If eight students complete the program, they will pay enough income tax to repay the Government for the entire grant.

Congress cannot ignore its responsibility for the continuation of these programs. Positive action taken now will go a long way in increasing our nationwide supply of health care and aid in delaying future increases in the cost of medical services. I urge my colleagues to join me in supporting this amendment to assure top quality medical care for all Americans.

(By unanimous consent, Mr. CORMAN yielded the remainder of his time to Mr. BOLAND.)

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. O'HARA).

(By unanimous consent, Mr. O'HARA yielded his time to Mr. BOLAND.)

The CHAIRMAN. The Chair recognizes the gentleman from South Carolina (Mr. RIVERS).

(By unanimous consent, Mr. RIVERS was allowed to speak out of order.)

REVIEW OF THE DRAFT LAW

Mr. RIVERS. Mr. Chairman, I wish to take this opportunity to publicly commend the Special Armed Services Subcommittee which recently completed its investigation and submitted its report to the committee and the general public on the Mylai affair.

The report requires no commentary from me since it speaks for itself. Every member of the subcommittee and its staff by virtue of this candid report have once again earned the continued respect of every Member of Congress, and indeed the American public.

The chairman of the special subcommittee was Congressman F. EDWARD HÉBERT. I am, therefore, happy to announce that upon the conclusion of his special investigation into the Mylai affair, I requested that he convene his Special Subcommittee on the Draft to begin a review of the entire draft law, including its administration, regulation, and judicial interpretation.

Mr. HÉBERT'S subcommittee is now meeting on this subject and I am confident will, upon completion of its review, provide the full Committee on Armed Services with meaningful recommendations for possible future action in this area.

It has been truthfully said that when you want difficult problems solved, you assign them to a busy man. I think what I have just said indicates the type of man EDDIE HÉBERT is. I would like to commend him, in particular, for the special dedication he always gives to any of the myriad of problems that are submitted to him as a subcommittee chairman.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. PEPPER).

Mr. PEPPER. Mr. Chairman, I commend the able chairman of the subcommittee—the gentleman from Pennsylvania—for the bill he brings to the House floor. But the question is not what we have done, but what needs to be done for health research and medical care for the people of this country.

In 1968 over $53 billion was spent by public authorities and private individuals for health care. More research and more medical care would have reduced that expenditure.

In 1967 the workers of the United States lost over $3 billion in wages which would not have been lost if there had been adequate health research and adequate provisions for medical care for these workers.

In 1967 the people who lived, who otherwise would have died but for the research we have had in the past, contributed $1.7 billion in Federal income and excise taxes.

Mr. Chairman, not to speak of what it means to save human life and health in terms of dollars saved, it is economy for this country to spend much more on health research and medical care for our people than we are spending or prepared to spend. This amendment, though itself not adequate for the Nation's needs, will make this bill more meaningful to the people of our country and I hope it will be adopted.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

Mr. KOCH. Mr. Chairman, I rise in support of the emergency health amendment introduced by our distinguished colleague, EDWARD BOLAND of Massachusetts. Our colleague, on the floor in debating this amendment, has cited the extraordinary need for these additional moneys which would be used primarily to fund vital health services.

The simple statistic on infant mortality in this country, and this country stands 13th in the world, should shock the conscience of every legislator sitting in this Chamber. With all our technological advances permitting us to be the first to land on the moon, we are not the first in terms of health care. As was pointed out by other of our collagues, our male population has a shorter life expectancy than that of males in 17 other countries. The poor in this country, and I refer now to those who are not on welfare, are the least assisted medically. In my own State of New York the person who is not on welfare and over the age of 21 and under the age of 65 is not eligible for medicaid. And it is that large group of people that I have just described that have been the least assisted by this Congress over the years. The medical schools are suffering and are not able to provide us with a growing physician population to meet the needs of the growing population at large. And many medical schools are in critical financial condition. We have no hesitation in spending billions on military cost overruns and yet we hesitate to provide bare minimums for the health of our population.

Mr. Chairman, I believe in economy but not economy at the expense of

health. There are many areas in the Federal budget and in particular the military, space, farm, and highway budgets that could be trimmed to have many times the cost of this amendment and I therefore urge its adoption.

(By unanimous consent, Mr. KOCH yielded the remainder of his time to Mr. BOLAND.)

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Chairman, this amendment to increase expenditures for health care ought to pass.

Dr. Kenneth M. Endicott, Director of the Bureau of Health Professions Education and Manpower Training, put it convincingly when he testified before the subcommittee 3 months ago. Dr. Endicott said:

> For, as reported by the President and many national health organizations, there is indeed a health crisis. There is a massive shortage of physicians, dentists, nurses, and all types of allied health personnel. Unless very substantial investments to expand training capacity are made now, these serious shortages will persist into the late 1970's and 1980's.

There is no mistaking the extent of this health crisis, and no question about the substantial investments required to deal with it. We must apply our resources to the best of our authorized abilities. To do less would be foolish and shortsighted.

Yesterday a question was raised on the floor as to who is qualified to judge what ought to be spent on health care. That is a legitimate question, but it does not take a genius to see that our medical and dental schools are in serious trouble and that in their present condition simply cannot produce the quantity and quality of doctors and dentists the country demonstrably needs. I am disturbed because some people have discussed this in terms of being just an urban problem, but it is not. I come from a rural district and small community after small community in that district is without a single doctor and even the most populous county in my district has less than half the Nation's average in the number of doctors per hundred thousand population and that national average is terribly inadequate and it results, at least in part, in the shocking health statistics which define the status of our country's health.

In infant mortality this country stands 13th in the world. If we had the same rate of infant mortality as they have in Sweden, 50,000 fewer American babies would have died last year. American males have a shorter life expectancy than males in 17 other countries. Forty-five percent of the population suffers from some chronic disease and the poor have four times the incidence of those diseases as the rest of the Nation. By 1975 the number of visits to doctors in this country will increase by 25 percent. The number of doctors will increase only 9 percent, and yet the medical schools are dying.

The Association of American Medical Colleges reports that 61 out of 107 medical schools in the Nation have been awarded special projects grants on the basis of some condition of financial distress.

Without these emergency transfusions, some schools certainly would have gone under. And half of the 61 were in such critical financial condition that they were in danger of losing accreditation.

Two dental schools, one in Missouri and one in Louisiana, have closed their doors permanently, and six others are reported in danger of doing so. The total operating deficit of the Nation's 53 remaining dental schools is estimated at about $45 million.

Mr. Chairman, our medical schools are straining to increase their enrollments. They will be admitting 30 percent more students this fall than they did in 1963. And they are strained to the breaking point.

At present there are $600 million worth of approved but unfunded applications for the construction of medical and dental teaching facilities. Unless we make a substantial effort to reduce this backlog of expansion projects, we shall be unable to increase our output of health professionals.

And there is another fact to consider. Whether we are for it, or against it, we had better face the fact that some kind of national health insurance program will be facing us within the next 5 or 6 years. The Nation's health care system is inadequate to handle its present burden. Can you imagine how woefully inadequate it will be to meet the needs of that kind of a program even if we budget every dollar that is authorized? We need dramatic action and we need it now. Five years from now we will wish we had adopted these amendments and gone even beyond them.

There seems to be an assumption on the part of some that supporters of this amendment do not care about the Federal budget. The record shows, however, that many of us have tried continually to cut programs that can wait: The SST, the ABM, the space budget, and some parts of foreign aid. I do not apologize for the fact that this amendment asks for an additional $360 million. That is a small fraction of the cost overrun for the C–5A. The moon, superspeed travel, and certain aspects of the foreign aid program can wait, but heart disease, cancer and other diseases do not occur conveniently on a fiscal year basis. They happen every day. If the richest Nation in the world cannot afford to become the healthiest Nation in the world, I do not know who can.

Two weeks ago we overrode the veto of the Hill-Burton authorization bill. All we are asking is that you today put some meaning into that action by voting for the money to finance that override.

(By unanimous consent, Mr. OBEY yielded the remainder of his time to Mr. BOLAND.)

The CHAIRMAN. The Chair recognizes the gentlewoman from Illinois (Mrs. REID).

(By unanimous consent, Mr. GERALD R. FORD and Mr. MICHEL yielded their time to Mrs. REID of Illinois.)

Mrs. REID of Illinois. Mr. Chairman, I rise in opposition to the amendment which would increase appropriations by $360.4 million. As I have pointed out previously along with the other members of my subcommittee we gave all of the items included in the amendment very careful and considerate attention and in almost every instance we have increased the amounts over the President's budget request and provided more money than was available in the 1970 fiscal year. For all health programs, H.R. 18515 will provide a total of $208 million over the budget request and $313 million over the amount available in 1970.

After hearing the testimony and discussing the items in executive session, a majority of our committee felt that the funds we recommended for most of these programs—with the exception of the Hill-Burton program—were all that could be used effectively in this fiscal year. In the case of Hill-Burton hospital construction and modernization, testimony has shown that modernization needs alone could exceed $11 billion. Obviously, it is impossible to provide all of this in a direct-grant program. Therefore, the administration has recommended a new approach of financing by providing interest subsidies. In order to get into this program gradually, our committee added $122.2 million to the direct-grant program while providing $5 million for interest subsidies.

I believe that most of us will agree that all of these health programs have very worthy goals and it would be wonderful if we could proceed to build and modernize all the needed medical facilities and schools at once—as well as provide the needed scholarships and student aid. But, I would remind you once again that in deciding our priorities, significant and overriding points must be weighed. Providing health services is one of the Nation's largest domestic businesses and, even more so than other businesses, it has been hit hard by the effect of inflation. Thus, the importance of curbing inflation must be understood by anyone who sees the dollar spent on such services being continually eroded by inflated costs. We must, therefore, continue to do everything possible to win the battle against inflation and in doing so, we have a responsibility to appropriate funds in ways that will provide the most effective results. In my opinion, we should keep this in mind and, accordingly, vote against this amendment.

MOTION OFFERED BY MR. YATES

Mr. YATES. Mr. Chairman, a parliamentary inquiry.

Is it in order for me to move that the Committee do now rise?

The CHAIRMAN. It is a privileged motion.

Mr. YATES. Mr. Chairman, I move that the Committee do now rise.

The CHAIRMAN. The question is on the motion offered by the gentleman from Illinois.

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. YATES. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. YATES and Mr. FLOOD.

The Committee divided, and the tellers reported that there were—ayes 8, noes 93.

So the motion was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Chairman, I am sure that all the Members of the Committee of the Whole House on the State of the Union are happy that we are coming to the end of this debate on this particular amendment. We have had a rather full debate on the amendment over the past few days.

Mr. Chairman, I was struck by the arguments that were advanced here a moment ago by the distinguished gentleman from California (Mr. Moss) and by the distinguished gentleman from Connecticut (Mr. GIAIMO).

The gentleman from California (Mr. Moss) has served for some 14 years on the Committee on Interstate and Foreign Commerce. That committee is interested in this legislation and in this amendment because it has over the past years passed some of the finest health legislation in the history of the Congress. I look with pride on the other side of the aisle upon the distinguished gentleman from Illinois (Mr. SPRINGER) who has been one of those who has been a leader in some of the great landmark health legislation that has been passed out of this committee and passed by the Congress.

I repeat, I was struck by the arguments of the gentleman from Connecticut (Mr. GIAIMO). Simply stated, his arguments were that we ought to reorder our priorities, and that is what we are doing with this amendment, precisely what we are doing with this amendment. The gentleman indicated, I think with good reason, where money could be taken from other programs—other programs—not from those programs that deal with the health of the people of this Nation.

So, Mr. Chairman, as we come to the close of the debate on this amendment, let me quote from the RECORD of the 88th Congress, the second session, the words are those of our late, beloved, and remarkably able colleague, John E. Fogarty—a giant, as any Member who is serving here today knows, who served with him, can tell you—a giant in the field of Government participation in health.

He pointed out, with some degree of modesty, that he had been intimately involved in the development of the HEW programs over the years. He said, and I quote:

> Time and again, and more often than should have been necessary, I have seen the Congress stepping in—because Congress could not do otherwise—to assure the funds to seize present opportunities—as identified by our science leaders to meet the most urgent of these health needs. Largely because the Congress has had the foresight and good sense to take bold action, these health-related programs have flourished. Their effectiveness and high reputation throughout the world are unequaled in the science area.
>
> All of us—each day—count increasing benefits from these programs. I reiterate my conviction that what has been wrought in this postwar effort, in medical research, will emerge as the most significant federal action of our era.

Mr. Chairman, the action we take today is indeed bold action with which to meet the crisis in health that pervades this land. But this great body has taken this kind of action before. It can with reason and with conviction do so again today by voting for the amendment now before this committee.

Mr. MORSE. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to my colleague, the gentleman from Massachusetts (Mr. MORSE).

Mr. MORSE. Mr. Chairman, I thank the gentleman for yielding. I wonder if the gentleman is aware that this administration has done a remarkable job already in the reallocation of our resources?

As an example, I will cite the fact that while the Department of Defense budget was 45 percent of the overall Government spending in the last year of the Johnson administration, that it is now 37 percent in this year in the Nixon budget.

Mr. BOLAND. In response to the gentleman from Massachusetts, I believe we can say that the fault lies not alone with the Nixon administration, but with past administrations. We are here today to make our own judgments of what ought to be done in this field. I say that this is the way to do it, and I would hope that the gentleman from Massachusetts would support our efforts in this area.

Mr. MORSE. Mr. Chairman, if the gentleman will yield further, I would also point out, because I am sure that my distinguished colleague from Massachusetts is aware of it, that the Government spending on human resources in the last year of the Johnson administration was 32 percent of the total budget, while it will be 41 percent of the Nixon budget in this Congress this year.

Mr. BOLAND. The contention of those who support this amendment is that we are not spending what we ought to be spending in the health area. There is a crisis in health, and this has been the cry not alone of our President, but the cry of the former Secretary Robert E. Finch, and the cry of the Assistant Secretary for Health and Scientific Affairs, Dr. Robert Egeberg.

There is a crisis in health, and this is the way to meet it.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. YATES).

Mr. YATES. Mr. Chairman, just about 1 year ago on July 10, 1969, President Nixon walked into the Rose Garden and before the assembled press said this:

> I realized when the administration came in, in January, that we had a major problem with regard to health care, that the problem was primarily one of enough doctors, the quality of the doctors, enough hospital beds to take care of the massively increasing demands in this field.
>
> The report that I have received from Secretary Finch and Dr. Egeberg indicates that the problem is much greater than I had realized. We face a massive crisis in this area and unless action is taken, both administratively and legislatively, to meet that crisis within the next 2 to 3 years, we will have a breakdown in our medical care system which could have consequences affecting millions of people throughout this country.
>
> I don't think I am overstating the case.

That is what the President said a year ago. "I don't think I am overstating the case." And then, amazingly, Mr. Chairman, he filed a budget that severely underfinanced the health care program, as for example, the Hill-Burton program which was reduced by more than two-thirds of what was appropriated last year. Recommending appropriations which are clearly insufficient is hardly mounting a massive attack on the massive crisis the President spoke about. It is somewhat like throwing a rope 30 feet long to a man who is drowning 50 feet away.

Mr. Chairman, in this year, 1970, medical care is still not available for the people of our country and the committee's increases in the bill were timid for the most part. Timid and less than meaningful. The Boland amendment will take the long step needed to stop the accelerating deterioration of our medical care system.

This country has the brains and the resources to provide the best medical care of any country in the world and we are not doing it. The gap between what we know and what we do is so great that thousands of people die needlessly every year. There is no greater priority than the health of our people and the budget must take that into consideration. The budget must not decide what the needs of the Nation are. The needs of the Nation must govern the budget, and if Federal dollars are to be limited in their allocation, certainly the care of the people of our Nation must come highest in our consideration. I believe there must be an aye vote on the Boland amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. FLOOD) to close debate on the pending amendment.

Mr. FLOOD. Mr. Chairman, in these historic Halls many good men have gone down with the ship. I see here another case.

This bill, with the Boland amendment, would sink this House and would destroy many brave men.

Mr. DULSKI. Mr. Chairman, I rise in support of the health emergency amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

The need for increased appropriations for health is a matter of clear record before both our legislative and appropriative committees.

The package amendment now pending would increase the health appropriation in this bill by $360,454,000.

It covers added institutional support of health schools, loans and traineeships for health profession students, construction of health education facilities, increased funding for the National Heart and Lung Institute.

Also, initial funding for special dental projects, increased funding for hospital construction grants, increased funding for staffing of community mental health centers, and a small increase in the funding for medical libraries.

AID FOR PROFESSIONS

Included in these collective requests are funds for the health professions. I

would call particular attention to the need for providing assistance in connection with the nursing staffs of Veterans' Administration hospitals.

I am a member of the Subcommittee on Hospitals of the Committee on Veterans' Affairs, which has been investigating the hospital staffing situation.

As a result of on-the-spot investigation by myself, as well as hearings before our subcommittee, it is clear that the ratio of nurses to patients in VA hospitals is dangerously low.

The evidence before our committee is that the employee ratio per patient in VA hospitals is running about 1.5 as contrasted with the ratio in civilian hospitals of at least 2.7.

VA BELOW CIVILIAN MINIMUM

During our subcommittee hearings, a witness from a VA hospital in California pointed out that the State minimum licensing criteria for civilian hospitals is a ratio of 2.5. On this basis, the witness said that if the VA hospital was not a Federal institution it would not be licensed to operate in that State.

It is essential that the Federal Government increase its share of assistance for students in the health provisions. This can be done through loans and traineeships. We also must have additional health education facilities.

Without the facilities and the assistance for students the prospect is that the shortage of doctors, nurses, dentists, and other health professionalists is going to increase to a point of peril to our Nation's health.

While I recognize the need for a control on Federal spending, I do not believe that we can justify the meager appropriations which we have been providing in the past for health manpower.

Mr. Chairman, I support vigorously the pending health emergency amendment and urge its adoption.

Mr. PREYER of North Carolina. Mr. Chairman, during my first term in office, I have served on the Interstate and Foreign Commerce Committee, which developed the authorization language for the Health Manpower Act of 1968.

The United States is faced with a critical shortage of health manpower. More than 50,000 additional physicians are needed now. In 1967, we needed 800,000 registered nurses—yet in 1969, the nursing manpower supply was only 700,000. The demand for health professionals is increasing faster than the supply, especially since we, the Congress, recently passed a hospital construction bill to provide more needed hospital beds.

To meet this need, a program of direct loans to students of the health professions was established by us in 1965. Grants are made to the schools of the health professions who then loan the money to the students most in need. Students of medicine, dentistry, osteopathy, optometry, podiatry, pharmacy, and veterinary medicine are eligible. A similar program exists for nursing students.

Despite the students' demonstrated need for and dependence on these loan funds, the administration is requesting only $9,610,000 for nursing students, with a markup to $15,610,000 by the full Appropriations Committee. This figure falls far below the amounts authorized by us under the Health Manpower Act of 1968—$21,000,000—and far below the fiscal year 1971 funds requested by schools of nursing—$27,900,929.

In my own State of North Carolina, the Duke University School of Nursing currently states:

> We receive 175–200 applications for undergraduate study of which we can presently enroll a maximum of 85. Of 303 students in the school, 102 receive financial assistance and the need for aid keeps increasing.

Mr. Chairman, with facts and figures before us, I fully support the Health Emergency Amendment of 1970, and I urge you to do the same.

Mr. COHELAN. Mr. Chairman, the wire services quoted the gentleman from Michigan (Mr. FORD) as citing Mr. YATES of Illinois and Mr. COHELAN of California as the two biggest "spenders" of the House Appropriations Committee.

It is now quite clear that this impulsive attack was an expression of disapproval of the attempts that are being made today to provide adequate health facilities and medical manpower, along with my past efforts in behalf of decent housing for the American people, quality education, and, in general, adequately funding those programs which are designed to improve the quality of life in our cities through those programs which are in desperate need of Federal support.

Such scatter-gun attacks by the administration on big spending will not hide the real issues. An examination of the budget for fiscal year 1971 will make clear that the administration's budget requests for our most important domestic programs were deficient—falling far below the minimal amount necessary for schools, health facilities and manpower, and urban housing.

It is also painfully clear that the administration has made no effort to submit revenue measures designed to alleviate these alleged imbalances and adequately fund our necessary domestic programs. No request for the extension of the surcharge came from the administration. This lack of meaningful revenue measures on the part of the administration was done with the complete knowledge of the budget formulation that the termination of the surtax would remove $10.8 billion from Federal revenues. Also it must be remembered that the President's own economic plan, inadequate though it may be, called for a "cooling off" of the economy. This meant that there would be a reduction in new construction, production, and employment. Thus by the President's own plan it was predictable that tax revenues would fall sharply from last year's figures.

The point is that the administration knew that it would be a budget with a deficit when they formulated it. The administration chose not to ask for the needed revenues which would have helped to offset these financial imbalances. The administration did choose to control—"slash" is a better word—the controllable programs to improve the quality of life in the United States.

I must also note that there has been no discussion by the administration of the two spending categories that have substantially increased the budget outlays over the past few years. The first is in the uncontrollable items such as social security, retirement, medicare, and public assistance.

The estimated increase in uncontrollables from 1970 to 1971 alone is $9.8 billion. I do not specifically object to these expenditures, but merely point out their magnitude in order to gain some perspective on the spending question.

The second category is defense spending. Here we see substantial increases. For example, authorizations for strategic nuclear forces from 1968 to 1971 grew from $16.6 billion to $18 billion. Authorizations for general purpose forces, not including Vietnam, costs grew from $37.5 billion in 1968 to $43.3 billion in 1971. This is a total increase of $7.2 billion, and may I add that it was the Congress that led the way last year in cutting the Department of Defense budget.

Let us look to the comparative figures. On one side we have a growth of $7.2 billion in military spending; yet not one word of caution comes from the White House. Quite the opposite. The administration continually presses forward with programs of dubious value. The ABM is but one example.

On the other side, Congress has been treated to a continual barrage of criticism from the administration for increases over budget requests. But these so-called tremendous increases total a mere $1.884 billion. I want to emphasize that the total increase in educational appropriations and the total suggested increases in health and housing totals less than $2 billion.

I do not want to leave the impression that we have adequately funded these domestic programs. This $1.884 billion increase is only a drop in the bucket compared to the needs in these crucial areas of education, health, and housing. But the real problem is inadequate revenue schemes.

It is instructive to note the magnitude of the total budgetary picture when discussing the questioned congressional action. The budget as submitted foresaw expenditures of $202.2 billion, including cost estimates for a 10-percent social security increase and a $5.2 billion decrease in defense expenditures. On the other side, with the surtax for example, we would have expected revenues of $210.8 billion—leaving a surplus of $8.6 billion.

Why then do we have a deficit? The administration attempts to blame expected deficits on additional expenditures which we see are minimal in relation to the total budgetary picture—$2 billion in a $202.2 billion budget. The answer is clear. The President has refused to suggest or continue adequate revenue producing measures which would have allowed for the increased domestic expenses.

The administration continues to blame the Congress for its own dereliction in the revenue area. Had the surtax been continued the $1.5 billion extra in expenditures resulting from a necessary 15 percent rather than 10 percent increase in social security, as well as the $1.884 billion in additional domestic ex-

penses, could easily have been absorbed in the surplus budget.

Looking at this table, each of us can ask what were the new revenue measures suggested by the administration.

[In billions of dollars]

User transportation charges	0.7
Excise rate extension	.6
Increase in social security	.2
Retirement fund (for new increases)	.1
Total	1.6

Thus, faced with predictable revenue shortfalls—shortfalls built into the Nixon economic plans—the administration did almost nothing to raise new revenues. It became painfully apparent as the revenues from personal income taxes would become offset by increases in unemployment insurance, as corporate taxes fall short of projections because of accelerating recession. It is obvious even to the most casual observer that the highly touted $1.3 billion surplus was just an effort in wish fulfillment and public relations.

According to my information, the Ways and Means Committee has not received official administration proposals for excise tax speedups or an official administration bill for a tax on leaded gasoline. By administration figures, these proposals would add $3 billion to revenues.

The full picture is clearly seen in the following chart:

THE 1971 BUDGET PROBLEM AND HOW IT WAS HANDLED

THE POTENTIAL SURPLUS

Revenues, if calculated for fiscal 1971 at 1969 tax rates (that is, not allowing for the expiration of the tax surcharge), would have been $210.8 billion.

Expenditures, if calculated for fiscal 1971 only on the basis of a 10 percent social security benefit increase, a $5.2 billion military spending cut, and largely uncontrollable increases in civilian spending (including a federal pay raise on July 1, 1970), would have been $202.2 billion.

Hence there would have been a potential *surplus* for program expansion, for tax cuts, or for fiscal policy purposes of $8.6 billion.

HOW THE POTENTIAL SURPLUS BECAME A POTENTIAL DEFICIT

The expiration of the income tax surcharge will result in an estimated revenue loss of $10.8 billion.

The extra 5 percent increase in social security benefits will cost an estimated $1.5 billion.

The total loss of available funds from both these effects will thus be $12.3 billion.

A loss of $12.3 billion in available funds would transform the $8.6 billion potential *surplus* into a potential *deficit* of $3.7 billion.

THE BASIC PROBLEM FORMULATED

Even after a $5.2 billion cut in military spending and without any allowance for program expansion, the budget was threatened with a $3.7 billion deficit. Hence the basic problem became that of turning the deficit into a modest surplus and finding budgetary room for some program expansion to meet urgent needs.

HOW THE ADMINISTRATION HANDLED THE PROBLEM

Six ways were found to reduce expenditures by a total of $7.5 billion.

They were: program reductions, $1.1 billion; postponement of the federal pay raise for six months, $1.2 billion; a reduction in the postal deficit, $0.9 billion; an additional net sale of government mortgages and loans, $2.7 billion; sale of stockpile assets and the Alaska Railroad, $0.8 billion; and transfer of cash royalties from the continental shelf oil escrow account to the Treasury, $0.8 billion.

Three ways were found to increase revenues by a total of $2.1 billion. They were: accelerated tax collections, $1.2 billion; an increase in the social security tax wage base, $0.2 billion; and new user charges, $0.7 billion.

The net effect was to increase available funds by a total of $9.6 billion.

The $9.6 billion increase was used in two ways:

The $3.7 billion potential deficit was converted into a $1.3 billion surplus; this required $5.0 billion.

Existing programs were expanded and new programs were proposed; this required $4.6 billion.

Earlier in this statement and in my remarks made on the floor of the House July 21, I discussed the uncontrollables in the budget. Medicare payments, as one example, increased from the estimated $200 million to $2 billion yearly. This escalatory trend in uncontrollables is not clearly understood by the administration or by the Congress for that matter. One method used by the administration to balance the rise in uncontrollables was an attempted decrease in controllable items. This is an obvious albeit deadly solution for it results in what I call "paralleling" the spending. As budgetary social welfare uncontrollables rose, the administration attempted to cut social welfare controllables. Obviously Congress will not stand for this approach to spending. The domestic programs are acutely underfunded now, and it makes no sense to cut them further because the domestic uncontrollables have expanded beyond expectation. This expansion should be viewed as an indication of the need for more funds and more rational planning, It should not be viewed as an excuse to penalize those whose need is well evidenced.

The administration appears to view the budget as a series of compartments, for example, education, health, military spending, and so forth. Reallocations are made within compartments on a "robbing Peter to pay Paul" basis. This approach is neither fair nor logical. In the short term we must look at the full budget to determine where cuts and additions can be made.

Granted this is difficult as appropriations are considered in the same compartmentalized basis, department by department, agency by agency. They are then voted on a piecemeal basis as they come out of committee. This tends to make for interdepartmental juggling rather than providing a view of the entire structure.

In his budget message, the President did make reference to a macroeconomic approach. He said:

The President's ability to control budget decisions is limited by long-range impact of past decisions as to the nature and dimensions of resource allocation. Budget control can be improved by projecting available resources and potential claims on them. Such projections require assumptions about the future course of economic, legislative, international, and other events and are necessarily rough and arbitrary. Nevertheless, they should be undertaken to present a tentative indication of our future fiscal environment.

This is sound. It expresses general problems in this area.

The President must follow his own dictum, however, for the Congress is and should be willing to gut the essential programs to cut deficits resulting from inattention to new revenue sources and poor administration planning.

Mr. BIAGGI. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) to increase appropriations for health programs under H.R. 18515.

This amendment would provide an additional $104.8 million for institutional support of our medical schools, $100 million for medical training facilities construction, $80 million for Hill-Burton medical facilities construction, $20 million for community mental health staffing, $18.4 million for student loans, $15.7 million for traineeships, and $15 million for the National Heart and Lung Institute, among other things.

It greatly disturbs me when I see public officials from the Chief Executive on down opposing increased funding for the many projects aimed at improving the faltering health services delivery system in this country and increasing research in various health fields.

I am fully aware of the need to control excessive Government spending which feeds inflation, but the Budget Director's slashes should never be permitted to jeopardize the health and well-being of the people of our Nation.

Daily, the testimony concerning the tremendous need for health services among migrant workers pours in. The Hill-Burton program would help build medical facilities in many rural areas to meet the needs of these poor Americans. But the present administration and its supporters in this body would deny the necessary funds for such construction.

And over and over the statisticians point to heart disease and cancer as among the leading causes of death for Americans. Increased funding for the National Heart and Lung Institute would mean that a real cure to these terrible diseases might come about sooner. But the present administration and its supporters in this body would rather buy an SST than the answer to two of our most serious health problems.

And urgent reports are reaching this body of the imminent possibility of many of our leading medical schools closing due to lack of sufficient funds to maintain their operations. This amendment would provide those greatly needed funds and thus protect these important institutions from ruin. But the present administration and its supporters in this body would rather invest in palaces for dictators with misguided foreign aid funds than in the future of our greatly needed medical doctors and nurses.

And all too frequently we hear of growing drug abuse, youth frustration and increasing mental health problems. More mental health centers are needed to meet the growing demands in this area. This amendment would provide the funds necessary to insure adequate staffing to at least keep existing centers open. But this administration and its supporters in this body would rather supply unwanted

and unneeded jets to Taiwan than aid the many suffering mental patients in this country.

What economy is it, I ask, if the patient dies while the doctors quibble over who will pay the bill? Can we afford to count pennies when the health of so many of our citizens, young and old, rich and poor alike is the risk of the ante? What dollar value can one place on the life of a heart attack victim that is lost because researchers lacked the money to cure his disease? Or what is the value of a child's life, lost because no doctors or medical facilities were available to her due to the parsimony of a few politicians?

Mr. Chairman, this measure is properly entitled the emergency health amendment. Our medical schools, hospitals, and medical research institutes are in a crisis. Many Americans can hardly afford to pay for medical services because of the ever-increasing costs. And many more cannot even obtain such services due to a lack of facilities in their area.

I sincerely hope that a majority of my colleagues here today will see the wisdom in providing for at least adequate funding for these programs so vitally necessary to the health of every citizen. I strongly urge the adoption of this amendment and prompt final passage of H.R. 18515.

Mr. STRATTON. Mr. Chairman, I am strongly in support of the emergency health amendment, offered by Mr. BOLAND, to add $360 million to help meet our Nation's grave health crisis.

I flew to Albany, N.Y., this morning to carry out a longstanding commitment to address the Albany Rotary Club on current issues in the Congress. I had planned to return to Washington immediately after that meeting on the 2:10 p.m. plane, so as to be able to vote on the Boland amendment, so urgently needed in the capital district area of New York State.

Unfortunately, due to an emergency collapse of one runway in the Albany county airport, the flight I had been scheduled to take was canceled. I was diverted to a later flight, which arrived, unfortunately, after the crucial teller vote had been cast. As it turned out, of course, my vote would not have been enough to turn the tide, but I am sorry not to have been able to arrive in time to cast that vote, because added funds in the HEW appropriations bill could have meant a great deal in Albany.

We hear the phrase "crisis in health" more and more often today. This is not an empty shibboleth, but rather the naked truth—a harsh reality that affects every American family. Our health care institutions, including medical schools, hospitals, and public clinics, are in a state of financial starvation, and the fiscal 1971 appropriation for the Department of Health, Education, and Welfare does not meet the needs of these institutions. The President has expressed his deep concern for the plight of the health field, but the HEW budget request for fiscal 1971 falls far short of meeting our health care needs. And it is probably true that even if we fund our health care programs to the level of maximum authorization that our health programs will still not be adequate.

Mr. Chairman, I am particularly interested in the health manpower and institutional support sections of the emergency health amendment. There is little doubt that the principal cause of our health crisis is the severe shortage in trained health manpower. The needs in this area grow nearly every day and full funding of the health manpower program is absolutely necessary.

When our country needs 48,000 more doctors, 17,800 more dentists, 150,000 more nurses, and 266,000 more allied health personnel then it is fair to call the present health situation in America severe and unnecessary. It is the responsibility of the Congress to reverse this trend and fund these programs of institutional support to the full amounts authorized.

I understand too that the student loan programs administered under the manpower training programs are in serious difficulty. In 1968, 37 percent of our health professional students received financial aid, but projected figures show that only 14 percent will receive such aid during 1971 under the administration's proposed budget. I believe that all my distinguished colleagues are well aware of the tremendous expense of a medical, dental, or nursing education and the resulting need of financial aid for these students.

Institutional support for medical and nursing schools also falls far below the needs of these schools. In my own area, for example, cuts in Federal aid have severely reduced the effectiveness of several valuable programs and services performed by the Albany Medical College and Albany Medical Center. The importance of these losses to the residents of upstate New York cannot be overemphasized. The situation is exemplified by the decision to eliminate the Clinical Research Center at the College. Fifty percent of the work performed at this research center deals with cancer patients and now, because of a lack of funds, the research center will be phased out of operation. This Boland amendment could rescue the Albany clinical center.

America, then, is faced with a health crisis of major proportions, a crisis that is embarrassing to the United States and uncalled for in light of our great wealth. The time has come now for the Congress to reverse this alarming situation and allocate the funds necessary to start to get our Nation's medical system back on its feet. It is inevitable that some people will get sick, but it is inexcusable and shameful that proper health care cannot be provided to all Americans. No person should have to linger in misery if we have the resources to avoid or at least ease this terrible burden. To do less would be a disgrace. Therefore I trust we can still increase this bill by the amounts contained in the Boland amendment.

Mr. ASHLEY. Mr. Chairman, I support the conference report on Labor-HEW appropriations and the Boland amendment.

The plight of the Nation's medical and allied health professions schools is desperate and deteriorating and the need for more health manpower in my district in Lucas County, Ohio—as well as across the country—in reaching critical proportions. Clearly we cannot leave the sick man to care for himself because we have failed to adequately appropriate funds for health manpower.

In 1968 the Congress called for the critically needed massive increases in health manpower of all kinds and passed a series of laws authorizing funds to assist the schools in meeting the new goals. If national priorities are to be maintained in response to the real needs of our changing society, then clearly Congress must deliver on its promise and fulfill its commitment to making sure that there is enough manpower for every American in need of health care.

In doing this we do not mean to ignore the importance of fiscal responsibility and the need to check inflationary pressures and to achieve price stability. But we must be responsive to this most pressing national need and defer expenditures in other sectors of the economy in which activity can be postponed or eliminated. I would suggest, in the alternative, that the President apply the surgeon's knife to paring such questionable ventures as the ABM, MIRV, NASA, the C–5A transport, the SST and high Southeast Asian expenditures.

The administration's proposed health manpower budget for this year tragically underfunds the programs Congress established. This has subjected health professional training institutions to virtually unbearable pressures. For the most part these institutions have not been able to increase the number of their graduates as rapidly as they need to, and, more threateningly, a number of these institutions may, because of financial distress, no longer be able to continue operating.

Student tuition and fees have already been increased beyond the means of many students, and this has overstrained available health profession student loan and scholarship funds. For fiscal 1971, for example, the health professions schools have requested loan funds of $61 million, while the administration's budget proposal is $21.6 million. The amount authorized by Congress is $56 million. In the meantime, the percent of students assisted in the health professions other than nursing, for example, will have declined from 36 percent in 1968 and 1969 to only 13 percent in 1971 under the proposed budget.

The health manpower programs are essential to our achievement of better health for generations to come. Our investment in them reaps tremendous rewards for the American people and will be repaid untold times in the years ahead. Mr. Chairman, Congress must meet its obligation to the priorities it has already so correctly established, by fully funding the authorizations for health manpower programs.

Mr. RANDALL. Mr. Chairman, I will support the emergency health amendment offered by the gentleman from Massachusetts (Mr. BOLAND) to H.R. 18515, being the appropriations bill for the Department of Health, Education, and Welfare for fiscal year 1971.

Of course, we have heard from the critics of this amendment that it is misnamed and there is no real emergency. That is very easy to say. The true

facts are that there is a very real existing crisis in health care. The word emergency is not just an empty phrase, but a reality. This appropriation bill, H.R. 18515 falls far short of the actual need. As a matter of fact we will be short of the actual need if we funded the maximum authorization which was provided for under the authorization bill.

Now, Mr. Chairman, in this amendment we are really considering two major programs. One is the health manpower program, which, in general, means the training of doctors, dentists, nurses, and allied health personnel. Second is the Hill-Burton program which, as everyone in America should know, provides grants for medical facilities. In recent years Hill-Burton has been a combined modernization and construction program.

Those of us who consider the support of this amendment are mindful of the suggestion by the present administration that the result of the amendment will be inflationary. The valid answer to these critics is that one of the worst inflationary pressures in our entire economy comes from the low supply of health care manpower and hospital facilities. It is the medical costs spiral which has been skyrocketing worst of all. The money in this amendment, while contended to be inflationary, will in fact supply sorely needed trained health manpower and provide for the modernization and construction of new care facilities and thus tend to be a contribution to controlling inflation by reducing the medical cost increases which are certainly at present the most inflationary of anything in our entire economy.

Mr. Chairman, if statistics mean anything we are told we need 40,000 more doctors, 17,800 more dentists, 150,000 more nurses, and 266,000 more allied health personnel. A rather reliable source of statistics is the Public Health Service which points out that unless we make up this gap now, the needs in 10 years by 1980 will be doubled and the shortage will be twice the figures just enumerated. Up to now, we have made no real effort toward increasing our supply of doctors unless it would happen to be the relaxation of immigration quotas to bring in a few foreign doctors. Our medical schools are in financial difficulties. In my own State of Missouri a dental school at St. Louis has closed its doors.

In the field of health manpower training the student loan program is woefully short. Two or 3 years ago over 35 percent of health professional students could receive financial aid. For fiscal year 1971 under the administration budget only 14 percent could receive aid. Under the committee appropriations only about 24 percent could receive aid.

I suppose all of us to some degree, more or less, are provincial and parochial. In Kansas City, Mo., a portion of which it is my privilege to represent, there is an area we call Hospital Hill. We have two present and pressing problems on the hill. The long-cherished dream of having a teaching hospital in Kansas City was recently realized when the University of Missouri medical school was established at Kansas City. Our hard-pressed State of Missouri managed to scrape together over $4 million in State money to be contributed toward the building of this medical school. That institution presently has an application to health manpower for $9 million. Unless the emergency health amendment is adopted this money may not be available.

Also on this same Hospital Hill in Kansas City there is proposed to be built a teaching hospital in addition to the medical school. The good people of Jackson County have voted county bonds; $13 million of this money has been set aside for construction of this hospital. An additional $10 million in Federal funds is sorely needed now. An application is pending for that amount of money from Federal Health Manpower. These figures taken alone may not in themselves be alarming, but the frightening thing is that the present schedule calls for the medical school to accept its first class in September of 1971. It is anticipated that without some construction either this year or next this class will have to use facilities scattered in several area hospitals all over the city.

It was my privilege to talk to a leader in the health area in Kansas City, Homer Wadsworth, who characterized the importance of this emergency health amendment to the Kansas City area in these words:

> This is as important a thing as going on out here anywhere. The new medical school and hospital will give us a chance to build a network of facilities to serve the medical needs of the entire western half of Missouri. At the same time we can build a great institution to train and increase the supply of sorely needed doctors and nurses, not only for our area but the entire Middlewest.

Awhile back we all went through the exercise of first passing the Hill-Burton authorization bill and then repassing it over the Presidential veto. Two-thirds of the Members of this House supported the effort to override the veto. In effect, those who so voted said they were in favor of $317 million for construction grants in fiscal year 1971. The committee bill before us today contains only $172 million for Hill-Burton construction. Even the health emergency amendment offered by Mr. BOLAND, which added $80 million, produced a total of $252 million or $65 million short of what two-thirds of the Members of the Congress said they wanted when they overrode the Presidential veto.

The question can appropriately be asked, Were those voting to pass the authorization bill over the Presidential veto engaged in an exercise in futility? They were unless appropriations are provided pursuant to that authorization.

Inflation caused by Federal expenditures seems to be the central argument concerning this amendment. For my part, I am ready to meet that argument head on with this thought: The cost of hospital care continues to skyrocket. There are millions of middle-class, middle-income people who are faced with not simply a rise in cost of living but the way it is now when they get sick not only do they have a particular disease to try to cure but they are also faced with the specter of another dreaded disease to plague them and that is of financial disaster to the point of bankruptcy because they cannot pay for their hospital care.

Repeating, adequate funding of this kind is spending in the investment of the health of America. Once again, expenditures of this kind may be said to be inflationary but certainly if they can contribute toward holding down skyrocketing costs of hospital care, they deserve our support.

Mr. OTTINGER. Mr. Chairman, I rise to urge my colleagues to vote in favor of the emergency health amendment to the 1971 Labor-HEW appropriation.

I am proud to be a sponsor of the amendment, which is supported by the Association of American Medical Colleges, the American Public Health Association, the American Nurse's Association, the American Dental Association, the Ad Hoc Committee on the Nation's Health Crisis, the Urban Coalition, the Center for Community Affairs, the AFL–CIO, the UAW, and concerned health professionals and private citizens throughout the country.

The emergency health amendment would increase the funds in this bill by $360.5 million, providing absolutely essential support for medical manpower institutional support and student loans, health education facilities construction, Hill-Burton grants, community mental health centers, the National Heart and Lung Institute, pilot dental care projects for needy children, and grants to medical school libraries. Rather than inflate the Federal budget for fiscal 1971, this amendment will serve only to bring the budget request up to 1970 funding levels.

Mr. Chairman, we cannot afford to diminish in any way the Federal commitment to such vital health programs. As our population grows, the need for facilities, health services, and medical manpower has reached crisis proportions. Millions of Americans are doing without essential health care, and it is incumbent upon us to upgrade and expand Government activity before the delivery of health services falls behind the demand irretrievably. It is unconscionable for the administration to forward to the Congress such a minimal budget request, and while the Appropriations committee has moved in the right direction by adding $134.1 million for HEW health and welfare programs, this increase is far short of the goal we should set for ourselves. Even with passage of the emergency health amendment we will still be $65.3 million below the authorization for Hill-Burton construction grants, but it is unthinkable for us to maintain this program at the low levels of the 1970 appropriation.

This is no time to be standing still, Mr. Chairman. The need is acute, and the American people are demanding—and deserve—an acounting. For the sake of all those who are suffering from our shamefully inadequate health services today, and for those generations to come. we have a deep moral obligation to move forward and provide health services for our citizens concomitant with our position of world leadership in other areas. We cannot postpone this important de-

cision, and I urge an overwhelming vote in favor of the Emergency Health Amendment today as evidence of our concern for the quality of life for all Americans.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

Mr. YATES. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. BOLAND and Mr. FLOOD.

The Committee divided, and the tellers reported that there were—ayes 103, noes 151.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SOCIAL AND REHABILITATION SERVICE

GRANTS TO STATES FOR PUBLIC ASSISTANCE

For carrying out, except as otherwise provided, titles I, IV, VII, X, XI, XIV, XVI and XIX of the Social Security Act, and the Act of July 5, 1960 (24 U.S.C. ch. 9), $8,651,950,000, of which $46,000,000 shall be for child welfare services under Part B of title IV, and $3,000,000 shall be for grants under section 707 of the Social Security Act: *Provided*, That such amounts as may be necessary for locating parents, as authorized in section 410 of the Social Security Act, may be transferred to the Secretary of the Treasury.

AMENDMENT OFFERED BY MR. BURKE OF MASSACHUSETTS

Mr. BURKE of Massachusetts. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BURKE of Massachusetts: page 22, lines 24 and 25, after "(24 U.S.C. ch. 9)", strike out "$8,651,950,000, of which $46,000,000" and insert "$8,715,950,000, of which $110,000,000",

Mr. BURKE of Massachusetts. Mr. Chairman, I approach this microphone with some misapprehension in view of what has just taken place. However, this is a subject matter in which I have great interest. This amendment should be known as the John Fogarty amendment, because several years ago John Fogarty, who was chairman of this subcommittee, expressed his deep interest in the subject matter, because of the failure of the Federal Government to take its moral part in contributing toward this program in an adequate way.

In fact, the day before John Fogarty passed away, I had a conversation with him out here in the section of the House known as the Cherokee Strip. He said, "Jim, you get the authorization, and I will get the funds when it gets to the Appropriations Committee."

After a great fight in the House Ways and Means Committee, I was able to prevail and have the authorization raised from $44 million up to $110 million annually.

The interesting part is that this appropriation deals with the children under child welfare. These children are the most underprivileged children in America. They are the children without parents and without relatives to take care of them. They are in the hands of the State governments and private agencies on whom they depend for their care.

Despite the fact that the Federal Government contributes from 75 to 83 percent for children under the AFDC program—mind you, those children have at least a mother or some relative to take care of them—these children, who have no political voice, no political muscle, who are wards of the State with no voice whatsoever, the voiceless children of America, have been unable to bring about any increase in this appropriation.

This is a reasonable appropriation. I realize that we are faced with many problems. Under the Johnson administration they promised me they would seek additional funds for this item. Under the Nixon administration they promised me they would seek additional appropriations.

This appropriation of $46 million has remained static not only for the present fiscal year but also for the past 2 fiscal years.

Mr. BURTON of California. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman from California.

Mr. BURTON of California. I should like to commend the gentleman in the well, our distinguished colleague, the gentleman from Massachusetts (Mr. BURKE), for his leadership in this area and for his very important effort today to see that these children, children without parents, are given some opportunity to find their way to productive and useful and loving lives.

The proposed increase is very modest, but it is a vital one if we are to give real meaning to the lives of these children who face perhaps a lifetime of sorrow.

I sincerely hope that our colleagues will join the distinguished gentleman from Massachusetts and adopt this amendment to the pending legislation.

Mr. BURKE of Massachusetts. I thank the gentleman.

I should like to point out that as of March 1968 an estimated 644,900 children received services through State and local public child welfare agencies as compared to 607,000 in March of 1967. The total amount of children coming under this program is increasing at the rate of 6 or 7 or 8 percent a year, yet this dollar amount has remained static for 3 years.

I realize that the chairman of the subcommittee, who is in charge of this appropriation bill, has the most difficult job in the U.S. Congress. I realize that he is a man of great heart and great compassion. But I recognize that there has been a failure some place along the line. I do not assess this to him, because of his many duties and the many hours he has to spend with this gigantic appropriation bill, dealing with over $18 billion.

I am using this means here to try to bring to the gentleman's attention and to the attention of the members of his subcommittee a problem which lies within this area. These are children of child welfare, with no parents, and the Federal Government contributes an average of only 6 percent for their upkeep, while for other children it contributes from 75 to 83 percent. It is unconscionable that this great Government of ours does not do more for them.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

(By unanimous consent, Mr. BURKE of Massachusetts was allowed to proceed for 2 additional minutes.)

Mr. FLOOD. Mr. Chairman, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to my friend from Pennsylvania, the chairman of the subcommittee.

Mr. FLOOD. Mr. Chairman, I was about to rise—I did rise, as a matter of fact—to oppose the amendment. I suggest that my friend from Massachusetts withdraw his amendment, and then perhaps he could ask me certain questions in regard to the bill.

Mr. BURKE of Massachusetts. I will ask the chairman a question.

Mr. FLOOD. The gentleman will withdraw the amendment?

Mr. BURKE of Massachusetts. If I withdraw the amendment——

Mr. FLOOD. If and when you do?

Mr. BURKE of Massachusetts. I want to apply a little contingency here.

Mr. FLOOD. Why not?

Mr. BURKE of Massachusetts. I realize the hour is getting late.

If I could have the assurance of the gentleman from Pennsylvania that he will press the administration and the Department of Health, Education, and Welfare in this particular problem, if he can convince them, and if we can get the backing of the administration on increased appropriations here, whereby we can bring up the level of care for child welfare—if he can give me that assurance, that before the supplemental budget is passed there will be some action taken by his committee to have a little dialog with the agency involved, to see if we cannot get some funds into this particular item. I would make a move to withdraw the amendment.

May I have that real firm assurance on his part?

Mr. FLOOD. You have that assurance.

Mr. BURKE of Masachusetts. Now, if I can get the assurance of some of your colleagues on the committee, that would help.

Mr. Chairman, I will comply. I am a realist. I know that if we had won the amendment here today, there would be nothing in there to compel the administration to spend the money, and I would rather have the backing of the administration and the committee in its entirety so that when funds are appropriated they will be expended.

Mr. FLOOD. For the purposes of this debate you have the assurance of the committee.

Mr. BURKE of Massachusetts. Thank you.

Mr. Chairman, I ask unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

Mr. O'NEILL of Massachusetts. Mr. Chairman, reserving the right to object, I would like to know if that colloquy we just heard is negotiation, arbitration, or are we writing it officially into the record?

Mr. BURKE of Massachusetts. Mr. Chairman, I would like to answer my good friend and colleague from Massachusetts, because he was a former speaker of the Massachusetts House. He and I understand legislation, and we understand how it can be brought about.

Mr. O'NEILL of Massachusetts. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts (Mr. BURKE)?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

OFFICE OF ECONOMIC OPPORTUNITY

ECONOMIC OPPORTUNITY PROGRAM

For expenses necessary to carry out the provisions of the Economic Opportunity Act of 1964 (Public Law 88-452, approved August 20, 1964), as amended, $2,046,200,000, plus reimbursements: *Provided*, That this appropriation shall be available for transfers to the economic opportunity loan fund for loans under title III, and amounts so transferred shall remain available until expended: *Provided further*, That this appropriation shall be available for the purchase and hire of passenger motor vehicles, and for construction, alteration, and repair of buildings and other facilities, as authorized by section 602 of the Economic Opportunity Act of 1964, and for purchase of real property for training centers: *Provided further*, That this appropriation shall not be available for contracts under titles I, II, V, VI, and VIII extending for more than twenty-four months: *Provided further*, That no part of the funds appropriated in this paragraph shall be available for any grant until the Director has determined that the grantee is qualified to administer the funds and programs involved in the proposed grant: *Provided further*, That all grant agreements shall provide that the General Accounting Office shall have access to the records of the grantee which bear exclusively upon the Federal grant: *Provided further*, That those provisions of the Economic Opportunity Amendments of 1967 and 1969 that set mandatory funding levels shall not be effective during the fiscal year ending June 30, 1971.

Mr. JONAS. Mr. Chairman, I offer an amendment.

POINT OF ORDER

Mr. PERKINS. Mr. Chairman, I was seeking recognition in order to make a point of order prior to the time the gentleman from North Carolina offered his amendment.

The CHAIRMAN. The Chair will entertain the point of order, but the Chair is following the custom of recognizing members on the committee. However, it is in order to make a point of order. The gentleman will state his point of order.

Mr. PERKINS. Mr. Chairman, I make a point of order against the language beginning on page 38, line 25, and on page 39 through line 3. The language reads:

Provided further, That those provisions of the Economic Opportunity Amendments of 1967 and 1969 that set mandatory funding levels shall not be effective during the fiscal year ending June 30, 1971.

Mr. Chairman, this is legislation in an appropriation bill and sets aside all the earmarking that we provided for in the Economic Opportunity Authorization Act.

The CHAIRMAN. Does the gentleman from Pennsylvania desire to be heard on the point of order?

Mr. FLOOD. Mr. Chairman, we concede the point of order.

The CHAIRMAN. The point of order is conceded and the Chair therefore sustains the point of order.

POINT OF ORDER

Mr. HALL. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HALL. Mr. Chairman, I make a further point of order under this title and under the heading "Office of Economic Opportunity," on page 38, lines 1 through 25, including the colon after the word "grant", predicated upon the fact that this is further legislation in an appropriation bill and that it involves specifically, Mr. Chairman, the phrase on line 14 "and for purchase of real property for training centers:" and other legislation language which is foreign to an appropriation bill.

Mr. Chairman, I will say further that the point of order is not waived by House Resolution 1151 which, of course, was changed by unanimous consent on the House floor to include all points of order against appropriations carried in the bill which are not yet authorized by law are hereby waived.

Mr. Chairman, this is in specific violation of section 602 of the Economic Opportunity Act of 1964, which is contained in the bill, page 38, line 13, which act, according to 42 United States Code, referring specifically to section 602, section 2914 in no place allows for acquisition of land, although it does provide for construction repairs and capital improvements.

For all of these considerations, it is my firm belief that the remainder of this section of the bill under consideration should be stricken, and that the point of order should stand.

The CHAIRMAN. Does the gentleman from Pennsylvania desire to be heard on the point of order?

Mr. FLOOD. Yes, Mr. Chairman.

Mr. Chairman, as usual I am confused. We have just conceded to the point of order of the gentleman from Kentucky (Mr. PERKINS). I have before me page 38 of the bill. I am looking at line 11 down to line 15. That we have conceded. I have not the faintest idea beyond that of what is in doubt. This must be what my friend, the gentleman from Missouri, has in mind. I am sure it is, and we have conceded to the point of order raised by the gentleman from Kentucky (Mr. PERKINS).

We have no quarrel. But to this specific point, for that reason, of course, I answer, and I repeat for the purpose of clarity that we have conceded precisely the thing which my friend, the gentleman from Missouri (Mr. HALL) has in mind.

I direct the attention of the gentleman to line 11, beginning there, down to the end of the word "centers," and the colon, on line 15.

The gentleman could not possibly have anything else in mind in the point of order, because it could not be.

The CHAIRMAN. As the Chair understands it, the gentleman from Missouri (Mr. HALL), has made his point of order against all language from and including lines 1 to 25 on page 38. Unless the chairman of the committee can cite authorization language, particularly for the language "and for the purchase of real property for training centers" which the gentleman from Missouri has specified, the Chair is ready to rule.

Mr. PERKINS. Mr. Chairman, may I be heard on the point of order?

The CHAIRMAN. The gentleman from Kentucky will be heard.

Mr. PERKINS. Mr. Chairman, if I understand the point of order raised by the gentleman from Missouri, the gentleman moved to strike the language on page 38 from what line through what line?

Mr. HALL. The Chair has just repeated it. Line 1, including the title and the heading, down through the colon following the word "grant."

Mr. PERKINS. Mr. Chairman, if I may be heard further, lines 1 through 5 including the amount authorized and appropriated, $2,046,200,000, follows the language in the authorization bill. We do have some new language commencing on lines 14 through 15 that is not in the authorization bill presently, but this is the language that has been carried on previous appropriation bills. The language that I specifically refer to that is not in the authorization bill is on line 14 after "1964," commencing with "and for purchase of real property for training centers."

Now, this language is not in the authorization bill.

The language commencing on line 18 and the rest of the paragraph down to line 21 is language on an appropriation bill, in my judgment, because there is nothing in the authorization bill. But we certainly do not want the amount that is appropriated for the economic opportunity act stricken from this bill. It is in strict compliance with the authorization amendment.

The CHAIRMAN. The Chair is ready to rule.

There are ample precedents for ruling a complete paragraph out of order, if any part of that paragraph is out of order. The gentleman from Kentucky has conceded that part of it is not in order, and therefore the Chair sustains the point of order made by the gentleman from Missouri (Mr. HALL).

AMENDMENT OFFERED BY MR. MICHEL

Mr. MICHEL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MICHEL: on page 38, line 1, insert the following:

OFFICE OF ECONOMIC OPPORTUNITY

ECONOMIC OPPORTUNITY PROGRAM

For expenses necessary to carry out the provisions of the Economic Opportunity Act of 1964 (Public Law 88-452, approved August 20, 1964), as amended, $2,046,200,000, plus reimbursements: *Provided*, That this appropriation shall be available for transfers to the economic opportunity loan fund for loans under title III, and amounts so transferred shall remain available until expended: *Provided further*, That this appropriation shall be available for the purchase and hire of passenger motor vehicles, and for construction, alteration, and repair of buildings and other facilities, as authorized by section 602 of the Economic Opportunity Act of 1964: *Provided further*, That this appropriation shall not be available for contracts under titles I, II, V, VI, and VIII extending for more than

twenty-four months: *Provided further,* That no part of the funds appropriated in this paragraph shall be available for any grant until the Director has determined that the grantee is qualified to administer the funds and programs involved in the proposed grant: *Provided further,* That all grant agreements shall provide that the General Accounting Office shall have access to the records of the grantee which bear exclusively upon the Federal grant.

Mr. MICHEL (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read.

Mr. PERKINS. Well, let us see what you have in there first.

Mr. MICHEL. If the gentleman will withhold for a moment, I can explain it very simply.

All that I have done in my amendment is to strike out the words beginning on page 38, line 14, "and for purchase of real property for training centers:" and left the balance of the page precisely as it is, except down on line 25, after the word "grant" there will be a period, and the last part of that sentence will be stricken.

Mr. PERKINS. I thank the gentleman for his explanation. His amendment is acceptable to me.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois (Mr. MICHEL) to dispense with the further reading of the amendment?

There was no objection.

Mr. HALL. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state the point of order.

Mr. HALL. Mr. Chairman, the point of order against the amendment is that all of the language to which the amendment addresses itself on page 38 of the bill, H.R. 18515, has been stricken.

Mr. Chairman, there is no way that we can amend something that is not before the House.

The CHAIRMAN. The gentleman from Illinois (Mr. MICHEL) has offered a separate amendment to insert a new paragraph, and the amendment is in order.

The gentleman from Illinois (Mr. MICHEL) is recognized for 5 minutes in support of his amendment.

Mr. MICHEL. Mr. Chairman, as I understood the colloquy of the gentleman from Missouri when he was making his point of order, he had specific reference to lines 14 and 15, which I deleted in my amendment.

Now over and above that, the last sentence on line 25, page 38, "*Provided further,* That those provisions," inasmuch as that was the language which he cited as being subject to a point of order, I of course offered the amendment deleting that objectionable phrase and I submit that the balance of the page is what has traditionally been carried in the OEO appropriation bill.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman.

The CHAIRMAN. The Chair will state that it is too late to make a point of order, but the Chair will hear the gentleman.

Mr. HALL. I believe the Chair cannot avoid it, inasmuch as the gentleman has the time and he has yielded to me. I appreciate the Chair's statement. I, too, know that it is too late to make an additional point of order. I simply want to raise a point, and I appreciate the gentleman yielding because I know the last thing he intends to do is to put words in my mouth.

Actually the Chair would confirm the fact that I cited the phrase "and for purchase of real property for training centers" as an example only of unauthorized legislation in this body. If one would want to take the further proviso beginning on line 18, neither is this authorized legislation. Neither is there any other authorized legislation in this area. For this reason it was all stricken. For this reason the gentleman's amendment should be voted down.

The CHAIRMAN. Does any Member wish to be heard in opposition to the amendment? If not, the Chair will put the question.

The question is on the amendment offered by the gentleman from Illinois (Mr. MICHEL).

The question was taken; and on a division (demanded by Mr. HALL) there were—ayes 99, noes 31.

So the amendment was agreed to.

The CHAIRMAN. For what purpose does the gentleman from Texas rise?

Mr. MAHON. Mr. Chairman, I have an amendment at the desk.

The CHAIRMAN. The Clerk will report the amendment.

PARLIAMENTARY INQUIRY

Mr. JONAS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. JONAS. May I respectfully remind the Chair that I was recognized, and that the Chair allowed a point of order to intervene only, and I had been recognized. The Chair ruled that since a point of order had been made, the Chair would dispose of the point of order first.

The CHAIRMAN. The Chair respectfully states that the point of order did intervene following the gentleman's recognition. The Chair intends to recognize members of the committee in the order of their seniority. The Chair, therefore, recognized the gentleman from Texas. The Chair will later recognize the gentleman from North Carolina.

Mr. MICHEL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MICHEL. Did the Clerk read through the section concluding with line 3, page 39?

The CHAIRMAN. It is the understanding of the Chair that he did.

Mr. JONAS. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. JONAS. I respectfully ask the Chair to rule that my amendment does precede the amendment that will be offered by the gentleman from Texas. My amendment goes to line 5, page 38, and my information is that the amendment to be offered by the gentleman from Texas comes at a later point in the paragraph.

The CHAIRMAN. A whole paragraph is open to amendment at the same time. Therefore, the line does not determine the order of the amendment.

Mr. O'HARA. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. O'HARA. As I understand the situation, all the language on page 38 and the first three lines on page 39 were stricken under a point of order.

The CHAIRMAN. The gentleman is correct.

Mr. O'HARA. At that point, following that ruling of the Chair, the gentleman from Illinois (Mr. MICHEL) offered an amendment to the bill which restored a good part of that language.

Is it not correct, Mr. Chairman, that if anyone wanted to amend the langauge of the Michel amendment, he should have offered his amendment while the Michel amendment was pending?

The CHAIRMAN. The gentleman is correct.

Does the gentleman from Texas offer an amendment?

AMENDMENT OFFERED BY MR. MAHON

Mr. MAHON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MAHON: After the colon on page 38, line 25, insert the following:

"*Provided further,* That of the sums appropriated under this Act not more than $33 Million shall be spent for the purpose of carrying out programs under section 222 (a) (5), not more than $4,000,000 shall be spent for the purpose of carrying out programs under section 222(a)(8), not more than $3,000,000 shall be spent for the purpose of carrying out programs under Sec. 222(a)(9), and not more than $5,000,000 shall be spent for the purpose of carrying out programs under part A of title III."

POINT OF ORDER

Mr. O'HARA. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. O'HARA. Mr. Chairman, I make the point of order that the amendment comes too late. It should properly have been an amendment to the amendment offered by the gentleman from Illinois, Mr. MICHEL. It now comes too late.

The CHAIRMAN. Does the gentleman from Texas desire to be heard on the point of order?

Mr. MICHEL. Mr. Chairman, I would like to be heard on the point of order. It would seem to me, if I understand the language of the gentleman from Texas, it is a new paragraph. It would not come under but would follow the text of my amendment which I offered.

The CHAIRMAN. The Chair does not understand it in that light. The amendment offered by the gentleman from Texas is a continuation of and is an addition to the amendment just agreed to and is in the form of a proviso and is not in the form of a paragraph or new section to the bill.

Mr. MAHON. Mr. Chairman, I ask unanimous consent that I may modify the amendment. I ask that it be an amendment which shall be inserted at the be-

ginning of page 39, as a separate paragraph.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. O'HARA. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Chair must rule the amendment offered by the gentleman from Texas is out of order.

The Clerk will read.

The Clerk read as follows:

SEC. 408. The Secretary of Labor and the Secretary of Health, Education, and Welfare are authorized to transfer unexpended balances of prior appropriations to accounts corresponding to current appropriations provided in this Act: *Provided*, That such transferred balances are used for the same purpose, and for the same periods of time, for which they were originally appropriated.

Mr. GUDE. Mr. Chairman, I want to commend the committee for its usual thorough review on the HEW appropriations bill, and to single out for special praise the members of the Subcommittee on Health, Education, and Welfare. Recommending funding levels for so many worthy programs in a period of budgetary constraint is surely one of the hardest jobs in the Congress. Our thanks go to the chairman, the gentleman from Pennsylvania (Mr. FLOOD), the ranking subcommittee member, the gentleman from Illinois (Mr. MICHEL), the gentleman from Kentucky (Mr. NATCHER), the gentleman from Iowa (Mr. SMITH), the gentleman from Missouri (Mr. HULL), the gentleman from Texas (Mr. CASEY), the gentleman from Kansas (Mr. SHRIVER), and the gentlewoman from Illinois (Mrs. REID).

I am gratified by the committee's action in adding $92 million for the National Institutes of Health. This action is both hardheaded and courageous. It is hardheaded because the facts show that we are losing ground in medical research because appropriations are not even meeting the rising costs of existing programs. We cannot afford to scrap programs once begun and to risk the dismantling of research teams whose work is a matter of life and death for millions of Americans. I am relieved to see that $25 million of the increase is for cancer research. This mysterious and dreadful disease strikes two out of three American families. The Federal share of cancer research has amounted to 80 percent of total expenditures, and due to rising costs, effective dollars spent on cancer research in fiscal 1970 are only about two-thirds what they were in 1966. The committee's action in the field of research will help to reverse this disheartening trend.

The committee's action is courageous because it is a bold assertion that health is perhaps our highest human priority. Diseases such as cancer are greater killers than war. Debilitating and crippling illnesses make the enjoyment of a full life impossible for many Americans. And American achievements in medical research are a primary source of our prestige as a Nation abroad.

We must reduce Government spending in the many programs which do not affect the well-being of millions of Americans, and do not signal our concern for human life to millions abroad. Let us continue to work to put first things first.

Mr. LEGGETT. Mr. Chairman, I want to take this time at the outset to congratulate the committee on an outstanding bill in the labor, health and welfare subject areas.

As the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. FLOOD), has indicated, $2.3 billion in excess of last year's budget, a total bill of $18,824,000,000, certainly cannot be sneezed at. I want to thank the chairman of the committee and the committee particularly for augmenting the bill in the amount of $2.7 million for health manpower assistance for formula grants for schools of veterinary medicine. The administration proposed to totally cut these funds and I agree with the committee. As I testified before the committee, there is little reason to discriminate in this important subject area.

In addition, I commend the committee for the augmentation in resources for the animal resources program. As the committee indicates, this program has deteriorated from $15.1 million in 1969 to $12.5 million requested in this year's budget by the administration. The committee has responded with a $2½ million augmentation restoring funds to the $15 million 1969 level, an increase of $800,000 over last year's program.

Being very health conscious and while I appreciate the great work done by the committee, I certainly must support further amendments of my colleagues, the gentleman from Illinois (Mr. YATES) and the gentleman from California (Mr. COHELAN) to further liberalize spending in these important subject areas.

Mr. Chairman, money may not be everything, if one has enough of it. If one does not—well, to take one of many examples, there are perhaps 5,500 Americans who are currently in the process of dying because they cannot afford an artificial kidney machine. This is more than five times the number of the lucky few who get the machines.

Why should this be? Why should American citizens be forced to die because they cannot lay out $20,000 for a machine? We have spent billions to put men on the moon; we eagerly set up crash programs for every weapons system we conceivably need and many we do not. But when we turn to the health of our citizens, we suddenly become cost conscious.

Let us look at it another way. The most significant performance indexes of a country's health programs are life expectancy and infant survival. It has been many years since the United States ranked in the top 10 by either of these measures.

Why should this be? Is there any conceivable excuse for it? We are the richest country in the world. We have the biggest gross national product and the highest per capita income. Why do we not have the best medical care in the world?

We have two problems.

First. Medical care is becoming astronomically expensive. We must think of perhaps doing something along the lines of a compulsory health insurance plan or a Kaiser-Permanente-type prepaid group practice plan. Either way, the Government is going to have to subsidize the premiums for those who cannot pay. Senator KENNEDY, the United Auto Workers, and others have recently made some excellent proposals we will need to consider very carefully.

The second problem, to which the emergency health amendment addresses itself, lies in the fact that our health programs would be inadequate to service all our citizens, even if there were no cost problem. We have a shortage of buildings and equipment. But more urgently, we have a shortage of trained people.

The health manpower shortage is severe at present, and it is going to get a lot worse if we don't get on the stick. If present trends continue, in 10 years we will be short 26,000 doctors, 56,000 dentists, 210,000 nurses, and 432,000 "allied health professionals"—veterinarians, pharmacists, optometrists, and so forth.

The proposals of the administration can best be described as not very benign neglect. To cite one of many possible examples, where schools of medicine, dentistry, veterinary medicine, optometry, and so forth, requested $43 million in student loan funds and we authorized $35 million, the administration budgeted $12 million. The Vice President once expressed concern at the thought of being operated on by a surgeon who entered medical school under a disadvantaged-minority program. If we follow his administration's recommendations, he could some day find himself with no surgeon at all.

The emergency health amendment is no cureall. It is not enough. But it will help considerably. It will cost about one-third as much as a single Safeguard ABM complex, and it will go us a heck of a lot more good.

Mr. HUNGATE. Mr. Chairman, in the Labor-Health, Education, and Welfare appropriations bill for fiscal year 1971, two institutions of medical science are deserving of our attention and support: medical schools and community mental health centers.

Sixty-one out of one hundred seven medical schools have applied for grants on the basis of financial distress. Many medical schools are threatened with closing if they cannot obtain special funding. The critical needs of these schools must be met.

The budget includes $60,100,000 for staffing grants for community mental health centers. The committee has added $20,000,000 to the bill for staffing grants for the centers. The amount requested by the budget would not even enable the Health Services and Mental Health Administration to continue obligations on staffing grants already initiated, some witnesses have testified.

One example of a center desperately in need of a staffing grant is the East Central Missouri Mental Health Center, in Mexico, Mo. The center serves a six-county area, nearly 10,000 people. I am advised that the center has a 21-in-patient capacity and the staff sees over 150 people on a regular outpatient basis. In the first 4 months of this year, the center lost in excess of $30,000, and their current monthly losses are running

$8,000. With reference to the East Central Missouri Mental Health Center, Dr. Woodrow Lee, administrator of the Audrain, Mo., hospital says:

Without immediate support from Federal staffing grants, we will not be able to survive.

With the critical shortages we face in medical manpower and hospital space, I recommend the full authorized funding of all vital programs and support for the emergency health amendment.

Mr. YATES. Mr. Chairman, little has been said in the debate about the need for dental research and dental care. This is unfortunate. At long last, there have been breakthroughs in thwarting caries with its attendant pain and destruction. Moreover, 15,000,000 children in our country have never had the care of a dentist, a condition that must be corrected.

The American people pay out of their pockets each year for dental care more than $4 billion, and a $4 billion industry is worth attention, especially when it is realized that some 23,000 Americans sit down each year in a doctor's office and are told they have oral cancer. The condition brings death within a few years, or to others surgery upon their jaws or tongues so that they can never fully resume their normal life—23,000 a year. That is not a small number.

Or, let us consider cleft lip and palate. I do not suppose many people realize that it's disabling and disfiguring and that the correction of it is a long, tortuous process. What may not be known is that one out of every 750 live births in this country is a baby afflicted with this cruel disability, some 6,000 new cases each and every year. If that little baby is not given proper care, I do not care how much ability, energy or aptitude he has, he is not ever going to be a schoolteacher or a doctor, or a salesman, or any of a hundred other careers you can name. Thus, Mr. Chairman, dental disease is not all toothaches and jaw fractures. It is for these things too that the private sector spends some $4 billion a year.

That is the private sector. Government on all levels contributes many more hundreds of millions of dollars. The current Federal estimate is some $300 million a year for all kinds of dental activities. It is questionable whether it is all spent wisely, and that is not only my opinion. It is the opinion of most private dentists. That is the opinion, too, of private dental groups like the American Dental Association. That is the opinion of Federal dentists, and the opinion of Federal dental agencies, unanimously.

If each of us was asked to give an off-the-cuff description of dental disease in this country, all those descriptions would share at least one element: that dental disease is endemic, that nearly everyone is susceptible to it and suffers from it. That is true. What is equally true is that most manifestations of dental disease are not only preventable but readily preventable. Most of us nowadays have enough sense to know that we go to the dentist for preventive care, to have our oral health checked. But we also go for what we think of as such routine services as having teeth pulled, teeth filled, dentures or crowns or bridges fitted.

If preventive care is delivered to people early enough in their life they will be able to maintain sound oral health all their life. In other words, we must concentrate on children, not to the exclusion of other age groups, but as a matter of emphasis. It is a simple matter as well as a sound one. It not only makes professional sense but when it comes to the public programs, it makes fiscal sense as well.

Let me report to you just two statistics from studies for which we must vote funds of dental care under medicaid that nail down this point about fiscal sense. For instance, take dentures, which are in many respects the ultimate failure of a person's dental health since it means there are no natural teeth left at all. In one medicaid study, dentures constituted only 3 percent of the services rendered but consumed 43 percent of the available funds. On the other hand, take a finding in one study with regard to children under medicaid. It shows that more than half the bills for children under 5 years of age were for less than $20.

Obviously, there is a lesson to be learned from this comparison. We need to do some experimentation in differing methods of delivery: do we use the school system, for example, as a focal point for delivery of children's care or do we look elsewhere? We need, as well, to experiment within differing settings for children in rural areas may well need a different structure than those living in the midst of cities.

This entire, commonsense concept made its impression on this House in 1967 and we authorized an amendment to the Social Security Act to begin a series of such pilot experimental projects. In testimony before the Ways and Means Committee, Dr. John Gardner, then HEW Secretary, estimated $5 million as being first-year costs of the projects, which were to run for 4 years. Contrast that sum with the $110 million or so now spent under medicaid for dental services. How much of that $110 million is spent to repair disease that should not have occurred and would have not occurred had we had a sound children's program? How many more years we want to pay out such tens of millions of dollars annually rather than invest a few million for the pilot programs to which I refer?

The Senate, in 1967, followed the lead of the House in approving the concept embodied in section 510. But there the matter has rested. There was no supplemental request for funds in fiscal 1968. There was no request for funds in fiscal 1969. There was no request for funds in fiscal 1970.

However, thereafter, two things were done: first, a modest amount of money was added to the fiscal 1970 budget to begin planning of the projects. The amount was $200,000, one of the smaller sums that will be mentioned during the debate, but not too small for it to be discovered and totally eliminated by the executive branch under the 2 percent authority we gave it last year. A second action was taken in fiscal 1970 when the House Committee on Appropriations, in its report, said to the executive branch, and I quote:

The Committee is concerned about the lack of a coordinated program for the dental health of children while so many Federal dollars are being spent under Medicaid and similar programs to treat dental conditions in adults that could have been prevented. The Committee will expect that some of the funds provided in this appropriation will be used pursuant to the authorization in section 510 of Title V of the Social Security Act relating to special project grants for dental health of children.

Now, surely that is plain language. Surely, no interpreter needs to be hired to tell the appropriate agency what is meant by it. Unfortunately, the Department did not listen and nothing was done.

Now we are in fiscal 1971. What is budgeted for this program, a program to help us put our dental care policies on a rational basis and, in the long run, almost certainly save us a great deal of money? So far as can be discovered, there is no intention to truly implement these projects. There is a vague reference in the Committee hearings to a paltry $180,000 that might be spent on these projects, not nearly enough.

Mr. Chairman, we must begin now. We must insert a reasonable sum in this budget to undertake the dental research that must be initiated.

Mr. MICHEL. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time to advise the Members that I intend to offer a motion to recommit, that will take the form of section 208, which was deleted from the bill, minus the provision where the Secretary had some discretionary authority as to whether or not he could bail out a particular State if it got into any particular trouble.

My motion to recommit will be the precise language of the section which our Subcommittee deleted from the bill before we reported the measure to the full Appropriations Committee.

My amendment would limit payments to the States for social services, staff training, and administrative expenditures under public assistance to 110 percent of the aggregate amount estimated for these purposes for such States for the fiscal year 1970.

Without this provision in this bill, we will have to face up to approximately a $300 million supplemental appropriation.

Unfortunately, at the time of our hearings the last information available to us on public assistance costs were for the November estimates from the States. On the basis of those figures, the Department estimated that inclusion of the 110-percent limitation on social services, administration and training would result in a savings of $45 million.

Throughout the year the States estimates changed and based on the May estimate, the amount of savings had increased to $300 million, although I should point out that none of these estimates take into account the escape clause which would permit exceptions to be made to the 110-percent limitation by the Secretary. These exceptions would of course reduce the amount of savings.

It is difficult to analyze precisely why the estimates of cost have risen.

The November State estimates predicted a 10-percent increase in welfare caseloads for 1971 and a 16-percent increase to cover services, administration, and training. The May estimates indicate that the States expect caseloads to increase by 14 percent and they have proposed a 44-percent increase in services, administration, and training.

This 44-percent increase consists of a 54-percent increase in social services and a 27-percent increase in administration. The 54-percent increase in services is not only precipitous, it is undefined as to its substance, and is questionable on two scores: First, whether or not States which claim they will double their social services program in 1971 have the serious intent to do so; and second, whether they have the capability, if indeed they are serious, to accomplish their objectives.

For instance, Pennsylvania proposed to increase Federal services dollars per AFDC recipient from $37 in 1970 to $152 per recipient in 1971. California would go from $110 to $168 per recipient. Not only do these predictions seem unrealistic, they also indicate the substantial fallacy in the assertion that the principal burden of the limitation will fall on small States just getting started.

In summary, the estimates are probably inflated—at least partially for purposes of demonstrating that the limitation would be extremely burdensome. It is probably true, however, that the final savings will be closer to the $300 million figure than to the $45 million figure in the President's budget. The principal point, however, is that, to the degree that the May estimates are accurate, they reflect a program increase in relation to recipients which is not justifiable in today's fiscal situation.

Our committee report indicates that the limitation would discriminate unfairly against those States which have been slow in developing their programs but are now ready to expand them.

In fact, the majority of the States affected by the limitation and the vast preponderance of the savings are associated with large States which have had programs for a number of years.

The provision permits the Secretary to make exceptions to the limitation when he determines that it would impair in a significant way the effective operation of the program involved. This exception provision can be used for those States which have a good case to make.

One of the principal goals of the new welfare legislation that passed the House was to equalize the level of services among the States. If we permit costs to rise indiscriminately, this will increase the disparity between the States.

Another point which we probably should have recognized long ago is that open-ended appropriations are only justifiable in relation to benefit payments. Conceptually, there is practically no case to be made for applying an open-ended concept to either services or administration.

Now, finally, Mr. Chairman, my amendment would permit a 10-percent increase in funding.

In a restrictive fiscal climate, there is no reason to permit administrative resources to expand by more than 10 percent a year. This would be inequitable in comparison with other Governmental programs at the Federal, State, or local level.

The Social Security Administration, for example, does not receive an annual expansion in its administrative resources commensurate with its workload increases.

By far the biggest increase in recipient workload in public assistance is in large States which already have sizable welfare staff. Like, SSA, they are better able to absorb workload increases.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. MICHEL. I am happy to yield to my friend from Louisiana.

Mr. WAGGONNER. Does this 110-percent ceiling apply to administrative costs and training costs and benefits?

Mr. MICHEL. No, not to the benefits. I specifically said that we were talking about administration and training.

Mr. WAGGONNER. I thank the gentleman.

Mr. FLOOD. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do not blame the gentleman from Illinois for offering this amendment. After all, he has a standard to bear and he bears it well. But this is a bad amendment.

Listen to this: This amendment will adversely affect some 40 States. It will have the greatest adverse effect on those States with the poorest programs and with plans to improve them. It will mean that those States that built up their programs during 1970 will actually have to cut back.

But I think a member of the administration, an assistant secretary of the Department of Housing and Urban Development, in commenting on its effects with regard to model cities probably set forth the case against this amendment better than I can. Let me read from his letter which is dated June 9, 1970:

Possible Consequences Resulting from Passage of Section 208:

Model Cities which are implementing jointly funded programs under the affected titles may be forced to cut back their operations if their FY '71 full-year budget must be equivalent to their partial-year spending in FY '70.

With no new start funds available, Model Cities will be forced to use 100% supplemental dollars for their needed social service projects, thus circumventing programs normally within the domain and expertise of HEW.

And, Mr. Chairman, I am still quoting the Assistant Secretary of HUD. His letter continued:

Without the incentive of funds for implementing programs, much of the effort which has gone into interagency coordination, joint programming and institutional change will produce no results and further efforts will be abandoned.

The hopes and expectations of many neighborhood residents will be destroyed.

Many Model Cities Programs will be seriously hampered in their efforts to make a substantial impact on the social and economic problems of their model neighborhoods.

Supplmental funds will be insufficient to provide the scope of program necessary to meet the needs of residents, particularly for the child care projects which are used as supportive services for manpower components as well as educational opportunities for pre-school children.

Now, Mr. Chairman, here is the Assistant Secretary's conclusions. And I am still quoting his letter:

CONCLUSIONS

The passage of Section 208 of the HEW appropriations bill would reduce the effectiveness of the Model Cities Program by substantially decreasing HEW involvement in a key program area. It would disrupt patterns of interagency cooperation and coordination which have been carefully nurtured in local communities. Furthermore, it would inhibit the development of service programs which would serve as vital support mechanisms for any future Family Assistance legislation.

Mr. Chairman, the motion to recommit should be defeated.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FLOOD. Mr. Chairman, I am heartbroken and I cannot continue to read the administration's opinion in opposition to my friend's amendment. I therefore suggest that the motion to recommit be defeated.

The CHAIRMAN. The Clerk will read.

The Clerk concluded the reading of the bill.

Mr. FLOOD. Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, had directed him to report the bill back to the House with an amendment, with the recommendation that the amendment be agreed to and that the bill as amended do pass.

Mr. FLOOD. Mr. Speaker, I move the previous question on the bill and the amendment thereto to final passage.

The previous question was ordered.

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. MICHEL

Mr. MICHEL. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. MICHEL. I am in its present form, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. MICHEL moves to recommit the bill H.R. 18515 to the Committee on Appropriations with instructions to that committee to report it back forthwith with the following amendment: Page 34, after line 23 insert:

"SEC. 209. None of the funds contained in this title may be used for payments to any State for fiscal year 1971 for services, staff training, and administrative expenses under titles I, IV (part A), X, XIV, and XVI of the Social Security Act which, in the aggregate, exceed 110 percent of the aggregate amount estimated for these purposes for such State for fiscal year 1970."

Mr. FLOOD. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

Mr. GERALD R. FORD. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 362, nays 14, not voting 55, as follows:

[Roll No. 233]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Daddario with Mr. Meskill.

Mr. Murphy of New York with Mr. Cunningham.

Mr. Long of Louisiana with Mr. Brock.

Mr. Edwards of Louisiana with Mr. Burton of Utah.

Mr. Gallagher with Mr. Hosmer.

Mr. Gray with Mr. Pelly.

Mr. Pickle with Mr. Cramer.

Mr. Dorn with Mr. Crane.

Mr. Caffery with Mr. Burke of Florida.

Mr. Rarick with Mr. MacGregor.

Mr. Rogers of Colorado with Mr. Rhodes.

Mr. Ryan with Mr. Weicker.

Mr. Stratton with Mr. Roudebush.

Mr. Hanna with Mr. Mailliard.

Mr. Davis of Georgia with Mr. Pollock.

Mr. Jones of Tennessee with Mr. Kuykendall.

Mr. Ichord with Mr. Bush.

Mr. Kirwan with Mr. Powell.

Mr. Ottinger with Mr. King.

Mr. Mollohan with Mr. McClure.

Mr. Fallon with Mr. Beall of Maryland.

Mr. Gilbert with Mr. Esch.

Mr. Farbstein with Mr. Dawson.

Mr. Mann with Mr. McCulloch.

Mr. Waldie with Mr. Goldwater.

Mr. Gilbert with Mr. Hungate.

Mrs. Griffiths with Mr. Anderson of Tennessee.

Mr. Alexander with Mr. Anderson of California.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. SMITH of Iowa. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed and include extraneous matter.

The SPEAKER pro tempore (Mr. MATSUNAGA). Is there objection to the request of the gentleman from Iowa?

There was no objection.

LEGISLATIVE PROGRAM FOR WEEK OF JULY 27

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute.)

Mr. GERALD R. FORD. Mr. Speaker, I take this time for the purpose of inquiring of the distinguished majority leader as to the program for the rest of this week, if any, and the program for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the distinguished majority leader.

Mr. ALBERT. In response to the inquiring of the distinguished minority leader, we have no further business this week. We will ask to go over upon the announcement of next week's program.

The program for Monday and Tuesday is as follows: Monday is District day, but there are no District bills.

During Monday and Tuesday we will continue the consideration of H.R. 17654, the Legislative Reorganization Act of 1970. That will be the total business of the House on Monday and Tuesday insofar as I know, except for a continuing appropriations resolution for 1971, which will be the first order of business on Tuesday.

For Wednesday and the balance of the week the program is as follows:

H.R. 17880, the Defense Production Act Amendments, subject to a rule being granted.

H.R. 18546, the Agricultural Act of 1970, subject to a rule being granted. If one of these rules comes out ahead of the other, we will reverse the order of consideration, if necessary.

H.R. 13100, to extend programs for training in the allied health professions, under an open rule with 1 hour of general debate.

H.R. 14237, to amend the Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, under an open rule with 1 hour of debate.

This announcement is made with the further reservation that conference reports may be brought up at any time and any further program may be announced later.

Mr. GERALD R. FORD. I thank the distinguished majority leader.

ADJOURNMENT TO MONDAY NEXT

Mr. ALBERT. Mr. Speaker, if the gentleman will yield further, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER pro tempore (Mr. MATSUNAGA). Is there objection to the request of the gentlemen from Oklahoma?

There was no objection.

DISPENSING WITH BUSINESS IN ORDER UNDER THE CALENDAR WEDNESDAY RULE ON WEDNESDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule on Wednesday next may be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, if the gentleman will yield further, may I make this announcement at this stage of the legislative program. I feel it is imperative to finish our program for next week, even if that means meeting on Friday and Saturday. We must do this in order to complete the balance of the legislative business before the recess. I hope all Members will cooperate, as I know all of us want to leave here as scheduled on August 14.

Mr. GERALD R. FORD. Could the gentleman from Oklahoma tell us if he knows of any conference reports that may be coming up on Monday?

Mr. ALBERT. Mr. Speaker, if the gentleman will yield further, I know of none, I will say to the gentleman. May I say that I believe the distinguished gentleman from California (Mr. SISK) is here and he might want to add some comment with reference to the program for next week.

Mr. SISK. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from California.

Mr. SISK. Mr. Speaker, I appreciate the statement which has been made by the distinguished majority leader in his colloquy with the distinguished gentleman from Michigan, the minority leader, in respect to the program for Monday and Tuesday.

I would simply like to say this—and I appreciate the gentleman yielding for this purpose—it is our hope to put in a full day Monday and Tuesday, with the single exception that has been noted, and by that I mean I would hope no one plans dinner until after 7 o'clock. I say this because as I understand the legislative program from the leadership and the volume of work scheduled between now and the August recess, that these 2 days are probably going to be "it" for reorganization. I say this further to alert Members because many are interested in and concerned about reorganization. Therefore, we have these 2 days during which to do our job and it is my earnest hope that everyone will be here to do that job. I urge that they will be here on Monday and Tuesday so that we can complete action on congressional reform by Tuesday night.

Mr. SCOTT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Virginia.

Mr. SCOTT. I would ask the distinguished majority leader if he could tell us what has happened to the unsolicited credit card bill, and if it will be programed for consideration sometime in the future?

Mr. ALBERT. Mr. Speaker, if the distinguished minority leader will yield further, the answer to the gentleman's question is "Yes." We had programed it for this week but, obviously, we cannot get to it. The two bills scheduled for this week, which we are programing again next week, were ahead of the credit card bill on the program. In view of the bills we have added to the program for next week, we could not hope to reach the credit card bill for floor action.

It is not, as we understand from the Committee on Post Office and Civil Service, one of those bills that must be handled immediately, but we do intend to take it up.

Mr. SCOTT. Mr. Speaker, if the gentleman will yield further, as a member of the Committee on Post Office and Civil Service, we receive a lot of mail from constituents who are concerned about this particular bill. It may not be a piece of major legislation, but I would hope that the gentleman would program it at the earliest convenience.

Mr. ALBERT. Mr. Speaker, if the distinguished minority leader will yield further, there is no question but that we will program the bill. We want to do it. I think everyone is for the bill insofar as I know.

I want to add that in addition to the business we have scheduled, there are several privileged matters ahead of us between now and the time we adjourn for the August recess and some of these might be called up.

Mr. GERALD R. FORD. Mr. Speaker, I might add further to the distinguished majority leader that there is one matter that has received sufficient signatures in the discharge process, the so-called Women's Equal Right Amendment to the Constitution. I have heard that the principal proponent of that, the gentlewoman from Michigan (Mrs. GRIFFITHS), has indicated she intends to bring it up, or bring it to the floor on Monday, August 10.

Mr. ALBERT. If the gentleman will yield further, that is what the gentlewoman from Michigan indicated to me, and that is one of the privileged matters. It is of the highest privilege. We have two District bills, and they will be brought up on that same Monday, so those are privileged matters for that day. And, of course, we have another bill that has been in the Committee on Rules long enough to be privileged, and we do have to operate within the boundaries of privileged legislation that might be called up.

Mr. VAN DEERLIN. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from California.

Mr. VAN DEERLIN. Mr. Speaker, I thank the minority leader. It seems to me that in the absence of the gentleman from Iowa (Mr. GROSS), that someone ought to inquire as to what became of Friday this week.

Mr. ALBERT. Mr. Speaker, if the gentleman will yield further, as far as Friday of this week is concerned, we had hoped that we could meet. We discussed the matter with the various committee chairmen, and they were not prepared to go on with the program.

But I do hope that our admonition will be heeded, that we want to finish the program we have announced for next week, even if it requires a Friday or Saturday meeting. I hope the Members will try to adjust their schedules from now on to meet on Fridays and Saturdays if necessary.

Mr. VAN DEERLIN. Mr. Speaker, if the gentleman will yield further, for one further observation, that was precisely what I did this week. I remember the story of the boy who cried "Wolf," and I will say no more.

Mr. ALBERT. Mr. Speaker, if the gentleman will yield further, we accept the responsibility, because we must, for making the announcement, and we hope that we will get the cooperation of the committees handling the bills to finish them next week. This we must have, and the gentleman knows that.

Mr. GERALD R. FORD. Mr. Speaker, I thank the gentleman.

PUERTO RICAN CONSTITUTION DAY, 1970

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, on July 25, 1952, 18 years ago, the Governor of Puerto Rico, with the approval of our Federal Government, proclaimed the establishment of the Commonwealth of Puerto Rico.

Under the provisions of the constitution adopted on that day by the Puerto Rican people, an elected legislature enacts all Puerto Rican laws. Religious freedom is assured and racial discrimination is unlawful under this constitution.

The Commonwealth constitution, moreover, is considered a model of democratic principles. By its adoption, a semicolonial area evolved from a status of dependency into a condition of partnership with our Federal Government. Puerto Rico thenceforth became fully autonomous in local affairs, and its dignity as a self-governing unit within the national framework could be altered only by the mutual consent of the Puerto Rican and Federal governments.

Today, Puerto Rico's citizens are citizens of the United States, and enjoy practically all of the privileges of statehood except that of national suffrage. In terms of democratic fulfillment, Puerto Rico occupies the highest rank ever attained by an American territory prior to admission to the sisterhood of States. Since 1947, the people of Puerto Rico have enjoyed the right to elect their own Governor, they are permitted to participate in most Federal programs, including social security, and are not subject to pay taxes. On the other hand, their sons are subject to military duty in America's armed forces and their voice is silent in the election of national officers and in the determination of national policies.

The only direct influence the people of Puerto Rico have on the Congress of the United States is through their Resident Commissioner, who has unlimited right to talk in committee and on the floor of the House, but cannot vote in either place. As the House of Representatives continues its deliberations this week on the Legislative Reorganization Act of 1970, it is possible that the law may eventually be changed to give the power of voting in committee and on the House floor to the Resident Commissioner.

I want to take this opportunity to commend Honorable JORGE L. CÓRDOVA, the Resident Commissioner of Puerto Rico, who was elected to serve in the 91st Congress and has done an outstanding job in representing his people since coming to Congress.

The annual observance of Puerto Rican Constitution Day is of great importance because it represents to a proud people an enlightened affirmation of freedom and self-government which they fashioned on their own. The people of Puerto Rico are masters of their own destiny, and over the years, have transformed their land into a showcase of democracy in action.

Moreover, they have accomplished something of an economic miracle, and today, the Puerto Rican economy is the best in Latin America and the average per capita income the highest. The people have lifted themselves up by their own bootstraps to an elevation unattained by the citizens of any other country in Latin America.

Mr. Speaker, in my own Seventh Congressional District of Illinois, reside many, many thousands of Americans of Puerto Rican descent, and as their Congressman, I know firsthand of the many valuable contributions they have made to our community, our city of Chicago, and our Nation. I want to take this opportunity to congratulate them and the people of the Commonwealth of Puerto Rico as they join in this anniversary celebration, and I extend to them my best wishes for continuing peace and prosperity in the years ahead.

POLICE CHIEF IVAN A. ROBINSON OF DOWNEY, CALIF.

(Mr. DEL CLAWSON asked and was given permission to address the House for 1 minute and revise and extend his remarks and include extraneous matter.)

Mr. DEL CLAWSON. Mr. Speaker, occasionally a man with exceptional qualities of leadership and dedication that distinguish him from his peers is appropriately honored by his community. On July 31, 1970, Police Chief Ivan A. Robinson of Downey, Calif., will be recognized for his unusual and above-average contributions to his community, State, and Nation. The event is prompted by his retirement after 30 years of service in the field of law enforcement.

Robbie, as he is affectionately known, gained an international reputation through the use of a documentary film of the Downey Special Enforcement Detail by the Federal Laboratories by the FBI and other law enforcement agencies throughout the United States of America, Canada, Australia, New Zealand, South America, and Mexico. This widespread use attests to the expertise and high training standards in riot and crowd control demanded by Chief Robinson.

This Police Department in Downey, Calif., was established in 1957 when the area became a municipal corporation in Los Angeles County. Ivan Robinson was selected by the mayor and council to be the first police chief of the new city. The story of the organization and development of the department was written up at the request of Mr. J. Edgar Hoover and was published by him in the June 1962 issue of FBI Law Enforcement Bulletin.

Many civic, fraternal, church, and service organizations have been the beneficiaries of his abilities and contributions. The Salvation Army, the Red Cross, the Community Chest, the Boy Scouts of America, the YMCA, Rotary International, Downey Methodist Church, DeMolay, and many others are included in the list.

Mr. Robinson's knowledge and dedication have been demonstrated as president of the Los Angeles County Peace Officers' Association in 1965–66, and in 1968–69 when he served as president of the California State Peace Officers' Association. In both organizations he has held membership since 1949 and served as an officer and on committees involved in every aspect of law enforcement.

Civil defense, California Chiefs of Police, International Association Chiefs of Police, have received contributions of service from Chief Robinson. With all of this extra activity, the city of Downey has enjoyed the service and protection of one of the finest police departments in the Nation.

Mr. Speaker, it is a personal privilege to salute Chief Ivan A. Robinson on the occasion of his retirement and wish him Godspeed and many happy years of continued personal service in whatever endeavor he enjoys.

LEGISLATION TO PROVIDE FACILITIES FOR HANDICAPPED PERSONS

(Mr. MIZELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MIZELL. Mr. Speaker, I am today introducing legislation that would provide tax exemptions for renovation of buildings to provide facilities especially designed for handicapped persons.

This bill provides that a taxpayer owning a business or commercial building may deduct up to $3,000 in taxes for any one building to finance construction of a single access ramp, when no ground level exists, for persons using wheelchairs; a single ramp or elevator to allow persons using wheelchairs to move between floors; and such special equipment as may be required to make a restroom, one each for males and females, accessible to handicapped persons.

Also included as a deduction would be a ramp leading to a walkway in front of a building whenever a curb would ordinarily exist between the parking lot and such a walkway.

We owe our handicapped citizens every convenience to make their daily routine less difficult by providing them with facilities easily accessible to them.

Therefore, I now introduce this bill for consideration by my distinguished colleagues, and urge the expeditious passage of this legislation.

CONCERNING "THE AMENDMENT TO END THE WAR COMMITTEE"

(Mr. SCHERLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHERLE. Mr. Speaker, over in the other House the architects of surrender are busily at work attempting to build support for a new proposal that will insure an American defeat in Vietnam and in the eyes of the world.

They call themselves "The Amendment To End the War Committee."

And they are trying their hardest to tell the Vietcong and the North Vietnamese to hang on for another year and then we will go home and give them what they could not take by force.

They are doing their best to assure the whole world that the American people will not stand up for their friends or their commitments anywhere in the world—not in Vietnam, not in Asia, not in the Middle East, not in Europe, and not in the Americas.

They are doing all they can to assure the world that Americans believe peace

comes before freedom and that the road to world security lies backward through Munich.

To convince the people that they are the only ones who want peace they are running a series of newspaper ads and television spots. They are, in fact, advertising in favor of surrender.

Mr. Speaker, I am sure the Members of this House will not be fooled by their pious tones. Neither will most of the Members of the other House and neither will the American people.

LET THE AMERICAN PEOPLE PARTICIPATE IN PRISONER OF WAR PETITIONS

(Mr. DE LA GARZA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DE LA GARZA. Mr. Speaker, all Americans are deeply concerned about our military personnel who are being held prisoners in North Vietnam. Many dedicated Americans are circulating petitions asking that information be provided by Hanoi about our boys being held and that they be accorded humane treatment under the Geneva Convention.

Just the other day, Mr. Speaker, I saw a Member passing a petition among the Members here in the Chamber. I have personally signed a petition that is being circulated in my district by a dedicated Customs Service officer. We must do everything within our means to help these men. They have done their duty, they have served their country, they have obeyed their orders, and whether we agree or not with the situation as it exists, these are our own flesh and blood.

I know President Nixon is doing all he can as Commander in Chief, but I think we could do more. I think we all know that world opinion is now regarded as important in the decisionmaking of the world powers, and that much of the dissent over the war is considered by the Communists as favorable to their cause.

So now I believe we have here the perfect way for all Americans to join in a humane and charitable effort—an effort we would make even in behalf of a stranger—we can now make in behalf of our own.

Mr. Speaker, I think that the Federal Government—and all State governments—should extend all possible help to those who are circulating such petitions and see to it that Americans are given the maximum opportunity to sign them. Therefore, I would respectfully ask that the President, through an Executive order or in any other appropriate manner—order that these petitions on behalf of our prisoners of war in Vietnam be made available or be allowed to be placed in all Federal offices of the country. I would respectfully ask that the Governors of several States do likewise in all State offices.

This is the least we can do—let the American people have an opportunity to participate in this vital project.

(Mr. WOLFF asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WOLFF. Mr. Speaker, veterans hospitals' employees salaries are based upon a national scale. In some instances this places the VA hospitals at a disadvantage since there are not sufficient inducements to draw professionals into VA hospital work. We bear the responsibility of insuring that if VA hospital employees are paid on a national scale there must be other inducements to draw top men into working for our VA patients.

Some of the inducements would be decent hospital facilities, and the expansion of both training and educational activities for VA hospital employees. For this, our Veterans' Administration needs sufficient funds.

When one considers that the VA medical and hospital program provides 13 percent of the medical care for the Nation and is the largest program of its kind, the importance of full funding is clear. It is time to meet this responsibility and insure the continuation of the program and the attainment of the finest medical care for our VA hospital patients.

Moreover, Mr. Speaker, veterans' hospital wages must be realined to provide for the differences in costs of living across the Nation. What may well be adequate wages for a VA hospital worker in one area, may be very inadequate salaries for comparable workers in another part of the Nation. What is really needed is an area wage scale.

VETERINARIANS SERVE, TOO

(Mr. MELCHER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MELCHER. Mr. Speaker, with a large part of our population in urban centers, most people get to know their veterinarian only when their pet becomes sick or is injured.

Many people do not appreciate that the veterinary profession has a very broad and important role, not only in the production and safeguarding of the food which human beings eat, but that veterinarians have an important role in medical research and control of disease, and particularly those transmissible from animals to man. There are a good many treatments and cures for human ailments, and surgical techniques, which originated in veterinary medicine. Immunological discoveries in veterinary medicine have often paved the way for preventative medicine of great importance to mankind.

I make no apology for an effort on my part to try to enlighten my colleagues in Congress on the role in our society of my colleagues in the veterinary medicine profession.

As a part of that educational effort, I am including in the RECORD the annual address of American Veterinary Medical Association president, Dr. E. W. Tucker, which I urge all of you to read for a better understanding of the interests, and the role in human affairs, of our profession, which is making a very vital contribution to human welfare:

PRESIDENT'S MESSAGE

(By Dr. E. W. Tucker)

Honored guests, distinguished visitors, fellow veterinarians, and your families, I bring you warm greeting from the rest of AVMA and thank you for the honor of speaking to you today at this Planary Session.

I doubt that any other AVMA Presidential Inaugural speech has been delivered in like conditions—with competition from so many diversionary activities here in the heart of the entertainment capital of the world. It would be foolish for me to tell jokes because many complex problems occupy our thoughts and actions in today's world. The news media are obsessed with vivid portrayals of the violence of the Southeast Asia conflict; of the undeclared war in the Middle East; crime in the streets; the black vs. white controversy world-wide; the protests by students everywhere and at all educational levels; the problems and effects of drug abuse; the chaotic environmental pollution puzzle; confusing court and governmental actions; the lack of confidence in "the establishment", and with more demands for government to do all; overpopulation; permissiveness; and hunger.

Add to this list substandard or ghetto housing, ecological problems, incomplete delivery of health care; cancer and infectious diseases, and a host of other topics and I wonder where in the world are we going? How can we solve these urgent problems?

The answers to these questions are beyond my abilities, except to realize that change is inevitable. Each one of us has accepted some change in action or attitude recently and surely more changes are coming. Worldwide unrest affects us just as much as that within our own country and has direct bearing on our lives today and in the future.

You may ask, "Why is he talking about all these things? What have they to do with the AVMA and veterinary medicine?"

My answer is that all these problems concern us as highly educated citizens of our communities. Many of the problems have very direct bearing on our profession, our lives, and our livelihood. We as veterinarians can materially help to solve several of the most important questions now before us.

Of the domestic issues, public opinion polls place fighting pollution second only to fighting crime. Is this a current fad or will there be sustained effort to improve the quality of our air and water? Quoting Dr. Etzioni, chairman, Department of Sociology, Columbia University, New York, N.Y., "The complicated problems that pollution control poses can be handled only in part through a crash program. Public and legislative commitment ought to be built up for a long pull. But even if one day water and air are again as pure as they were before man polluted them, many other environmental problems, from ugly cities to overcrowding—will still be with us.

"Now we should continue to give top priority to 'unfashionable' human problems. Fighting hunger, malnutrition and rats should be given top priority over saving wildlife, and improving our schools over constructing waste disposal systems. If we must turn to 'environment,' first attention should be given to the 57,000 Americans who will lose their lives on the roads in 1970."

To contrast with Dr. Etzioni's quote is this one by Allan Barnes, M.D., Johns Hopkins University, School of Medicine: "Christoper was born August 22, 1969. When he is 35 years old, the world will be twice as populated as it was that August 22nd. When he is 55 years old, the population will again have doubled—making it four times the size it was on the day of his birth. This number, 16 billion people, approaches global saturation. Clearly, if he survives to 65, he will see a population incompatable with life. The genera-

tion which must face population saturation is being born now. When Christoper looks back to see what society was doing to prevent catastrophe, where will he find your name written?"

If, indeed, Christoper does look back he will find the veterinary profession and AVMA were active in making it possible for people to live in 2025. We must face facts today and consider life in future decades.

Babies will continue to be born. These humans need good food, air, and water. Knowledge gained through research at our colleges and farms has made animal protein from meat, milk, and eggs available in adequate quantity to most Americans. Yet changes are rapidly affecting all food animal veterinarians.

For many of us the family farm operation is nearly gone. Successful farming today is big business and big business has little regard for sentiment. Monetary profit is paramount. To reduce or eliminate professional fees may be an objective. Purchase of drugs and biologicals from peddlers is one way to get along for a while, then when real trouble develops, "call the veterinarian," and put the blame on him for not salvaging the herd. That is the way it goes many times in dairy and beef cattle and swine herds.

Of course this is the wrong approach. There are veterinarians who are expert in feed-lot animal care and nutrition. There are others highly capable in disease control and nutrition of dairy cows in large product units. But we need more qualified men for this expanding agribusiness. The challenge of large animal practice still exists.

Large animal clinicians in veterinary colleges have been encouraged to include more information on feed-lot management, and care and nutrition of livestock in concentrated areas. Short courses, illustrated lectures and field tours as part of continuing education show our interest in this developing operation. Research and field observations will continue to provide answers to economical food production.

But several things bother me. First, why do we continue to be at the mercy of real estate developers? Why do we let them transform prime farm land in housing, or plazas, or industrial centers, and permanently remove fertile land from agriculture? Why not encourage developments on poor agricultural land or arid or rocky soil?

Second, what methods will be devised for waste disposal from the feedlots and other concentrated livestock operations? Where will the excreted drugs, pesticides, and bacteria go? Will they travel via natural drainage to brooks, rivers, or lakes? Or will they percolate into the ground water?

Already highway salt is contaminating water supplies in many areas of the northern states. Pesticide pollution of water is not restricted to agricultural or large animal use. What happens to the solutions used for ectoparasite control on small animals? How many gallons of pesticides go into sewerage systems, only to end in lakes, rivers, or the ocean? Why should waste disposal not be of prime concern now? The U.S. Department of Agriculture has pilot study projects underway, but it behooves all of us to contribute what we can to local solutions of these problems.

This brings me to ecology, wildlife, and fish-farming. We know that some rocks on the moon age back to 4.3 billion years, yet we know only a small part of what makes nature "tick." We are woefully lacking in knowledge of wildlife behavior, breeding, nutrition, diseases, and interrelationships. Knowledge of fish culture and propagation is only elementary, yet the fastest growing agricultural enterprise in the southeast is catfish farming.

It is heartening to see the enthusiastic, aggressive approach to the problems of aquatic animal health taken by the veterinary college at the University of Georgia, and to know of other work being done at Texas A&M University, and by individuals elsewhere. However, we need more work at more veterinary colleges on fish and wildlife problems.

The basic knowledge of anatomical relations, physiological chemistry, pathology, bacteriology, virology, and epidemiology make the veterinarian a logical choice to lead a team of workers. Let's get on with the job right now.

Another urgent domestic issue is delivery of health care. To me this term "delivery of health care" encompasses nearly everything having to do with human health—from emergency service to rest homes for the aged; from comprehensive health planning to epidemiology; and from zoonoses to nutrition. This may be a broader viewpoint than that which many people have, but nothing in health delivery is singular—everything is interrelated.

There is no formula, to my knowledge, which incorporates veterinarians in comprehensive health planning. Why not? Veterinarians are important members of research teams and administrative agencies throughout the country, working on problems ranging from cancer research and heart disease to space medicine. Contributions by veterinarians to the solutions of human health problems in the past and at present are known to all of you.

I regret that importance of these contributions was not recognized in February. How some people in our national government could overlook the importance of meat, poultry, and other food inspection by veterinarians in the Department of Agriculture and the military services, forget the reduction of bovine tuberculosis and brucellosis, fail to recognize the actions of the veterinarians in public health and regulatory work, and discard the efforts of academic staff, research, industrial, and food animal veterinarians, is more than I can understand. It was disappointing to read in the budget message that only animal lovers would be upset by the elimination of $2.7 million as institutional grants to colleges of veterinary medicine in fiscal year 1971.

This brings up the big point that veterinarians individually and in all organized groups should let their accomplishments be made known. We must make it clear that foods don't originate in the market place. With 70% of our population living in cities how can we expect these people to know what we do if we don't tell them? I am annoyed each time a cat or dog owner asks with astonishment why cows or pigs need attention from a veterinarian. This shows me that I have failed in client education. More veterinarians must show the broad knowledge they have.

Such knowledge can nicely be applied in comprehensive health planning. Who knows the road, terrain, and people better than the large animal or mixed practitioner? He can also help counsel officials in disaster control programs and can help guide residents on matters of first aid, nutrition, and principles of disease prevention, safety and sanitation by working with social clubs, Scouts, FFA, and 4–H. Counsel to the Board of Health on all problems of animal origin should be a natural.

What has been done about all this? I have asked a Council and staff of AVMA to prepare articles for use in professional and lay publications indicating where veterinarians could be involved. The National Center for Disease Control of the U.S. Public Health Service has been asked to prepare an outline showing where veterinarians could be active in comprehensive health planning. Sustained effort on explanation of veterinary activities should be maintained.

When I was elected as President-elect, I was asked what my objectives were for my term in office. I replied that I had no revolutionary new concepts—rather that I would work to solve existing problems.

Some of these have already been mentioned but I have said nothing about AVMA organizational structure or the mechanics of operation. Now is not the time for detailed discussion of that. But it has seemed to me, for years, that contact between AVMA and members needed vast improvement. Our excellent Journal does a fine job of reporting activities, etc., in the "yellow pages," yet members seem to be relatively poorly informed.

To try to improve the situation, Drs. Herrick, Brown, and I have represented AVMA at all meetings we could attend. Although this is no easy chore, we are happy to learn about local problems, and to discuss affairs with members. Chicago staff is willing and available, too; all we need are invitations to be with you.

We have asked that AVMA Executive Board members be invited to attend the annual meeting of each constituent association in their Districts. In a few Districts we know the board members' attendance is not possible, but in most of them it is possible, and I urge this improved liaison. AVMA depends on strong constituent associations and should help these constituents wherever and whenever possible.

I think we are now working well with the special practice oriented groups; that these will be asked to do more in the future by way of joint meetings and continuing education. I hope that by sensible cooperation among all groups, part of the needless duplication of programs will be eliminated. AVMA certainly can and will help if given the chance. Some speakers, now booked more than a year ahead, are losing their enthusiasm for appearances. We must correct this situation.

About our veterinary colleges. So far I have visited only seven, but I have been impressed by the earnest dedication to work by the faculty members I have met. They are producing graduates well grounded in science and basic veterinary medicine, in addition to doing research.

Faculty members deserve commendation for their efforts in teaching, research, and all the other things they do. Too often we take these people for granted, criticize what they do and what they don't do. New teaching methods enable faculties to expose more information to the students each year. The situation is not perfect, yet praise is in order for what they are doing in these difficult changing times.

Veterinary college students have not received the attention from AVMA that I think they deserve. I want each AVMA student chapter visited each year by an elected officer or other AVMA official; I want to see more financial and moral support of their worthwhile projects; I want to see 100% membership of students in chapters and later in AVMA.

These students have questions which require answers. We will all benefit from the conversations. The students are smart, dedicated, and have goals to be outstanding veterinarians and to improve the profession.

There is no connection, of course, but two hours after I arrived on the Ohio State campus, April 29, the riot broke out. Although we were on the peaceful side of the river, locked University buildings prevented our meeting. In spite of the turmoil elsewhere, veterinary students did show up to hear about the AVMA. It is reassuring to talk with veterinary students and to realize their stability. They should have more help from the AVMA Foundation for scholarship loans and grants. This cannot be done because of low level contributions from members. Only the Women's

Auxiliary has carried its share. I say the Foundation must either be renovated, or let's discard the whole idea. To continue as at present is not complimentary to veterinary medicine.

These points I have made are only a few of those we face today. You have been very patient to listen so attentively. I hope that in your reflective hours in the future you will think of poor Christopher and his problems, how veterinary medicine and you will provide the means for him to reach age 55, and whether your contribution will justify your name being written on the list of those who care.

EQUAL EDUCATIONAL OPPORTUNITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from South Carolina (Mr. WATSON) is recognized for 10 minutes.

Mr. WATSON. Mr. Speaker, for the past several weeks news coverage of the hearings conducted by the Senate Select Committee on Equal Educational Opportunity would lead most Americans outside the South to believe that the southern people, black and white, are forms of sub-Americans who should conform without question to massive Federal interference in their school systems while areas of the North should remain free from such discriminatory treatment.

I deeply resent the whole atmosphere under which the hearings were held which were obviously designed to malign the South and were devoid of any objectivity. Even more deeply I resent a liberal Member of the Senate, who knows absolutely nothing about the South, pretending to have all the answers for our region of the country. I am also fed up with the self-righteous, hypocritical double standard that people like the chairman of this committee apply in dealing with social problems of which they know nothing. If the Senator from Minnesota wants to examine in depth social attitudes and prejudices of which he should know a great deal, I respectfully suggest that he tell the Nation about the traditional plight of the Indians in his home State.

The hearings in themselves were a charade and a sham. They were conducted like mocked trials with obviously carefully selected witnesses who were chosen on the basis of what they were expected to say and what the committee wanted them to say. I do not know of an instance since the infamous Reconstruction era of a more blatant example of rigged hearings.

The arguments used by the chairman and so-called friendly witnesses to cram integration down the throats of the southern people were just absurd. But the rhetoric did clearly reveal the extraordinary length that liberals will go to malign anyone who dares to disagree with them, especially if the person disagreeing happens to be a southerner.

Mr. Speaker, it has often been said that the most intolerant and biased individual in our society is a liberal and yet the whole concept of liberalism is one in which free discussions and different opinions are supposedly solicited.

If the fair-minded, thinking people of this Nation need any more proof of example of northern liberal intolerance toward the South, the hearings conducted by the Senator from Minnesota should convince them.

For a century the South has been treated as if it were not even a part of the Nation, and our people have been hounded and criticized for our beliefs. Northern liberal politicians and newsmen have angrily and sanctimoniously denounced us because we dare to have a philosophy which differs from their own.

But, Mr. Speaker, I say this most emphatically, this sick intolerance must cease if this Nation is to survive. The very decline of America can be laid at the feet of northern liberal moral decline and its witchdoctor sociology.

If America is to maintain its greatness and its standards, the South will lead the way. Northern liberals, whose philosophy of permissiveness has produced a scene of rampant dope addiction, rock bottom moral standards, unprecedented lawlessness and a diminished patriotism, have forfeited the right to speak for any section of this country, much less the Nation itself. In fact, if philosophical denunciation is in order, the people of this Nation, regardless of region, should denounce in the strongest terms, northern liberal thoughts and actions, and tell them that we shall have no more of it.

EEOC'S "MORE POWER" GRAB

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. WILLIAMS) is recognized for 10 minutes.

Mr. WILLIAMS. Mr. Speaker, the authors and cosponsors of H.R. 17555 say this effort to expand the powers of the Equal Employment Opportunity Commission will further promote equal employment opportunities for American workers who are members of minority groups. This conclusion is totally incorrect. I cannot support the principles of this bill.

We must remember that all employment must be based on employee qualifications. This is as it should be. The employee's ability to perform determines the cost and quality of goods produced and services rendered.

I have repeatedly stated that the United States is a land of opportunity for everyone. A high school education is available to all of our youth; vocational-technical high schools have been built by the thousands.

It only follows that youth who are members of minority groups should take advantage of this education in order to qualify to properly compete for all employment.

I know that almost all trade unions have been carrying on active recruitment programs to get minority group youths employed in their apprentice programs. However, the trade unions have not been successful in this effort. Many members of minority groups who pass the most basic apprentice examination either fail to show up for work or last only a few weeks on the job.

Obviously, they are not willing to take the time to properly learn a trade. Many of them would rather receive $10 or $15 less a week on welfare for doing nothing than put forth the effort to learn a trade which would eventually pay them a most substantial income. This same welfare which provides higher payments to fatherless families is breaking up the family structure and this causes more school dropouts.

The obvious advantage enjoyed by minority group members today is illustrated by the fact that colleges and universities are actively recruiting students from the ranks of minority groups. Many colleges and universities have lower standards of admission for minority group students and even subsidize them with scholarships.

I submit that the bureaucratic powers of the Equal Employment Opportunity Commission need no further fattening. It already has enough. Its personnel have made it clear enough that they want more power and that they have been something more than zealous in pushing the power EEOC already enjoys.

For example, I am informed that, back in 1965, only four employees of the Newport News Shipbuilding & Dry Dock Co., then working on the world's largest aircraft carrier, were prepared to charge discrimination. Yet the EEOC summoned the full measure of its power to threaten the company's defense contracts, force a quota system of minority hiring, and compel the employers to sign an agreement that "conditions of the employee's skill and ability" were not "germane" to hiring.

In insisting that "conditions of employee's skill and ability" were not "germane" to hiring, the EEOC is attempting to commit a travesty on our American system. Our American system has long recognized an employee's skill and ability and has rewarded those who increase their skill and ability.

Yet, rather than attempt to stimulate members of minority groups to take advantage of the education available to them and to serve apprenticeships to learn trades, the EEOC would endanger our American system by simply legislating that quotas of minority groups be hired regardless of their skill and ability.

H.R. 17555 would permit EEOC to issue cease-and-desist orders in cases of discrimination allegedly practiced by companies or by labor unions and to reinstate or hire employees and conduct periodic checks to ascertain that EEOC orders are being carried out. Imagine what the EEOC bureaucrats would do with that additional power.

Consider, further, the additional impact of H.R. 17555's providing EEOC with the additional power to directly petition a court of appeals to force a company or a labor union to comply with EEOC's own orders based on EEOC's own prejudged findings of evidence of discrimination.

To grant the Equal Employment Opportunity Commission the power to bypass the Department of Justice in moving to the judicial branch with an executive branch legal action would establish a

dangerous precedent which could lead to other agencies, bureaus, and departments seeking to bypass the Department of Justice.

I think, further, that the effort to give the EEOC the power, as provided in H.R. 17555, to go to court over the head of the Justice Department with EEOC's self-acquired cases against industry and against organized labor is particularly peculiar and suspect in view of a critical fact which, presumably, we are supposed to ignore: The fact that, under title VII of the 1964 Civil Rights Act which H.R. 17555 seeks to expand, the Civil Rights Division of the Department of Justice has been greatly expanded and has been substantially reorganized in the interest of greater effectiveness in the defense of civil rights.

Back in 1957, when the Civil Rights Division of the Department of Justice was established, it was permitted about 15 lawyers. It now has 104 lawyers on the job, with more coming in to bring the Division to authorized strength of 133 lawyers, even as the Division seeks authorization to expand its recently-established Employment Section to 40 lawyers from its presently authorized strength of 30.

I insist that there is absolutely no justification for this effort by EEOC to pressure the Congress into giving it greater powers in the name of "Enforcement" of "Equal Employment Opportunities"—unless, of course, we wish to justify the well-established bureaucratic desire to perpetuate itself in power and to take unto itself ever greater, more authoritarian, power.

Mr. Speaker, I ask my distinguished colleagues to give most serious consideration to this which, to all of us, should be a most frightening—and real—possibility.

FUTURE AUTOMATIC ADJUSTMENTS IN PAY OF FEDERAL EMPLOYEES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. CORBETT) was recognized for 15 minutes.

Mr. CORBETT. Mr. Speaker, I am today introducing legislation which is officially recommended by the administration to provide for future automatic adjustments in the pay of Federal employees.

In 1962, this Congress established the policy that the pay of our Federal employees should be comparable to the pay of employees in private industry for the same levels and types of work. In the intervening years, we have not had a very good record in implementing this comparability principle.

Several "one-shot" pay enactments in 1964 and 1965 fell far short of achieving full pay comparability, primarily because of the wage-price guidelines then laid down by President Johnson. The 1967 pay bill contained a three-step pay raise which accomplished a reasonable degree of comparability on the effective date of the third pay raise, July 1, 1969. The 6-percent pay raise, retroactive to January 1 of this year, which was recommended by President Nixon and enacted on April 15, 1970, was another major effort to achieve full pay comparability.

However, it is evident that we are not going to either achieve or maintain full pay comparability until or unless we enact a permanent, rational, and orderly means for doing so.

The legislation recommended by the administration is intended to accomplish this objective. At least, it is a very sound basis upon which our committee can work to produce meaningful legislation on the subject before Congress adjourns this year.

For the information of the Members, I am inserting in the RECORD a letter from the Honorable Robert E. Hampton, Chairman of the U.S. Civil Service Commission, transmitting the proposed legislation to the House, a sectional analysis of the bill, and a statement of purpose and justification:

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., July 22, 1970.

Hon. JOHN H. MCCORMACK,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: I am transmitting for the consideratinon of the Congress proposed legislation "To amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes." A draft bill, a section analysis of its provisions, and a statement of purpose and justification are enclosed.

In presenting his postal reform legislation, the President proposed new procedures for the adjustment of the salaries of postal workers. It is now important that an improved continuing procedure be established for adjusting the salaries of Federal employees under other statutory salary systems. These employees must be assured that their pay rates will be kept up to date in relationship to salaries paid in the private sector.

This proposed legislation is needed to reduce the time lag between salary surveys and schedule adjustments and to make other improvements in the procedure for applying the pay comparability policy adopted by Congress in 1962. It affords an appropriate role to employee organizations, the President, and the Congress. Employee organizations would be consulted by an agent of the President on the coverage of the Bureau of Labor Statistics survey, the salary comparison process and the adjustments required to achieve comparability with private enterprise salaries. An impartial Advisory Committee on Federal Salaries would review the findings of the President's agent and consider the views of employee organizations with respect to the analysis and pay proposals in the agent's report. This Advisory Committee would report to the President.

After reviewing the reports and recommendations of his agent and of the Advisory Committee, the President would make the appropriate salary adjustments and would report his actions to the Congress. If in any year the President should find it inappropriate to make the adjustments because of a national emergency or economic conditions affecting the general welfare, he would have to present an alternative plan to the Congress before September 1 which would become effective on October 1 unless either House disapproved on or before September 30.

The draft bill contemplates that the first two salary adjustments will be effective January 1, 1971 and January 1, 1972. Subsequently, these effective dates will be October 1 of each year, in order to get into better phase with the budget cycle.

Enactment of this draft bill will build on the precedents set in 1967 and in 1970 (1) by reducing the time lag and (2) by providing for a review of findings by an impartial group. It is necessary to implement properly the sound pay-fixing principles established by Congress in 1962. We urge that it be given prompt and favorable consideration.

The Office of Management and Budget advises that the enactment of this draft bill would be in accord with the program of the Administration.

A similar letter is being sent to the President of the Senate.

By direction of the Commission:

Sincerely yours,

ROBERT E. HAMPTON,
Chairman.

SECTION ANALYSIS

(To accompany a draft bill to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal salaries, and for other purposes)

The first section of the draft bill provides that the act may be cited as the "Federal Salary Comparability Act of 1970."

Section 2 of the draft bill amends title 5, United States Code, by revising and restating sections 5301 and 5302, relating to the congressional policy for fixing pay rates for Federal statutory schedules, and by adding a new section 5302a, creating an Advisory Committee on Federal salaries.

The revised section 5301 continues the policy of the Congress that rates of pay for Federal statutory schedules shall be based on the principles that there shall be equal pay for substantially equal work, that pay distinctions shall be maintained in keeping with work and performance distinctions, and that Federal pay rates shall be comparable with private enterprise pay rate for the same levels of work. The pay systems covered by these principles are identified as those for the General Schedule, the Foreign Service, and the Department of Medicine and Surgery of the Veterans Administration.

The revised section 5302 sets forth the procedure for carrying out the policy expressed in section 5301. The major change from existing law is the provision directing the President to make the annual adjustments by October 1 of each year. Similar authority on a temporary basis was, however, given to the President by the pay acts of 1967 and 1970.

Subsection (a) of the revised section 5302 requires that an agent of the President, after consulting with employee organizations, shall make an annual report to the President comparing Federal statutory salaries with private enterprise rates for the same levels of work as reflected in appropriate Bureau of Labor Statistics surveys and recommending appropriate adjustments in Federal salary rates. After considering the report of his agent and the recommendations thereon of an impartial Advisory Committee on Federal Salaries, the President would be required before October 1 of each year to adjust rates of the Federal statutory schedules. These adjustments would be effective on the first day of the first applicable pay period beginning on or after that date. Under existing law, the President makes recommendations to the Congress and the adjustments must be made through the regular legislative process.

Action by the President under revised section 5302 is mandatory. Under subsection (b) in any year that he determines it inappropiate to make the adjustment required by the law because of national emergency or economic conditions affecting the general welfare, he must prepare and transmit to Congress before September 1 in that year such alternative plan as he deems appropriate, and if before September 30 neither House has disapproved, the President's alternative plan shall become effective on October 1. Should

either House disapprove, however, the President would have to make the adjustment required by section 5302, subsection (a)(2), of this bill.

By including specific dates, the provisions in subsections (a) and (b) of the revised section 5302 ensure that actions will be taken and become effective at a time certain and that there will be no retroactive adjustments.

Revised section 5302(c) requires that the President's agent in carrying out its role under subsection (a) must consult with employee oragnizations regarding the coverage of the BLS survey, the salary comparison process, and the adjustments in salaries required to achieve comparability with private enterprise salaries and must include the views of the employee organizations in its report to the President.

Revised section 5302(d) provides that the adjustments made by the President have the force and effect of statute and shall be printed in the Statutes at Large and in the Federal Register and included in the Code of Federal Regulations.

Under the provisions in revised section 5302(e), adjustments in pay rates under this authority would not be equivalent increases for purposes of computing waiting periods for step-increases under the General Schedule.

Revised section 5302(f) authorizes the President, or such agencies as he may designate, to prescribe conversion rules for making pay adjustments.

Revised section 5302(g) provides that other provisions in this section will not impair the authority of agencies to fix rates of pay by administrative action.

The new section 5302(a) of title 5, United States Code, establishes an Advisory Committee on Federal Salaries and prescribes its functions.

Subsection (a) of that section provides that the Committee shall be an independent establishment composed of three members appointed by the President from outside the Federal Government. The Chairman will be designated by the President from among the members. Except for initial appointments, members will serve six-year staggered terms.

Subsection (b) requires that the Committee shall (1) review the annual report of the President's agent; (2) consider such further views and recommendations with respect to the analysis and pay proposals contained in the annual report of the President's agent as may be presented to it in writing by Federal employee organizations, the President's agent, other Federal officials, and such experts as it may consult; and (3) report its findings and recommendations to the President.

Subsections (c)-(e) contain customary provisions for administration of a Committee of this type, including authority for the employment of experts and consultants under 5 U.S.C. 3109 and of such other personnel as necessary to carry out its functions. It also provides that each member of the Committee will receive the daily equivalent of the rate for Executive Schedule level IV for each day he is engaged on work of the Committee and will receive travel expenses, including a per diem allowance, under 5 U.S.C. 5703(b).

Section 2(b) of this draft bill makes conforming changes in the analysis of chapter 53 of title 5, United States Code.

Section 3 provides that the President may make the initial adjustment required by section 5302(a)(2) of title 5, United States Code, as revised by this draft bill, without regard to the provisions relating to the Advisory Committee on Federal Salaries. This authority would be used only if the date of enactment of the legislation should be so near the date on which the President would be required to make the adjustment that it would not be feasible to establish the Committee and allow time for it to become operational. This section also fixes the beginning of the first pay period on or after January 1 as the effective date for the adjustments in 1971 and 1972. In future years the adjustments would be effective in October.

STATEMENT OF PURPOSE AND JUSTIFICATION

(To accompany a draft bill to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes)

The purpose of this draft bill is to provide a continuing improved procedure for adjusting salaries for General Schedule employees, Foreign Service employees, and doctors, dentists, and nurses in the Department of Medicine and Surgery of the Veterans Administration. This legislation is necesary to properly implement the policy adopted by Congress in 1962 for relating the rates in these schedules to salaries paid for similar work levels in the private sector.

As stated in section 5301 of title 5, United States Code, the policy of Congress is that Federal pay fixing be based on the principles that—

(1) There be equal pay for substantially equal work, and pay distinctions be maintained in keeping with work and performance distinctions; and

(2) Federal pay rates be comparable with private enterprise pay rates for the same levels of work.

This draft bill is designed to reduce the time lag between salary surveys and schedule adjustments and to make other improvements in the procedure for applying the pay comparability principle to the adjustment of salaries for these Federal career employees.

Enactment of the salary review and adjustment procedures in this draft bill would afford an appropriate role to employee organizations, the President, and Congress. Employee organizations would be consulted regarding the coverage of the Bureau of Labor Statistics survey, the salary comparison process, and the adjustments in Federal salaries required to achieve comparability with private enterprise salaries.

In addition, employee organizations would be afforded the opportunity to have their views and recommendations with respect to the annual report of the President's agent considered by an impartial body. The proposed legislation would establish an Advisory Committee on Federal Salaries composed of three members appointed by the President from outside the Government service for six-year staggered terms. The Advisory Committee would review the annual report of the President's agent and give thorough consideration to such further views as might be presented with respect to the analysis and pay proposals in that report by unions, professional organizations, and other Federal officials. Upon completion of its review, the Committee would report to the President.

This proposal would vest in the President the responsibility for adjusting statutory schedules each year in accordance with policies established by law. Congress would continue to deal with changes in policy by the usual legislative process.

By giving the authority to the President, action can be completed in a much shorter time following the comparison of Federal and private enterprise salaries. When the President arrived at a decision on what adjustment was needed to raise Federal salaries to comparability with private enterprise rates, that adjustment could be put into effect in a timely manner. Now the President's recommendations must be sent to Congress where the necessary legislative action generally takes a minimum of two or three months and sometimes a much longer period. Especially in times when salaries in the private sector are increasing rapidly, the Federal employee should not have to wait for the adjustment to which he is entitled.

The draft bill fixes a date on or before which the President must adjust the salaries each year. If for reasons of national emergency or economic conditions affecting the general welfare the President should consider it inappropriate in any year to make the adjustment required by law, he would have to prepare and transmit to Congress in advance his alternative plan, and if neither House of Congress disapproved on or before September 30, the plan proposed by the President would become effective on October 1.

The draft bill specifies an October effective date for the adjustments. An exception is made, however, for the first two adjustments. Section 3 of the bill specifies that these adjustments will be effective in January 1971 and January 1972, respectively. The October date is introduced so that the survey schedule may be adjusted to better accommodate to the budget cycle. The time lag between the survey and the effective date of the adjustment would be unchanged. The survey would be made earlier and the adjustment would be made earlier. With the present survey schedule and a January adjustment, it is necessary to seek a supplemental appropriation not only for the current year but also for the next fiscal year.

Federal salary rates must be adequate to enable the Government to employ persons well qualified to conduct its programs; they must be fair to Federal employees and they must be fair to the taxpayer.

Salaries fixed in accordance with the principles established in 1962 meet these objectives. This draft bill reaffirms the established principles and provides improved procedures for carrying them out.

The achievement of true comparability dictates that the annual adjustments be made on a timely basis. The draft bill assures that this will be done by requiring that the President make the adjustments by a certain date.

Congress has established the policies. Congress can by this proposed legislation establish the needed authorizations for the continuing administration of the program. As with any other program administered by the Executive Branch, Congress will oversee the work and consider and enact legislation as needed to change it.

TAKE PRIDE IN AMERICA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. Over 3 percent of the U.S. population is enrolled in college. Both Canada and the Soviet Union have approximately 2 percent of their population enrolled in colleges.

JULY 25—ANNIVERSARY—PUERTO RICO ATTAINED SELF-GOVERNMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Puerto Rico (Mr. CÓRDOVA) is recognized for 5 minutes.

Mr. CÓRDOVA. Mr. Speaker, I invite our colleagues to pause with me for a

moment in these proceedings to mark our observance on this Saturday, July 25, of the anniversary of two historical events for Puerto Rico. It was on July 25, 1898, that the first troops of the U.S. Army landed at Guánica on the southwest coast of the island and were welcomed by most of the people of Puerto Rico.

It is an anniversary which has for centuries been observed as an official holiday. Prior to 1898, Puerto Rico, as a part of Spain, celebrated this anniversary as the feast of St. James, the patron saint of Spain, from which country our people derive their culture and language, and with which we shared four centuries of history.

Although Puerto Rico achieved in the early months of 1898 a very substantial degree of self-government granted by the liberal regime which came into power in Spain late in 1898, this newly received measure of freedom had scarcely been implemented when the American troops arrived, and were welcomed as the harbingers of true freedom in the new world.

I must say our people, who by the end of 1899 were practically unanimous in looking forward to joining the Union as a State, and meanwhile achieving self-government as a territory, were grievously disappointed when Congress denied them American citizenship, and reduced them to a colonial status, in the Foraker Act which in 1900 provided the first civil government under the American flag.

Congress finally granted our people American citizenship, and a small measure of self-government, in 1917. The recognition of our rights as citizens progressed some 30 years later with the appointment by the President of the first native-born Governor of Puerto Rico in 1946 and the extension by Congress to Puerto Rico of the right to elect its own Governor in 1947—the first time this right had been acknowledged with regard to any American community other than a State. This was followed by congressional action in 1950 authorizing Puerto Rico to adopt its own constitution, and in 1952 by the congressional approval of the constitution of the Commonwealth of Puerto Rico.

The effective date of the 1952 constitution was July 25, a date deliberately chosen because of its historical significance in Puerto Rico, as the feast of St. James, and as the anniversary of the landing of Gen. Nelson Miles and his troops in Guánica in 1898.

So Mr. Speaker, I invite our colleagues to join all Puerto Ricans, in Puerto Rico and in the mainland, in celebrating July 25 as a date redolent with significance in the history of Puerto Rico, and with the hope which all of us in Puerto Rico share of achieving full self-government.

THE FULTON-BROYHILL BILL: NATIONAL HEALTH INSURANCE THROUGH THE "MEDICREDIT TAX INCENTIVE PLAN"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. FULTON) is recognized for 15 minutes.

Mr. FULTON of Tennessee. Mr. Speaker, to say that the Nation faces a crisis in health care is neither startling nor original.

We have heard this assessment from President Nixon; from former Secretary of Health, Education and Welfare Robert Finch; from various Members of Congress; and from a host of editorial writers, news commentators, academicians, and health professionals.

There are, in fact, few Americans who would argue the point any longer.

Despite burgeoning governmental programs; the tremendous growth of private health insurance plans in recent years; a $60 billion-a-year health industry; and a $38 billion outlay annually in private expenditures for their own health care, the people of this country are viewing—with mounting concern—the widening gap between the promises and the realities.

We say that health care is a right, not a privilege.

But the difference between a right denied and a privilege withheld of little moment to a person who needs health care and either can't get it when he needs it or cannot afford it when he finds it.

And so we are far from the point where the goal that all of us share—adequate health care for all Americans—seems readily attainable.

But the search for solutions is on.

The problem is no longer whether we assure the right to adequate health care to those who expect it and demand it.

The problem is how we should go about it.

Let us be thankful that there is no shortage of ideas on that score. Already we have a double handful of proposed solutions and the likelihood of a dozen more being introduced in the months ahead.

And whether we are talking about the Rockefeller approach, the AFL–CIO approach, the Kennedy approach, or the approach taken by the Committee of 100, all of them advocate sweeping changes in our health care system.

For all propose, in one form or another, a national health insurance plan.

These plans deserve the most careful scrutiny, Mr. Speaker, as will the alternatives they are certain to generate. For no thornier problem confronts us on the domestic scene, none cries out for a workable solution with more urgency, none poses a greater need for hard, original thinking.

As Victor Hugo once wrote:

> Greater than the tread of mighty armies is an idea whose time has come.

The idea of national health insurance is an idea whose time has come. The question is no longer whether or not we need a national insurance plan. The question is what plan? And when can we develop one that works?

Early in this session—to be precise, in January a year ago—I introduced a bill which seemed to me to have considerable merit.

It stemmed from an American Medical Association concept and was drafted after extensive discussions with AMA spokesmen.

Essentially, my bill took a split-level approach to the problem.

The first part was designed to meet the needs of those presently covered under the title 19 medicaid program. Under the plan, each low-income person or family would receive a certificate for the purchase of a qualified and comprehensive health insurance plan.

This protection would be made available to those unable to pay for health care without cost or contribution to themselves, since the cost of the program would be borne entirely by the Federal Government.

At the second level, tax credits would be granted on the basis of the individual's gross income for the purchase of qualified health benefits coverage. These credits would be based on a sliding scale of gross income and would be larger or smaller according to need.

Since the introduction of that bill, a great deal has happened, Mr. Speaker.

We have held continuous hearings on the Ways and Means Committee from October of last year until May of this year.

We have listened to hundreds of witnesses, heard dozens of ideas, and exchanged uncounted hours of dialog.

Not surprisingly, my own thinking has been modified and rechanneled as a result of the experience.

If it is possible to identify a common concern, shared it seems to me by most, if not all of my colleagues on the committee, that concern is how we are going to control the costs of these programs.

Medicare and medicaid, for example, are beset by soaring costs. And they are limited programs.

How, then, are we to control the costs of an across-the-board national health insurance plan without bankrupting the Nation or wasting billions of tax dollars?

Mr. Speaker, I am introducing today another national health insurance bill which represents, in my view, a vast improvement over its predecessor by reason of the fact that it encompasses a built-in mechanism for cost control.

I am being joined in this by my committee colleague, Representative JOEL T. BROYHILL of Virginia.

Let me outline the measure for you briefly.

"Medicredit," as the AMA has christened it, recognizes that our population falls roughly into three categories.

In the first are those who are unable to pay the cost of adequate health care for themselves or their families.

In the second are those who can pay a portion of this cost—small or large, but depending upon their respective abilities.

The third category consists of those with a reasonably full ability to pay.

For those unable to afford health insurance, the Federal Government would buy basic comprehensive health coverage by providing the individual, or head

of the family, with a certificate that could be used to buy hospital and physicians' services.

Similar certificates would be provided for those with a low tax liability—say, $300 or less.

Those with a tax liability above that amount would be given income tax credits upon their establishment of expenditures for qualified health care plans. The amount of the credit would vary with tax liability. For example, a taxpayer with a $500 tax liability would receive 70 percent of the annual premium cost as a credit against the taxes he owed. A family with a $1,200 tax liability would receive 20 percent against its tax liability.

Let me stress that this bill is based on net taxable income rather than gross income, as provided in my original bill. This seems to me an improvement, in that net taxable income screens out inequities in tax liability—thereby reflecting more fairly a taxpayer's ability to pay—and for that reason furnishes a better yardstick of need than gross income.

In order to receive his tax credit, the taxpayer would need to show that he has purchased a qualified insurance or prepayment plan.

A qualified plan would be one where both the benefit package and the carrier or group had been approved by the appropriate State agency, which would follow established guidelines in developing this qualifying program.

A Health Insurance Advisory Board, to be chaired by the Secretary of Health, Education, and Welfare and to include the Commissioner of Internal Revenue and public members, would provide the guidelines necessary to carry out the program; plan and develop programs for maintaining the quality of medical care; oversee the financial aspects of the program; and concern itself with the effective use of available health manpower and facilities. The Health Insurance Advisory Board would report annually to the President and the Congress.

As basic benefits under any qualified plan, medicredit requires 60 days of inpatient hospital services, including maternity services; all emergency and outpatient services provided in the hospital; and all medical services provided by an M.D. or a doctor of osteopathy, whether performed in the hospital, home, office or elsewhere. Supplemental benefits could also be provided under the plan and paid for either with tax credits or, in the case of those unable to pay, with certificates.

This approach does away with the need for medicaid, Mr. Speaker. Under title 19, we have been saying—even to the self-sufficient who can clothe, house, and feed themselves—"spend yourselves to the point of indigency, and then we will move in to help."

Medicredit reverses that thinking. It says, in effect:

"The Federal Government will see that you get insurance protection against the cost of illness so that you will not be reduced to indigency.

An advantage to the plan is that it takes into account the varying costs of health care from region to region by dealing with commercial insurance companies, Blue Cross, Blue Shield, or any prepaid group plan operating in any part of the country, on the basis of an acceptable program reflecting regional costs.

Before going into the third element of this legislation, Mr. Speaker, let me express my conviction that the use of the insurance mechanism is essential to any successful program of national health insurance. Without Blue Shield, Blue Cross and the commercial carriers under contract to the Social Security Administration, medicare would have been an administrative nightmare. In fact it becomes increasingly clear that the private sector should be involved even further in the medicare program, as should any other program that seeks to deliver adequate health care at a price Americans can afford.

To summarize, then, the bill does away with the need for medicaid and places all those presently covered by medicaid in the mainstream of health care.

For the higher income individuals and families, the bill offers realistic incentives to purchase comprehensive health care coverage on a voluntary basis.

The bill utilizes to the fullest extent the private carriers and plans and allows the competition of the marketplace to operate in maintaining cost control and insuring quality of care.

Medicare would be unaffected by this bill's passage, for only those under 65 years of age would be covered by medicredit.

Briefly, now, a word on costs and cost controls.

As wealthy as this country is, there are limits to what we can undertake.

An across-the-board national health insurance plan, operated regardless of need, will carry a price tag of sobering size. And no such plan I have yet seen includes—at least to my satisfaction—a mechanism which promises effective cost control of the taxpayers' money.

This brings us to an essential element of medicredit—its provision of peer review.

This bill calls for a constant and unremitting policing mechanism.

The appropriate medical societies would be charged with establishing a peer review mechanism that would, among other things, review individual charges and services, wherever performed; review hospital and skilled nursing home admissions; review the length of stays in hospitals and skilled nursing homes; and review the need for professional services provided in the institution.

The process of ongoing review can have nothing but a salutary effect on the providers of services, thereby cutting down on the occasional or unintentional abuses that would otherwise occur.

Patterns of abuse would be detected, and the abusers either suspended from or excluded from the program. Exclusion could follow action by the Secretary of Health, Education, and Welfare upon the recommendation of the peer review committee.

In the case of fraud, or other clear intentional misconduct, the peer review committee would be expected to bring charges before the appropriate licensing body.

And in the event that a peer review committee was not established by the medical society within a reasonable time, or if established was not functioning, the Secretary of Health, Education, and Welfare, in consultation with the medical society, would be empowered to appoint a peer review committee that would function.

I am frank to admit, Mr. Speaker, that I am chary at this point of offering cost figures on medicredit or any other of the plans now under discussion. We have seen the cost estimates of medicare and medicaid, for instance, drastically underestimated in the past.

I will say this, however:

Medicredit will cost a third as much, or a half as much, as some of the alternatives we have heard proposed. And its total net cost will reflect tax savings to the Federal and State Governments of the money spent on medicaid—about $5 billion a year presently, about $7 billion in projected increases.

Mr. Speaker, I am requesting that this measure be laid on the table for 10 days in order to allow others to study it, and, if they see fit, join Representative BROYHILL and me as sponsors.

Let me now summarize briefly the provisions of the bill I introduce—the "Health Insurance Assistance Act of 1970."

HEALTH INSURANCE ASSISTANCE ACT OF 1970

Summary of Legislation: It is proposed to incorporate in a single bill programs for: (1) the financing of health care for low income persons; (2) cash incentives through tax credits for the acquisition of comprehensive health insurance coverage; and (3) a structured statewide system for peer review of utilization, charges and quality of services. The first two are incorporated under Title I, the last under Title II.

TITLE I—FEDERAL FINANCING OF VOLUNTARY HEALTH INSURANCE

As to the first two parts of the proposal, the federal government would assist in the financing of medical and hospital care for individuals and their dependents through participation in the cost of insurance policies of their choice—100% premium payment for the low-income groups, and graduated participation in the payment of premiums for other persons, based on their federal income tax liability.

Entitlement to benefits would be determined with reference to federal income tax liability of an individual in a particular year (base year).

Part A—Health care provision for low-income groups

Certificates for Health Insurance: An individual having a tax liability of $300 or less in a base year would be entitled to a certificate acceptable by carriers for health care insurance for himself and his dependents. Insurance purchased with such a full-pay certificate would require no beneficiary participation in health care charges.

The carrier, as defined in the bill, would present the certificate to the federal government for redemption.

Part B—Incentives for purchase of health insurance

Election of Tax Credit or Insurance Certificate: Federal contribution to insurance purchased by individuals under this part of

the program would be scaled in favor of low-income taxpayers—from 98% if the taxpayer's base year income tax is between $301 and $325, to 10% when his tax liability exceeds $1,300. A table of allowable percentages for related tax liabilities is included in the bill.

As an example: If in 1970 a family of four has $6,500 of income, and uses the standard tax deduction, its tax liability will be $493. The family would receive a tax credit of 73% of the premium cost. If his premium for a qualified health insurance plan or policy is $600, the taxpayer could reduce his income tax liability from $493 to $55 ($493 less $438). The same family with an income of $10,500 would receive a 20% tax credit and reduce the tax liability by $120 (assuming the same $600 premium cost).

A policy purchased under this program will contain deductibles: $50 per hospital stay, and 20% coinsurance on the first $500 of medical services.

Qualification of Participating Carriers: To participate in the plan any carrier would have to qualify under state law, provide certain basic coverage, make coverage available without preexisting health conditions, and guarantee annual renewal. An assigned risk insurance pool among carriers would be utilized as appropriate.

Health Insurance Coverage: Basic benefits in a 12-month policy period would include 60 days of inpatient hospital care. To encourage utilization of less expensive facilities, two days in an extended care facility would count as one day of the 60 days allowed. Other basic benefits would include emergency and outpatient services, and all medical services provided by a doctor of medicine or osteopathy. These are minimal requisites to any qualified insurance policy under the program.

A supplemental coverage could provide, in addition, one or more of the following: prescription drugs not otherwise covered, additional days of inpatient and extended care services, blood in excess of three pints, personal health services when furnished on written direction of a physician, diagnostic and therapeutic services, and catastrophic coverage of all hospital and medical costs, up to $25,000, after the first $300 of incurred expenses borne by the beneficiary.

Health Insurance Advisory Board: A health insurance advisory board of eleven members, including the Secretary of HEW and the Commissioner of Internal Revenue and other persons qualified by virtue of education, training, or experience, would be appointed by the President with Senate consent. The Board would establish minimum qualifications for carriers, and in consultation with carriers, providers and consumers would develop programs designed to maintain the quality of health care and the effective utilization of available financial resources, health manpower and facilities. It would report annually to the President and Congress.

PART II—PEER REVIEW (PRO)

Peer review would be employed as a system of review of utilization, charges and quality of services. As proposed in the bill, the Secretary of HEW would enter into agreements with State Medical Societies for the establishment by the societies of peer review organizations.

In establishing administration within a state, the State Medical Society would appoint a five-member Commission and a nine-member Advisory Council. The Commission would then divide the state into administrative areas, and appoint a three-member Local Review Panel and a five-member Local Advisory Council for each such area. All members of the Commission and of the Panels would be doctors of medicine or osteopathy. The Advisory Council would have consumer, provider, and carrier representation. If the State Medical Society would not or could not establish a peer review organization, the Secretary would create the Commission and carry out the peer review organization provisions within the terms of the act.

Hearing and Review: Each Panel would consider and review information supplied by individuals, institutions, hospitals, government agencies, and carriers. Random selection would also be employed for peer review.

When the facts as alleged so warrant, the Panel would have authority to order a hearing of a provider, and the provider would have the right to counsel. If the provider is a member of a specialty or allied health service, a person representing such service would be required to sit with the Panel in an advisory and consultative capacity. On the basis of its determinations on the hearing, the Panel could recommend, but not impose, disciplinary action.

Any recommendation for disciplinary action would be reviewed by the Commission, which could accept, reject or modify it. If the Commission finds that disciplinary action is warranted, it will make such recommendation to the Secretary.

Disciplinary Action: The Secretary will review and act upon a commission's recommendation for disciplinary action and may impose a penalty no greater than that recommended by the Commission, providing, however, that in the case of a first-time penalty, the provider may be suspended from participation in the program for a period no longer than one year. Continued violations giving rise to a subsequent hearing and recommendation for disciplinary action would be punishable by longer suspension or complete exclusion by the Secretary from participation in the programs. Upon showing of cause, however, the Secretary could reinstate a provider or reduce the period of exclusion.

The provider would have a right to judicial review of a determination of suspension or exclusion.

Evidence in other Proceedings: Evidence and information adduced under PRO and determinations made with respect thereto would not be admissible in any other action, civil or criminal.

Notice to Patients: An individual under suspension or exclusion would be required to take steps to advise his patients that medicare (or other federal health program) will not pay or reimburse for his services during the period of his ineligibility.

Protective Action and Communication: Action of a Commission or Panel member, or the supplying of information in carrying out the purpose of the PRO program, would not be a basis for legal liability.

Reimbursement of Expenses; Termination of Agreement: Expenses of PRO would be reimbursed by the federal government. An agreement to establish and operate a PRO would be terminable by the Secretary if the State Medical Society failed to discharge its obligations and responsibilities thereunder; or by the Medical Society by giving reasonable notice.

MILITARY HEALTH CARE TAKES AN IMPORTANT STEP FORWARD

(Mr. RIVERS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RIVERS. Mr. Speaker, yesterday evening, in a quiet and little-publicized ceremony at the Pentagon, Secretary of Defense, Melvin Laird, administered the oath of office as Assistant Secretary of Defense (Health and Environment), to Dr. Louis M. Rousselot.

Dr. Rousselot has been serving as a Deputy Assistant Secretary for Health and Medicine.

The importance of this occasion to the health and welfare of members of our armed services and their dependents cannot be overestimated. Prior to yesterday the Department of Defense had kept relegated to a nonstatutory position the individual responsible for the overall health needs of the armed services.

As a result of the insistence of the House Armed Services Committee, and notwithstanding objections from many sources, the position of Assistant Secretary of Defense (Health and Medical) was reestablished by law in last year's procurement authorization act. A new charter was written for this office and hereafter the individual occupying the office will be responsible for not only health, but environmental problems affecting the armed services.

Dr. Rousselot is extremely well qualified for the position to which he has been elevated. He is an eminent surgeon and was professor of clinical surgery at New York University before coming to Washington to succeed Dr. Shirley Fisk, another noted physician. Others who have occupied this important position, either as Assistant Secretary or Deputy Assistant Secretary, are Dr. Melvin Casberg, Dr. Randolph Lovelace, Dr. Frank Berry, and Dr. Richard Meiling.

I can speak for all members of the House Armed Services Committee when I say we are pleased that Dr. Rousselot has been appointed to this position. We are also pleased that we succeeded in raising this position to a statutory office. Now the physicians, dentists, nurses, and others responsible for the health needs of our armed services will have a champion to whom they can turn who will serve in a statutory office that cannot be eliminated.

I am confident that the wisdom of our insistence that the health needs of our armed services be put under the direct responsibility of an individual occupying a statutory office will prove to be not only a wise move, but will also be of great assistance to the Surgeons General and the various Directors of the health services of our Armed Forces. Yesterday's action may also prove to be a vital and important step toward solving many of the medical, dental and nursing problems of our armed services, not the least of which is assured health care, the retention of competent physicians, dentists, nurses, and all others whose primary duties involve the physical and mental well-being of our service personnal and their dependents.

LEGISLATION TO HELP WIDOWS OF SERVICEMEN KILLED IN VIETNAM

(Mr. RIVERS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RIVERS. Mr. Speaker, a national columnist published an article which was

printed in the Washington Post of July 17, 1970, which told the tragic story of the death of Sgt. Maj. James H. Palmer, who was killed as the result of ground fire striking his helicopter while he was on a mission supporting ground troops in Vietnam. Even though Sergeant Major Palmer was recommended for the Silver Star for gallantry, our Government, according to the columnist, "abruptly ended payments to help keep his son in a special school for children with learning difficulties."

The article went on to say that Mrs. Palmer, who has two other children, "must pay $205 a month to keep her 15-year-old son in a special school in Falls Church, Va. If her hero husband had lived, they would need to pay only $65."

The columnist said:

There are 55 other wives like Mrs. Palmer who have lost Government aid for handicapped children because their husbands were killed in action.

Unfortunately, the story is true.

A Member of the other body announced on July 17 that he would introduce a bill to correct this situation.

I would like to remind that Member and also the entire membership of the House and Senate, that the House has on two occasions passed a bill to correct this gross inequity: We first passed such a bill in the 90th Congress on August 1, 1968—only to have it die in the Senate. In this session, we passed H.R. 8413, a similar bill, on February 16, 1970, but as yet, no action has been taken in the Senate.

Let me quote from the report on H.R. 8413:

Section 1079(d) of title 10, United States Code, provides a program of assistance in the case of dependents of a member of the uniformed services who are moderately or severely mentally retarded or who has a serious physical handicap. Benefits include training, rehabilitation, special education, and institutional care. The program is limited to the dependents of active duty personnel. Therefore, retarded or handicapped dependents of personnel in Vietnam would, under the present workings of the law, lose their eligibility under the program when the service member dies while in receipt of hostile fire pay, or from an illness or injury incurred while eligible for such pay. His dependents would continue to be eligible for benefits under section 1079(d) of title 10, United States Code, with the same cost-sharing arrangement, until eligibility is otherwise terminated.

It was only right that the Armed Services Committee report these bills to the House of Representatives to help ease the burden of a widow whose husband has made the supreme sacrifice, and the House in its wisdom, and on two occasions, agreed with your Armed Services Committee by unanimously passing such legislation.

THE C–5A—QUESTIONS BEG FOR ANSWERS—PRESUMPTIONS BEG FOR FACTS

(Mr. RIVERS asked and was given permission to extend his remarks at this point in the RECORD and to include extraeous matter.)

Mr. RIVERS. Mr. Speaker, I have become deeply distressed about the ripple effect that often follows statements and charges made about military programs. Statements are sometimes made which, though perhaps meant to be fair, give a distorted picture because they are based on incomplete or inaccurate information or because those who do not have a deep knowledge of military programs arrive at conclusions which are not correct. These statements and charges are then picked up and repeated through various media and, as a result, false ideas gain wide currency.

I fully appreciate the right of every Member of Congress to utilize whatever resources he may have available to support his position on a contrversial matter.

Because of my concern in this matter, I am going to take the time, despite my reluctance to get into personal debate, to set the record straight on some charges made against the C–5A by the gentleman from Pennsylvania (Mr. MOORHEAD).

Back on December 15, 1969—in the CONGRESSIONAL RECORD, volume 115, part 29, pages 39229–39231—the gentleman from Pennsylvania inserted an article alleging some 25 deficiencies existed on the C–5A aircraft. The alleged deficiencies were listed in brief as findings by the General Accounting Office. The gentleman in question did say:

This should not be considered as an official GAO report.

However, the article left the distinct impression that the alleged deficiencies were findings and conclusions of the GAO on the C–5A as a whole. It was not clear from reading the article that the information supplied was not a complete statement of the GAO, and it was not pointed out, as the General Accounting Office at the time had pointed out to the gentleman, that GAO "could do no audit verification of the information with the short time available." It was also not pointed out that the findings applied only to one specific aircraft, the C–5A No. 9.

There has only recently come to my attention the report which was supplied to the gentleman from Pennsylvania back in December. Because the inference is so different if one reads the complete GAO language rather than the summations put in the RECORD back in December, I am going to insert in the RECORD at this point all of the list of 25 items provided by the gentleman from Pennsylvania, followed in each case by the complete text of the GAO statement. Quite frankly, I think it will be seen that the impression left by the CONGRESSIONAL RECORD article is quite different than that provided by the complete GAO material.

In particular, the gentleman's insertion in the RECORD failed to include the essential qualifying observation of the GAO in the case of most of these alleged deficiencies to the effect that they "were not considered a problem." As a matter of fact, of the 25 alleged deficiencies listed by the gentleman from Pennsylvania, 20 were characterized by GAO as not constituting any significant problem.

I cannot understand why these brief observations of the GAO were not listed by the gentleman. I urge all Members to read and compare each of these 25 items carefully and then to decide for themselves whether the material included in the RECORD represents an adequate effort to give Members of the Congress the whole truth on the issues involved. As I indicated, I am taking the trouble to do this at this particular time because of the wide currency that overstated charges can receive if not answered. The material follows:

TWENTY-FIVE ITEMS ON THE C–5A AND GAO OBSERVATIONS

CONGRESSIONAL RECORD

First. The primary restriction on the airplane is the result of the static wing failure. It is limited to a maximum of 2G's stress which means the cargo compartment may not be loaded with more than 100,000 pounds.

GAO DATA

There is a primary restriction on the airplane because of the static wing failure. Air Force has imposed a safety of flight restriction. It's a supplement to the Operating Manual for the airplane. The restriction is that the A.F. has to fly the airplane at a maximum of 2G stress. This means that the cargo body cannot be loaded with more than 100,000 lbs. of cargo until the restriction is lifted. Not expected to be lifted at time first squadron becomes operational currently scheduled for June 1970. Lockheed thinks it has a satisfactory fix. Present plans are that the fix is to be incorporated in the production line on A/C #34. 1 thru 33 to be retrofitted. Not considered a problem.

CONGRESSIONAL RECORD

Second. There has been a limitation of load imposed in one area of the cargo compartment because of pressurization problems. Like the wing deficiency, this is also a structural problem.

GAO DATA

Pressurization vs. cargo-load—Limits cargo load in one area of the cargo department. Structural problem in this one area. They are currently working on this. No problem.

CONGRESSIONAL RECORD

Third. Failures have been experienced with the engine mounts. Therefore, restrictions have been imposed on engine throttle limits and the plane cannot take off from unimproved runways.

GAO DATA

Throttle of Engine—This restriction is related to a problem of engine mount failures. The restriction limits fuel applied to the engine. This means that airplane can't be flown from unimproved field. This could be a problem. The strike at G.E. No problem now.

CONGRESSIONAL RECORD

Fourth. The speed of the craft has been limited as a result of design problems within the ailerons.

GAO DATA

Air Speed Limitations—Operating manual has a graph of the aircraft speed—has 3 zones (green, yellow & Red). Yellow zone is the outerlimits of the airplane performance envelope. The restriction is that the speed cannot go into the yellow zone. It is due [to] a design problem on the aileron. Have a fix but not fully tested. Expect to be o.k.

CONGRESSIONAL RECORD

Fifth. Problems exist in the terrain-following altimeter. The pilot cannot rely on its accuracy.

GAO DATA

Radar Altimeter—There are a number of these on the airplane. One of these altimeters is a terrain-following altimeter. Is used when airplane flys low to ground. It has some technical problems and pilot cannot rely on the altimeter. No problem.

CONGRESSIONAL RECORD

Sixth. The terrain-following radar has not been tested and cannot be used.

GAO DATA

Terrain-following Radar System—The system is not completely tested. Don't use until it is demonstrated. No problem.

CONGRESSIONAL RECORD

Seventh. Abnormal stress has occurred within the engine fan blades at certain speed settings. These speeds must be avoided.

GAO DATA

Engine Fan Blade Stress Limits—Stress occurs at some specific RPM setting. Engine should not be allowed to stay at this RPM for extended periods.

CONGRESSIONAL RECORD

Eighth. A design problem in the pitch trim flap system prevents full operation.

GAO DATA

Pitch trim system—There are 3 of these systems on the airplane. No one of the three can be operated simultaneously with the others. This is because of a minor design problem. Not considered a problem.

CONGRESSIONAL RECORD

Ninth. A problem exists in the landing gear that prevents the use of cross-wind landing capability.

GAO DATA

Landing Gear Cross Wind Position System—This system permits wheels to be positioned when landing in a cross-wind. Has problems, not fully tested. May have impact on training. Still can be landed in cross-wind normally. Can't teach pilot on how to operate system right now.

CONGRESSIONAL RECORD

Tenth. Problems with the landing gear prevent the use of the "kneeling" capability until a proposed temporary fix is incorporated.

GAO DATA

Forward kneeling—Restricted use—cannot forward kneel the plane. Found problem with nose landing gear when plane kneeled. Found temporary fix, being incorporated. No problem.

CONGRESSIONAL RECORD

Eleventh. The cargo door system cannot be operated in flight. The correction to this problem has not yet been tested. This means the plane cannot be used for parachute drops of cargo.

GAO DATA

Cargo door system limits—Cannot operate door in flight. Have found correction but not tested yet. Don't expect to use airdrop during training. No problem.

CONGRESSIONAL RECORD

Twelfth. The automatic pilot cannot now be used, and as a result the pilot must maintain manual control of the plane at all times.

GAO DATA

Automatic Pilot System—Not to be used. Problem may have been solved, currently testing, expect solution will work. Expect to lift restriction in a short time. No problem.

CONGRESSIONAL RECORD

Thirteenth. Because of the autopilot problem, the automatic throttles do not operate properly.

GAO DATA

Automatic Throttles—This is tied into the automatic pilot system. Tests not completed. Not a problem area.

CONGRESSIONAL RECORD

Fourteenth. The use of the multimode radar has been restricted.

GAO DATA

Multi-Mode Radar—Use of this system is restricted. Not yet completely tested. No problem.

CONGRESSIONAL RECORD

Fifteenth. The pitch augmentation system is not operable in flight.

GAO DATA

Pitch Augmentation—Not operable in flight. Has some problems in system. No problem for training.

CONGRESSIONAL RECORD

Sixteenth. There is a problem with the slat disconnect drive.

GAO DATA

Slat Drive Disconnect—If disconnected in flight, pilot must land or go back to have someone connect it for him. Cannot be corrected during flight. Design problem and disconnection very rare. May affect training.

CONGRESSIONAL RECORD

Seventeenth. The inertial doppler auxiliary computer has not been fully developed or tested.

GAO DATA

Inertial Doppler Auxiliary Computer—Limited use. Not fully developed. Testing not completed. No problem.

CONGRESSIONAL RECORD

Eighteenth. Use of the stall limiter system is restricted.

GAO DATA

Stall Limiter system—Use is restricted. Can't use the warning device to tell when a stall is imminent. Is being improved. No problem.

CONGRESSIONAL RECORD

Nineteenth. The flight director computer has not been completely tested.

GAO DATA

Flight Director Computer—Limited use. Not completely tested. No problem.

CONGRESSIONAL RECORD

Twentieth. There is a problem with power surges in the mulitmode radar in switching from auxiliary to internal power.

GAO DATA

Multi-Mode Radar—When airplane is on ground and using auxiliary power unit, the radar must be turned off before switching to airplane power to avoid surge of power. No problem.

CONGRESSIONAL RECORD

Twenty-first. Then engine anti-icing devices do not operate effectively.

GAO DATA

Engine Anti-icing—The engine doesn't anti-ice efficiently. It is for preventing ice from forming on the engine. Not considered a problem.

CONGRESSIONAL RECORD

Twenty-second. There are mistakes in operating manuals.

GAO DATA

Amplification Emergency Gear Hydraulic System—This is an operating manual deficiency—Doesn't create a problem.

CONGRESSIONAL RECORD

Twenty-third. The nose landing gear signal light does not work.

GAO DATA

Nose landing gear signal—Light in cockpit not functioning properly. Requires pilot to inspect nose landing gear. Pilot has to look and see if gear is in place and locked. No problem.

CONGRESSIONAL RECORD

Twenty-fourth. The go-around altitude system has not been fully tested and limits are placed on its all-weather landing capabilities.

GAO DATA

Go Around Altitude Subsystem—This is part of the all-weather landing system. Has not been fully tested. Not used to fullest limits of its capabilities.

CONGRESSIONAL RECORD

Twenty-fifth. And finally, the automatic liferaft release does not work.

GAO DATA

Automatic Life Raft Release—Raft would have to be released manually. Don't expect [it] to be used in training program. No problem.

MILITARY SPENDING REPORT OF THE MEMBERS OF CONGRESS FOR PEACE THROUGH LAW

(Mr. MOORHEAD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MOORHEAD. Mr. Speaker, I think that the hucksters in the Department of Defense not only have outdone themselves but have acted irresponsibly with regard to our national security.

On July 16, 1970, Mr. Jerry W. Friedheim, a deputy in the public information office, announced at a routine press briefing that the military spending report of the Members of Congress for peace through law contained secret information. I would charge that this statement of Mr. Friedheim—if his information is correct—is a severe breach of national security.

The congressional staff study was prepared using only information from public sources. Admittedly, even public sources occasionally print classified information. If there were any published material the republication of which in a congressional study would involve national security, strong, quiet steps should have been taken to delete it. Instead, Mr. Friedheim called attention to the classified information, if it truly is classified, by announcing it in a press conference.

If the Soviet intelligence network had failed to read the New York Times and the relevant trade journals—now they know the straight dope from Mr. Friedheim.

His lack of judgment is appalling. He seems motivated more to intimidate the Congress than to protect the basic security of the country. I for one do not take this matter lightly and think that it would be appropriate for Mr. Friedheim to resign immediately.

I also deplore the casual way in which this whole matter was handled by the Pentagon. Matters concerning the national security should be given top priority attention. If, indeed, the Pentagon felt that there was information in the report that would compromise the Nation's security, strong measures should have been taken to prevent the distribution of the material rather than using it for propaganda purposes.

Let me tell you how long the Pentagon knew about this report and its contents. In early June, one of the few preliminary draft copies of this report in existence turned up in the Pentagon security group.

After this report had been thoroughly reviewed by the supersleuths in the Pentagon who ostensibly think constantly of the Nation's security, copies were sent to selected members of the House and Senate Armed Services Committees on June 20. It was not double wrapped in accordance with security regulations,

and there was no notification made to these members that the Pentagon had submitted them classified information. If the report contained this, handling it constituted serious breach of security on the part of the Pentagon.

It was not until July 8, almost 3 weeks later that Richard Capen, Assistant to the Secretary of Defense for Legislative Affairs almost casually sent a letter to Senator HATFIELD indicating that there was classified information included in the report and that they would await the Senator's instructions on how to deal with these problems.

I charge that this is an irresponsible manner in which to handle a situation if it were critical to the national security.

Why was a letter to Senator HATFIELD—pointing out the existence of classified information—sent to an office in which the staff person who received it did not have a security clearance?

Why was Senator HATFIELD not contacted personally by an official of the Pentagon's security group who could identify the classified portions? The staff person who wrote the section in question could have been contacted and the questionable information could have been deleted immediately. There were limited copies at that time and the probability was high that all of them could have been located and changed.

If the draft was reviewed in mid-June—why did it take the Pentagon 3 weeks to contact Senator HATFIELD?

Regulations affecting the Nation's security are not political playthings to be bent and twisted at will. When these regulations are misused as in this case and when the cloak of security is spread over purely public information in attempts to intimidate Members of Congress—then the proper use of security is weakened. Such abuse unfortunately has led to an increasing lack of credibility in our whole security system. This is intolerable.

I suspect that the security question has again been grossly abused in this case—that this whole question was raised in an attempt to discredit this report and to discourage future efforts by the Congress to become informed on military questions and to arrive at some sort of independent judgment.

I have made a number of calls to Mr. Friedheim and Mr. Capen to ask them to identify to me privately those sections of the report that contain classified material and I assured them that we could cite public sources of the information. It has been a full week now since their charge and my first call, and they have yet to come forth with an itemized list of violations. According to people who are familiar with security reviews it would take a maximum of 8 hours to review our military spending report. So where is the Pentagon with their specifics?

Unless Mr. Capen can immediately come forward and justify his handling of this case he should resign immediately.

This is not the first time that I have encountered the misuse of security classification in the past year to intimidate and hopefully silence criticisms on national issues.

The case of A. E. Fitzgerald, the deposed Air Force cost expert, who was fired by the Pentagon as a result of his testimony before Congress, is probably the most serious case in point. In the spring of 1969, after Fitzgerald's testimony on the C–5A cost overruns, Mr. Seamans, Secretary of the Air Force, told the House Armed Services Committee that Fitzgerald had passed confidential documents to Members of Congress. This was a wholly unsubstantiated and false charge as admitted later by Seamans himself—but was never changed in the public record of that hearing. Seven months later in testimony before the Joint Economic Committee, he told me that he was sorry—that the charge was false. This is a serious charge to make against a person and should not be allowed to pass lightly. Seamans had four months in which to change the record or at least to make a public statement setting the record straight—he never did.

The major point is that the Air Force used a completely false "security" violation charge in an effort to discredit Fitzgerald's accurate and honest testimony. Moreover, this unconscionable tactic worked, at least with the Armed Services Committee. Following Seaman's false charge the members of the committee exhorted Seamans to fire Fitzgerald—less than 6 months later, Seamans announced that A. E. Fitzgerald's job had been abolished.

Once again, the Defense Department is dragging out the red herring of security in order to avoid and obscure the real issues. Once again, ad hominem is substituted for logic. Once again, the taxpayer is being bewildered by a smoke screen of phony security charges. The Pentagon's true purpose is, I believe, to scare off faint-hearted economy advocates.

Well, I have news for the Pentagon. At least some advocates of economy and truth in Government are not going to be scared off.

The Department of Defense has made very serious charges. Here and now, I challenge them to produce facts to back up their charges. If the Department of Defense can prove their charges let them to so, and bring appropriate legal action. If Members of this body who have supported the Pentagon's charges can back up their accusations, let them do so.

At this point, I will yield time to any Member who wishes to present specifics to back up the Pentagon's charges—I will be prepared to answer these charges in the RECORD tomorrow.

If the Pentagon's charges cannot be proved, I suggest that some high-level resignations are in order. In particular, I suggest that Mr. Friedheim and Mr. Capen should resign forthwith.

They appear to be guilty of breaches of security. If the material contained in the staff study, in fact, was not classified then these gentlemen have violated security regulations, for it is a breach of regulations to knowingly classify information that is not classified. If the material is classified, then it was not transmitted in accordance with security regulations. In either case security regulations have been broken.

There appears to be an emerging pattern whereby the Pentagon through the abuse of security regulations more and more seeks to discredit, intimidate, and silence dissent.

This my colleagues is doubly dangerous. It harms those who would oppose the Pentagon, and it stifles criticism and free exchange so necessary to our form of Government. Equally important, it demeans and therefore weakens true national security. The enemy of this Nation lies outside the country, it is not our citizens within.

Those who abuse security regulations, and misuse them ultimately compromise the Nation's security. For these reasons, Mr. Friedheim and Mr. Capen should be called upon to resign on the basis that they have exercised extremely poor judgment in this case.

IMPORTATION OF BEEF

(Mr. BERRY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BERRY. Mr. Speaker, for over a year and increasingly during the past 6 months, we have read in our national news media and heard from a well organized and foreign financed lobby of the need for increased importation of beef into the United States.

This is, I contend, a malign proposal which would bring catastrophic results to our domestic cattle producer. Before the administration or Congress makes any further hasty and unqualified decisions with regard to the abolition of our present quota system, I think we should take an indepth look into the plight of the cattle producer and his importance to our entire Nation.

The production of beef in the United States is big business. It is the largest of the agriculture industries and in 1969 had total sales of $20 billion or 27 percent of the total farm sales. Let me point out at this time that the cattle industry receives not the first penny of Federal subsidies—a unique accomplishment in these times.

Beef is important to the economy of all 50 States. There is some form of cattle production in all States. In several States beef accounts for 60 to 70 percent of the total farm sales. In eight others it amounts to more than 50 percent and in 34 States more than 10 percent. Thirty-five States at the present have more than 1 million head of cattle.

In 1969 there were over 10 million farm employees with a large percentage of them being directly on indirectly involved in the production of beef by way of the beef industries consumption of grain—of which it is the largest single consumer.

To the consumer, beef is the largest single item in the weekly grocery basket. It is little wonder that the housewife feels she has a vested concern in the price of beef.

Domestic production, we see, does have an important role in the economy of our Nation. A prosperous beef industry is a necessity if we are to maintain a healthy farm picture. History has shown us that

prosperity on the farm is an indication of the well-being of the Nation as a whole.

The situation facing the cattle industry today is pure and simply one of their existence being threatened by increasing amounts of beef imports which are serving to disrupt the domestic market. The question facing us is whether as responsible legislators we will sacrifice our domestic producers to satisfy the expansion desires of the foreign exporters of beef or whether we will take action to protect our farmers here at home.

The problem is not a new one. It has been with us for a number of years. By 1958 it had reached serious proportions with the rate of imports increasing nearly three times over the previous year from 249.447 million pounds to 636.397 million pounds. By 1963 imports of beef had skyrocketed to 1,032 million pounds and in 1964 hit a peak of 1,185 million pounds. This latter figure is equal to the combined cattle production in South Dakota, North Dakota, Idaho, Montana, and Wyoming for that year. These are the States that we usually consider to be at the heart of our domestic beef production. Comparing population growth to increase in beef imports in the years between 1957 and 1964, we see that while population rose slightly over 6 percent the rate of increase of cattle imports was nearly 500 percent.

The cause for this sudden and serious increase is twofold. The European Common Market in the early 1960's imposed stringent restrictions on beef imports from nonmember nations. At present they have tariffs of 58 to 118 percent ad valorem on cattle while the United States maintains a 3-cent per pound or 11 percent. This is 47 percent less than the smallest Common Market equivalent.

This action by our European allies forced nations like Australia, whose beef imports account for 50 percent of its total exports, to find another market. The United States because of its large demand and high prices was the natural substitute. The United States at this time had few tariff restrictions and was thus readily available for foreign imports.

The second reason for the notable increase in these 7 years was the technical advancements in refrigeration and the faster and more efficient means of transportation. This is why in the years between 1957 and 1964 beef importation into the United States rose five times what it had previously been. The continued existence of large numbers of our domestic producers was in doubt.

The domestic market was flooded and we had a full fledge crisis on our hands. The market for steers crashed with the result being that large numbers of cattlemen were forced out of business. In the fall of 1962 choice steers were selling for slightly over $30 per hundredweight. By January the price had fallen to $27.27 and in May of 1964 hit rock bottom with a $20.50 price. This is a decline of $10 in a period of less than 24 months. I ask you how many other industries have been accorded such ill treatment and have continued to strive to exist.

The cattle industry was in serious trouble. Gross cash income fell $350 million while the total farm income dropped $700 million. The farm parity ratio dropped to a 75 percent figure in April of 1964. This was the lowest level since the depression years of the 1930's.

The increase in imports to 11 percent of our total production of beef had brought a chaotic state of affairs to the cattle farm. Foreign beef accounted for more than 1 month of our total domestic production or 4.1 million head of beef at 800 pounds in 1964.

The entire economy felt the backlash of this disaster on our cattle farms. The sale of farm equipment, trucks, cars, grain, and other related products suffered with resulting drops in sales of 10 to 50 percent. This was not a regional crisis or one affecting only a minority of our population. It was of national concern and affected the pocketbooks of all Americans.

Senator HRUSKA made a vain attempt during these crisis months to amend the Wheat-Cotton Act of 1964 with a proposal to establish an effective quota on beef imports. This measure that would have been the saving grace for a number of beef producers and a great boost to all others failed in the Senate by two votes—44 to 46.

Later in that year a compromise measure was passed. This "milk-toast substitute" was offered by Senators MANSFIELD and MCGOVERN and was supported by the Democratic administration of Lyndon Johnson. It did nothing but to temporarily relieve the problem and is the primary reason why now, 6 years later, we are faced with another crisis situation. If the Hruska bill had become law, many of today's problems would have been prevented.

The 1964 legislation serves to limit certain quantities of foreign meat—fresh, chilled, and frozen beef, veal, and mutton. The base quota for beef imports was set at 725,400,000 pounds. This was the average for the years between 1959 and 1963. May I point out at this time that a large percentage of our present problem has stemmed from this base figure which in its conception was made to include the tragic year of 1964 which saw imports rise to crisis proportions. Because of this, the base quota in all following years has been out of line with the real situation.

The United States, as always, willing to satisfy the foreign producer, had built into this law a figure that has allowed foreign imports to increase yearly at a rate equal to our domestic production increase. Because of this figure, allowing our overseas competition to share in our growing market, from 1965 to 1969, imports have increased from 848.7 million pounds to 998.8 million pounds, an increase of 27 percent.

In addition the Mansfield-McGovern bill provided a 10 percent override to exist. This trigger figure, 10 percent above the established quota figure, had to be reached for the quota to be implemented. I ask you what was the purpose in establishing a quota at all, if we are going to allow foreign competition to exceed their allowed imports by 10 percent year after year. This has been just another loophole in the 1964 legislation which has put additional hardships on our domestic producers.

In 1968 and every year since, all overseas nations exporting beef into the United States agreed to a self-restraint program which would put total imports slightly below the trigger figure of 110 percent. In 1970 this large figure was to be 1,098.7 million pounds. This is 62.6 million pounds above the established figure or 6 percent of the total imports.

In recent years the beef producing nations of the world have gone to long lengths to circumvent these agreements and their restrictions. These nations apparently feel as though they deserve a larger share of the American market and are willing to disavow their agreements to secure increased profits from the market.

The profits from exporting beef to America cannot be undervalued. For example, Australia, the largest exporter of beef to the United States, yearly receives over one-quarter of a billion dollars from these exports.

Australia and other nations have devised a transshipment plan to get this increased share in the American market. This is a method of using a third nation to actually ship the beef into the United States while in actuality it has originated in a second nation—usually one of the large beef export nations. This allows beef to enter the United States under a third nation's quota and not be counted against the quota of the country of origin.

May I commend President Nixon and Secretary Hardin for their recent actions to curb this illegal method of importation.

In 1970 this problem has again reached crisis proportions. The 1964 legislation has finally been exposed for its many loopholes. During the first 4 months of this year beef imports have totaled 425.9 million pounds or 40.1 percent of the total quota for the year. This can be compared to 318.4 million pounds in 1969 and 295.8 million pounds for 1968 during the same time period.

If foreign shipments continue at the same rate they have established during the first quarter of this year, they will exceed the 110 percent level in 10 months or by the end of September.

It is apparent through the actions of these exporting nations, specifically their rapid shipments, that they feel the United States is prepared to give them a larger part of our market by either not imposing the quota or when the trigger figure is reached revising it or totally disregarding it.

The beef situation here at home has been complicated further by its becoming the whipping post for the gripes of the consumer. A congressional subcommittee of this body recently proposed that the Federal Government set up another of its commissions to determine the amount of beef needed and to then balance foreign imports with domestic production. The Commission is to be composed of six Members of the Senate, six Members of the House, and six appointees of the President. Not a single provision is made for representation of the cattle industry on this Commission which is to determine its future. I contend that this would be unlawful Government control of an industry, and of an industry that has been

able to and will continue to be able to manage its own affairs in an effective manner without outside interference.

The mayor of our largest city has called for unlimited imports of beef into our Nation. He argued that the consumer was unable to pay the high prices for beef and that a policy of free trade with regard to beef would be the solution to the situation and give the housewife needed added savings.

Once again the cattle industry has become the scapegoat for politicans searching for the support of the urban family with total disregard for the livelihood of our rural producers.

If these men for one moment would consider what their pragmatic proposals would do to the cattle producer and eventually to the consumer they would have reservations, I am sure.

Let us look at the price of beef during the past two decades and see just how much the cattle industry has profited from our booming economy. In 1964 the average hourly wage for the manufacturing industry was $1.78 while in April of this year it had skyrocketed to $3.38, or almost doubled. Since 1960 consumer services other than rent have risen 46.3 percent, per capita disposable income is up 63 percent, the cost of all food has increased 29.6 percent yet the price of retail meat has increased only 20.7 per cent and only a small portion of that has gone to the cattle producer.

In 1950 the price of cattle was $29.28 per 100 pounds for choice steers. This year 1970, two decades later, the price has taken a phenominal 3 percent increase to $30.52. If we use the current dollar, with it being in 1970 worth only 60 cents of the 1950 dollar, we see that the figure would fall to $18.31.

It is thus obvious that the cattle producer has not profited from our bountiful economy. Of the 20.7 percent increase in meat prices he has received only 3 per cent. The remaining 17.7 percent has gone to the meat packer and the retail market, much of which has been eaten up by wage increases.

Yet the mayor of New York proposes that we increase beef imports. I will grant that for a time the prices of beef would be lower but this would be the result of over supply. In the long run great increases would be shown. Because of the foreign competition, domestic producers would be driven out of business and America would then become dependent on foreign suppliers who would undoubtedly force prices to skyrocket to a figure they felt was the highest American consumers would pay. How can we expect American industries to compete with their overseas counterparts which often pay hourly wages of less than 30 cents? How can we permit the American housewife to become totally dependent on foreign cattle production for her dinner table?

A second argument for the increase in imports is the fear that the domestic market cannot meet added demands for beef in the coming years.

In 1969 red meat consumption was 182 pounds per person, or the fifth largest in the world. Of this 182 pounds, 110.7 pounds were beef. This is an increase of 25.7 pounds over the 1960 figure. To the average American beef is an important part of his daily food consumption, we see.

Increased production of beef comes from three sources: First, increasing the number of feed cattle through the reduction in slaughtering of calves, second, reduction in slaughter of nonfed steers and heifers and, third, increased production of cattle from birth.

In the area of increased production through decreased slaughter of calves, since 1950 the rate has fallen 50 percent. The slaughter of nonfed cattle has dropped from 5,664,000 to 3,033,000 head. In the increased production from birth, in 1969 there were 330,000 additional head and in 1970 there will be an estimated additional 1 million by the end of the year. This is the first significant change in cattle population in the last 6 years. The cattlemen of American are interested in meeting the additional demand for beef and are actively working to do so.

For a moment let us look at what the USDA estimates our needs to be in the next 5 years. By 1975 they estimate we should need 25.8 billion pounds of beef for consumption. This is computed using the estimates of population growth of 1.1 percent per annum and the estimate of added increase in beef consumption of 1 percent per year.

This would be an additional 4 million head of cattle in addition to our present 110 million. We now have over 1½ million beef producers and if during the next 5 years, each would increase their herds by three cows, we will meet the additional demands. If we give the cattle ranchers a reasonable price incentive and assurance of their future, there is no reason why they cannot meet the need for 4 million more head of cattle.

The price of beef is not unreasonable when one considers the larger extents that all other consumer goods and services have increased. The cattle industry, I have pointed out, can meet the domestic demand of the future. I ask you why then should we give the foreign producers an increased share in the American market when our domestic industry can meet the demands put on it?

In the past 2 years the quota law and related agreements have worked to at least a somewhat effective control of beef imports. They have served to stabilize the volume of imports and have given the American farmer some assurance of what the market will be like. On the other hand they have give the foreign producer a fair share of the American market.

The developments of 1970 have forced us to now consider amendments to the present law—Public Law 88-482 to protect our own cattlemen. They can not endure another crisis like the one in 1963-64. The time is now to enact legislation to come to the aid of our cattle producers.

Under H.R. 9407, my bill, and related bills, a quarterly quota on imports would be established. This would make fluctuations such as those that occurred in the first quarter of this year impossible. It would give the American beef producer an accurate estimate of what he could expect the market to be like in a particular month.

This legislation would abolish the 10 percent trigger figure. Why should we allow imports to reach a level of 10 percent above the quota figure before the quota is put into effect. It would extend the quota to include fresh, chilled, or frozen meat of lamb, swine, all beef and pork sausage and prepared and preserved pork, beef, and veal.

It would maintain the base figure at 725,800,000 pounds but in doing so would eliminate the growth formula which has allowed imports to reach 998,000,000 pounds in 1969.

This bill would change the mechanism which the Secretary of Agriculture is to use to establish the volume of imports. These levels in the future would be set according to recorded levels of imports with the quota being then imposed on the actual level of imports and not the Secretary's estimate.

Finally the bill would provide that all offshore purchases of beef, veal, lamb, pork, and mutton be included under the quota of the country of origin. This would include all purchases by the Department of Defense for our troops at home and abroad.

Congress must take action now to protect our cattle farmers. The recent actions by the President have helped the situation but they have hardly eliminated them.

It is now up to each of us to take actions to protect this very valuable area of American production before time runs out.

Abraham Lincoln once related that:

> He hadn't learned much about economics and especially foreign trade but I do know that if we use American steel to make railroad ties, we have the money and the ties; whereas if we bought the ties from a foreign mill we don't have the money.

In this session of Congress when we are considering all types of tariff restrictions, let us keep these words of our 16th President in mind. Let us never forget that the purpose of our Federal Government is to serve the people of the United States first and foremost. This is not to say that we should follow a policy of protectionism and isolate ourselves from the rest of the world. We all know that foreign imports and our own exports are valuable parts of our economy. But when foreign imports endanger the livelihood of our own domestic producers, as has been the case with the beef industry, it is time for positive preventive steps to be taken.

GOLDEN ANNIVERSARY OF BROADCASTING IN THE UNITED STATES

(Mr. TIERNAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. TIERNAN. Mr. Speaker, 1970 is the golden anniversary of broadcasting in the United States. A current radio commercial claims 50 years of great accomplishments by broadcasters, and "The best is yet to come." That statement holds true for the overwhelming majority of broadcasters in America, but

there are others who fall so far short of greatness that they cast a blot on the record of the entire broadcasting industry. I believe we have an example of just such a station's performance before the Federal Communications Commission at the present time.

Radio Station KTRG in Honolulu, Hawaii, has been cited for 26 alleged violations of the Communications Act of 1934. It is on open record that the FCC has received numerous and continuous complaints of a serious and substantial nature concerning the operation of KTRG. When one looks further into the "complaints," it is clear that the record of KTRG is shocking. If the 26 allegations submitted by the Chief of the FCC's Hearing Division are true, then surely this license should be revoked immediately.

KTRG is accused of: utilizing access to the public airways to obtain money from members of the Japanese community with threats that otherwise their character will be defamed over the station's facilities; violations of the personal attack rules; violation of the fairness doctrine; and the use of the broadcast facilities for personal benefit—that is, the advancement of the campaign for Governor of Hawaii by KTRG's president, David Watumul. Add to these breaches of duty the allegations that KTRG apparently staged the shutdown of the station in order to spur its listeners into a massive letterwriting campaign to the FCC urging quick renewal of their license, and we have a case of monumental misuse of the public airways.

In the bill of particulars published by the FCC it is further noted that KTRG employed a man who used filthy Japanese language to insult and slander members of the Japanese community. Station KTRG has taken editorial positions on controversial issues of public importance without affirmatively seeking to encourage and implement the presentation of contrasting views. It is further alleged that KTRG has not been law abiding. The station publicized its intention to refuse to comply with the census laws of the United States, and has urged and encouraged others to do the same. The allegations also say that the facilities of KTRG were used to encourage unlawful activities.

If there is any substance of truth to any of these allegations then surely KTRG should not be on the air today. This station showed no desire to ascertain community needs and purposely distorted issues and comments of listeners for their own personal benefit. The actions of this station are an affront to the people of Hawaii, and I find it a personal affront that we in Congress and the FCC allow this condition to continue.

There are too many deserving people who would like the opportunity to use a radio license for the benefit of the community, for us to allow any licensee to continue broadcasting when his performance is so overwhelmingly pathetic. The FCC has said that the complaints against KTRG "raise questions as to whether the licensee has been operating KRTG in conformity with Commission rules and regulations and in the public interest."

I contend that such a statement by the Commission raises questions in my mind as to whether they have any comprehension of the public interest. If they had, the FCC would surely not make such a weak statement concerning KTRG. The FCC has been too lenient for too long on scofflaws and those broadcasters who openly disregard the public interest and corrupt the use of this very valuable franchise. If the Commission hopes to gain any respect as a regulatory agency, it must begin to deal forthrightly with those whose choose to disobey the rules. KTRG should not go unscathed.

I would like to remind my colleagues that over a year ago I brought out how WIFE, a station in Indianapolis, had misused its franchise to broadcast. The WIFE and KTRG cases underscore the inadequacies of the Communications Act of 1934. It is clear that the public has not been served by these broadcasters. They should not be on the air today.

These are the cases that have come to my attention. One wonders just how many other licensees are so prostituted.

It is clearly not in the public interest that the FCC, in the face of reckless disregard of their rules, should treat these cases so lightly. The Congress should not be forced to act as a watchdog over the agency set up to insure that the field of communications is used for the public's interest, convenience and necessity.

The public has the right to have a broadcast industry that attempts to deal fairly with issues and tries to meet community needs. Clearly, WIFE, KTRG, and how many others we do not know, are failing miserably in this regard.

We, as elected officials, must not let such ineptitude exist. These cases are blatant reminders of how our system is failing the people. The Congress is already late in its effort to reclaim communications in America for the people. Let us not drag our feet any longer.

BUCHWALD ON COMMISSIONS

(Mr. MONAGAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, I wish to report to the House that Art Buchwald tells it like it is.

As chairman of the Special Studies Subcommittee of the Government Operations Committee, I have been presiding over a study into the operations of Presidential commissions. The subcommittee has held two sets of hearings so far this year, which are now available. Additional hearings will be held. They have demonstrated the ephemeral quality of these commissions.

Mr. Buchwald's column of July 23, 1970, in the Washington Post reports on the secret burial grounds of reports and studies made by Presidential commissions. Our evidence indicates that most reports are buried and that individuals who have served on such study groups do feel a deep personal loss when their work has been buried. In fact, we have been informed that our count of past Presidential commissions practically conforms to a count of the headstones in the cemetery. Further, the area appears to contain adequate space for the reports of present and future commissions. Mr. Gottfried Snellenbach, the caretaker of the burial area for Government reports since the Harding administration, is so knowledgeable on the subject of Presidential commissions that we have extended to him an invitation to testify at our next hearing.

At this point in the RECORD, I submit the article by Mr. Buchwald referred to above:

COSTLY REPORTS VIEWED GRAVELY

(By Art Buchwald)

This is a government of reports and studies. No matter what happens in this nation the first solution is to appoint a commission to study it. The commissions take one year, two years, some even longer, and then they make their report to the President. If the President agrees with the report, it's released to the nation. If he or his staff disagrees with it, it's buried. But where?

Just by chance I discovered the secret burial grounds of reports and studies made by presidential commissions. The cemetery is located on a hill overlooking the upper Potomac. It is quiet and deserted, and only the chirping of birds or the call of a hoot owl can be heard.

Mr. Gottfried Snellenbach has been caretaker of the burial area for government reports since the Harding administration, and after I assured him I would not dig up any of the graves, he let me enter the large well-kept grounds.

"We've got some of the great reports of all times buried here," Mr. Snellenbach said. "We've got reports that cost $20 million, and we've got reports that cost $2,000, but in the end they all wind up here, buried 6 feet under."

"Sir, what kind of reports are resting here?"

"It might be better to ask what kind of reports aren't buried here. We have reports on violence, studies on blacks, students, unemployment, the economy, the Communist threat, housing, health care, law and order. You name it, and we've buried it."

"How does a report find its final resting spot in this setting?"

"Well, as you know, the President is always appointing a commission to study something or other, and after the study they're supposed to hand in a report. Now, lots of times the President has no intention of paying any attention to the report, and it's dead before it's even written. Other times someone on the President's staff reads a report handed in by a commission and says, 'This stuff is dynamite. We have to kill it.'

"In some cases the President says, 'Let's release this report to the press and then bury it.' Occasionally a report will just die of heartbreak because nobody pays any attention to it.

"In any case, after the report is dead, it has to be buried, because if you're President you don't want someone finding it at a later date and using it against you.

"So every week each report that has died is placed in a pine box and loaded on a government hearse and brought up here, where we have a simple ceremony before lowering it into the ground.

"If it's a blue ribbon panel report that's been killed in action, we give it a 21-gun salute. Otherwise, we lay it to rest with as little fuss as possible."

"This cemetery goes for miles and miles," I said.

"No one knows how many reports have been buried here by the different Presidents."

"Mr. Snellenbach, this is a beautiful cemetery and very impressive, but why does the government go to so much trouble and expense to keep it up for nothing more than paper reports?"

"You must understand that most of the men asked to serve on the presidential commissions are very important citizens. They spend months and years working on these reports, and they feel very close to them. When their reports are killed or buried, these men feel a personal loss. Many days you will see them sitting here next to the tombstones of their studies, tears rolling down their cheeks. No matter how long you work here, it still gets to you."

MERCURY CONTAMINATION—ADMINISTRATION IN ACTION

(Mr. MONAGAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MONAGAN. Mr. Speaker, on July 21, 1970, I brought to the attention of the House the inadequacy of the abatement action involving mercury contamination being undertaken by the Departments of Interior and Justice.

I now wish to report that Secretary Walter Hickel announced on July 22 that he is seeking legal action against 13 U.S. industrial firms for "discharge into the Nation's waterways" of enough mercury to be "a serious hazard to public health." I commend Secretary Hickel for his action.

At the same time it was announced that the Department of Justice representative conferring with Mr. Hickel stated that no firm decision had been made yet, on whether or how to take action.

If the facts disclose that the discharge of mercury wastes is a serious hazard to the public's health, I urge the Department of Justice to bring suit promptly utilizing as grounds for the action the Federal Water Quality Administration Act and the Refuse Act of 1899. Discharge of mercury wastes into our water can be a serious hazard to man and warrants responsible abatement action. The Department of Justice should revoke its present guidelines to its attorneys which allows suits against "accidental and infrequent" industrial polluters but permits day to day dumping of mercury by polluters. The Department should demonstrate initiative and leadership by using the legal tools that the Congress has provided.

THE ANNIVERSARY OF PUERTO RICO CONSTITUTION DAY

(Mr. ROONEY of New York asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROONEY of New York. Mr. Speaker, 18 years ago this Saturday there began one of the most impressive experiments in American history. Truly the date July 25, 1952, marks the beginning of one of the most satisfactory agreements ever reached by this Government with any group of people. For on this day 2,500,000 Puerto Ricans were given assurance of all the liberties and the freedoms enjoyed by their fellow American citizens.

It is small wonder that the people in Puerto Rico and their kinsmen living here celebrate with deep emotion the anniversary of the adoption of their constitution which brought commonwealth status to their delightful island home.

I count it a distinct honor and a cherished memory to have been permitted by the late Speaker Sam Rayburn of Texas to chair the deliberations of this body during the enaction of the legislation which changed Puerto Rico's status of a semicolonial area of virtual dependency to full partnership with our Federal Government.

I recall with deep satisfaction my privileged association with the almost legendary "saint of Puerto Rico," my good friend and former Governor, Luis Munoz Marin. Working month after month with the Puerto Rican people's hero and his many fine associates was indeed a most rewarding and gratifying experience.

This anniversary date is of greater significance to our Puerto Rican neighbors than that of the day in July 1898 when American military forces wrested the island from the four-century domination by Spain.

It is a date of even greater historic significance than the date in 1899 when Puerto Rico was officially ceded to the United States under the Treaty of Paris.

This is true even though the years 1898 and 1899 marked the end of years upon years of hopeless thralldom and abject poverty for every man, woman, and child—a span of slavery years dating back to Columbus' discovery of the area on his second voyage in 1493 and its subsequent settlement by Ponce de Leon in 1508.

Unfortunately, for many reasons Puerto Rico was not granted the status of an incorporated territory which meant that although belonging to this country, she still was not a part of it. It is true that this Government did offer certain rights from time to time on a piecemeal basis.

Thus, it was that with the adoption of the Constitution—a mandate which evolved after months of dedicated joint effort on the part of political leaders of Puerto Rico and the United States, the people of Puerto Rico were given the opportunity to help themselves with the ardent support of this Government.

Gov. Luis Muñoz Marin then began implementing his far-seeing plan called Operation Bootstrap. His vision and his leadership coupled with the magnificent support of his people wrought a miracle within a short time. The plan began raising the annual income by doubling and tripling the pitiful $126 level of 1952 until now it is well over $1,000. Illiteracy has been virtually wiped out, poverty has been significantly reduced, and health conditions so improved that the lifespan has been raised from 46 years to 70 years in just 18 years.

On each visit to Puerto Rico over the years, I have been thrilled with the economic progress and cultural achievements which mark life under the Commonwealth. No amount of praise would do justice to the people who have worked so hard to make Puerto Rico now the "Showcase of the Carribbean." All of us can take great pride that Puerto Ricans are no longer just poor relations but are now well-to-do relatives.

Although Puerto Rico has not solved all its problems, it is devoting concerted efforts by the people and their elected leaders to do so. Much of the success of these efforts is due directly to the fine constitution which spelled out clearly the nature and extent of Puerto Rico's right to govern itself.

The constitution provides for a clear division of the powers within three coordinating branches of government—the legislative, executive, and judicial—and by assuring that each of which checks and balances the other. This gives the people of Puerto Rico maximum protection of their interests and their rights.

Mr. Speaker, too often we here on the mainland think of Puerto Ricans in terms of those who remain in the Commonwealth. We should remind ourselves of the hundreds of thousands who live and work throughout this land. We should remind ourselves of the tens of thousands of Puerto Rican young men who serve their country in our Armed Forces—many of them as volunteers. During the Korean war more than 60,000 Puerto Rican soldiers fought in our armed services of which number over 54,000 were volunteers.

We should remind ourselves of the great contribution which our Puerto Rican citizens are making to our daily lives culturally, politically, and economically. It might surprise you to learn that in New York City alone last year, Puerto Rican workers earned more than $800,000,000 and paid over $60 million in taxes. This in spite of getting too often the most menial jobs because of limited language proficiency and job experience.

Mr. Speaker, I salute the people of Puerto Rico both here and at home. I commend them for making such a success of their efforts under their 18-year-old constitution that they have provided a vivid vindication of the democratic process. They give us living proof that the traditional American way with its belief in human liberty and its belief in government by consent of the governed is workable and satisfactory.

I trust that during this anniversary date each year hence will be marked by the same success and splendid achievements which mark this Puerto Rico Constitution Day.

CONGRESSMAN HUNT INTRODUCES LEGISLATION TO PROHIBIT SALE OF GUN COLLECTOR LISTS BY IRS

(Mr. HUNT asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HUNT. Mr. Speaker, I am today introducing a bill that would prohibit the public disclosure of the names and addresses of persons licensed as collectors pursuant to the Gun Control Act of 1968.

It will be recalled that there was considerable concern and public protest when it became known that the Internal Revenue Service was selling, at cost, preaddressed mailing labels of licensed firearms dealers and collectors. My concern, and particularly that brought to my attention by the collectors themselves, involves the essentially private nature of the activity of a gun collector, commonly carried on in his home, and the threat to his security which the widespread dis-

closure of his identity poses. For example, a concerned resident of Columbus, Ohio, brought to my attention the theft in that city of an extensive gun collection from a residence followed by the gutting of the home when the burglars set fire to it as they left. I am not suggesting that there was any causal relationship between the sale of gun collector lists by the IRS and the theft and damage that occurred in this particular instance. However, I am saying that because of the indiscriminate availability of this type of information, the risk of such incidents is immeasurably increased.

In the aftermath of this situation, general legislation was introduced, which I cosponsored, that is designed to limit the sale and distribution of mailing lists by any Federal agency for purposes of commercial or other solicitations. That measure amends the so-called Freedom of Information Act. The bill I am introducing today, however, amends the Gun Control Act of 1968 and precludes any authority for the public disclosure of gun collector lists which might be claimed under the Freedom of Information Act. In my estimation, a careful reading will show that the Gun Control Act did not contemplate the public disclosure of this information, nor does the Freedom of Information Act require it under any stretch of the imagination. That any policy guidelines in this respect are lacking in the Gun Control Act is evident from the fact that identifying information relative to gun collectors has been indiscriminately disclosed in the past in mailing list form.

It is of some temporary consolation that the IRS has discontinued this practice as confirmed in a letter to me from the Assistant Commissioner for Compliance, Donald W. Bacon:

> We have concluded that a list of collectors is necessary solely because the law requires all licensees—not merely those engaged in business—to be furnished the compilation of relevant State and local ordinances. Under our Automatic Data Processing system and within the framework of the Freedom of Information Act, the names and addresses of licensed collectors can be separated from the list of dealers.
>
> Accordingly, in the future the names and addresses of those persons licensed as collectors under the Gun Control Act will not be disclosed.

Personally, I do not feel there should be this loose administrative discretion in such an important matter. The Gun Control Act should not be permitted to become dependent upon the future exercise of this discretionary authority, an insidious form of harrassment that carries with it a high risk of endangering those who are merely complying with the law while engaging in an unquestionably legitimate, although private, activity; namely, gun collecting.

The following Members join me at this time in sponsoring the legislation and urge its prompt consideration: Messrs. CARTER, CLANCY, DON H. CLAUSEN, DANIELS of Virginia, DENNEY, DEVINE, ESHLEMAN, GOODLING, KING, KYL, LATTA, MIZE, SAYLOR, SCHADEBERG, SEBELIUS, and WATKINS.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. JONES of Tennessee (at the request of Mr. OBEY) for today on account of official business.

Mr. HATHAWAY (at the request of Mrs. MINK) for July 22 on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. RIEGLE) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. WATSON, for 10 minutes, today.

Mr. WILLIAMS, for 10 minutes, today.

Mr. CORBETT, for 15 minutes, today.

Mr. MILLER, of Ohio for 5 minutes, today.

Mr. CÓRDOVA, for 5 minutes, today.

(The following Members (at the request of Mr. WOLFF) to address the House and to revise and extend their remarks and include extraneous matter:)

Mr. PATMAN, for 15 minutes, today.

Mr. FULTON of Tennessee, for 15 minutes, today.

Mr. LEGGETT, for 60 minutes, on July 28.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. GUDE, prior to the vote on H.R. 18515 today.

Mr. BIAGGI to revise and extend his remarks and include extraneous matter prior to the vote on the Boland amendment.

Mr. RANDALL to revise and extend his remarks and include extraneous matter prior to the vote on the Boland amendment.

Mr. FLYNT.

(The following Members (at the request of Mr. RIEGLE) and to include extraneous matter:)

Mr. SCHADEBERG.
Mr. DUNCAN in two instances.
Mr. WYMAN in two instances.
Mr. ZWACH in three instances.
Mr. ROBISON.
Mr. LANDGREBE.
Mr. HALL.
Mr. SHRIVER.
Mr. MORSE in two instances.
Mr. BROTZMAN.
Mr. BUSH.
Mr. BROWN of Michigan.
Mr. DON H. CLAUSEN.
Mr. ROUSSELOT.
Mr. STEIGER of Wisconsin.
Mr. LUJAN in two instances.
Mr. HANSEN of Idaho.
Mr. HARSHA.
Mr. HALPERN.
Mr. BOW in four instances.
Mr. HARVEY.
Mr. ASHBROOK.
Mr. MCKNEALLY.
Mr. BROYHILL of Virginia.
Mr. MCDONALD of Michigan.

(The following Members (at the request of Mr. WOLFF) and to include extraneous matter:)

Mr. RODINO in five instances.
Mr. FRASER.
Mr. NIX.
Mr. ANNUNZIO.
Mr. WALDIE.
Mr. ANDERSON of California in two instances.
Mr. LONG of Maryland in two instances.
Mr. BOGGS.
Mr. EVINS of Tennessee in two instances.
Mr. GONZALEZ in two instances.
Mr. WOLFF in four instances.
Mr. TUNNEY in three instances.
Mr. JOHNSON of California in two instances.
Mr. LEGGETT.
Mr. MOLLOHAN in five instances.
Mr. KARTH.
Mr. HATHAWAY in two instances.
Mr. MARSH.
Mr. FOUNTAIN in two instances.
Mr. KLUCZYNSKI in two instances.
Mr. O'NEILL of Massachusetts in two instances.
Mr. FLOWERS in three instances.
Mr. MILLER of California in five instances.
Mr. HAGAN in two instances.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 17619. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes.

SENATE ENROLLED BILL SIGNED

The Speaker announced his signature to an enrolled bill of the Senate of the following title:

S. 3279. An act to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes.

ADJOURNMENT

Mr. WOLFF. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 19 minutes p.m.), under its previous order, the House adjourned until Monday, July 27, 1970, at 12 o'clock noon.

COMMITTEE EMPLOYEES

JULY 9, 1970.

COMMITTEE ON AGRICULTURE

TO THE CLERK OF THE HOUSE:

The above-mentioned committee or subcommittee, pursuant to section 134(b) of the "Legislative Reorganization Act of 1946," Public Law 601, 79th Congress, approved August 2, 1946, as amended, submits the following report showing the name, profession, and total salary of each person employed by it during the 6-month period from

January 1, 1970, to June 30, 1970, inclusive, together with total funds authorized or appropriated and expended by it:

Name of employee	Profession	Total gross salary during 6-month period
Christine S. Gallagher	Clerk	$15,098.89
Lacey C. Sharp	General counsel	15,098.89
Hyde H. Murray	Associate counsel	16,967.67
Louis T. Easley	Staff consultant	12,247.88
Betty M. Prezioso	Secretary to general counsel.	8,073.75
Lydia Vacin	Staff assistant	8,073.75
Martha S. Hannah	do	8,073.75
Marjorie B. Johnson	Secretary to associate counsel.	8,073.75
Catherine L. Bernhardt	Calendar clerk	8,073.75
George F. Missibeck	Printing editor	8,747.16
Investigative staff:		
John A. Knebel	Assistant counsel	12,247.88
Mildred P. Baxley	Staff assistant	8,073.75
Fred T. Ward	Assistant staff consultant	8,581.20
Mary P. Shaw	Staff assistant	5,811.02
Doris Lucile Farmarco	do	5,811.02
Doris R. Swischer	do	4,959.24
Bert Allan Watson	do	938.90

Funds authorized or appropriated for committee expenditures	$200,000.00
Amount of expenditures previously reported	88,431.55
Amount expended, Jan 1–June 30, 1970	46,709.13
Total amount expended, Jan 1, 1969–June 30, 1970	135,140.68
Balance unexpended as of June 30, 1970	64,859.32

W. R. POAGE, Chairman.

JULY 15, 1970.

COMMITTEE ON APPROPRIATIONS

To the CLERK OF THE HOUSE:

The above-mentioned committee or subcommittee, pursuant to section 134(b) of the Legislative Reorganization Act of 1946, Public Law 601, 79th Congress, approved August 2, 1946, as amended, submits the following report showing the name, profession, and total salary of each person employed by it during the 6-month period from January 1, 1970, to June 30, 1970, inclusive, together with total funds authorized or appropriated and expended by it:

Name of employee	Profession (Standing or Select Committee)	Total gross salary during 6-month period
Paul M. Wilson	Clerk and staff director.	$16,671.35
Kenneth Sprankle	Special assistant	2,091.84
Jay B. Howe	Staff assistant	16,507.32
Robert L. Michaels	do	3,277.47
Robert M. Moyer	do	16,507.32
G. Homer Skarin	do	16,507.32
Eugene B. Wilhelm	do	16,507.32
Samuel R. Preston	do	16,507.32
Hunter L. Spillan	do	15,568.53
Aubrey A. Gunnels	do	15,325.63
Henry A. Neil	do	15,325.63
Francis G. Merrill	do	14,649.68
Keith F. Mainland	Staff assistant to chairman.	14,649.68

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2240. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated May 22, 1970, submitting a report, together with accompanying papers and illustrations, on Wenatchee, Wash., requested by a resolution of the Committee on Public Works, House of Representatives, adopted May 5, 1966 (H. Doc. No. 91–370); to the Committee on Public Works and ordered to be printed, with illustrations.

2241. A letter from the Assistant Secretary of the Interior, transmitting a copy of an application by the Central Oregon Irrigation District, Redmond, Oreg., for a supplemental loan under the Small Reclamation Projects Act; to the Committee on Interior and Insular Affairs.

S. 2242. A letter from the Chairman, Lewis

and Clark Trail Commission, transmitting the Commission's final report, pursuant to Public Law 88–630; to the Committee on Interior and Insular Affairs.

2243. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States, pursuant to section 212(a)(28)(I)(ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

2244. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases in which the authority contained in section 213(d)(3) of the Immigration and Nationality Act was exercised in behalf of certain aliens, together with a list of the persons involved, pursuant to section 212(d)(6) of the act; to the Committee on the Judiciary.

RECEIVED FROM THE COMPTROLLER GENERAL

2245. A letter from the Comptroller General of the United States, transmitting a report on progress and problems in implementing the Federal Claims Collection Act of 1966; to the Committee on Government Operations.

2246. A letter from the Comptroller General of the United States, transmitting a report on problems in approving and paying for nursing home care under the medicaid program in California, Social and Rehabilitation Service, Department of Health, Education, and Welfare; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. POAGE: Committee on Agriculture. H.R. 18546. A bill to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes; with amendments (Rept. No. 91–1329). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FEIGHAN: Committee on the Judiciary. S. 1087. An act for the relief of Vernon Louis Hoberg (Rept. No. 91–1323). Referred to the Committee of the Whole House.

Mr. FEIGHAN. Committee on the Judiciary. S. 1703, an act for the relief of Rosa Pintabona (Rept. No. 91–1324). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 1704. An act for the relief of Lillian Biazzo (Rept. No. 91–1325). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 2863. An act for the relief of Mrs. Cumorah Kennington Romney (Rept. No. 91–1326). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 2976. An act for the relief of Margarita Anne Marie Baden (Nguyen Tan Nga) (Rept. No. 91–1327). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3136. An act to confer U.S. citizenship posthumously upon Guy Andre Blanchette (Rept. No. 91–1328). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of the XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California:

H.R. 18599. A bill to prohibit commercial flights by supersonic aircraft within the United States until the Secretary of Health, Education, and Welfare finds and reports that such flights will not have detrimental physiological or psychological effects on persons on the ground, and to prohibit the escalation of aircraft noise; to the Committee on Interstate and Foreign Commerce.

By Mr. BARING:

H.R. 18600. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy need; to the Committee on Interstate and Foreign Commerce.

By Mr. BROWN of Michigan:

H.R. 18601. A bill to adjust agricultural production, to provide a transitional program for farmers, and for other purposes; to the Committee on Agriculture.

By Mr. BROYHILL of Virginia:

H.R. 18602. A bill to increase the authority of the District of Columbia to borrow funds for construction purposes from the U.S. Treasury by increasing from 6 to 10 percent the limitation on the amount of general revenue the District of Columbia is permitted to expend each fiscal year for principal and interest; to the Committee on the District of Columbia.

By Mr. CORBETT:

H.R. 18603. A bill to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. EILBERG:

H.R. 18604. A bill to amend the Sherman Act, as amended, by requiring prior notification of price increases in certain industries, and for other purposes; to the Committee on the Judiciary.

By Mr. FISH:

H.R. 18605. A bill to amend the Truth-in-Lending Act to eliminate the inclusion of agricultural credit; to the Committee on Banking and Currency.

By Mr. FLOOD (for himself, Mr. BROWN of Michigan, Mr. BURTON of California, Mr. EDMONDSON, Mr. GIAIMO, Mr. KEE, and Mr. STANTON):

H.R. 18606. A bill to provide support for the health manpower needs in the medical and dental educational programs for private nonprofit medical and dental schools in the District of Columbia; to the Committee on the District of Columbia.

By Mr. HUNT (for himself, Mr. CARTER, Mr. CLANCY, Mr. DON H. CLAUSEN, Mr. DANIEL of Virginia, Mr. DENNEY, Mr. DEVINE, Mr. ESHLEMAN, Mr. GOODLING, Mr. KING, Mr. KYL, Mr. LATTA, Mr. MIZE, Mr. SAYLOR, Mr. SCHADEBERG, Mr. SEBELIUS, Mr. WATKINS, Mr. MOLLOHAN, Mr. RANDALL, Mr. MCKNEALLY, Mr. PETTIS, and Mr. DOWNING):

H.R. 18607. A bill to provide that the Secretary of the Treasury shall not disclose to the public the names and addresses of certain persons licensed as collectors of firearms and ammunition, and for other purposes; to the Committee on the Judiciary.

By Mr. JOHNSON of California:

H.R. 18608. A bill to amend Public Law 875, 81st Congress, the Disaster Relief Act of 1969, and for other purposes; to the Committee on Public Works.

By Mr. MORGAN:

H.R. 18609. A bill to provide a program to improve the opportunity of students in elementary and secondary schools to study cultural heritages of the major ethnic groups in the Nation; to the Committee on Education and Labor.

By Mr. MYERS:

H.R. 18610. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. PELLY:

H.R. 18611. A bill to provide a temporary program of extended unemployment compensation and a temporary increase in the rate of the Federal unemployment tax; to the Committee on Ways and Means.

By Mr. RODINO (for himself, Mr. CONTE, and Mr. SYMINGTON):

H.R. 18612. A bill to amend section 620 of the Foreign Assistance Act of 1961 to suspend, in whole or in part, economic and military assistance and certain sales to any country which fails to take appropriate steps to prevent narcotic drugs produced or processed, in whole or in part, in such country from entering the United States unlawfully, and for other purposes; to the Committee on Foreign Affairs.

By Mr. STEIGER of Wisconsin (for himself, Mr. LOWENSTEIN, Mr. GUBSER, Mr. GUDE, Mr. SMITH of New York, Mr. SNYDER, Mr. STAFFORD, Mr. STANTON, Mr. STOKES, Mr. TAFT, Mr. UDALL, Mr. VANIK, Mr. WIDNALL, Mr. CHARLES H. WILSON, and Mrs. GREEN of Oregon):

H.R. 18613. A bill Voluntary Military Manpower Procurement Act of 1970; to the Committee on Armed Services.

By Mr. STEIGER of Wisconsin (for himself, Mr. LOWENSTEIN, Mr. ADDABBO, Mr. ANDERSON of Illinois, Mr. ANDERSON of Tennessee, Mr. BELL of California, Mr. BIESTER, Mr. BROOMFIELD, Mr. BROWN of California, Mr. BUSH, Mr. CARTER, Mrs. CHISHOLM, Mr. DON H. CLAUSEN, Mr. CLAY, Mr. CLEVELAND, Mr. CONTE, Mr. CONYERS, Mr. COWGER, Mr. DUNCAN, Mr. EDWARDS of California, Mr. ESCH, Mr. FARBSTEIN, Mr. FINDLEY, Mr. FISH, and Mr. FRIEDEL):

H.R. 18614. A bill Voluntary Military Manpower Procurement Act of 1970; to the Committee on Armed Services.

By Mr. LOWENSTEIN (for himself, Mr. STEIGER of Wisconsin, Mr. HALPERN, Mr. HARRINGTON, Mr. HASTINGS, Mr. HECHLER of West Virginia, Mrs. HECKLER of Massachusetts, Mr. LEGGETT, Mr. LLOYD, Mr. LUKENS, Mr. MCDADE, Mr. MATSUNAGA, Mrs. MINK, Mr. MORSE, Mr. O'KONSKI, Mr. OTTINGER, Mr. PETTIS, Mr. QUIE, Mr. RAILSBACK, Mr. ROBISON, Mr. ROSENTHAL, Mr. ROYBAL, Mr. RYAN, Mr. SCHWENGEL, and Mr. SHRIVER):

H.R. 18615. A bill Voluntary Military Manpower Procurement Act of 1970; to the Committee on Armed Services.

By Mr. WYDLER:

H.R. 18616. A bill to amend the National Traffic and Motor Vehicle Safety Act of 1966 to require the installation in school buses of restraining devices for the protection of children; to the Committee on Interstate and Foreign Commerce.

By Mr. ASHLEY (for himself, Mr. BROOMFIELD, Mr. EDWARDS of Louisiana, Mr. FULTON of Pennsylvania, Mr. LATTA, Mr. MCKNEALLY, Mr. PATMAN, Mr. SCHNEEBELI, Mr. STOKES, Mr. VANIK, and Mr. YATRON):

H.R. 18617. A bill to provide partial reimbursement for losses incurred by commercial fishermen as a result of restrictions imposed on domestic commercial fishing by a State or the Federal Government; to the Committee on Merchant Marine and Fisheries.

By Mr. BINGHAM:

H.R. 18618. A bill to establish a National Economic Equity Board to protect the public interest in price stability and the control of inflation; to the Committee on Banking and Currency.

By Mr. CABELL:

H.R. 18619. A bill to establish the Offices of Delegate from the District of Columbia to the Senate and Delegate to the House of Representatives, to amend the District of Columbia Election Act, and for other purposes; to the Committee on the District of Columbia.

By Mr. GETTYS:

H.R. 18620. A bill to amend title 38 of the United States Code so as to provide that monthly social security benefit payments shall not be included as income for the purpose of determining eligibility for a pension under that title; to the Committee on Veterans' Affairs.

By Mr. HARRINGTON (for himself, Mr. SYMINGTON, and Mr. MOSHER):

H.R. 18621. A bill to amend the Fish and Wildlife Coordination Act to provide additional protection to marine and wildlife ecology by providing for the orderly regulation of dumping in the coastal waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. LUJAN:

H.R. 18622. A bill to declare that the U.S. holds in trust for the Pueblo of Cochiti approximately 3.308 acres of land; to the Committee on Interior and Insular Affairs.

H.R. 18623. A bill to make certain individuals who participate in civil disorders civilly liable for damages to persons who suffer loss; to the Committee on the Judiciary.

H.R. 18624. A bill to impose an excess profits tax on the income of corporations during the period of military involvement in Southeast Asia, in order to establish a fund to provide for the improvement of the quality of medical care, housing, and education in the United States; to the Committee on Ways and Means.

By Mrs. MINK (for herself, Mr. BROWN of California, Mr. POWELL, Mr. HELSTOSKI, Mr. BINGHAM, Mr. CHARLES H. WILSON, Mr. NEDZI, Mr. LEGGETT, and Mr. PODELL):

H.R. 18625. A bill to amend the Internal Revenue Code of 1954 to disallow any deduction for contributions to elementary and secondary schools which discriminate on the grounds of race; to the Committee on Ways and Means.

By Mr. MIZELL:

H.R. 18626. A bill to amend the Internal Revenue Code of 1954 to allow a current deduction for certain expenditures incurred to make buildings accessible to handicapped persons; to the Committee on Ways and Means.

By Mr. STAGGERS:

H.R. 18627. A bill to regulate travel agents, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS (for himself, Mr. PERKINS, Mr. ROONEY of Pennsylvania, Mr. SKUBITZ, Mr. SATTERFIELD, Mr. CARTER, Mr. STUCKEY, Mr. KUYKENDALL, Mr. SAYLOR, Mr. JOHNSON of California, Mr. MCCLURE, Mr. KEE, Mr. WOLD, Mr. MORGAN, Mr. MADDEN, Mr. WAMPLER, Mr. DULSKI, Mr. FLOOD, Mr. SLACK, Mr. FULTON of Pennsylvania, Mr. HAYS, Mr. BEVILL, Mr. MOORHEAD, Mr. GRAY, and Mr. WHALLEY):

H.R. 18628. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS (for himself, Mr. MOLLOHAN, Mr. YATRON, Mr. ZION, Mr. TUNNEY Mr. DENT, Mr. SMITH of New York, Mr. MURPHY of Illinois, Mr. OLSEN, Mr. CLARK, Mr. PRICE of Illinois, Mr. MELCHER, and Mrs. HANSEN of Washington):

H.R. 18629. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. WEICKER:

H.R. 18630. A bill to establish an Intergovernmental Commission on Long Island Sound; to the Committee on Interior and Insular Affairs.

Mr. BUSH (for himself, Mr. CARTER, Mr. FREY, Mr. GUBSER, Mr. HORTON, Mr. LUKENS, Mr. MCCLOSKEY, Mr. MOSHER, Mr. PETTIS, Mr. REID of New York, Mr. VANDER JAGT, and Mr. WOLD):

H.J. Res. 1327. Joint resolution to set forth a national policy on the stabilization of the population of the United States of America; to the Committee on Government Operations.

By Mr. MOLLOHAN:

H. Res. 1159. Resolution to express the sense of the House of Representatives that the U.S. maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of California:

H.R. 18631. A bill for the relief of Mrs. Rosanna Thomas; to the Committee on the Judiciary.

By Mr. FISHER:

H.R. 18632. A bill for the relief of Maurice R. Seaquist, Lieutenant Colonel, U.S. Air Force; to the Committee on the Judiciary.

By Mrs. MINK:

H.R. 18633. A bill for the relief of Mrs. Andrea Pasion and her minor daughter, Benedicta Pasion; to the Committee on the Judiciary.

By Mr. SMITH of California:

H.R. 18634. A bill for the relief of Satenig G. Shalvardjian; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

430. The SPEAKER presented a memorial of the Legislature of the State of California, relative to teachers' retirement, which was referred to the Committee on Education and Labor.

PETITIONS, ETC.

Under clause 1 of rule XXII,

554. The SPEAKER presented a petition of Henry Stoner, York, Pa., relative to an amendment to the Constitution of the United States providing for the item veto of legislation by the President; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

C. G. COMUNTZIS, MORGANTOWN, W. VA., PRESIDENT, 70TH INFANTRY DIVISION ASSOCIATION, WORLD WAR II, SENT RESOLUTION ADOPTED BY THAT ASSOCIATION RELATIVE TO VIETNAM CONFLICT TO THE PRESIDENT

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1970

Mr. RANDOLPH. Mr. President, Gus Comuntzis, of Morgantown, W. Va., a good citizen and patriotic American, has sent me a copy of a resolution adopted at the biennial meeting of the 70th Infantry Division Association, World War II, held recently in Reno, Nev.

The resolution, which was sent to the President, was passed by the association unanimously.

Mr. President, I ask unanimous consent that the resolution be printed in the Extensions of Remarks.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE 70TH DIVISION ASSOCIATION RESOLUTION

The 70th Infantry Division Association, PO Box 42, Topeka, Kansas, at it's biennial meeting at the Mapes Hotel, Reno, Nevada on 27 June 1970 adopted the following resolution:

"We, the members of the 70th Infantry Division Association, being Americans first, being civilians who proudly served our country as soldiers in World War II, who fought militarily for the preservation of freedoms and being men who are vitally concerned with regard to the sacrifices of American G.I.s in the sphere of the Vietnam conflict; being Americans who disdain and oppose the expressed apathy, complacency, disloyalty and general lack of patriotism so existent among many of our fellow Americans; being men who support the exercise of eternal vigilance required for the preservation of our God given liberties, do hereby resolve that we support any and all efforts on the part of our elected government, and those of our President in his role as Commander-in-Chief of our Armed Forces, in the necessary performance of military action in Vietnam and Cambodia, provided such action is in the best interest of protecting the lives of American fighting men, would serve the purpose of ending the state of conflict and hasten to secure the release of Americans held as prisoners of war.

Furthermore, we do hereby resolve that our government be so urged towards an objective of concluding the war with honor in Vietnam; but under no circumstances should a peace be concluded without the mutual release of all prisoners of war. To

secure such a goal, may God forbid any compromise with the deceptive pretenses of the enemy.

This foregoing expression of our concern was born because we once served our country as fighting men, at such a time when the country was united in the support of our nation and it's fighting men, and knew and valued this unity on the battlefield and elsewhere. We are firmly resolved and under the unswerving conviction and belief that our men in the Vietnam conflict are entitled to nothing less—any issue with regard to the legality or illegality of the Vietnamese conflict notwithstanding."

During World War II the 70th Infantry Division with a strength of 15,000 men, in addition to being a combat division, trained and provided more than 75,000 men as replacements before departure to the ETO. This association now represents this group of men who live in all 50 states of this nation.

SOME CONCERNS ABOUT NATIONAL SECURITY BY GEN. IRA C. EAKER, USAF, RETIRED

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. FLYNT. Mr. Speaker, Gen. Ira C. Eaker, U.S. Air Force, retired, recently addressed The Air War College, Maxwell Air Force Base, Ala., in the capacity of guest lecturer. I consider his presentation to be masterful and timely. On occasion, I introduce into the CONGRESSIONAL RECORD a speech without being in full accord with what the author of that speech had to say. In this instance I endorse General Eaker's remarks in both substance and form.

There are at least two reasons for that statement. First, I have a very high regard for Ira Eaker, which high regard I have held since we served together in the European Theater of Operations during World War II. Second, several years ago I was invited to be a guest lecturer at the Air War College and many of the thoughts which I expressed at that time were very similar to those expressed by General Eaker in 1970. In at least two instances our language was almost identical and I believe that the thoughts which prompted that language are identical.

General Eaker served his Nation with distinction for many years and as he says in his remarks which follow, for 53 years his major interest and concern has been and is the national security of the United States of America.

Mr. Speaker, it is with pleasure and with my endorsement of its contents that I include General Eaker's address into the RECORD of the proceedings of the House of Representatives:

SOME CONCERNS ABOUT NATIONAL SECURITY

(By Ira C. Eaker)

General Clark, General Blank, Members of The Air War College Graduating Class, Ladies and Gentlemen:

No one here knows what I shall say today and none is responsible in any way for any of my comments. I alone bear the responsibility. This statement, like the warning on the cigarette package, is for your protection and continued good health.

There are two reasons for my presence here this morning. The first is illustrated by a war-time story I heard General Eisenhower tell in the summer of 1944, shortly after his forces crossed the English Channel to free Europe from the Nazis. He went on the night before D-Day to visit the 82nd Airborne Division, a few hours prior to the time it was to parachute behind the German lines. There he saw a little fellow who was obviously very frightened. The boy was probably only 16 years old. He had misstated his age by at least two years in order to be in the service at all. The General, in an effort to reassure the boy, engaged him in conversation. He said, "Son, do you like to fly in airplanes?" The boy said, "No, Sir, I hate it." He then asked, "Do you like to jump in parachutes?" The boy said, "No, Sir, it frightens me to death." General Eisenhower then said, "Well, paratroop units are voluntary organizations, why then are you in an airborne division?"

The boy said, "Sir, I guess I just like to be with people who fly in airplanes and jump in parachutes."

Paraphrasing the frightened little paratrooper, I like to be with military people and especially professional leaders long dedicated to the security of our country.

The second reason for my being here is because my major interest and concern for fifty-three years, since entering the military service in May 1917, has been the national security. I believe our country is in greater danger today than at any time in its history. Despite the fact that it is faced with the most powerful enemy it has ever had, it is now, incredibly, engaged in disarming.

Our people appear unaware of their peril and there is an alarming paralysis of leadership. We have no Churchill or Lincoln with the vision and courage to warn and unite our citizens to the effort required for survival.

It is my hope that by sharing my concerns I can enlist, if not your support in remedial action, at least your thoughtful consideration of some of our problems with possible solutions.

My remarks will fall into three subdivisions, a brief look at the Vietnam War, my analysis of President Nixon's defense policy and some suggestions on what we in the military service could and should do to awaken our people to their peril.

I

It would never occur to me, in speaking to a War College class, not to discuss a war in progress, especially one of the magnitude of the Vietnam War. It is now the longest war in our history; more than six million Americans have been engaged; 50,000 have died and 200,000 have been wounded, and it has cost us more than $100 billion.

I have sometimes summarized the Vietnam War by saying that if we had fought World War II like we have Vietnam, Hitler would control all of Europe today and Japan all of Eastern and Southeastern Asia and the Pacific west of Honolulu.

When a nation with the resources of the U.S. fails to accomplish a military mission against a nation the size of North Vietnam, it must be obvious to the most myopic that there have been errors in strategy or tactics or both.

The first and fundamental error of course was to fight an undeclared war and the failure of our leadership to marshal our resources and obtain popular support, as in our earlier wars (except Korea where we failed to win anything but truce and stalemate).

The next decisive error, made by our political leadership, was to engage in a massive land war where every advantage lay with the enemy and the failure properly to employ naval and air power. This, combined with the creation of sanctuaries for the enemy, and placing unreasonable restrictions on our forces has made victory impossible.

Another major concern about the Vietnam War is the widely held contention that air power has failed in Vietnam. I see or hear almost every day some commentator's statement that "of course air power is ineffective in a guerrilla war."

As a matter of fact it has been clearly demonstrated in Vietnam that air power alone has the quick response and the detection capability to deal effectively with guerrillas. When guerrillas cannot, even in the densest jungle, light a fire to cook their rice and boil their tea without being detected and suffering a rain of bombs, it should be obvious that it was not air power which failed in Vietnam but the fact that it has been employed improperly.

This degradation of air power in this war must not be allowed to prevail for this will adversely affect force structure and weapons procurement in the future. I do not need to labor this point with this audience, since many of you have served in Vietnam and all of you know why we have not long since ended that conflict. But I do suggest that all of us must make a much greater effort to inform our people and convince our leadership of these facts. Otherwise our future security is in certain jeopardy.

II

My next major concern about national security lies in the loss of the deterrent credibility of our strategic posture.

I was deeply concerned during the eight years when McNamara was Secretary of Defense, in his unilateral disarmament program, based naively upon the conviction that the USSR would be happy to follow suit. I thought when it was initiated that it was unsafe and unwise and subsequent events have completely verified this estimate.

At the time of the Cuban missile crisis our strategic superiority was four or five to one. The Kremlin had no alternative but to comply with President Kennedy's ultimatum.

The Politburo learned that lesson well, threw Khrushchev out, and began at once an all-out effort to gain strategic superiority. This they have now achieved. Secretary of Defense Laird recently told a Congressional Committee that Russia's nuclear delivery capability was at least twice that of the U.S. in megatonnage. It is long since evident that the Kremlin is not satisfied with strategic parity, since they continue to improve their strategic posture at forced draft.

In this situation the critical question is: What will the President, our Commander-in-Chief do? Is he aware of the loss of our strategic superiority and what will he do about it? When he was a candidate for the Presidency, Mr. Nixon's campaign speeches expressed grave concern about Russia's growing strategic strength coincident with our unilateral disarmament. It has surprised me therefore that the process of U.S. disarmament has accelerated under the first two Nixon budgets.

This is my present analysis of the Nixon defense policy:

He will go to the country this Fall, in an effort to elect a Republican Congress, by reminding our people that he expressed the hope that we are leaving a period of confrontation with the Reds and moving into a period of negotiation. Since he became President, therefore, he has reduced our defense budgets by more than $10 billion and has not deployed a single strategic offensive weapon, relying upon SALT to provide for our continued security through negotiation. In the meantime, Mr. Nixon will continue to wind down the Vietnam War, reducing by

more than half the extent and cost of that conflict and reducing our armed forces by about one million men, military and civilian.

Whether this plan will be politically effective, resulting in Republican control of Congress, I cannot say, not being a politician or political commentator. But I am certain, having spent fifty years as a Red watcher, that it will not favorably influence Kremlin policy. The USSR will never agree to return to strategic inferiority or parity at Vienna or anywhere else. There is no evidence that they have abandoned their plans for world domination and they know that parity is not the route to success in that area.

Instead of the period of negotiation, for which the President hopes, we shall, I believe, have a period of Red nuclear blackmail. Taking advantage of their strategic superiority, the Reds will begin to show their muscle and make hostile demands. Already since achieving superiority they have become much more aggressive. Their air and sea bases in North Africa, their missiles and fighters in Egypt, their growing naval thrusts into the Mediterranean Sea and Indian Ocean provide unmistakeable evidence of this.

On May 20th last year missile ships returned to Cuban waters and U.S. intelligence reports that Russian bombers are now using Cuban bases.

Faced then with positive evidence of Red truculence and blackmail, President Nixon will go to the American people in his own reelection bid in 1972 reminding our people and all the world that he bent over backward in an effort to support SALT. He even continued our own strategic disarmament for two years despite certain evidences of the Red strategic arms build-up. Since this effort failed, he proposes to begin at once to restore the strategic imbalance. He can point out that since we have twice the economic resources of the USSR we can and will do this without further delay. Such a campaign promise will be very effective as our people will by then have ample warning of the hazard in strategic inferiority, the loss of the credibility of our deterrent posture.

There is a danger in the Nixon defense strategy as I have outlined it. The Reds may not permit our rearmament. Over the Hot Line from Moscow could come this ultimatum: "As you know, Mr. President, we now have your land-based ICBM's well covered with our SS9's. Your own Secretary of Defense has told your Congress that we can destroy 95% of your ICBM capability in a surprise first strike. The only thing we now have to fear is your Polaris and Poseidon nuclear submarines. We now order you to send these vessels into the Black Sea where we can be sure they are disarmed. You will be wise to comply, since each of your subs at sea is now tailed by two of our killer subs which can destroy your ships at will."

In such a circumstance, when the USSR has about the same strategic superiority, four to one, which we enjoyed at the time of the Cuban missile crisis, the President will have no alternative but to comply with the Red ultimatum as Khrushchev responded in 1961.

What can be done to avoid such a tragic surrender?

First, at least half of our bomber force must be on airborne alert at all times. This bomber force must be modernized by the early development of the B–1 including its decoys and missiles.

Next, the Minuteman III and MIRV program must be pushed at maximum effort.

Then these more long-ranged steps must be taken, but initiated now:

The AWACS (Air Borne Warning and Control) system must be expedited.

We must make our land-based ICBM's mobile, putting them on trucks as the USSR is now doing.

The Navy's recommendation for faster, quieter submarines must be approved.

In the meantime the ABM deployment must be expedited. It is obvious that such a system improves the credibility of our deterrent posture. The Reds believe in ABM effectiveness. They continue to develop and deploy such a system.

High on our priority list must be the rehabilitation of our Air Defense Command, including the earliest possible deployment of an interceptor like the F–12, capable in performance and in numbers of dealing with the Red bomber force. For the first time it now exceeds our own bomber capability. They now have two or three hundred heavy bombers capable of reaching any U.S. target and 700 medium bombers which can reach any U.S. target with air refuelling and they have such refuelling capability. The USSR also is now flight-testing a supersonic bomber like our proposed B–1.

Our own bomber force, as all of you know, numbers 450 B–52's now 20 years old plus 150 F–111's, medium ranged bombers which are grounded.

One of the most effective measures to restore the credibility of our ICBM deterrence would be to devise a system for automatic launch, sometimes called launch on warning. If an enemy knew that when his ICBM's were launched it would trigger the release of our own and that the SS9's would hit empty silos, there would be little prospect that even a mad man like Hitler would try a pre-emptive attack.

All the evidence suggests that the USSR is making an extensive effort in space weapon capability. To their FOBS capability has lately been added the launch of a space weapon capable of destroying our reconnaissance satellites. Without our spy satellites our warning vanishes and our deterrent capability entirely disappears. We then become the "helpless, blind giant," recently referred to by President Nixon.

The U.S. must develop a space capability to overhaul, inspect, and, if need be, destroy any enemy space weapon or satellite.

Perhaps our greatest present deficit viz-a-viz the USSR is in research and development. The U.S. program in R&D has become less and less, year by year and it is now considerably inferior, by any measurement, to that of the USSR. This assures the dismal prospect that in the years ahead the Reds will have strategic weapons of superior quality. Herein probably lies our greatest future danger.

With budgets at present levels, each of the armed services must review their weapons needs and established priorities. These priorities must be coordinated at the JCS and DOD levels to insure that they mesh, are reciprocal and eventually will cover the whole security spectrum without duplication.

III

I am aware, of course, as you probably are, that few if any of these courses of action I have suggested as necessary to regain and retain the credibility of our deterrent strategic posture can be taken in the present political climate in this country.

We are now tragically and incredibly, for the first time in our history, witnessing large-scale treason. A traitor traditionally is one who knowingly gives aid and comfort to the enemy. A considerable number of our citizens, some in high places, have been engaged in treasonable acts and statements for some time. They hide behind the legal fiction that we are engaged in an undeclared war and there is therefore no official enemy.

I believe that when some historian of the future does the job on us which Gibbon did on Rome he will find that the first certain evidence of our decline was our tolerance of treason.

Another popular and political manifestation inimical to the national security is the attack on the military establishment and its people. The left-wing spate of invective and antipathy against the so-called Military-Industrial Complex and the demand of many college presidents, faculty members and campus revolutionaries that ROTC be eliminated are two other very dangerous manifestations of this condition.

The determination of pacifist groups and Congressional doves to reduce defense appropriations and deny needed new weapons systems is but further evidence of the dangerous political and popular climate in which we live today. While some of this is, of course, Communist inspired and agitated by the traitors I mentioned earlier, many patriotic citizens simply do not believe that the Reds represent a menace to our present and future security.

In earlier times since World War II, whenever our defenses were at low level and military appropriations were reduced dangerously, the men in the Kremlin always came to our rescue. They invariably made some offensive gesture or took some definite hostile action to warn our people and our leaders of their hazard.

Greece, the blockade of Berlin, Korea, the Cuban missile crisis and the invasion of South Vietnam fall in this category.

Some observers feel the present Soviet leaders are too smart to make that mistake now. I do not agree. I think they are showing more truculence, more muscle and less evidence of a desire for peaceful co-existence and accord than at any previous time. Their expanding fleets in the Mediterranean Sea and Indian Oceans, their missile ships sailing in the Caribbean, their bombers in Cuba and their missiles and fighters in Egypt, give ample evidence of aggressive designs.

The new factor in this warning process is that Russian aggression no longer worries U.S. leaders or disturbs the American people. Those who urge us to continue unilateral disarmament really do not believe the Reds represent a threat to the U.S. or to Free World security.

Now we come to the crux of the matter. What can we who realize our hazards do to awaken our people to their peril?

Military men have a dual responsibility. They must, of course, maintain the highest professional competence. They must at all times be prepared to execute any mission directed by the Commander-in-Chief despite any private opinion or personal hazard.

In addition they must exercise maximum influence to acquaint their fellow citizens with all pertinent facts concerning the strategy, tactics and weapons essential to that security. It is in this area I think we of the military have been most remiss in recent years. I credit McNamara's extraordinary effort to muzzle the military with much of the silence and detachment of men in uniform during the last few years. But McNamara is gone, fortuitously, and leaders of greater wisdom and sounder judgment have replaced him. Military men can regain their citizenship.

In earlier times when we had only a few thousand military officers we made a much greater effort and were much more successful in communicating with our people on all aspects of national security. If we do not return to this effort, achieve greater success and obtain more support and resources for the defense mission we shall not have the weapons, the forces, the budget and the popular support requisite to a safe defense posture.

I am doing all that I can in this area, more than at any time in my life, since the need is now infinitely greater, and I exhort each of you wherever you are and in whatever way you can to inform and influence our people

about what must be their number one concern, the credibility of our defense posture, the security of our country.

I regret that I have not delivered a more cheerful message today. But these are not happy days. They are dangerous times. They call for extraordinary concern and involvement by all patriotic citizens and demand the careful selection of courageous leaders.

The Air Force is not the only military element in our defense system, of course. The land and sea approaches must be protected as well as the air and space frontiers. But there can be no credible deterrent defense posture without an effective aerospace force. For that reason I shall be hoping and praying for your complete success in your future professional careers. As you its future leaders go, so goes the Air Force. As the Air Force goes, so goes the national security.

THEODORE N. VAIL BRONZE MEDAL AWARD

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. JOHNSON of California. Mr. Speaker, I would like to share with my colleagues, another incident involving two modest and quick-thinking men who saved the life of another person. Not long ago, you may recall, I made mention of two Pacific Telephone Co. employees who performed a similar service and were awarded the Theodore N. Vail Award.

This second incident involves two gentlemen, also employed by the Pacific Telephone Co., of Jackson, Calif. Together they saved the life of a 60-year-old woman who had choked on a piece of meat in a restaurant in Jackson.

Messrs. Albert V. Peyus and Francis Warner were together in the Wells Fargo Restaurant when suddenly the owner ran in from another section of the establishment asking the men if they could help a woman who had choked on some food and was now unconscious. The woman, Mrs. William Tam, of Jackson, had been eating dinner when a piece of meat caught in her throat and caused her to gag. She had left the table and went to the restroom, and while there, had become unconscious. The wife of the owner, who had followed her to offer assistance, immediately ran for help. When Messrs. Peyus and Warner reached the restroom they found Mrs. Tam lying face down on the floor. She was cold and her face had turned purple. Breathing had apparently stopped.

By their instantaneous and correct actions, the two men, working as a team, removed the obstructions from Mrs. Tam's throat.

Mr. Warner then placed Mrs. Tam on the floor and administered artificial respiration. Within a few minutes, she started to breathe. At this time, the doctor and ambulance arrived and she was taken to the hospital.

Mrs. Tam said later:

The last thing I remember is running from the table. That was my last conscious thought until later in the hospital after they got me breathing again. I was through breathing completely. The only conscious thought I had while breathing was somebody said I was dead. I guess maybe I was. I remember the doctor's face above mine. I remember nothing more until they got me to the hospital. They deserve an awful lot of credit. Had they not been there, I wouldn't have made it. I was gone, I was really gone. I deeply appreciate.

Certainly these men performed a public service of a type that is too often unpublicized. I am extremely pleased that the Theodore N. Vail Bronze Medal, one of the Bell System's most coveted awards, will be awarded to these two men who displayed quick and clear-minded citizenship which resulted in a life saved.

I know my colleagues in the House of Representatives would want to join in congratulating these two fine American citizens, Mr. Albert V. Peyus and Mr. Francis Warner of Jackson, Calif.

TRIBUTE TO THE HONORABLE JOHN JUNK

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ANDERSON of California. Mr. Speaker, the city of Carson, which is in my district, was incorporated just over 2 years ago and has adopted the commendable practice of honoring each of its past mayors with a testimonial dinner at the completion of their 1-year term of office.

Councilman John L. Junk, who finished his term as mayor this past May, will be honored by such a dinner August 8. Mr. Junk served as chairman of the Carson Citizens Committee for Incorporation in 1967 and 1968, the organization which led the successful campaign for formation of the city after several previous attempts had failed.

In recognition of his leadership in that campaign, the voters of Carson elected him to the initial City Council of the city of Carson with a vote tally close behind that of Councilman John A. Marbut who served as the city's first mayor. When Mr. Marbut completed his term as mayor in February 1969, Councilman Junk was selected by the City Council to take the post. Both men were reelected to office during the Carson municipal election this year.

I would like to briefly outline for my fellow Members of the Congress the record of achievement which has led this young man to be honored by his fellow citizens in the city which he has helped bring into being.

Mr. Junk was born 34 years ago in Connellsville, Pa., a small community in a hilly region in the southwest portion of that State. As the eldest of three children, John learned to shoulder responsibility at an early age. He answered the call of responsibility when his country faced a national emergency during and immediately after the Korean conflict by enlisting in the Armed Forces, serving with Army security for 3 years in Korea and in Washington, D.C.

While still in the Army, Mr. Junk met Nancy Brogneaux of Virginia and they were married soon after his discharge. John and Nancy Junk now have two charming daughters, Angela, 8, and Pamela, 6.

The Junks moved to California in 1954 and settled in their present home in 1965. John quickly became involved in the formation of the Leadership Homeowners Association in the then developing tract of homes where they live, later serving as president of that organization.

This was the start of his concern for the well-being of the community which, 3 years later, he was to help incorporate as the city of Carson. The drive for incorporation gained impetus as all homeowner groups in the area came to realize that only home rule could provide the careful attention to the problems of integrating their residential neighborhoods with surrounding industrial and commercial areas. Several unsuccessful attempts to make their concerns known to the county government increased their awareness of this need and, eventually, brought support for the incorporation movement from the Carson Chamber of Commerce, the Dominguez Chamber of Commerce, numerous industrial leaders, and other groups.

As previously noted, John Junk has twice been elected to the city council where he has directed his efforts toward serving the needs of the people of Carson—particularly the small homeowner.

He has been particularly active in the area of improving the city of Carson's park and recreation facilities and directed his energy toward obtaining a Parks in Cities grant under the open space program of the Department of Housing and Urban Development. This grant was approved earlier this month and will provide for purchase and development of two additional 8-acre parks—doubling the amount of park land now in use—to serve the 70,000 residents of Carson. I have been most pleased to work with John and other civic leaders of Carson in helping to obtain approval of this grant.

Another of the major problems facing the city of Carson—and indeed the entire Nation—is that of the deterioration of our environment. Councilman Junk has not contented himself with merely joining in the complaint over the pollution crisis. Instead, he and his fellow councilmen have recently appointed a seven-member environmental advisory commission to help the city council in developing positive answers to the problem and coordinating the citys activities with those of other governmental and private agencies.

A staff representative of the United Auto Workers, Mr. Junk is also vitally interested in improving the working conditions and assuring equal employment opportunities for all of the citizens of his city, State, and Nation. In this connection, he serves as secretary of the Aerospace Apprenticeship and Training Committee for the State of California; is a member of the Los Angeles County Man-

power and Development Training Advisory Committee; and, in 1966, was a member of the Civil Service Selection Board for the State of California.

He is also a member of the Los Angeles County District Attorney's Advisory Committee; the Legislative Committee of the California Contract Cities Association; and the Andrew Carnegie Junior High School Advisory Committee in Carson. Civic organizations of which he is a member include the Carson Lions Club, the Carson Chamber of Commerce, and the Carson Jaycees.

Mr. Speaker, I thank you for giving my colleagues in the House of Representatives this opportunity to join me and the citizens of Carson in saluting John Junk for his many services as mayor of that community.

PUBLICITY PROMPTS VIOLENT DISSENT

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ZWACH. Mr. Speaker, there are a great many people in America, people learned in public relations and human reaction, who believe that if we did not focus the aura of publicity on violent dissent, that violence would soon fade away.

This was aptly demonstrated recently in Minneapolis, Minn., at a church convention where a couple disrobed and approached the communion table nude.

They were ignored, by the congregation, by the press, and by the television cameras. Except for a few editorials, no publicity was given to their stunt. They acted in vain. Whatever protest they were trying to make, it went unregistered.

Mr. Speaker, I think there is a lesson for all of us in this happening. At this point, I am inserting an editorial from the Litchfield Independent-Review in our Minnesota Sixth Congressional District, in the RECORD telling of the failure of this bizarre happening:

THIS COULD BE THE ANSWER

Too much publicity has been made over the sit-in, the demonstration, the confrontation. This is probably part of the reason this minority group participates in doing what they do. They get the headlines, they get opposition from the conservatives, they become some kind of a hero in a warped kind of way.

This is the fault of the Press, TV and Radio. These three medias are trying to sell their individual product. They do not have the future of our country at stake.

Last week there was a big effort to make a scene by two individuals who hoped to disrupt a state church meeting. The two "Goofs" who were the actors in the event surely must feel shame at the outcome. It was at a district meeting of a church group, meeting at the University of Minnesota. The church session was to be ended with a communion service which is fitting and proper. When the service began these two (who were not U of M students or probably not Lutherans) stripped down and appeared at the communion table in the nude. There could be only one reason to do this, to create a riot, a panic or certainly a big problem.

Unfortunately for the two, there was no big problem, they were not thrown out, they were accepted as if they were appearing at the communion table as the more than 800 other communicants.

It backfired, they must really have felt foolish and stupid. This type of person is in the minority and if they were to be treated as a minority and not receive headlines and publicity perhaps they would soon dwindle to where they belong, in a forgotten, not wanted group.

—Litchfield Independent Review.

VFW NATIONAL COMMANDER IN CHIEF RAYMOND A. GALLAGHER LEADS CAPTIVE NATIONS WEEK IN KENOSHA, WIS.

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. SCHADEBERG. Mr. Speaker, in recent years it has been a personal honor to me to be included in a Wisconsin Lithuanian Day ceremony to commemorate Captive Nations Week.

This event, set aside by congressional proclamation to center the attention of the entire world on the cruel fate of oppressed peoples living under the Soviet subjugation, is held annually in Kenosha, Wis., in the First Congressional District which I represent.

This year's program on Sunday, July 19, held at the St. Therese's Parish Park, was highlighted by a magnificent speech by National Commander Raymond A. Gallagher of the Veterans of Foreign Wars. Eugene Bartkus, president of the Lithuanian American Council, Inc., Chicago, also shared the platform.

The Wisconsin Lithuanian Day began with solemn high masses at St. Peter's Church, Kenosha; St. Gabriel's Church, Milwaukee; St. Casimir's, Racine, and St. Therese's, Kenosha. There were special religious services in other churches and synagogues throughout the State.

The program included Lithuanian foods, music by the Bristol band, a flag parade with a VFW contingent, Boy and Girl Scouts, labor union representatives, and civic organizations.

Many of those in the audience at this program were moved by the words of VFW Commander in Chief Gallagher as he related how the Communists continue to deny freedom as they pursue their dream of world domination.

On this occasion, Mr. Speaker, I also expressed my deep concern over the captive status of these countries.

However, the keen insight of Commander Gallagher, a remarkable leader of a great organization of overseas warriors, is worthy of being placed in the RECORD for the attention of my colleagues with the hope that the time will soon come when liberty and self-determination will again be enjoyed by the people of Lithuania, Poland, Czechoslovakia, Hungary, Latvia, Estonia, Bulgaria, Rumania, and other countries.

The text follows:

SPEECH BY VFW NATIONAL COMMANDER IN CHIEF RAYMOND GALLAGHER

It is indeed an honor for me to be in Wisconsin to mark the 11th anniversary of Captive Nations Week, for Wisconsin is the home of former Congressman Charles Kersten. It was through the Kersten Committee of the early 1950s that Communist treachery which led to the enslavement of more than a billion of mankind was exposed. Through his efforts the American people were alerted to the horrors of Red oppression from the Elbe to the Pacific. It was also Charles Kersten who detected the parallel between the assassination of President John F. Kennedy in 1963 and the murders of the Ukrainian leaders in Munich, Rebet in 1957, and Bandera in 1959. As an observer at the trial in Germany of the Soviet agent Bohdan Stashinsky, the convicted killer of Rebet and Bandera, Charles Kersten warned that the Kremlin planned more murders.

There is sadness, too, in coming to Wisconsin. Within the last year one of the towering leaders in the worldwide movement for freedom for all captive peoples, Dr. Roman Smal-Stocki (Smal-Stotski), was taken from our midst. For years he taught at Marquette University and more recently at the Catholic University in Washington. A leader after World War I in his own Ukraine's tragic struggle for freedom, Dr. Smal-Stocki devoted the rest of his life to the right of self-determination and liberty for all men and nations. Without his efforts it is unlikely that the statue of Taras Shevchenko, the poet laureate of Ukraine, would ever have been erected in Washington or unveiled by former President Eisenhower in June 1964, as 100,000 persons joined in tribute to the bard who more than a century ago called for another George Washington to free the victims of Russian oppression.

Two other deaths in recent months have saddened us as well. They were of former Congressman Alvin M. Bentley, of Michigan, and Federal Judge Thaddeus M. Machrowicz (Mackrohvich), of Detroit. Both of these men served valiantly at the side of Charles Kersten as members of his committee.

One of Judge Machrowicz's monumental contributions to the committee was the exposure of the Soviet massacre of 15,000 Polish officers in World War II at the Katyn Forest. These men—all prisoners of war—were killed simply as a class, intellectuals and professional men who would have stood in the Communists' way when they took over Poland.

These three, Dr. Roman Smal-Stocki, Alvin M. Bentley and Thaddeus M. Machrowicz, will be long remembered for their devotion to the cause of freedom.

To you people gathered here today, there is little reason to explain the word freedom. You, having lived under Communist and Nazi oppression or even under other forms of political repression in your native lands, know full well its meaning and its blessings. Far better, I am sure, than most Americans at this period of history can or ever will and I pray that they will never have to undergo your experiences in order to appreciate fully what freedom is.

Unfortunately too many of our people, especially the young, have no understanding of freedom, or, as you do, what it means to be without it—utterly bereft of liberty of any kind. They have taken the cup of freedom from the lips of men who have fought to preserve it and we can only hope that when the time comes for many of our rebellious youth to "pay their dues," they will not be found wanting. If they are, there will be little

hope for civilization as it is known to free men.

I am sure that if any of our young people were to ask a Czech, a Slovak, a Latvian, a Lithuanian, a Ukrainian, a Hungarian, a Pole or any of the others behind the Iron Curtain what freedom means, he would be stared at in shocked amazement.

The people behind the Iron Curtain know what freedom is, even if they have seen precious little of it in recent years. They know, too, that the only thing standing between their Communist rulers and the nearest lamp post is the force of Soviet arms. This has been proven in Czechoslovakia, East Germany, Poland, Hungary and in countless places inside the Soviet Union itself.

Each year since 1959, according to Congressional resolution, the President has set aside a week in July as Captive Nations Week to focus attention on the denial of freedom to men and nations to determine for themselves their own destiny. This condition exists from the Elbe River to the Pacific Ocean and reaches almost to our own shores to Cuba 90 miles off the coast of Florida.

More than a billion human beings are being held prisoner by godless, materialistic Communism, appropriated as a doctrine by the Kremlin to fulfill the ancient Russian dream of world domination. This goal motivated the czars who looked on Moscow as the "third and last Rome" in their expansionist frenzy no less than it did Trotsky, Lenin, Stalin, Malenkov, Bulganin, Khrushchev and now Brezhnev.

The captivity of this vast segment of mankind is an ideal example of the "domino theory" which Vietnam War doves scoff at so knowingly when it is applied to Southeast Asia. But in truth after the Bolshevik Revolution, which overthrew the liberal but great Russian Chauvinist regime of Alexander Kerensky, nations which had become independent of Russia and whose independence was recognized by the Bolsheviks were reconquered one by one. From 1920 to 1924 the Communists seized all of the non-Russian peoples which the old czarist empire had grabbed except Finland, Estonia, Latvia and Lithuania.

In these last four, as in all the others, there were Red invasions and revolutions, but they failed. However, the Russians again tried to seize Finland in the bloody Winter War of 1939–40 and were rebuffed. The unhappy Baltic states of Estonia, Latvia and Lithuania were forcibly incorporated into the Soviet Union early in World War II and hundreds of thousands of their people shipped to Siberia, many never to return and others never to be heard of again. It is to the credit of the United States that this country has never recognized the seizure of the Baltic states and their representatives in Washington are still accorded the same rights as any other diplomats.

One of the most tragic aspects of the denial of liberty to the captive nations is that for the most part they represent ancient civilizations and cultures, far beyond anything the Muscovites ever achieved on their own. Compare any of the Soviets' captives with Tonga, the Pacific island freed a few weeks ago by the British.

Those nations of Eastern Europe which were to come under the Communist heel, but allowed to remain outside the Soviet Union as "people's republic," had had earlier experience with the Communists. Poles, Ukrainians and Romanians under Pilsudski 50 years ago next month threw back the Red hordes at the Vistula and saved Europe for 25 years. The Hungarians overthrew the Communist regime of Bela Kun (Bayla Coon) only, like the Poles, to have Red rule imposed a quarter century later. Czechoslovakia, formed after World War I, had a brief encounter with the Communists in 1920, but this "republic of Presov" was crushed. Liberated largely by the Soviets, though the Americans freed the extreme western end, Czechoslovakia did not come under total Soviet Communist rule until 1948 in an outright seizure of power.

In Yugoslavia the Communists capitalized on the vacuum created by the fighting between the Serbs and Croatians, two heroic peoples with a long history of achievement but who were tragic pawns in great power politics. Bulgaria and Romania were victims of sheer Communist brute force. Much of what is now East Germany was taken originally by American forces, but literally handed over to the Russians as their zone of occupation. China's fate was sealed at Yalta when the Soviets agreed to enter the war against Japan. Now, in Southeast Asia American manpower and that of Asian allies are struggling to prevent one of freedom's last footholds on the Asian continent from falling victim to Communist aggression.

Thus, from the very beginning of Communist rule in Russia, that devilish system showed that it will never halt its drive for power. Stopped in 1920, the Russians resumed their drive to the west in World War II and ever since then they have been fanning out from their base in Moscow.

Too often we in the West do not know how to respond to their moves. When the Russians wave an olive branch, our leaders frequently react as if the millennium is at hand. First, there was disengagement prompted by George Kennan and followed by the specious Rapacki (Rapotski) plan for a nuclear free zone in Europe. Then came detente, another fancy word for surrender. And now the code word for giving up is convergence. All of these have been greeted with huzzahs by the self-appointed "intellectual community" that would be the first to the wall if any of these tricks succeeded.

The enemy is like the mythical hydra. You cut off its head and a new and even more lethal one grows in its place.

There is one spot in which the Reds are the most vulnerable, however. This is among the non-Russian peoples of the Soviet Union—who constitute the majority of the USSR's population now. These are the ones who have been subjected to generations of cultural genocide, forced Russification and the deportation of their populations to the "virgin lands." They are the ones who are the Russians' Achilles heel. An example of this was Khrushchev's violent reaction to the first Captive Nations Resolution in his confrontation with then Vice President Nixon at the trade fair in Moscow in 1959. Most recently was the expulsion of the Washington Post Moscow correspondent Anatole Shub for writing about the discontent of the nationalities in the USSR.

So evident was the Russification of Ukrainian schools that three years ago a group of Canadian Communists who saw the situation for themselves objected so vigorously that the Russians were forced to make changes in the Ukrainian school system.

Unsure of their minorities, the Soviets make sure that their troops are thoroughly integrated to prevent a preponderance of any nationality group in any one unit. At the same time, pains are taken to preclude the stationing of many Latvians in Latvia, Armenians in Armenia, Georgians in Georgia and so forth. A recent Soviet Army film went to great pains to feature troops of non-Russian origin to give false impression of unity.

Unhappily, after all these years, the American people and most of the West fail to realize that the Soviet Union is composed of different peoples and as I mentioned less than half are Russians. For the most part Westerners tend to lump them all under the heading Russian. For one thing it is easier, but it is also an error that could prove fatal for us.

Failure to include the disaffected nationalities inside the Soviet Union in any of our assessments of its strengths and weaknesses would be the same as the Russians or the North Vietnamese ignoring the potential for destruction inherent in a riot or disruption in an American city or on a college campus. And you may rest assured that if they are not directly responsible, they certainly reap the benefits.

Some of our ignorance of the captive peoples can be attributed to the American press. It is simpler for a copy reader to write Russian in a headline if the story is datelined Moscow than to properly identify the subject. How often, for example, was Shevchenko referred to in headlines a few years ago as "Russian Poet?" Such an identification is not only inaccurate but an insult to this Ukrainian hero who devoted his entire life to opposing the Russians.

Another case in point is the trials a few years ago of the four or five writers in Leningrad—all Russians. But how much space has been devoted to the more than 300 Ukrainian intellectuals, the "prisoners of conscience," at least one of whom has been in a Mordovian camp for 25 years?

By contrast, whenever a wild Soviet accusation of "war criminal" is lodged against a former displaced person in the United States or another Western country, he is always identified as a Latvian, Estonian, Lithuanian, Ukrainian or whatever. Whenever it's bad, the national origin is made clear. When it's good, the individual is Russian. Another instance of this was the publication a few years ago of a virulently anti-Semitic book reminiscent of Julius Streicher's fulminations in his prime. In all the commentaries on it, great pains were taken to point out it was published by the Ukrainian Academy of Science, as if anything of this seriousness could be printed without the authority of Moscow.

Another trick to attempt discrediting the captive peoples is to single out the Vlasov army formed by the Nazis from Soviet prisoners to fight the Communists. The implication was that somehow these Slavs and others the Nazis considered subhumans had been imbued with the Hitlerian philosophy of the master race. No thought is given to the fact that these men sincerely wanted to free their homelands of Communist rule. No mention is ever made of the Ukrainian Insurgent Army that fought the Nazis and Communists for nine years or of the guerrillas who did the same thing in the Baltic States. One of the greatest blows the Communists suffered was the wholesale desertion of masses of troops in the early stages of the German invasion, coupled with the support the Nazis received from the people who greeted them with bread and salt as liberators.

Did the Russians or the Communists learn anything from this experience? There is no indication that they did. In fact, if anything, they simply answered by making their system even harsher. Whole peoples—the Chechen-Ingush, for example, were wiped out, an instance of genocide still unpunished. After the death of Stalin, much was made of the crimes of his era, as if his successors somehow wouold emerge as moderate "social reformers" aghast at the terror at the root of their system.

Were there any substantive changes? Of course not. The reality is that the situation has become so bad that a recent writer, Andrei Amalrik (jailed for expressing his opinion, incidentally) asked whether the Soviets will survive until 1984, George Orwell's year of Big Brother. Last year Tartar leaders were imprisoned for demanding their rights as Soviet citizens and one of their

supporters, the retired General Pyotr (Peeoater) Grigorenko, was sent off again to an insane asylum for encouraging their cause. What a commentary on a so-called civilized country—demand your rights as a citizen and you are a lunatic.

The Soviet Union itself is no monolithic force, but a gigantic Potemkin Village implanted in the world's heartland and like a Potemkin Village shiny on the surface but corroded and rotten inside.

It is up to you people to maintain the struggle to expose the true nature of Russian Communism and for all of us in the West to work toward the day when all men will be free to live under a code of laws that will assume every nation its right to liberty and self-determination.

GOVERNORS OF APPALACHIAN STATES RECOMMEND EXTENSION OF APPALACHIAN PROGRAM TO PRESIDENT

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. EVINS of Tennessee. Mr. Speaker, with Congress considering the renewal and extension of the important and vital Appalachian Regional Development program, the Governors of the 13 Appalachian States recently urged President Nixon to support the extension of the Appalachian Regional Commission and program.

The appeal was bipartisan, coming—as it did—from seven Democratic and six Republican Governors of the Appalachian States. All agreed on the importance of this program of supplemental assistance—and the need for its continuance.

Because of the interest of my colleagues and the American people in this most important program, I place in the RECORD my recent newsletter, "Capitol Comments," which outlines the accomplishments and achievements, as well as the continuing need, for this great Federal-State program and partnership for progress.

The newsletter follows:

(By JOE L. EVINS, MEMBER OF CONGRESS)

GOVERNORS OF APPALACHIAN STATES RECOMMEND EXTENSION OF APPALACHIAN PROGRAM TO PRESIDENT

As the Congress considers renewal and extension of the Appalachian Regional Development Program, President Nixon this week flew to Louisville, Kentucky, to meet with Governors of the 13 Appalachian states. These Governors unanimously urged the extension of the Appalachian Regional Commission and program. The Commission and all programs authorized by the Appalachian Development Act are scheduled to expire June 30, 1971, with the exception of the highway program which has one additional year of authorization.

The appeal to President Nixon for extension of the program was bi-partisan—seven of the Appalachian Governors are Democrat and six Republican. Policy officials of the Administration are evaluating the program to determine its effectiveness and whether, in their view, the program should be continued, expanded or reduced.

As Chairman of the Subcommittee on Independent Offices Appropriations, which is concerned with funding for the Appalachian program, it is certainly my view that this program has proved its worth and value in its contribution to the growth and progress of our District, State and the entire Appalachian area—and that it should be continued, expanded and strengthened. In our Appropriations Committee Report, we made these observations and comments:

"The program for Appalachia is a joint Federal-State effort to achieve common solutions to regional development. This program has proven to be an excellent example of Federal-State cooperation. The initiative for making proposals is with the State governments and . . . the achievements and beneficial results of the Appalachian program are now beginning to show in the programs of trade schools, hospitals, health centers and in other areas."

Testimony before our Committee by Director John Waters of Tennessee—the capable and energetic Chairman of the Commission—showed that, with the assistance of Appalachian supplemental grants totaling more than $140 million, accomplishments include the following:

Construction of 184 vocational trade schools.

Completion of 202 health centers, hospitals, nursing homes and other health facilities.

Construction of 145 buildings at colleges and universities.

The installation of 105 sewage treatment facilities.

The building of 72 libraries, 43 airports and 24 water and sewer systems, among other vital and important projects—a total of 819 projects—all developed in Appalachia.

This program is locally and state oriented and controlled. The Congress provides the appropriations—the local governments recommended projects to the Governor and his recommendation is necessary to proceed with projects. Our Committee on Appropriations has approved a total of $291,500,000 for the Appalachian program for next year which should contribute to the highest level of development in our area in many years.

BIG SPENDERS IN CONGRESS

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BOW. Mr. Speaker, it appears that the big spenders are back in the saddle again and they are determined to spend their way into a victory at the polls in November, regardless of the cost to the country in inflation and debt.

Every big spender in the Congress has his own pet project for a select group of people, a project for which the American people will pick up the bill in higher prices.

I think it is well that the American people be warned that the big spender of today is the cause of higher taxes tomorrow—after the election.

Mr. Speaker, I believe it is time for Congress to begin to act responsibly in fiscal matters.

Either we should live within the President's budget or we should raise taxes now to pay for those programs that we think are necessary but that cost more money.

The people already are paying too much in high prices and too much in taxes. It is time to give them a break. It is time to begin to remember the welfare of all the people instead of just the special interest groups.

VOLUNTEER ARMY LEGISLATION INTRODUCED IN THE HOUSE BY 61 MEMBERS

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. STEIGER of Wisconsin. Mr. Speaker, the gentleman from New York (Mr. LOWENSTEIN) and I have joined with 59 of our colleagues in introducing legislation to establish a Volunteer Army based on the recommendations of the Gates Commission.

The bill provides that no inductions will be made after June 30, 1971, termination of the present Selective Service Act.

The Gates Commission found that an all-volunteer Army, first, would cause only a small budget increase, and would be cheaper in real economic terms; second, could be achieved without impairing the Nation's ability to meet existing and anticipated troop level requirements; third, would be adequate to defend the Nation, even against a sudden surprise attack; fourth, would not result in a more militarized society; and fifth, would not vary greatly in ethnic, racial, or economic makeup from the present system.

The Gates Commission was established by President Nixon to "develop a comprehensive plan for eliminating conscription and moving toward an all-volunteer Armed Force." It was headed by former Secretary of Defense Thomas Gates.

This large bipartisan group of sponsors reflects the growing support for ending compulsory military service and establishing a Volunteer Army. Our bill translates into legislation the findings of the Gates Commission which completed the most extensive and objective study of the volunteer military concept.

Representative LOWENSTEIN said:

Implementation of the Commission's recommendations, after its thorough study debunked the myths that have sprung up about the volunteer army, is one of the nation's first priorities. We expect that the diversity of ideology and geography among the co-sponsors will prompt immediate hearings so that Congress will have the opportunity to eliminate the draft with all its inequities.

The bill that Representatives STEIGER and LOWENSTEIN introduced is identical to the one Senators HATFIELD, MCGOVERN, GOLDWATER, and nine other Senators introduced 2 weeks ago as an amendment to the military appropriations bill. Among the major provisions of the measure are the following:

1. Institute a basic pay increase of approximately 50% for the enlisted ranks and approximately 25% for officers.

2. Stop inductions July 7, 1971, the termination date of the Selective Service Act.

3. Have continued registration on a limited basis, the draft to be reinstituted at the request of the President and the joint resolution of the Senate and House of Representatives.

4. Direct the Secretary of Defense to:

(a) Improve and expand utilization of civilian personnel;

(b) Improve and expand specialist education programs;

(c) Improve and expand officer training programs;

(d) Improve and expand recruiting programs;

(e) Provide more effective recruiting programs;

(f) Formulate plans for maximum use of civilian medical facilities including a medical insurance program;

(g) Formulate a new pay structure providing:

(1) Salary schedules, combining basic pay and quarters and subsistence allowances;

(2) Cash contributions to a retirement system similar to Federal civilian employees;

5. Provide for a reserve officer training corps scholarship increase.

6. Increase combat pay from $65 to $200.

7. Increase special pay for physicians, dentists and veterinarians.

(Total budgetary cost: $3.24 billion.)

The complete list of sponsors follows:

A BILL TO IMPOSE AN EXCESS WAR PROFITS TAX ON CORPORATE PROFITS RESULTING DIRECTLY FROM THE INDOCHINESE WAR

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. LUJAN. Mr. Speaker, today I am introducing a bill to impose an excess war profits tax on corporate profits that result directly from the effects of the Indochinese war on the American economy.

It is patently unjust for a nation to conscript its young men into its service to fight a war, while allowing its corporations to amass extraordinary profits attributable to the distortions of a wartime economy. In order to eliminate such injustice it is proposed that the Congress enact legislation to tax excess profits. Thus, the aim of my bill is to impose an additional levy on these profits.

There is substantial precedent for enacting this legislation. In both World Wars, excess profits taxes were enacted to enable a more complete mobilization of the Nation's productive capacity into the national defense effort. However, there is also precedent for taxing excess profits during an undeclared war of limited objectives. In 1950, Congress passed an equally strong excess profits tax within 6 months of the beginning of the hostilities in Korea.

My proposed bill imposes on all corporations a tax of 37 percent on the amount of their taxable income which exceeds their "normal nonwartime" taxable income. This 37 percent tax will be added to the normal 48 percent corporate tax rate, thus creating an effective rate of 85 percent on all excess war profits.

As it is the aim of my bill to conscript the productive capacities of our Nation's corporations during the period of military operations in Indochina, as the Nation conscripts its young men for the same purpose, this bill is designed to take effect as of January 1, 1970 and to continue until our military operations in Indochina are effectively concluded. Thus my bill provides that the tax will be applied during the "present emergency period." That emergency period includes all taxable years beginning after December 31, 1969, and it shall continue until such time as the actual American troop commitment in Vietnam, Laos, Cambodia, and Thailand is less than 50,000, including offshore naval operations.

In order that only those corporate profits be taxed which bear a reasonable relation to our present military operations, the bill allows a special deduction from a corporation's "taxable income" to determine its "excess profits taxable income." Thus, the excess profits deduction is designed to except from the excess profits tax "normal" profits for the particular corporation. This deduction may be calculated in either of two ways:

(a) The base period method.—The first method of determining the excess profits deduction is to deem profits earned during a period immediately preceding the period of increased military activity as "normal." This method determines the taxable income during a nonemergency base period, and adjusts that income to eliminate any particular abnormalities that occurred during the "base period." The average adjusted taxable income for the base period then becomes the excess profits deduction. The bill sets the base period as beginning January 1, 1961 and ending December 31, 1964. It is planned that this method of determining the excess profits deduction shall be the predominant one used, as it was in past acts.

(b) The return on invested capital method.—In order to assure that no corporation is forced to do business without the potential of receiving a reasonable return on its invested capital, an alternative method of calculating the excess profits deduction is provided. The corporation may choose such method if it allows a great deductiton. Under the return-on-capital method, a corporation is allowed to receive a minimum return on its invested capital without excess profits taxation. This alternative guarantees that corporations whose taxable incomes during the base period (1961–1964) were quite low will not be forced to pay taxes which may appear to be confiscatory. Furthermore this alternative will also make it possible to tax those corporations that were not in existence during part or all of the base period. This bill allows the following return:

Eight percent on the first $5 million of invested capital;

Seven percent on the next $5 million of invested capital;

Six percent on the next $190 million of invested capital; and

Five percent on invested capital exceeding $200 million.

In addition, the bill also fixes the minimum excess profits deduction, regardless of the method of calculation, at $25,000, thus excepting from the levy small or marginally porfitable corporations.

In a major shift from historical precedent, my bill provides that all moneys collected from the imposition of the excess profits tax must be spent to fulfill the stated national commitment to build a vast number of new housing units, and to improve the quality of medical care and education in the United States. As these goals have never been approached in the past due to lack of available resources, this bill may begin to enact a more sensible set of national priorities. This earmarking is necessary to distinguish this bill from an attempt at complete mobilization of the economy for war production.

A further dividend of this bill is that the additional tax-imposed should begin to alleviate oppressive inflation. Historically, excess profits taxes have not been passed on to consumers, probably due to the high rate of taxation imposed which makes it impracticable for a corporation to recover newly taxed profits by raising its prices. The earmarking of the funds collected for domestic uses protects against an increase in unemployment. Thus, this bill will not only spread the burden of waging war more evenly throughout our society, but it will also help stabilize our economy in this most difficult time.

INDIANA DUNES NATIONAL LAKESHORE PROJECT: MORE DESTRUCTION THAN CONSERVATION?

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. LANDGREBE. Mr. Speaker, I wish to insert in the RECORD a "Letter to the Editor" which appeared in the Chicago Tribune of July 19, 1970, written by Mrs. Stanley Florek, Jr., of Beverly Shores, Ind. Mrs. Florek comments on her dealings with the National Park Service regarding the acquisition of her land for the Indiana Dunes National Lakeshore. She is just one among many residents of this area who, while they support the efforts to curb pollution and conserve the natural beauty, are very disturbed that the plans of the Park Service will actually result in more destruction than conservation.

My bill, H.R. 11084, which attempts to deal with this situation is now before the Interior Committee, but has yet to be scheduled for any hearings. As everyone can understand from reading Mrs. Florek's letter, the problem is a serious one and I am hopeful that the Interior Committee will give the legislation I have introduced its prompt attention and consideration. Eight hundred homes are at stake as well as the wasteful expenditure of millions of dollars of taxpayers money.

BEVERLY SHORES, IND.—Regarding *"The Fight to Divvy Up the Dunes" (by A. A. Dornfeld, May 31)*: My home will be condemned in a few months if I refuse to sign a document giving the federal government a free option to purchase it. My town will lose 80 per cent of its tax base when the government devours all but a small portion of it. The Lakeshore Advisory Commission set up by the government to deal with local problems holds secret meetings from which the public and press are barred. The cost of land acquisition will be closer to $60 million than the $28 million originally authorized by Congress; industrial and commercial concerns have received a majority of the funds.

The Save the Dunes Council, propaganda tool of the National Park Service, would have your readers believe that setting up a massive bathing beach and forest preserve expected to serve thousands of people a day will preserve the natural state of the dunes. Garbage! Knee-deep beer cans and trash baskets as far as the eye can see are hardly natural wonders.

I support efforts to curb pollution and preserve natural beauty, but I, among other Northern Indiana residents, will fight the self-annointed conservationists, the Park Service and anyone else who tries to force us to sell our homes to be demolished under the pretense of preserving and conserving. The battle has just begun.

MRS. STANLEY FLOREK, Jr.

AIRPORT AND AIRWAY DEVELOPMENT ACT OF 1970 INCLUDED A "HIDDEN TAX"

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. TIERNAN. Mr. Speaker, when the Airport and Airway Development Act of 1970 passed the House after coming from conference, it included a "hidden tax" section which makes it unlawful for airline ticket agents or travel agents to write the amount of tax on tickets.

I have introduced a bill which would repeal this section of the act. In this electronic and modern age, the consumer needs more protection than ever before. The inclusion of the "hidden tax" provision is an affront to all honest Americans.

Tuesday's Christian Science Monitor carried an article which stated that airline ticket agents are as unhappy with this provision as consumers are. At this point in the RECORD I would like to include this article:

LONG DEFENDS AIR-TICKET OMISSION: SENATOR ACCUSED OF PLAYING 'HIDE A TAX'

(By Robert P. Hey, staff correspondent of The Christian Science Monitor)

Flying to that vacation hideaway? If you haven't been there in a while, take along a few extra pennies when you go to buy your ticket. It'll cost you a little more—the tax you pay when you buy domestic plane tickets went up July 1 from 5 to 8 percent.

But, you can't tell that from looking at your ticket. It just gives the total amount you have to pay—doesn't list the amount of the tax. If you want to know how much it is, you have to ask.

And therein lies the nub of a little controversy that's whirling around Washington these days. It promises to get bigger before it slows down.

It's principally over the fact that the amount of the tax cannot be listed on the face of the ticket a passenger buys—as it used to be routinely. There's even a $100 fine if a ticket agent lists the amount.

Travel agents, some passengers, and some members of Congress charge Sen. Russell B. Long, architect of this feature of the tax, with having played "hideatax" from the consumer. Senator Long is principal architect of the provision that the tax amount cannot be written on the ticket.

CONSUMER AID STRESSED

Senator Long flatly denies any nefarious motive. Rather, he says, it is he who is the genuine friend of the consumer. In the first place, he explains, the public only cares about the total cost—and formerly airline prices frequently were advertised without adding tax cost. Now the total cost must be advertised, including but not itemizing the tax.

Secondly, he says, the procedure will shorten lines at ticket counters. His reasoning is that lines in part have resulted from the fact that formerly ticket agents had to write three figures on every ticket—airline price, tax, and total. Now they only write one figure—the total, which he says will help speed the ticketing process.

Airline ticket agents put this down as Louisiana hogwash. "It simply won't make any real difference" insists one graying ticket agent, as two hovering colleagues nod vigorous assent. "Won't save hardly any time." And, he says, some passengers ask about the amount of tax, which takes time to explain.

BILLS SEEK TAX DETAILS

Besides, he says, sometime after the passenger has taken his ticket and left, for the airlines accounting department the agent must laboriously break down the total cost into airline fare and tax, and write this information on the copy of the ticket which the airline retains. Thus the new procedure is not an agent's idea of the ideal.

Several representatives and one senator have introduced bills that would permit airlines again to write the amount of tax on each ticket. One is Rep. Samuel S. Stratton, a New York Democrat, who explains that Congress was trying to hide from the people the amount of taxes we are asking them to pay.

"Nothing could be more disruptive of confidence in our government procedure. After all, this is an age of truth-in-lending. Surely we cannot now try to enjoin similar candor as far as taxation is concerned."

This is the same point the letter-writing public has been making caustically to various congressmen.

Nevertheless, Capitol Hill observers do not expect these bills to be passed this year, with Congress facing so much undone major work. Besides which, many congressmen face a November election which traditionally makes them itchy to hit the campaign trail without prolonging their Washington stay by taking up bills near the end of summer that they don't consider major.

METHOD CRITICIZED

One reason there's so much suspicion of congressional motives is the method by which this decision was reached. Actually it is only one small part of a very large bill, which provides federal money to expand and modernize airports and airport equipment (the tax raise provides some of this money.) There was much congressional discussion over other aspects of the bill when it was being considered in Congress.

During discussion the bill did not contain the present section which makes it unlawful for airline ticket agents or travel agents to write the amount of tax on tickets. (They may, however, tell customers the tax amount.)

That section was added when a small number of senators and representatives held the usual conference to reach a compromise between the differing versions of the bill passed by the two houses of Congress. The conferences are private, not public. Senator Long, who led the Senate conferees, said this section was added during the course of reaching that compromise.

When the compromise version of the bill returned to the House and Senate for final approval the attention of most congressmen and their aides was focused on other aspects of the complex measure.

"To be honest it just slipped by me," ruefully admits a top aide to one senator. "When the bill came back from conference, and I scrutinized it for my senator, I didn't see

this part. That's why he didn't object to it."

But some members of Congress are objecting now. So are travel agents, who say it makes their work harder, and their passenger-clients madder. Some passengers are complaining to Congress, too. Airline ticket agents say it doesn't make any real difference to them—or, really, to the passengers.

As for the airlines themselves, they're basically happy with the bill because other sections provide money for airport expansion. "Besides," says one congressional source, "they've got more and bigger problems to worry about than this . . . and it doesn't actually hurt them in any grand way."

Consumer issues are politically popular nowadays. Some people are complaining about what they call this "hidden" tax. And with elections coming up in November, the tempo of the issue seems more likely to pick up than slow down.

PRISONERS' WIVES SHARE ENDLESS WAIT

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. SHRIVER. Mr. Speaker, the record of North Vietnam's treatment of U.S. POW's is indeed sad. The North Vietnamese authorities have refused to identify the prisoners they hold. Only a limited minority of those men known by the U.S. Government to have been captured have been allowed to communicate with the outside world. Mail even from this small minority has been infrequent and irregular. The sick and the wounded have not been repatriated, nor have they been identified. Even the minimum protection that would be afforded by inspection of POW facilities by an impartial international body has been denied.

From the reports of the few men actually released by North Vietnam and from other sources has come disturbing evidence that prisoners are being deprived of adequate medical care and diets and that, in many instances, they have been subjected to physical and mental torture.

In North Vietnam the International Committee of the Red Cross has so far had limited success; American POW's cannot be even visited by that organization. On the other hand, the ICRC is represented in Saigon and the delegates are able to visit all prisoner-of-war camps. They also regularly receive nominal rolls of these prisoners.

In the face of such international criticism there have been few breaks in the silence of Hanoi. Hanoi has asserted that our men held as prisoners are war criminals, apparently on the theory that any attacks against North Vietnam or Vietcong forces or facilities are criminal acts and that all military personnel involved in such attacks are criminals. Such assertions are patently absurd. Our men are not war criminals. Moreover, the Geneva conventions and modern international humanitarian law reject any suggestion that the protection of individual war victims, whether soldiers or civilians, is dependent upon moral or legal judgments about the cause for which their government is fighting. The law is there to protect all the victims of war on both sides. All countries have an interest in seeing that it is respected.

The Geneva convention imposes upon all combatant powers the obligation to treat military personnel made helpless by their captivity in accordance with a single objective and verifiable standard. The failure to treat any prisoner of war, wherever he may be, in accordance with common standards of decency, is an affront to all who claim the mantle of civilization.

We must not forget these brave Americans, and their loved ones. It is essential that our new chief negotiator at the Paris talks, Ambassador Bruce, continue our Government's efforts to obtain the humane treatment and prompt release of those Americans who are held as prisoners of war.

Under the leave to extend my remarks in the RECORD, I include the following article written by Bob Jordan, staff writer for the Wichita, Kans., Eagle, which effectively describes the anxieties and uncertainties which confront the wives and families of those Americans who are prisoners of war or missing in action. The article follows:

PRISONERS' WIVES SHARE ENDLESS WAIT

(By Bob Jordan, Eagle Staff Writer)

("You have to live with hope, and then if the worst comes, you can start all over again," says Mrs. Neal Oynum, Salina, Kan. "But if I had to wait five years to know that some day he'll come through that door, it would be like the next 24 hours.")

For the wives and families of nearly 1,500 Americans missing in action in the Vietnam war, the opposite of heaven isn't hell, but limbo.

Some women have not heard from their husbands in more than five years. They don't know whether they are wives of widows. Letters and packages are sent religiously, but the wives don't know whether the mail reaches their husbands.

North Vietnam released a list of names last week, saying it was holding only 334 men prisoner. Hanoi's claim was disputed by Defense and State Department spokesmen. Administration officials have said 400 to 800 men are believed held prisoner by Hanoi—and 100 to 500 by the Viet Cong in South Vietnam jungle camps. Other men, shot down over Laos are believed to be held prisoner by Pathet Lao forces.

"Most of the guys on the list we already know about," said one Kansas woman whose husband is missing in action. "I'm sure there were some new names, but I've talked with most of the Kansas wives whose husbands were on the list."

Six Kansans were among the names on the list. Fifty-six Kansas families—12 in Wichita—have men missing in action.

Life for these families is an endless wait, filled with positive hopes, but never a positive answer.

DEEP-RUNNING SHOCK

"I really can't express the tragedy of it all. It's just got to come knockin' at your door," said Mrs. Lawrence Clark, Salina, Kan.

For Mrs. Clark, the knock came at 2:20 a.m. Oct. 18, 1966. A group of military personnel drove seven hours in England to deliver the bad news—"Your husband has been declared missing in action."

Mrs. Clark's husband, a crewman aboard a rescue helicopter, was shot down over North Vietnam 34 days after he went overseas.

"I think my first reaction was shock," Mrs. Clark said. "I thought, 'it can't be my husband. He's been in planes 18 years. It can't be. It's impossible.' "

Within an hour after the news of her husband, Mrs. Clark began to stammer. Doctors have told her it is an emotional release. "I only stammer when I talk about my husband though," she said. "It's hidden so deep in me, you know."

Since that night, she has had "no whisper of anything." M. Sgt. Clark left for Vietnam Sept. 13, 1966. He was scheduled to retire from the service two months after he returned from the war.

"I thought about it all the time at first, but you get into other things to try and forget," Mrs. Clark said. "But no matter how hard you try, things can't seem to change for you.

"Sometimes it gets very difficult—in the daytime you have the children to take care of, but at night, when it's still and quiet, when you're not busy, you think about him," she said. "But you have to push things out of your mind. If I didn't I'd go out of my head by now."

Mrs. Clark's everyday distractions include two children, Steven, 11, and Jan, 8, and a myna bird with a British accent named "Petey."

The Englishwoman makes every effort to keep up the morale around the house. "The kids used to talk about him all the time," she said. "But they don't as much as they used to. I guess they're like normal kids—they're not depressed. I won't let them feel sorry for themselves.

"But still, every now and then they ask, 'Is daddy coming home?' "

When things "get going tough" Mrs. Clark said she imagines how bad the situation could be. "I've been very lucky not to get that final death notice that says 'that's it.' The things you live on are wish, hope and prayer. You just bring up the children like their daddy would have wanted you to."

Mrs. Clark said she often becomes frustrated. "But it's just a passing thing," she explained. "But I still have hope." When the pressures start to get her down, Mrs. Clark whips up her own home remedy—"A nice, hot, strong cup of tea."

Until January 1970, Mrs. Clark said, the government had instructed the wives not to say anything about their husbands, "only that they were missing in action. It was done to protect the men," she added.

"But I firmly believe none (of the prisoners) will be released until every American soldier is out of Vietnam," Mrs. Clark said. Because she is not a U.S. citizen, Mrs. Clark declined to express an opinion about American involvement in Vietnam. But she did comment on the war in relation to the wives and husbands she knows who have returned.

"Each day we stay in South Vietnam we're wondering, 'Is their health ruined for life?' It's a damn shame. I'm a mother and a wife. If I had my way there would be no wars . . . period!

WHY?—WHY?

"I can't vote, I can't say what is right and what is wrong. It's a cruel life, though. I never have met one husband back from Vietnam who said, 'I was proud to be there.' Every day more men are missing, maimed or killed," she said. "Hanoi will not give their names because that's their ace card."

But Mrs. Clark holds a great faith in the American people in general. "If there was a war going on to protect this country, every hippie would fight," she submitted. "I've

met so many men who don't even know why they are there."

Mrs. Clark went to Paris on Christmas day with 58 wives and 94 children in an effort to speak with the Hanoi delegation to obtain some word of her husband.

When the families arrived in Paris, the Hanoi delegation refused to see them. A suggestion by Mrs. Clark that the group be permitted to attend church was believed to be one which finally moved the delegation to admit three wives. "I wasn't trying to persuade the delegation," she said. "I just thought we should be able to go to Mass on Christmas."

The three were told that release was inconsistent with North Vietnamese policy and would be part of the overall settlement of the war, but that names would be released on a "gradual" basis.

Mrs. Bruce Johnson, Salina, one of the three, was asked for a list of husbands whose families made the trip. As they were leaving, she asked a North Vietnamese official what they could tell their children about their fathers.

The official's answer: "Return home and tell your children their fathers are murderers of North Vietnamese childen."

When talking of the prisoners the North Vietnamese referred exclusively to pilots in the North, Mrs. Johnson told the Salina Journal. Nothing was said of enlisted men or prisoners held in the South.

Mrs. Clark believes only two names of noncommissioned officers ever have been released. "That was in 1966," she said. "Out of 1,500 men, that's low.

"You just write and write but you never get answers. But I've just got to hope. It's the only way. More letters keep coming out (of Vietnam). Who knows? Maybe next month I'll get one."

A special kind of tragedy is evident for each of the families sharing the long wait. In the case of Mrs. Patrick Harrold, her little boy, Timmy, was born 17 hours after her husband was declared missing last December.

Six days later, the letters Lt. Harrold had written his wife still were arriving.

Mrs. Harrold, 22, Hays, Kan., said, "On the night it happened, I didn't believe it. I looked at the letters, but I couldn't see through the tears.

"For the first three months I firmly believed he was alive," she said. But a friend who had been with her husband in Vietnam said he thought her husband had been killed.

Like all the wives interviewed, Mrs. Harrold has learned to live with the uncertainty. "That's all you can do, just live with it," she said. "But if I didn't have Timmy I'd just shrivel up and die. Patrick wanted a boy so much and on my way to the hospital I kept my fingers crossed for a boy."

Mrs. Harrold refuses to believe her husband is dead. Lt. Harrold went down over Laos flying a Phantom II combat jet. "I've been told the prisoners there are kept in 20-foot pits and have to live in their own filth and waste," she said.

JOURNEY WITH NO END

"I think it would be easier to know whether he's dead or alive—even if you lose your husband you can pick up the pieces and start over again. But this way you don't know whether you're a wife or a widow and it just continues. There's no end to it.

"There's no way to express how I really feel. It's always present in your mind," she said. "It's a hell on earth. I guess I feel most depressed because Timmy is learning how to do things now (he's 6 months old) and Patrick can't be here to share in it. But the busier I am, the better it is because then I can't dwell on it," she explained.

Lt. Harrold's young wife is a member of the National League of Families, a group intent on promoting public support to get Hanoi to release the names of "all" prisoners held captive in North and South Vietnam and Laos.

She has spoken on television shows and at luncheons to inform people of the league efforts and conditions under which prisoners live.

"I don't definitely believe Patrick's alive," she said, "but the league has restored my hope. Everything I'm doing in the league, I'm doing for Patrick," Mrs. Harrold added.

"The secret to living like this," said Mrs. Carl Karst, Russel, Kan., "is to dwell on the present. You can't live in the past."

Maj. Karst was within seven weeks of coming home when officials from McConnell Air Force Base pulled up in front of the Karst home.

That was 18 months ago. Today Mrs. Karst still hasn't completely adjusted to her husband not being home, which she says is the most difficult part for her and her three children.

"You just have to stay busy," she said. "You're up one day and down the next. It's just one big wait."

Mrs. Karst said she and the children, Cathy, 14, Tommy, 11, and Doug, 6, enjoy looking at the pictures taken when the whole family was together.

"We remember a lot, but you can't do this too much," Mrs. Karst explained. "They (the children) like to look at the pictures and remember daddy.

"There are all kinds of tragedies in the world. We've had a happy family life all along—and the children are aware of the kind of father he's been," she said.

"We haven't had time to feel sorry for ourselves. It's part of their lives."

When asked if she believed her husband was alive, Mrs. Karst replied, "Yes, I really do. But the chances are he could be dead too," she added.

She explained that the plane her husband flew, a Cessna O–2 observer was light and could land in trees over heavy jungle.

"There's been no word at all since he went down," Mrs. Karst said. "They conducted a three-day search and didn't find any wreckage or anything."

The one thing Mr. Karst dreads more than anything is her husband's death. "It's lonely without him," she said. "It's a world made for married people. All you can do is bury yourself in helping the kids lead an active social life."

There are many days when the loneliness seems too much to bear. "It can be only five minutes, but it seems endless. When you hit a rough day it seems like forever," she said.

When she heard the news of her husband Mrs. Karst said she didn't expect it. "But as I look back on it I wasn't surprised. I thought, 'This can't be happening to me.' I guess I was in a state of shock, but still operating. It was a long time before it really sunk in."

Mrs. Karst said the days seem more peaceful now. "I can live each day in more peace," she said. "I can't wish the next three months were over and he'll be home, because it might be the same then."

Mrs. Karst indicated the most frightening thing to her was to think there is no one she can contact who knows where her husband is. But, like all the wives interviewed, she feels his faith and self-determination will see him through. "I feel the Lord is with him," she said.

The soft spoken woman is seeking an elementary education degree at Fort Hays, Kan., State College. She likes small children and would like to teach on the third grade level. She also wants to be prepared if her husband returns from Vietnam disabled.

NOT KILLERS—JUST MEN

Also a member of the League of Families, Mrs. Karst said, "We're striving for American support to bring the men back. American support stopped the bombing. If we can get people steamed up enough about conditions, I think Hanoi will release the names. We just can't forget them," she said emphatically.

"You think of the men over there (in Vietnam) as warmongers—you know, Kill, Kill! But nothing could be more false. They're dedicated family men—just tremendous people with lots of ability. If they can come back they have a lot to live for," she said.

"That's why we have to work for their release, because they can't.

"We all want Carl back so badly," she said, "and that's the perfect ending."

A second briefing is scheduled for October to decide whether there is enough evidence to declare Mrs. Neal Bynum's husband killed in action.

Lt. Bynum was shot down five miles above the so-called "demilitarized zone" Oct. 12, 1969. "The chances of him being alive aren't good," Mrs. Bynum, Salina, said. "I don't know if he is alive, but I think and feel he is."

"Where he went down, neither air rescue nor troops can get in to help," she said. "There was no radio contact, no nothing.

"I knew something was wrong when mother answered the door," Mrs. Bynum recalled of the notification day. "The service told us what to expect. I was scared. Then the officer, a woman, read the letter to me.

"Death never entered my mind. I was numb. Then I heard the words 'missing in action.' It was almost a relief," she said.

"The fact that my husband is gone is always with me," she continued. "But you can't dwell on it. You just live from day to day, hoping your life will someday return to normal."

Lt. Bynum was gone 8½ months before declared missing. There's been no word since.

Positive thoughts and hope are what keep up Mrs. Bynum's morale. "The wife can't say, 'Well, he's dead.' So what would happen if Neal came walking in the door two years later?" she asked rhetorically. "You have to live with hope and then if the worst comes, you can start all over again. But if I had to wait five years to know that some day he'll come through that door, it would be like the next 24 hours," she said.

Mrs. Bynum feels wives with small children have the most difficult adjustment to make. She said the tension she feels reflects on her daughter, Angel, "and you can tell," she added. "Probably children 6 and older have the hardest time comprehending. I just hope Angel's father is home before she reaches that age, because I don't want to answer those questions."

Her top goal now is to have the names of the prisoners released. As a member of the League of Families, Mrs. Bynum has done television spots, speaking engagements and much behind-the-scenes work to drum up support of the American people.

"If the American people care enough about the men held prisoner and North and South Vietnam, and Laos too, if they care enough to write and show their concern, then the names will be released," she said.

"Of course the ultimate wish of the families is to bring the men home. But even if we could get the names released, it would relieve some of the anguish."

Mrs. Bynum said she feels something is going to happen within two years due to the election hopes of President Nixon.

"We have to have hope. I can't live with the thought that someone will come to the door someday with more bad news. I have to have positive thoughts," she said.

She feels strongly that political considerations have no part of the effort to have the names released. "It doesn't matter whether

it's hawk or dove, it's a humane cause," she insisted. "Some of the families have been quiet six long years. It's time someone started speaking out—and loud!"

While people are going through their daily routines, these men are dying, Mrs. Bynum said. "The American people aren't apathetic, but they need to get concerned. It's going to take more than the wives and families to get these men out—it'll take the support of the American people," she continued.

"But," she added, "people will read this article and forget about it the next morning."

The families are opposed to sympathy alone. All they want are their husbands. Their desperate hopes are for the future and dreams are of happier days gone by. The present seems endless as they wait and pray for the day when their husbands walk through the door—safe, and home again.

CRIME COMMITTEE HEARINGS IN PHILADELPHIA

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. NIX. Mr. Speaker, I am pleased to report that the Select Committee on Crime, of which I am a member, had most successful hearings in my home city of Philadelphia. We had a thorough exposition of the local problem by some of our most concerned public officials, examined the Federal programs concerned, and listened to a number of citizen witnesses who were very helpful to us.

Philadelphia has had a unique youth gang problem. Hundreds of young people have chosen organized violence as a means of expression, and the death toll has concerned our citizenry. One unfortunate result, we were told, was that so much effort was being made that there was a sorry lack of coordination, and I joined our chairman, CLAUDE PEPPER of Florida, in pledging renewed effort to help Philadelphia and its citizens.

Press and broadcast coverage of our hearings was so extensive that I can best report to my colleagues by providing some of the newspaper reports. Because many of us share high esteem for Mr. PEPPER, I first submit an editorial from the Philadelphia Daily News which welcomed our chairman to our city:

WELCOME, PEPPER!

Rep. Claude Pepper (D., Fla.) heads the Congressional committee taking gang killing testimony here this week. He is one of the few men ever to serve in the U.S. Senate, be defeated and then return to the lower chamber. His answer about this political curiosity is to remind the interviewer that a fellow by the name of John Quincy Adams was President and then served in the House (in fact, he died on its floor).

Representative Pepper has given notable service to his country and we welcome him to town.

Philadelphia's very able police commissioner, Frank L. Rizzo, was the principal witness of our first session, and we also heard from other official spokesmen. The Philadelphia Bulletin news report, by Henry S. Messaros and Sally Grimes, topped page 1 of that day's paper. The story accurately told of reactions to some of Commissioner Rizzo's statements:

STATEMENTS BY COMMISSIONER RIZZO

Police Commissioner Frank L. Rizzo told a congressional committee here today that Philadelphia needs large sums of outside money immediately to combat a "very critical" juvenile gang problem.

Rizzo was one of several witnesses at a hearing of the U.S. House of Representatives Select Committee on Crime at the Federal Building, 9th and Chestnut Sts.

Large infusions of state and federal funds, he said, would enable him to assign two experts to each of the city's 50 most active and violent gangs. They would try to divert gang energy into constructive pursuits, he said.

GOAL OF HEARING

Rizzo said the city is already spending $3.1 million a year for its Juvenile Aid Division, and $660,000 on salaries for gang control officers.

"Gentlemen it is clearly obvious that outside funds are needed to help combat Philadelphia's gang problem," Rizzo said.

Rep. Claude Pepper (D-Fla), committee chairman, said the purpose of the hearings is to determine whether federal aid would be helpful in the battle against juvenile gang warfare here.

Pepper observed that there has been no noticeable improvement in the situation since an investigation and hearings last year by the Pennsylvania Crime Commission.

NIX AGREES

Rep. Robert N. C. Nix (D-Pa), a member of the committee, agreed that there is an immediate need for money, manpower and talent to halt the violence.

"We will bring before this committee witnesses who have been fighting this battle. We hope to share their thoughts as to proposed solutions."

Rep. William A. Barrett (D-Pa.) introduced the panel of two congressmen and three legal aides to some 75 persons attending the session in a courtroom. Barrett is not a member of the committee.

He said the juvenile crime problem must be attacked by a federal, state and city combination. He promised to work for funds in Washington for such a program.

Managing Director Fred T. Corleto, appearing on behalf of Mayor Tate, said the city has responded to "the limit of its capabilities" to the gang problem. He asked for federal funds under the Safe Streets Act of 1968.

When Corleto finished his statement, Nix asked how much the city is getting now from Washington for gang control. Corleto said the amount was insignificant.

In answer to another question from Nix, Corleto said that last Monday a meeting was held to organize a Philadelphia committee of agencies responsible for dealing with youth problems.

"I am delighted to hear that," Nix said. "There has been too much fragmentation."

SINGLE DIRECTOR

City Council President Paul D'Ortona suggested to the committee that federal aid would allow all programs on juvenile crime to be brought under a single director here.

He blamed the city's urban redevelopment program for much of the trouble, charging that it uproots neighborhoods and throws strangers together in alien environments.

D'Ortona said a large share of the blame can also be placed on the parents, adding that government cannot take the full responsibility for what is happening.

NEED FOR DISCIPLINE

Institutions for the delinquent, D'Ortona continued, are "a farce and a travesty of justice" and fail to rehabilitate anybody.

"Discipline must come back to the schools. Discipline must come back to the homes, and authority given back to the police," he said.

Rizzo was flanked by two aides as he testified. Two huge red placards bearing the insignia of the police department adorned one side of the front of the courtroom. On the other side was a display of guns, knives and other weapons confiscated from juvenile gangs.

Rizzo, who testified for about an hour, told Pepper at the outset: "I'm honored to be here today, but I'm not going before any more committees. It's just a waste of time."

He said much time and money are wasted on official studies, adding: "If we could put money for studies into an action program we could get something done."

BATTLE FOR MONEY

Pepper nodded, saying he had frequently heard "that same pitiful plea."

Every day, Rizzo said, he puts up a battle for money. He agreed to list his needs for the committee in writing.

Nix observed that he is disgusted with competition and the lack of coordination among social service agencies.

"I know of no organization that does more than the police for the community," Rizzo said.

Several spectators protested out loud. Rizzo turned toward the audience and said: "Make them be quiet. If they can't be quiet, put them out."

THINGS QUIET DOWN

Several plainclothesmen got up and circulated about the room. The spectators became quiet.

When Rizzo had testified the city has had 100 juvenile gang killings since 1967, and that the number before that was insignificant. Nix wondered about the reason for this, saying that poverty and a lack of education existed then as now.

"There must be some other reason," Nix said.

"I wish I knew the answer," Rizzo replied.

Rizzo told the committee: "We must have speedy trials for hardcore gang offenders, plus swift and severe penalties for those convicted. Surely, the snail's pace of our judicial system is no deterrent to crime."

The commissioner said the city has 93 organized teen-age gangs with a total membership of 5,300.

BATTLE OVER "TURF"

He said 72 of the gangs are Negro, but that gang fighting is not racially inspired. "In most cases, Negro gangs battle Negro gangs, and whites move against whites."

Narcotics, Rizzo continued, play no part in gang activities. Most of the fighting is over "turf," the area a gang lays claim to.

Referring to his plan to hire 100 experts to work with the 50 most active gangs, Rizzo said they would serve as consultants to gang members, would help them get jobs or special tutoring and, if necessary, clothing and other needs of life.

"I sincerely believe that only with this helping hand treatment can we make effective inroads against the gang problem. As an extension of this program, the police department might, if federal funds were available, assist needy pre-gang age children."

He said he envisioned a police-administered clothing program adding: "It is a sad commentary on our times that some children miss school today simply because they have nothing to wear."

SOCIAL CONCERN

Many agencies should be providing such assistance now, Rizzo said, but they are caught by rising costs and don't have the funds to do it.

"The police department wishes to become involved in these aid programs. We want the public to realize that the police department has a heart, that we're genuinely interested in the welfare of Philadelphians and not simply intent on arresting people."

The New York Times' report on the first day's hearings was also detailed. I was pleased that the Times considered our session worthy of almost a full column's coverage. The Times' story follows:

REPORT ON FIRST DAY'S HEARINGS

PHILADELPHIA, July 16.—Police Commissioner Frank L. Rizzo told a Congressional committee today that the city was in desperate need of outside funds to combat the juvenile gang problem.

Mr. Rizzo said he needed money to enable him to assign two experts to each of the city's 50 most violent gangs.

Philadelphia has had 100 juvenile gang slayings since 1967, he said, and before that the number was insignificant.

Mr. Rizzo says the city has 93 identifiable teenage gangs with a total membership of 5,300.

Commissioner Rizzo was one of several witnesses at a hearing called by the House of Representatives Select Committee on Crime. Representative Claude D. Pepper, Democrat of Florida, is the committee chairman. Mr. Rizzo said Philadelphia was already spending $3.1-million a year for its juvenile aid division, and $660,000 on salaries for gang control officers.

PURPOSE DELINEATED

Mr. Pepper said the purpose of the hearings was to determine whether Federal aid would be helpful in the fight against juvenile gangs in Philadelphia.

He said that there had been no noticeable improvement in the gang situation since hearings in 1969 by the Pennsylvania crime commission.

Representative Robert N. C. Nix, Democrat of Pennsylvania, who is a member of the committee agreed and said that there was an immediate need for money and manpower to halt the violence.

"We will bring before this committee witnesses who have been fighting this battle," Mr. Nix said. "We hope to share their thoughts as to proposed solutions."

Managing director Fred T. Corleto appearing on behalf of Mayor James H. J. Tate said the city has responded to "the limit of its capabilities to the gang problem." He asked for Federal funds under the Safe Streets Act of 1968.

Representative Nix asked Mr. Corleto how much money the city was getting now from Washington for gang control and Mr. Corleto's reply was that the amount was negligible.

Pursuing the extent of juvenile crime here as compared to other cities, Mr. Rizzo's men asked the New York City police department how many juvenile slayings there were there in 1969, he said.

Philadelphia was told the New York had 1,058 homicides in 1969 but did not classify them by age, "which seems a little ridiculous," Mr. Rizzo said.

In reference to his plan to hire 100 experts to work with the 50 most active gangs, Mr. Rizzo said they would serve as consultants to gang members, would help them get jobs and special tutoring and, if necessary, clothing and other needs of life.

"I sincerely believe that only with this helping hand treatment can we make effective inroads against the gang problem," Mr. Rizzo said. "As an extension of this program, the police department might, if Federal funds were available, assist needy pregang age children."

Mr. Rizzo said he envisioned a police-administered clothing program. "It is a sad commentary on our times that some children miss school today simply because they have nothing to wear," he said.

He said many agencies should be providing such assistance now but they are caught by rising costs and insufficient funds.

"The police department wishes to become involved in these aid programs," said Commissioner Rizzo.

"We want the public to realize that the police department has a heart, that we are genuinely interested in the welfare of Philadelphians and not simply intent on arresting people," he said.

The hearings continue tomorrow.

The Philadelphia Tribune, an important biweekly paper, considered our hearings sufficiently important to spread an eight-column headline "5,300 Teenage Gang Members Here, Rizzo Says." Pamala Haynes' story said in part:

TEENAGE GANG

Police Commissioner Frank Rizzo, testifying at the opening hearing of the Select Committee on Crime of the U.S. House of Representatives yesterday (Thurs.), told the Federal panel that this city is plagued with 93 organized teen-age gangs. The gangs, Rizzio said, have 5,300 members.

Of the 93, 72 gangs are black. The largest of these, the Valley Gang, in the 25th and Diamond Sts. area, has 250 active members.

Rizzo told the committee, chaired by Florida Democrat Claude Pepper, that "practically none of the gang fighting is racially inspired."

"Negroes battle Negro gangs and whites move against whites," he said, adding that most of the white gangs are confined to the Northeast and South Philadelphia.

Rizzo described the gang problem in Philadelphia as "very critical" despite what he termed "a slight improvement" in conditions this year.

"So far in 1970, 17 persons, including a nine-year-old girl sitting innocently on her front step, have been slain in gang related rampages. For the corresponding period last year, there were 24 gang related slayings. In all of 1969, 41 persons lost their lives in gang incidents," he said.

Since 1967, police statistics show that 100 persons have been killed by roving gangs in this city.

I next call your attention to a report on judges' opinions as carried by the Philadelphia Daily News, under the byline of reporter Jim Smith:

JUDGES' OPINIONS

Judge Frank J. Montemuro, Jr., administrative judge of Family Court, told the House Select Committee on Crime that legislation is needed to make it a crime to belong to a gang.

"The first step in treating the over-all problem of anti-social gangs is to contain and control the spread of conflict," the judge told the committee hearing in the U.S. Courthouse here.

"Legislation making gang membership a crime would be a basic tool in halting this juvenile anarchy," he added.

Two U.S. congressmen heard testimony throughout the day citing the need of Federal aid to cities to halt juvenile delinquency.

Judge Montemuro summed up most of the witnesses' feelings when he said, "we need mount no massive research. This committee has but to undertake a 15-minute, non-stop drive through our North Philadelphia ghetto area to clearly identify what is urgently required in the areas of housing, poverty, unemployment, recreation, education or racial unrest."

Common Pleas Court Judge Clifford Scott Green in earlier testimony submitted a model for a Youth Services Commission to combat juvenile delinquency.

The commission, he said, would be independent, representative, federally funded and monitoring a complete system of youth services.

Philadelphia had a similar board during the administrations of former Mayors Joseph Clark and Richardson Dilworth, he said.

The commission would serve as a referral agency for all juveniles in trouble, provide services and programs to youth, study the problems of local youth, and collect and analyze statistical information, Judge Green told the congressmen.

In our second day of hearings, we listened to civic workers, educators, and gang members, as reported by Dennis Kirkland in the Philadelphia Inquirer:

DENNIS KIRKLAND REPORTS

Because of gang violence, young people are afraid to go to many public schools and, once there, "are more concerned about their personal safety than their education," the U.S. House Select Committee on Crime was told here Friday.

Robert L. Poindexter, executive deputy superintendent of schools, told the committee that young gangs have had "a tremendous impact on the public schools."

The committee also was told that the Philadelphia Urban Coalition has formed a Youth Development Council which will attempt to organize and coordinate the many "splinter" groups involved in gang work in the city.

Charles Bowser, executive director of the Urban Coalition, also proposed a five-point program calling for deployment of many more gang workers and equipping young "field personnel" with walkie-talkies so they can alert police to potentially violent situations.

William Wilcox, director of the Greater Philadelphia Movement, said the gang situation is a "mental health problem and should be treated with mental health techniques." He suggested that older gang members be "trained in group therapy techniques."

Poindexter, who said he was speaking for vacationing Superintendent Dr. Mark R. Shedd, said the gang problem has "reached alarming proportions and immediate steps must be taken to deal with the situation."

What are needed, he said, are jobs and programs to keep potential dropouts in school.

Bowser told the committee, which is concluding two days of public hearings, that gangs are here to stay. They are an integral part of the society of the city, he said, and will remain so until "an adequate substitute" is found.

These, in turn, should be coordinated with the programs of agencies like the Urban Coalition and Safe Streets, Inc.

Herman C. Wrice, president of the Young Great Society, brought four former gang leaders from Mantua and they spoke in his place.

Daniel Tate, 22, told the committee that gangs fight, for one reason, because they have nothing else to do.

"Basically, there's nothing to do. The average kid has no place to play, no job and no future," he said.

Boys start in gangs at age 12 as "peewees." They travel with the older boys and often carry weapons for older boys on their way to gang wars. Boys between 13 and 18 are called juniors, those between 18 and 21 are junior heads and, thereafter, "old heads."

Ezra Monroe, 23, who said he had been a burglar, told the committee that prison

facilities for juveniles are inadequate and that young boys are taught the "tricks of the trade" by older criminals.

CONGRESSMAN HALL REPORTS FROM WASHINGTON

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HALL. Mr. Speaker, this week I am mailing to the constitutents of the Missouri Seventh Congressional District my quarterly newsletter, "Your Congressman Reports From Washington." It contains, in addition to a report on the activities of the second session of this 91st Congress, other bits of information that I feel is of interest to all.

The newsletter follows:

YOUR CONGRESSMAN REPORTS FROM WASHINGTON

DEAR FRIEND: Phillips Brooks, a noted pulpit preacher once said, "Do not pray for easy lives. Pray to be stronger men! Do not pray for tasks equal to your powers. Pray for powers equal to your tasks."

This mid-summer of 1970 finds the character of the American people being tested as never before. The tasks that face this nation are indeed formidable, and most certainly will require that the true strength and moral stamina of this Republic emerge, in order that we might properly "face up" to the monumental job of uniting this land that has seemingly been caught up in the conflicts of emotion and confidence.

We must honestly recognize that:

There is no easy way out of Vietnam.

There is no easy way to stop inflation.

There is no easy way to combat crime.

There is no easy way to solve the problem of the "inner" cities.

There is no easy way to prevent pollution.

The fact remains that although solutions may not be easy, solutions, nonetheless must be found. They can only come about by carefully planned programs, the use of restraint, and a united and dedicated people, determined that the responsible way is the only way. Then, they must have the will to work the plan.

For every benefit that the government holds out, one must ask, "What am I required to give up in return?" The answer will usually bring to light that the price demanded is greater than the benefit offered, whether in taxes, or in restrictions of individual freedom and initiative, or in self-respect and moral character.

For the Republic,

DURWARD G. HALL,
Member of Congress.

UNITED STATES HOUSE OF REPRESENTATIVES, 1970: FIRST 6 MONTHS REPORT

RAILROAD RETIREMENT ANNUITY

When passed by the Senate and signed by the President, this legislation will increase by 15 percent the Railroad Retirement annuities. It will be retroactive to January 1, 1970. This action by the House, keeps the Railroad Retirement in line with the Social Security benefit adjustments.

EMERGENCY HOME FINANCE ACT OF 1970

Authorizes $250 million to be used by the Federal Home Loan Bank for short-term and long-term loans to member associations. This legislation will help promote an orderly flow of funds into residential financing. It is estimated that the Act will permit the building of 200,000 new housing units.

DEPARTMENT OF AGRICULTURE APPROPRIATION FOR 1971

Funds were earmarked to provide for the inspection of 100 percent of the "red meat" that is marketed in the United States. It is planned to include poultry in the future. In addition, the A.S.C.S. and S.C.S. received increased funding of about $10 million. The appropriation granted assistance to schools serving free or reduced priced lunches to needy children, and restored the special milk program which will provide 3 billion ½ pints of milk to some 17 million school children.

POST OFFICE REORGANIZATION

The passage of this legislation provides for an 8 percent pay increase for 750,000 Post Office employees. It also assures that postal employees will have the freedom of choice regarding membership in a postal union. Other features include: Removing the Post Office from Cabinet status; permits bond financing for major improvements; calls for the assurance from both labor and management to refrain from any restriction on the use of new equipment devices which might reduce the cost or improve the quality of the postal service, and provided for the retention of existing veterans' rights.

PUBLIC WORKS APPROPRIATION FOR 1971

$1 billion for the construction of waste treatment facilities to help abate water pollution; an increase of $200 million over fiscal 1970.

FOREIGN AID APPROPRIATION FOR 1971

Funds for Foreign Aid have been reduced by $500 million below last year's amount. Even with this huge cut, the Foreign Aid Budget will still top $2 billion. Of special note is the fact that Foreign Assistance Budget has an *unexpended* balance of $18 billion, on which we pay interest.

ITEMS OF SPECIAL SIGNIFICANCE

VIETNAM

As promised, President Nixon has pulled all of our troops out of Cambodia following a highly successful action. Now that the rainy season has set in, the North Vietnamese will find it difficult indeed to re-establish their supply bases along the border. This in effect, *buys time* for the acceleration of the Vietnamization process which will do much to assure the speedy removal of American troops. More than 115,000 have already returned home. Another 50,000 are scheduled to be pulled out by October, and 100,000 more programed to return by Spring.

President Nixon has now appointed David Bruce, a highly regarded former Ambassador, to head our delegation to the Paris Peace Talks with the North Vietnamese. Mr. Bruce will be bargaining from a much stronger position than in the past, let us hope that he will also be more successful.

THE 18-YEAR-OLD VOTE

The President has signed into law the Amendment to the Voting Rights Act that will lower the voting age to 18. At issue is the constitutionality of this procedure. The Constitution leaves to the States, the power to set voting qualifications. The final decision on whether the law will take effect on January 1, 1971, now lies with the U.S. Supreme Court. The Court is expected to rule on the Act when it begins its next session in October.

Presently, only four states have voting ages lower than 21. They include Kentucky, Georgia, Alaska, and Hawaii. Recently voters turned down a referendum to lower the voting age to 18 in New Jersey and Ohio. Oregon voters rejected an attempt to lower the voting age to 19.

TEXTILE IMPORTS

Now in hearings before the House Committee on Ways and Means is H.R. 16920. This legislation is designed to limit 1970 imports of all textile articles and *leather footwear*, by category, to the average annual quantity which entered the United States in 1967–68. After 1970, the permissible level of imports would be adjusted upward or downward annually, in proportion to increases or decreases in domestic consumption. This is vital legislation to the many residents of the Seventh Congressional District who are employed in the manufacture of footwear.

SURCHARGE PHASES OUT

The National economy received a welcome "boost" effective July 1st, when the 5 percent tax surcharge expired. The overall monetary effect will be to increase the collective paychecks of American workers by about $6.5 billion this year. In addition, this year the personal exemption for the taxpayer and spouse as well as the dependency allowance has been increased.

ON PLEASING PEOPLE

To paraphrase Montaigne, the French essayist, "A Congressman has need of tender ears to hear himself freely judged."

Regardless of how careful and conscientious a Congressman may be, someone is almost always sure to misunderstand his actions, and attitudes, and utterances.

When he is conscientiously careful with the taxpayers' money, someone will almost surely say that he is too "tight-fisted." If his views are more conservative than ours, we may assume that he is "too conservative."

When he favors our position, we may refer to him as fair-minded and responsive. When he opposes our position we probably pronounce him prejudiced. And in all honesty, must we not admit the possibility of our condemning in a Congressman, what we condone in a friend? And, the chances are that we ourselves do many things that we resent in others.

When a Congressman does nothing, people oft times find fault with what he doesn't do; when he does *something*, they will find fault with what he does do. While part of the people may applaud what he does part of the time, it is more than probable that part of the people will surely disapprove of what he does at *any* time.

When, therefore, a Congressman is attempting to please other people, he must remember that no mortal man ever lived (and that includes all of us), who has ever pleased anyone all the time—not even himself. No matter what course a person pursues, someone will wonder why he didn't do something different.

Possibly the best thing a Congressman can do is to conduct himself conscientiously according to his best knowledge and sincere convictions and keep his mind always honestly open to the possibility of his own errors—and hope that others will forgive his mistakes, as he is expected to forgive theirs.

Indeed, a Congressman has need of "tough ears" to hear himself freely judged by others.

A TRIBUTE TO MR. DONALD DOUGLAS, A PROMINENT MINNESOTAN

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. KARTH. Mr. Speaker, a prominent Minnesotan is about to retire from active business life.

Mr. Donald Douglas, 3M Co. division vice president and general manager of the Reflective Products Division, has been with 3M for 42 years.

First, let me note that there is nothing unique about anyone retiring after 42 years of service with a company, an organization or for that matter with his Government. It happens every day.

Therefore, the uniqueness of his retirement is not in his length of service. It is Mr. Douglas' contribution to the safety of those who travel America's congested highways.

As leader, vice president, and general manager of the Scotchlite Special Products Division, tens of thousands of lives have literally been saved—not only in the United States of America—but in many foreign lands as well. In fact, he has contributed his lifetime to highway safety.

It is for this reason, Mr. Speaker, that I submit for the RECORD, the incomparable contribution this distinguished businessman American has made to his fellowman and to our society.

LAWYERS GROUP HONORS SUN-TIMES FOR SERIES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. PUCINSKI. Mr. Speaker, recently, the Chicago Sun-Times was named winner by the American Bar Association for its outstanding work on "contributing to public understanding of the American system of law and justice."

The award given by the ABA to the Sun-Times cited an excellent series of articles written by Mr. James W. Singer on legal subjects of public importance.

Mr. Singer himself is a unique person. He is both a lawyer and a journalist, thus possessing those unusual qualities that go into making a successful writer in the field of legal journalism.

Mr. Speaker, I wish to congratulate the distinguished Sun-Times and the equally distinguished Mr. Singer for their outstanding contributions to the public. In this day of mass communications, the Sun-Times and Mr. Singer have provided for the public, in a very readable fashion, an insight into the legal complexities of a variety of issues that face our Nation, which are timely and urgent.

I wish to place in the RECORD today an article concerning the ABA award to the Sun-Times and to Mr. Singer.

Mr. Speaker, the article follows:

LAWYERS GROUP HONORS CHICAGO SUN-TIMES FOR SERIES

The Sun-Times was named the winner Sunday of an American Bar Assn. award for "contributing to public understanding of the American system of law and justice."

This newspaper was cited for a series of articles by James W. Singer on legal subjects of public importance, including the need for more Negro lawyers, Illinois' new income tax law and church-state relations.

Inscribed silver gavels will be presented to The Sun-Times, Singer and other winners at the ABA's 93d annual meeting in St. Louis on Aug. 12.

REPORTER FORMER LAWYER

Singer, 34, is a graduate of Harvard College and the University of Virginia Law School. He joined The Sun-Times last year. Previously, he was on the staff of the St. Louis Post-Dispatch for 1½ years and in private law practice for six years.

Among other assignments for The Sun-Times, Singer covered the trial of the seven accused of inciting riots during the 1968 Democratic National Convention here.

Among other gavel award winners named by the ABA was Parade magazine, a Sunday supplement that appears in The Sun-Times. Parade was honored for an article explaining a new law program for high school students.

OTHER NEWSPAPER WINNERS

Awards went to two newspapers in the 500,000-and-over circulation category—The Sun-Times and the New York Times.

Newspapers in the 200,000-to-500,000 circulation category that won gavel awards were the Washington Evening Star, the Christian Science Monitor and the Louisville Courier-Journal.

Among awards to newspapers of smaller circulation was one to the Kankakee Daily Journal for an investigation of the local administration of criminal justice.

In addition to the gavel awards, the ABA named 20 winners of certificates of merit. Among these winners was Chicago Radio Station WIND for its efforts in gaining new legislation to expunge the record of first offenders who are not convicted.

WHAT STATESMEN MAY DO

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HATHAWAY. Mr. Speaker, a thought-provoking article appears in the July 11 issue of America magazine which asks the question: "Has politics descended from a consideration of the fitting action to the technical level of the feasible reaction?" The question is asked in the context of the recent United States incursion into Cambodia, but its application is broader.

The article is the work of Francis X. Winters, a doctoral student at New York's Fordham University. I commend it to my colleagues.

A RULE OF THUMB FOR POLITICIANS

The alleged militarization of American foreign policy, coupled with recent events in Southeast Asia, has led to an energetic discussion on the constitutionality of current governmental processes. Yet there is a danger that the larger issues confronting the nation may be lost in the maze of constitutional-prerogative disputes. These larger issues focus on the question of national security, understood in the sense of the totality of human concerns which the nation must respect under pain of disintegration. While pursuing the urgent issues of the division of powers among the branches of government, we may be tempted to forget about the isolation of Americans from other nationalities, which frequently results in policy making from narrow attention to national security. In the hope of keeping the substantial issues in perspective, I would like to suggest some reflections on the technologization of politics.

By "technological" politics I refer to the tendency to confine political discussion within the limits of feasibility studies. Technology asks the questions: "What can we do?" and "How can we do it?" Technological politics asks about the cohesiveness and durability of the consensus behind some policy, while military technology concentrates on the strategic alternatives available to policy makers. Neither the military nor the elected parties to the discussion are confronting the total question of security until they entertain a more difficult question, which technology cannot answer. That further question is not the technical one of capability but the challenge of human dignity: What goals may we seek politically and militarily? What are the means we may use?

Beyond the effort to adjudicate the competing claims of political and military sectors of the American public lies the question of the devaluation of politics itself. Has politics indeed been debased to the level of merely technological considerations, to feasibility studies?

Has politics descended from a consideration of the *fitting* action to the technical level of the *feasible* reaction? Do we notice, for example, in analyses of the Cambodian venture, the prevalence of technical considerations, such as the suggestion, often heard, that if the brief invasion is successful, the plan will have been a stroke of genius? Are politicians as well as military analysts asking the merely technical question: "Have we enough resources to accomplish this?"

Technological politics, which asks the meager question: "What can we do?" rather than the human question: "What may we do?", may be yet another indication of the dominance of social engineering in American life. To the extent that technical considerations are controlling political life in America, the current attempts to balance the claims of political and military influence will be foredoomed, since political and military technology represent two weights on the same side of the scale: that of social engineering.

Up to this point we have asked whether politics has become technological, that is, reduced to the ritual of inspecting the opinion polls, a rationalized search for political portents.

There seems to be little evidence that politicians are asking the more formidable and fruitful question of the human spirit—what a statesman may do without losing his human dignity. Transcending merely technical calculations, a statesman asks the moral question about the limits of human choice: what are those things that a man may never do, under any circumstances, no matter what political advantages must be forgone? In addition to exercising restraint over the military on constitutional grounds, the statesman must exercise self-restraint on the grounds of human dignity.

The difference between the narrow, technological understanding of politics and politics in the larger, human sense lies perhaps in the divergent attitudes toward national security. One might be able to gauge the presence of a metapolitical awareness by asking the politician: "What considerations must be balanced against the enlightened interests of the United States?" If the answer is "None!", the so-called politicians have not yet transcended the level of technology. Until politicians are willing to recognize the equivalent status of other nations, they are not exercising anything more than violence (militarism). At this stage, there is no final difference between political and military considerations.

Recent events in Cambodia, of course, provide an illustrative example of this fatal blurring of political and military considerations. Militarily it seems appropriate to eliminate potential threats to troop withdrawal. Politically it may be feasible to maintain

domestic support for such an operation over a short period of time. Thus, considerations confined to the security of the United States may recommend the Cambodian invasion. Yet security conceived thus unilaterally may prove a false security.

Regardless of the historical judgment to come on the Cambodian strategy, there remains the properly political ("metapolitical," according to Hans Morgenthau) question of human dignity, the capacity of a moral agent to balance his claims against the claims of others. Specifically, the metapolitical question at issue here is that of the territorial integrity of Cambodia. As one of the group of resigning advisors to Henry Kissinger remarked in a press conference: "Somebody forgot to tell the President that Cambodia is a country." Does the United States (either the President or the Senate or both) have the right to violate the territorial integrity of Cambodia? Even though the government has recently given its express consent, this must be interpreted in the context of Cambodia's military impotence.

Furthermore, what are the precise U.S. interests that are being balanced against the considerable weight of Cambodian autonomy? These U.S. interests are often spoken of as "survival." Such arguments that the Cambodian invasion is essential to national security would be palpably absurd in any sense except the diminishment of American casualties during the troop withdrawal. Evidently such a calculation is a unilateral concern for American interests, with no regard for the claims of other nations. The argumentation, indeed, belongs to the same species of "cost-efficiency ethics" that is still used to defend the American use of A-bombs at Hiroshima and Nagasaki.

The metapolitical frame of mind, which is aware that human dignity makes claims that are prior to patriotism, insists that the national security be broadened to include the spiritual security of mutual respect among nations. Such a frame of mind devises a rule of thumb that can serve to balance the claims of competing parties to a dispute. The rule suggests that (excepting those cases where the survival of the nation is indisputably at stake) the legitimate political interests of other nations (such as autonomy, territorial integrity, free trade, and so on) will always coincide with the human (metapolitical) interests of the United States, even though they may not always coincide with our political interests.

The rule of thumb proposed here to measure metapolitical (human) interests is an attempt to express in more neutral language those interests of the nation that have usually been called "moral." Because of the unhappy history of moral discourse in America, the word "moral" is usually taken by policy makers to be equivalent to an absolutism of love that would surrender all claims to national survival. Such an idealistic position has indeed at times (especially between the two wars) dominated the moral discourse of America. Hence it is not surprising that policy makers adopt a condescending attitude to representatives of the "moral interests" in the United States. Yet it is my contention that policy makers who ignore metapolitical considerations do not rise above the stature of technicians. It is because of the contempt into which the moral perspective has (perhaps justifiably) fallen that politics rarely transcends the level of technology in America. An easy-going empiricism, or even cynicism, has grown up on the soil of wishful idealism.

The metapolitical formula proposed here, however, which balances the legitimate claims of other nations against those of the United States, is not a naive one-worldism of the United Nations-garden party variety. Underlying the metapolitical vision is the acceptance (rational or instinctual) of national survival as a valid criterion of policy. According to this formula, no course of action would be entertained that might probably undermine national security. Yet policy makers operating with this formula would ask very hard questions concerning the connection between apparently unjust means (violation of territorial integrity) and the principle of national security.

What, indeed, is required for the national security? Answers to this fundamental political question range from the prophetic call to dismantle the industrial complex (see Sidney Lens, in *The Military-Industrial Complex*) to the Presidential summons to "total victory." Such has always been the variation of estimates about national security, ranging from calculations based on trust to those relying on technology.

The proposal made here is that there is a middle path between the prophetic program of beating the swords into plowshares and the impoverished politics of technocracy. Security, according to this metapolitical analysis, cannot be considered a mere question of technical competence (which can do seemingly anything it can imagine); it is, rather, a question of the human spirit, whose pre-eminence in the evolutionary struggle consists in the capacity *not* to do everything it can imagine.

Security, then, is a blend of technical prowess and the perennial sense of human limitation, the awareness that there are some things that a man may never do, for any advantage whatsoever, at the peril of his own spirit. National security demands that policy makers with a metapolitical perspective keep a firm hand on both political and military factors in the nation. Rather than asking the technical question of what is good for the United States, they must ask the larger question of how U.S. national interests may be balanced against the legitimate interests of other nations.

Asking this metapolitical question is admittedly more hazardous than asking the technical questions of prestige and force. Failing to ask that question, however, may be more hazardous still. That hazard may be as high, as John Gardner suggests, as the disintegration of a nation.

TAX DEPRECIATION POLICY

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, July 23, 1970

Mr. JAVITS. Mr. President, last December during the debate on the Tax Reform Act of 1969, I was concerned, as were other Senators, about the pending outright repeal of the investment tax credit. My concern centered on the fact that the repeal of the investment tax credit removed an incentive to business investment—leading to increased productivity of our economy—without substituting a comparable incentive in its place. The business leaders and tax lawyers with whom I consulted at that time strongly urged that if U.S. industry is to maintain the levels of investment necessary to insure the productivity required by our people and international competitive position of our industries in the decade ahead, that some sort of a continuing investment incentive would be needed. It was repeatedly suggested that the repeal of the investment tax credit, made necessary as a long-run policy the revision of existing tax depreciation policy. At that time, the Under Secretary of the Treasury Charles Walker indicated that he would make available to the Congress a study with respect to tax depreciation policy.

This study has now been made available pursuant to that assurance. As our economy has moved into a mild recession, and as levels of business investment have declined and in many cases declined precipitously, it becomes increasingly urgent that serious consideration be given to the reinstitution of appropriate investment incentives. I share the sentiments of Professor Samuelson, when he stated on July 22, 1970 in testimony before the Joint Economic Committee that the repeal of the investment tax credit was a mistake and unfortunate. This mistake could be rectified by legislation or by the administrative determination to revise tax depreciation policy. I also agree with former Chairman of the Council of Economic Advisers and former ambassador Gardner Ackley who was also a witness before the committee that if revised depreciation schedules are implemented, that consideration will have to be given to balancing out revised depreciation schedules with some increase in existing corporate tax rates. I am also fully aware of the differences of opinion which exist concerning the type of investment incentives that need to be restored to our tax structure.

I feel strongly that this matter of depreciation schedules for new equipment should be given the priority attention it deserves. Secretary Kennedy, in making available to me this report with respect to tax depreciation policy, has initiated the essential first step toward fueling such a debate. I note in Secretary Kennedy's letter which transmits the report, it is stated that the eventual recommendations that will be forthcoming from Treasury on revising depreciation policy will "depend heavily on the levels of Federal expenditures which are to be financed and upon the money and credit policies selected to meet our domestic and international financial needs." Secretary Kennedy also states:

> For the short term, the Administration's continued concern with remaining inflationary tendencies in the economy suggests a cautious approach to tax policy; it would be fiscally imprudent to embark on long range tax policy courses before the weather charts can be drawn with confidence.

I do not agree and I would argue, that in at least one respect the weather charts are sufficiently clear. American business is now facing an increasingly serious profit squeeze as well as a serious liquidity crises. Seriously declining business profits have fueled the stock market decline and contributed to the revenue shortfall which has caused the budget to move into deficit. Future levels of business investment will be an important determining factor as to the depths of the current recession and the time span required to get this economy moving again.

The implementation of revised depreciation schedules now would help the profit margins of our corporations and correspondingly revenue flows to the Treasury could be favorably affected. Such increased revenue flows could help compensate for the revenue loss that

would result from the implementation of such modernized depreciation schedules. The key point is that the implementation of revised depreciation schedules now could play an important role in restoring business confidence and in turn in getting this economy moving again.

I will circulate this Treasury study to interested organizations for their evaluation and comment. When these comments are received, I will again report to the Senate on this vital policy question.

I ask unanimous consent that Secretary Kennedy's letter of July 17 and the enclosure entitled "Tax Depreciation Policy: Measures of Effectiveness and Estimated Revenue Loss" be printed in the RECORD.

There being no objection, the letter and the report were ordered to be printed in the RECORD, as follows:

THE SECRETARY OF THE TREASURY,
Washington, D.C., July 17, 1970.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: I am enclosing our report with respect to tax depreciation policy as promised in Under Secretary Walker's letter to you of November 25, 1969. The report includes revenue estimates for a number of depreciation liberalization methods. In addition, the report presents an extensive set of measures of investment incentive effectiveness which should prove useful in evaluating these business tax options.

The Treasury is continuing its studies of a wide range of tax policies, including modifications of tax depreciation. These studies are generally addressed to questions concerning the compatibility of the federal tax system with national economic goals in the private and public sectors. Some of these tax policies would raise revenues, and others would reduce them; each would naturally alter the structure of the tax system and its impact on private saving and consumption decisions. Thus, the recommendations which will be forthcoming depend heavily on the levels of federal expenditures which are to be financed and upon the money and credit policies selected to meet our domestic and international financial needs. For the short term, the Administration's continued concern with remaining inflationary tendencies in the economy suggests a cautious approach to tax policy; it would be fiscally imprudent to embark on a long range tax policy course before the economic weather charts can be drawn with confidence.

I hope you will find this tax depreciation report useful in your evaluation of business tax policies. If there is any further assistance we could furnish, please call upon me.

Sincerely yours,

DAVID.

TAX DEPRECIATION POLICY OPTIONS: MEASURES OF EFFECTIVENESS AND ESTIMATED REVENUE LOSSES

This report develops a set of measures of effectiveness of changes in tax depreciation policy as investment incentives and applies them to such commonly proposed changes as: (1) provision of initial allowances; (2) arbitrary shortening of useful lives of assets for tax purposes; (3) allowance of declining balance depreciation methods at three times the straight line rate; and (4) substitution of the full year for half year convention. In addition, consideration is given to the qualitative aspects of abandonment of the reserve ratio test and to disregarding additional amounts of salvage in the determination of allowable depreciation deductions. Estimates of revenue losses associated with a variety of depreciation policy changes are also presented, along with a description of the computer model utilized for their computation.

PART I. FOUR MEASURES FOR COMPARING ALTERNATIVE DEPRECIATION POLICIES

Tax depreciation policy may be described most succinctly as the set of rules which govern the size of annual depreciation deductions allowed for purposes of computing taxable income. These rules, in general, specify that the aggregate of all depreciation deductions which may be taken by a business taxpayer may not exceed the difference between the original cost, or other basis, of the asset and its salvage value, and that this depreciable basis must be apportioned over the estimated useful life of the asset by a consistent method.[1]

Despite the fact that the aggregate depreciation deductions for any asset may not exceed the depreciable basis and is the same under any method, the *timing* of the deductions varies under different methods; and since differences in timing of deductions cause differences in timing of tax liabilities, changes in tax depreciation policy have economic consequences. It is generally understood that tax depreciation policies which permit more depreciation deductions in early years are "worth more" to a taxpayer because they defer his tax liabilities to later years without penalty of interest charges. In this introductory note, assuming an asset which costs $1,000, has an actual useful life of 12 years, and no net salvage value, we develop four measures by which to evaluate four alternative tax depreciation policies. The period of 12 years has been taken for the illustration because it represents the average useful life for depreciable assets used in manufacturing industries, the sector of the economy which is regarded as being highly sensitive to investment incentives. For purposes of constructing these measures, it will be assumed an *after-tax* rate of return of 12 percent is representative, since that is the return on equity reported by all manufacturing companies in the SEC–FTC *Quarterly Financial Report* over the previous three years.

Section A of Table 1 portrays the effect of differences in timing of deductions as among several depreciation methods. Expensing, which is the extreme of "acceleration," allows an immediate write-off of basis; and, with less accelerated methods, the first year deductions range down to $83.33 by the straight line method. By the end of the first half of the asset's life, $500 of deductions would have been taken under the straight line method, but the amount under the sum-of-years digits (SOYD) method would be $730.77.

Considering that, to the taxpayer hypothesized here, each dollar of payment deferral can yield a net return of 12 percent, we may quantify the values of these alternative depreciation policies to the taxpayer as he contemplates the purchase of the $1,000 asset with a 12 year expected life so that they may be compared with each other by discounting each method's depreciation deduction stream to the present at 12 percent. The result is shown in Section B of Table 1. Obviously expending, which has the quickest write-off has the highest present value, shown as $1,000 in the table;[2] and straight line depreciation, which has the lowest present value.

Of course, present values of deductions have no economic content in themselves; they do not directly represent cash payments or receipts. However, under an income tax system, they do affect tax liability and, hence, the accrual and payment of taxes. Reflecting an income tax rate of 48 percent, the second row of Section B shows the differential cash flow effect of depreciation policies on the owner of the asset as he considers purchasing it. The interpretation of these numbers is as follows: if the prospective owner of the asset—who is (1) paying a 48 percent tax and (2) expects a 12 percent return after tax—presented with the choice of no allowance for tax depreciation deductions or of being accorded the privilege of taking straight line deductions, he would be willing to pay up to $247.78 for the privilege of using the straight line method. Alternatively, if he had been permitted only to take straight line depreciation and were asked how much we would be willing to pay for the privilege of using the double declining balance method, his response would be: "Up to $39.74," which is the excess of the present value of DDB *tax reductions* (extra cash flow) over straight line. Similarly he would be willing to pay up to $49.94 for the opportunity to use SOYD depreciation rather than straight line and $232.22 to expense rather than be limited to straight line. These differences in the value of tax deferred associated with different tax depreciation policies are one useful economic measure.

TABLE 1.—COMPARATIVE MEASURES OF DIFFERENCES BETWEEN FOUR DEPRECIATION METHODS APPLIED TO A $1,000 ASSET WHEN THE AFTER-TAX RATE OF RETURN IS 12 PERCENT

Item	With income tax at 48 percent, and allowable tax depreciation			
	Straight line	Double declining balance	Sum-of-years digits	Expensing
A. Tax life=expected life=12 years cumulative depreciation deductions, at end of year—				
1	$83.33	$166.67	$153.85	$1,000
3	250.00	421.30	423.08	1,000
6	500.00	665.10	730.77	1,000
12	1,000.00	1,000.00	1,000.00	1,000
B. Present value of depreciation deductions at beginning of year 1	516.20	599.01	620.26	[1] 1,000
Equivalent present value of reduction in tax liabilities	247.78	287.52	297.72	[1] 480.00
Excess over straight line depreciation		39.74	49.94	232.22
C. Asset price reduction which would be equivalent to tax depreciation more accelerated than straight line		52.85	66.40	308.72
D. Effective tax rate, straight line depreciation as standard (percent)	48	43.3	42.0	0
E. Effective rate of return, straight line depreciation as standard (percent)	12	13.1	13.4	23.1

[1] If it is recognized that tax deductions cannot be effectively taken until tax liabilities are accrued and payable, the present value of the deductions would be $944.91, and the present value of the reduction in taxes would be $453.56.

Section C presents another series of measures of the economic significance—incentive effect—of these depreciation policies. The point of view taken is the following: if, as was basically the case before 1954 when accelerated depreciation methods were authorized by the Internal Revenue Code, we take straight line depreciation as the base from which to measure change, then it can be computed that the benefit from being permitted to use DDB rather than straight line methods is equivalent to a reduction of

Footnotes at end of article.

$52.85 in the price of this $1,000 asset, or a price reduction of 5.3 percent. That is, if the Government had subsidized the sale of this asset to the extent of $52.85 but continued to require the asset owner to use only straight line depreciation (on the diminished basis of $947.15), the asset owner would be as well-off as when he is extended the privilege of using DDB. Or, put another way, the incentive effect of permitting DDB rather than straight line depreciation is equivalent to that which would be produced by a 5.3 percent reduction in the prices of 12 year assets. And, since SOYD depreciation is more accelerated than DDB, a switch to it from straight line is equivalent to a $66.40 reduction in the price of a $1,000 asset, or 6.6 percent.[3] Finally, permission to expense the cost of the asset rather than take straight line depreciation would be equivalent to a $308.72 reduction in price, nearly 31 percent, a powerful incentive indeed.

The same data may also be used to measure the tax depreciation policy differentials as differences in effective tax rates, as is shown in Section D of Table 1. Clearly, if more accelerated depreciation is worth more to the owner of a depreciable asset than less accelerated depreciation, this increased benefit may also be equated to a lower rate of taxation while holding the depreciation method constant. As indicated in Table 1, if straight line depreciation is taken as the basis of comparison, and the nominal tax rate is 48 percent, permitting DDB is equivalent, from the point of view of the owner of the asset, to a reduction in the tax rate of 43.3 percent. That is, in lieu of permitting the use of DDB, a reduction in the tax rate from 48 to 43.3 percent (and still requiring straight line depreciation) would leave the asset owner equally well-off. And, since the difference between straight line and DDB depreciation policies is equal to an asset cost reduction of 5.3 percent (see Section C of Table 1) we may observe that a reduction in the tax rate from 48 to 43.3 percent has the effect of reducing the cost of 12 year assets by 5.3 percent. It is in this sense that a tax rate reduction is also an investment incentive. Again, since SOYD depreciation deductions are worth more than DDB, permitting a switch from straight line to SOYD reduces the effective tax rate to 42 percent. Finally, permitting the capital cost of an asset to be expensed has the effect of exempting the income from ownership of the asset from taxation.[4]

A fourth measure of the differential economic impact of tax depreciation methods, also based on the data of Section B in Table 1, is expressed in terms of rates of return from the ownership of depreciable assets. Once again, taking the straight line depreciation case as a standard of comparison, if the rate of return after taxes at a 48 percent tax rate is 12 percent, the benefit of permitting DDB tax depreciation is equivalent to raising the rate of return to 13.1 percent, an increase of 1.1 points, or more than 9 percent in after tax rate of return; permitting SOYD is equivalent to raising the rate of return to 13.4 percent, an increase of 11.5 percent; and permitting expensing is equivalent to raising the rate of return to 23.1 percent, a 92.5 percent increase in rate of return.[5]

It is worth noting that the increase in rate of investment which might occur in response to the incentives provided by a change in tax depreciation policy, or any other business income tax policy that reduces the weight of taxation on the cost of undertaking investment projects, reflects two distinctive elements. There is, most obviously, an increase in rate of investment due to expansion of kinds of investment which were already profitable enough to be undertaken before the policy change; since these are now more profitable, more will be undertaken. Additionally, many investment projects which were insufficiently profitable before the change now become profitable.

In the example above, for 48 percent taxpayers, projects with a useful life of 12 years, which could only yield after tax rates of return of 10.6 percent when tax depreciation is limited to straight line and hence could not be undertaken because the going rate of return in the market is 12 percent, become eligible for investment if tax depreciation is allowed to be computed by the SOYD method. With no change in the market prices of products or depreciable assets, this degree of liberalization of depreciation would raise the after tax rate of return of such projects to 12 percent and qualify them to be undertaken.

Of course, the extent to which the rate of investment may be expanded for both these reasons is dependent on the expansibility of the supply of savings (capital funds). If desired expansion in the rate of investment does not elicit an increased flow of savings, interest rates (the rates used in discounting future payments) will be pushed upward, and this will dampen the rate of investment undertaken.

The above may be summarized in the following way: In 1954 when tax depreciation was liberalized by making freely available to taxpayers the use of SOYD depreciation, if 12 year assets may be taken as typical of manufacturing machinery and equipment, and a 12 percent after-tax rate of return is descriptive of the opportunity cost of capital, the option to switch from straight line depreciation to SOYD may be evaluated, reading down the column headed SOYD in Table 1, as worth:

a. $49.94 per $1,000 of net assets, in terms of greater cash flow from tax deferral, or

b. The equivalent of a 6.6 percent reduction in the cost of new assets, or

c. A reduction in the effective tax rate from 48 to 42 percent, or

d. An increase in the rate of return from ownership of assets from 12 to 13.4 percent.

Since all these measures are derived from the same data—the differences in present value of varying degrees of tax deferral provided by optional tax depreciation policies—they are equivalents: The greater degree of tax deferral under SOYD as compared with straight line depreciation for a $1,000 asset with a 12 year life is equal to a present value in cash of $49.94, which is the same as a 6.6 percent reduction in the price of the assets, or a reduction in the tax rate from 48 to 42 percent, or to an increase in after-tax profitability from 12 to 13.4 percent. Depending on the way particular investors may prefer to assess the effect of a change in income tax policy, any of these measures will suffice to index the "incentive" effect of a change.

The response to these incentives, however, will obviously not be uniform over all industries. Depreciable assets are only one input to production processes, and the relative importance of this form of capital varies greatly from industry to industry. In some industries, such as primary metals, chemicals, and heavy manufacturing, depreciable assets contribute five times as much to unit product costs as in others, such as textiles; a 6 percent reduction in the cost of depreciable assets will clearly elicit much more response in the former category of industrial enterprises than in the latter.

In Part II, several changes in tax depreciation policy are examined. To the extent each change results in a determinate modification of the time stream of depreciation deductions, the change is evaluated by at least one of the measures developed above. That is, given the present law provisions (including accelerated depreciation), the value of a proposed change—substituting a first year allowance, allowing triple declining balance depreciation, etc.—is measured as an asset price reduction equivalent, a change in effective tax rate, or an increase in "rate of profit."

PART II. TAX DEPRECIATION POLICY OPTIONS

The reasons for modifying the present tax treatment of depreciation range over the entire spectrum of considerations pertinent to tax reform. Since tax depreciation is a major determinant of the effective tax imposed on income from business equity investment, one set of objectives toward which depreciation proposals are aimed is concerned with incentives to investment. This set addresses both generalized concerns that the rate of private investment is inadequate to support a sufficiently high rate of economic growth as well as particular concerns that investment in specific industrial categories is disadvantaged with respect to other categories or to foreign investment. A second set of objectives, not necessarily mutually exclusive of the other, principally addresses basic questions of business income tax structure: the neutrality of present tax depreciation policies with respect to investments in assets of different lives and with respect to the effects of inflation.

A number of proposals to achieve one or more of these objectives is examined in this part. Whenever possible, the investment incentive equivalent of the proposal will be discussed, along with their more important implications for tax system neutrality. No conclusions as to the merits of the options are reached; these can only be arrived at in the context of a budget proposal, including an evaluation of the fiscal impact of particular proposals and the available means for financing them. As an aid to budgetary evaluation, revenue estimates for particular proposals are presented in Part III.

A. Proposals to liberalize tax depreciation, the incentive effects of which are not amenable to quantification and tax revenue estimation

(1) Abandon the Reserve Ratio Test

When Revenue Procedure 62–21, popularly known as "Guidelines," was published in 1962, two purposes were served. On the one hand, the Guidelines presented a simplified set of asset classes with corresponding asset lives that constituted the first revision of "guideline lives" since these had been incorporated in Bulletin F in 1942. On the other hand, Guidelines formalized the application of the reserve ratio test, a mechanical method by which business taxpayers may establish whether the asset lives they are using for tax purposes are consistent with their useful lives as required by Section 167(a) of the Internal Revenue Code.[6] The guideline lives published were not only simplified as compared with the extensive listings in Bulletin F, they were also purposely set at levels below typical, or average, replacement periods, as indicated in industry surveys that had been completed for the revision, rather than at industrial averages as had been the case in Bulletin F. The reason for this departure in Guidelines was the desire to facilitate the adoption of faster replacement policies by business taxpayers in harmony with the economic policy objective of the time to modernize United States industrial plant, which was then thought to be obsolescent.

It was not the intent of Guidelines to simply shorten lives for tax purposes for all taxpayers. It was, rather, intended that taxpayers who had adopted, or wished to adopt, investment policies which resulted in below-average replacement periods should not be penalized by the theretofore traditional tax audit procedure which placed the burden of proof on the taxpayer for "justifying" departures from Bulletin F lives. Thus, the new published guidelines were "short" for the bulk of business taxpayers, but they were admonished that, if they were to use these lives, or any other which might be shorter or longer, they would have to satisfy the reserve ratio test. In order to facilitate changes in investment policy which taxpayers might be induced to make by the new rules, it was

Footnotes at end of article.

announced that the reserve ratio test would not be applied for three years; and to further moderate audit of transitional adjustments of taxpayer investment policy, in 1965 Revenue Procedure 65–13 was published, supplementing Guidelines with a set of rules which enable taxpayers to satisfy the reserve ratio test by trending toward a conformity of tax and actual lives. Altogether, present law tax depreciation policy may be characterized as a set of rules under which taxpayers may freely select from a set of depreciation methods (straight line, double declining balance, sum-of-years digits, etc.) allowable under Section 167 of the Code by which to distribute the cost of assets over their expected useful lives, and they may objectively establish the conformity of their depreciation deductions with their replacement policies by pre-established rules—the reserve ratio test and supplementary transition rules.

Almost from the date of publication of Guidelines, critics have advocated abolition of the reserve ratio test. One body of criticism has centered on the alleged inability of the reserve ratio test to accommodate likely variances in growth rates of individual firms. However, an extensive simulation study published by the Treasury Department in 1968 rebuts these allegations.[7] A more substantial body of criticism is based upon the contention that, in the dynamic world of business investment, the useful life of a depreciable asset is not a physical datum. The useful life depends on the "wearing-out" process, to be sure, but also on prices of replacement assets, expected value of output, capital costs, etc.

Since estimates of useful life made when assets are acquired are likely to be found inaccurate because of changes in the variables noted above, it is arbitrary and constraining on sound investment behavior to bind taxpayers to a historically based reserve ratio test. Since even the reserve ratio test is arbitrary in this dynamic sense, it should be abandoned and replaced by a system of "capital allowance" deductions for tax purposes which are available to business taxpayers by "right."

It is beyond the scope of this report to evaluate this criticism and its implications for tax policy. However some comment on the proposed solution is appropriate here. In view of the admittedly great diversity of replacement policies among firms in the same industry and the still greater diversity between industries, an arbitrary system of capital allowances would necessarily result in inequalities in the tax treatment of private investment. For those taxpayers whose situation is (accidentally) accommodated by the prescribed allowances, no tax benefit would be derived; but for the greater number whose situation is not typical, tax benefits and penalties would result. Even if the periods for allowable cost recovery were sufficiently short that the depreciation deductions of substantially all taxpayers were increased, the degree of benefit to individual taxpayers would nevertheless vary, creating the same inequalities.

An obvious expectation under a system of arbitrary capital allowances is that pressure from those who are either not benefited, or are actually penalized by the existing allowance system, would be continually exerted on the Congress and Treasury to "liberalize" the allowances. (See the discussion below of the benefit to taxpayers of shortening lives and otherwise increasing the present value of depreciation deductions for an indication of the sizable benefits from such liberalizations.)

If the reserve ratio test were abandoned and all taxpayers permitted to use Guideline lives, some undeterminable revenue loss would doubtlessly result as those taxpayers who are now constrained from using the shorter Guideline lives by the reserve ratio test would adopt them. Moreover, this loss would be amplified in the short run if taxpayers were permitted to group their existing assets into Guideline classes and apply to them the higher depreciation rates implied by the Guidelines.

If the reserve ratio test is abandoned and replaced by a system of arbitrary capital allowances, either by amendment of the Internal Revenue Code or by new regulations, the Congress and Treasury Department would be thrust into the role of arbiter of industrial asset replacement policy. By its determination of "the" useful life of particular assets, and assuming prescribed lives would be set intentionally low, the government would be affecting investment incentive. To the extent the economic circumstances in which taxpayers find themselves dictate they should employ asset replacement policies that yield above average actual useful lives within their industrial (guideline) classification, these taxpayers will be benefited by the use of arbitrary capital allowances; but other taxpayers who have found it economic to employ rapid replacement policies and for whom the arbitrary allowances would not permit capital recovery within actual asset lifetimes, would be forced to pay higher effective tax rates. There would appear to be no economic principle by which to justify providing an investment incentive to the former group and a disincentive to the latter. Indeed, this is recognized by advocates of arbitrary capital consumption allowances who generally recommend that taxpayers who can demonstrate that their economic circumstances warrant the use of shorter tax lives than are prescribed by statute or regulation be permitted to do so. But if some business taxpayers are able to justify particulated tax lives, in the interests of tax system neutrality with respect to private investment decisions, *all* taxpayers should do so.

(2) Disregard Salvage Value in the Computation of Allowable Depreciation

Under present law taxpayers are generally limited to an aggregate of depreciation deductions over the estimated useful life of assets no greater than the difference between cost, or other basis, and salvage value. However, in order to minimize taxpayer-Revenue Agent conflicts concerning reasonable estimates of salvage value, Section 167(f) permits amounts of salvage value up to 10 percent of original basis to be disregarded. As a step toward further simplification and liberalization of tax depreciation, it is occasionally suggested that additional amounts of salvage value might be disregarded in computing allowable depreciation; and as the ultimate in simplification, salvage value might be completely disregarded.

The practical import of this proposal is obviously to increase the absolute amount of depreciation deductions available to the owner of a depreciable asset and, thereby, to increase the present value of allowable tax depreciation. Clearly, the value of this benefit, the incentive effect, will depend on whether taxpayers own depreciable assets possessing salvage value that can be disregarded, on their tax rates, on the expected life of the assets in question, and on the depreciation method which they may use. Illustrative calculations of the benefit from disregarding an additional amount of salvage value equal to 10 percent of the original basis are shown in Table 2. The benefits are expressed as asset price reduction equivalents (See Part I), and are shown for taxpayers subject to 22 and 48 percent tax rates, using either straight line or SOYD depreciation methods, and for asset lives from 5 to 30 years. Inherently, this proposal provides greater tax benefits the shorter the asset life and the more accelerated the tax depreciation formula, and in common with all proposals to provide tax incentives via tax depreciation policy, it provides greater benefits to high-tax-rate asset owners (i.e., larger businesses) than to low-tax-rate owners. Since the margin of benefit is so much greater for short lived assets while being restricted to taxpayers who, in fact, have salvage value to ignore it is reasonable to infer that one of the side-effects of such a change in the tax laws would be to stimulate the growth of artificial asset ownership and trading patterns whose only function would be to maximize the amount of tax depreciation deductions.

TABLE 2.—TAX BENEFIT OF DISREGARDING ADDITIONAL SALVAGE VALUE EQUAL TO 10 PERCENT OF ORIGINAL BASIS

Asset life (years)	Asset price reduction equivalent, per $1,000 of original basis, if the tax rate is—			
	22 percent		48 percent	
	Depreciation method			
	Straight line	Sum-of-years digits	Straight line	Sum-of-years digits
5	$18.85	$20.56	$52.92	$59.25
10	14.19	16.96	37.21	46.27
15	11.10	14.30	27.87	37.55
20	8.95	12.28	21.84	31.35
25	7.41	10.72	17.73	26.77
30	6.28	9.47	14.80	23.27

For example, if salvage value were disregarded, owners of assets with, say, a normal useful life of 10 years and a zero salvage value at the end of that period, would find it economically rewarding not to hold title to the asset but, rather, to "lease" its use from firms established for the purpose and who would arrange to "exchange" the asset frequently during the 10 years, each time restoring all or some of the basis. In the extreme, such purely tax avoidance arrangements might permit many capital assets to effectively be expensed. This tendency to create artificial leasing and asset exchange arrangements always occurs when significant amounts of salvage value (in the hands of the asset owner) are ignored.[8]

Due to uncertainty about the extent of disregardable salvage and its distribution among business taxpayers, no revenue estimates could be prepared to indicate the tax loss which might be associated with such proposals.

B. Quantifiable proposals to liberalize tax depreciation

A number of proposals to liberalize tax depreciation policy may be conveniently grouped under the head of "accelerating" tax depreciation. By the methods described in Part I above, these proposals lend themselves to quantification, both as to their quality as investment incentives and as to the probable revenue losses which would be experienced in the event they were adopted. They are reviewed in this section in descending order of their stimulative effect, quantified as: (1) asset price reduction equivalents; (2) effective tax rates implied; and (3) rate of return. In all cases, the standard of reference is to the current situation of business taxpayers assumed to be using DDB methods, able to satisfy the reserve ratio test and following the half-year convention (see below for explanation). It is also assumed that a 12 percent after-tax rate of return is representative of the current situation; thus 12 percent is the discount rate which has been employed to calculate the differential incentive effects of the proposals.[9] And finally, all calculations are based on the assumption that no more than depreciable basis (original basis less salvage) is depreciated.[10]

(1) Provide an Initial 40 Percent Allowance

A method for accelerating tax depreciation is the provision of an arbitrary allowance, usually expressed as a percentage of the original basis of the asset, in the first year of

Footnotes at end of article.

asset ownership. Since this method merely moves a portion of the aggregate allowable depreciation forward in time, it obviously results in acceleration in a manner easily controlled by the size of the initial allowance. The use of an initial allowance, sometimes called partial expensing, may be found in the tax laws of some foreign countries and in the financial accounting practices of domestic corporations. Here we consider the effect of a 40 percent initial allowance, but the measures presented may easily be adapted to smaller allowances by a proportionality factor.

Due to the fundamental characteristic of an initial allowance that a fixed proportion of the depreciation occurs in the initial year, its economic effectiveness increases with the expected life of the asset for which it is allowed.[11] This is shown in Tables 3, 4, and 5: Table 3 shows that, as compared with the situation of taxpayers under present law, provision of a 40 percent initial allowance is the equivalent of an 8.4 percent asset price reduction to 48 percent taxpayers owning 10 year assets but a 15.1 percent price reduction to owners of 50 years assets; and for 22 percent taxpayers, the corresponding asset price reduction equivalents are 3.1 and 6.5 percent. Similarly, in Table 4 it may be seen that the effective tax rate of nominal 48 percent taxpayers would be reduced to 37.9 percent in the case of 10 year assets by a 40 percent initial allowance, and to 36.8 percent in the case of 50 year assets; the corresponding effective tax rates for nominal 22 percent taxpayers would be 15.7 and 15.1 percent. Or, put a third way, Table 5 shows that a 48 percent taxpayer would have his 12 percent rate of return on 10 year assets raised to 14.3 percent by a 40 percent initial allowance, whereas the rate of return on 50 year assets would be increased to 14.6 percent; and as with the previous measures, the 22 percent taxpayer's rate of return shows less beneficial effects, rising from 12 percent to 13.0 and 13.1 percent of 10 and 50 year assets, respectively.

Footnotes at end of article.

TABLE 3.—ASSET PRICE REDUCTION EQUIVALENTS OF SELECTED TAX DEPRECIATION POLICY CHANGES, BY LENGTH OF USEFUL LIFE, FOR TAX RATES OF 22 AND 48 PERCENT

Present useful life, in years	Asset price reduction equivalents, if the tax rate is— 22 percent; Tax depreciation policy options: Full-year convention	300 percent declining balance	40 percent shorter lives	40 percent initial allowance	48 percent; Full-year convention	300 percent declining balance	40 percent shorter lives	40 percent initial allowance

[1] The after tax rate of return equivalents are computed on the assumptions that taxpayers presently use double declining balance methods for tax depreciation, that actual lives are sufficiently close to tax lives, that the reserve ratio test would be satisfied, and that the discount rate is 12 percent.

(2) Shorten Useful (Tax) Lives by 40 Percent

In the discussion of the reserve ratio test above, it was noted that a primary motive of proponents of its abandonment is to achieve acceleration of tax depreciation. If the reserve ratio were abandoned and if guideline lives were shortened by 40 percent, the same approximate ratio by which Bulletin F lives were lowered in the Guideline listings published in 1962, the benefits to business taxpayers resulting from the change are also shown in Tables 3–5.[12] In this instance the effectiveness of the policy change again varies with expected life of the asset, but due to the interaction between the depreciation rate and discount rate, the value of the benefit peaks for assets with approximately 20 year expected lives.[13] On the whole, shortening lives still awards the greater incentives to assets with expected lives greater than 10 years than to those with shorter expected lives.

(3) Declining Balance Depreciation Rates Greater than Double the Straight Line Rate

Just as introduction of double declining balance depreciation methods in 1954 accelerated the taking of depreciation deductions, so would an increase in the declining balance rate above twice the straight line rate further accelerate depreciation and thereby increase the present value of tax depreciation deductions. Although in principle any allowable declining balance rate less than unity[14] but greater than twice the straight line rate would produce acceleration, we here examine only the effects of "triple declining balance" rates, i.e., rates three times the straight line rate to be applied to the undepreciated balance. Measures of the effectiveness of accelerating depreciation by triple declining balance tax depreciation (with tax lives assumed equal to expected lives) are also presented in Tables 3–5. As in the instance of arbitrarily shortened lives, due to the interaction between the depreciation rate and the discount rate, the value of acceleration provided by this policy also peaks for 20 year assets.

However, while the incentive effect yielded by triple declining balance depreciation to a 48 percent taxpayer owning a 20 year asset is the equivalent of a price reduction of 5.7 percent (Table 3), or a reduction in his effective tax rate to 41 percent (Table 4), or an increase in his rate of return from 12 to 13.6 percent (Table 5), the corresponding incentive effects are nearly 40 percent greater with a shortening of lives. On the whole, a 40 percent shortening of lives produces a much larger benefit to business taxpayers than does triple declining balance, but both policies are less powerful investment incentives than is the 40 percent initial allowance.

(4) Permit Full Year's Depreciation Deduction in Year of Acquisition

Since most business taxpayers possess numerous depreciable assets, the stock of which is continuously being replaced or added to, taxpayers either must keep detailed property records in order to establish the period of time during a tax year they have owned depreciable assets in order to determine allowable depreciation, or they must consistently follow the simple convention that all assets acquired during a year were acquired at mid-year. This convention, called the "half-year" convention, assumes that assets are acquired at a uniform rate during the year and have been held for half a year, on the average. One way, then, to accelerate the taking of depreciation deductions by business taxpayers is to replace the half-year with a full-year convention. This would move up depreciation deductions a full six months and correspondingly increase their present value. Naturally, as compared with the options previously discussed, this yields a weak investment incentive. Moreover, as may be seen in Tables 3–5, the inherent characteristic of this policy change causes it to provide an incentive which varies inversely with asset life: moving up a 50 year stream of deductions six months can have relatively little effect compared with moving up a five year stream the same six months. This is easily seen in Tables 3–5: For a 48 percent taxpayer with a five-year asset, permitting a full-year convention is equivalent to a 3.5 percent asset price reduction, or a reduction in effective tax rate to 42.3 percent, or an increase in rate of return from 12 to 13.3 percent; the corresponding equivalents for a 50 year asset are an 0.8 percent asset price reduction, an effective tax rate of 47.5 percent, and a rate of return of 12.1 percent.

(5) Summary

As might be expected, depreciation liberalization provides a highly variable set of incentives. With the exception of substitution of the full-year for half-year convention, all conventional "accelerating" policies tend to favor longer-lived as compared with shorter-lived assets. Thus, while depreciation liberalization constitutes a controllable investment incentive, it necessarily induces distortions of the pattern of private investment. Ironically, the distortions are most severe precisely in those instances when investment incentives may be expected to be effective, that is, in those industries which are capital intensive but which differ among each other in the expected useful lives of the assets they employ. Finally, investment incentives provided through tax depreciation policy necessarily favor large relatively to small businesses since so much of the value of the incentive is dependent on tax deferral and, hence, on the nominal tax rate.

PART III. REVENUE ESTIMATES

In much the same way that evaluation of the incentive effects of depreciation tax policies is complicated by a need to compare different time patterns of depreciation deductions, so are estimates of the revenue losses that might result. When a depreciation policy is liberalized, even if the new policy is limited to newly acquired assets, revenue losses mount rapidly, for the assets acquired each year include, largely, replacements of assets which had been subject to the old policy. As a consequence, the rapid growth of assets eligible for the liberalized depreciation generates a large volume of deductions and revenue losses. As the stock of depreciable assets eligible for the liberalized depreciation grow through an average replacement cycle, the bulge of depreciation deductions moderates and, in the absence of sufficiently large net growth in the stock itself, will actually turn down. But, if there is a normal underlying growth trend, revenue losses continue to mount, for the growth in newly acquired assets ensures that depreciation deductions attributable to "young" assets

Footnotes at end of article.

will outweigh those contributed by "old" assets. Thus, estimates of the change in future levels of deductions may be derived only from projections of annual investments and by calculating the effect of depreciation policy changes on depreciation deductions attributable to these investments.

In order to systematize the revenue estimation process and to provide detail which might assist in the evaluation of investment incentive benefits corresponding to the estimates of revenue loss, the Treasury Department has developed a computer model for the purpose. The basic inputs to this model are: (1) a set of estimated 1971 gross investment expenditures, in 62 different asset-industry categories, which are listed in Appendix A and (2) a set of corresponding useful lives, also shown in Appendix A. The investment expenditures are consistent with projections of the Council of Economic Advisors when estimated expenditures for owner-occupied dwellings are eliminated from their estimates. Altogether, the basic investment input to the model estimates a gross expenditure on tax depreciable assets of $126 billion in 1971, 60 percent of which is estimated as expenditures on machinery and equipment, 40 percent on structures. (See Table 6.) And since depreciable basis will grow corresponding to some growth rate, the computer model applies a uniform growth rate of 5 percent to the 1971 figures to derive annual gross investment in depreciable assets beyond 1971.[15]

In computing the revenue losses which will be generated by this fixed composition of future outlays, the computer model employed this logic:

(1) Each depreciation policy change proposal was compared with the present law situation in each of the 62 asset categories to determine the annual differences in depreciation deductions which would result from the change. In computing this change, recognition was given to the fact that, for a number of reasons, not all assets in all categories are depreciated by the most accelerated methods allowed under present law (see Appendix A).

(2) The extra depreciation deductions thus computed were summed and converted into estimated revenue losses by applying an average tax rate of 45 percent. This tax rate has proved reliable in previous business income tax revenue estimations and appears to successfully reflect the composition of corporate and unincorporated businesses as well as the proportion of business income not subject to tax because of carry-forward of operating losses by enterprises.

The estimates of tax revenue loss associated with a variety of tax depreciation policy changes produced by the computer model are shown in Table 7 for specified years, 1971 to 1990; the full listing of estimates by year, 1971 to 1995 may be found in Appendix B. For convenience in appraising the magnitudes of revenue loss estimates, the first row of Table 7 presents a set of present law business income tax revenue estimates; this reference estimate includes taxes attributable to both unincorporated enterprises and corporations and is based upon assumptions which are consistent with those underlying the revenue loss estimates. The sections immediately following review the revenue estimates, and this part is concluded with a brief discussion of the relevance of induced economic growth in an evaluation of these revenue estimates.

Footnotes at end of article.

A. Initial allowances

In Part II the investment incentive effectiveness of a 40 percent initial allowance was noted as exceeding that of the other depreciation liberalization policies examined. Reflecting this, the estimated revenue losses shown in Table 7 are also largest of the options examined. Because initial allowances immediately increase taxpayers' depreciation deductions (and subsequently lower them), the first year effect is considerable, an estimated $21 billion, which is nearly 44 percent of the reference business income tax level in 1971.

[1] Revenue estimates for tax policy changes were computed on the assumption changes would apply to property put in place after Dec. 31, 1970. Thus, in the case of initial allowances and adoption of the full year convention, full year benefits are available in 1971; but in the cases of shortened tax lives and 300 percent declining balance depreciation, under the present half year convention, only one-half the annual benefit is available in 1971.

[2] Includes estimates for unincorporated enterprises and corporations electing to be taxed as partnerships under Subchapter S of the Internal Revenue Code. Does not include estimates of reductions in tax payable due to investment credit for prerepeal property placed in service during calendar year 1971, and thereafter, nor due to unused prerepeal credit carried forward. The estimates for 1971 and later years are constructed to be consistent with the basis on which revenue losses were estimated; they assume full employment and an annual growth rate of 5 percent.

[3] It is assumed that the investment credit is only 65 percent effective, as suggested by the experience of 1962–68 under the investment credit for machinery and equipment. Less stringent income limitations on eligibility for the credit and more generous allowance of the credit for assets of shorter life would increase the percentage effectiveness of an investment credit.

[4] Less than $50,000,000.

The revenue losses decline for approximately eight years, at which time the continued effect of the growth rate has begun to offset the effect of diminished depreciation deductions for assets acquired in the initial years of the policy change. By 1990, the 40 percent initial allowance would generate a revenue loss of $18.2 billion, which is then 15 percent of the reference business tax level. A 20 percent initial allowance, which would have half the effectiveness of a 40 percent allowance, has the same time pattern of revenue losses but at half the cost.

The distribution of these tax losses (and the benefits) is shown in Table 8. In the first year, 74 percent of the revenue loss is absorbed by non-farm, non-manufacturing enterprises, and by 1990, a year which is representative of the long run impact, the share absorbed by this sector of the economy has risen to 77 percent. On the whole, the distribution of benefits from this depreciation policy change roughly matches the pattern of investment by sector: manufacturing investment expenditure is 21 percent of the total (see Table 6) and will generate 18 percent of long run tax losses while farm investment expenditure is approximately 8 percent of the total and generates 4 percent of the tax losses. However, investment in structures, which accounts for only 40 percent of estimated annual expenditure on depreciable assets, absorb 69 percent of the 1990 tax loss. The reason for this increasing share of tax losses being attributable to structures is their markedly longer useful life.

TABLE 8.—SUMMARY ESTIMATED REVENUE LOSSES, BY INDUSTRY CATEGORY AND CLASS OF DEPRECIABLE ASSETS, 1971 AND 1990

[Dollar amounts in billions]

Percent	(100)		(93)		(7)		(100)		(58)		(42)	

Note: Figures may not add to totals due to rounding. Percentages computed on the basis of information from app. B.

[1] Less than $50,000,000.

As the data in Appendix A indicate, structures have a typical useful life of 35 years whereas half the investment in machinery and equipment has a useful life of seven years or less; and just as 35 year assets derive an investment incentive from a 40 percent initial allowance that is more than twice as great as the incentive derived by seven year assets, so does a dollar's worth of investment in the 35 year assets generate more than twice the revenue loss of a dollar invested in seven year assets.

B. Abandonment of the Reserve Ratio Test and Shortening of Tax Lives

Second to a 40 percent initial allowance in investment incentive effectiveness is a 40 percent reduction in tax lives; accordingly, it is second in tax costliness. Due to the operation

of the half year convention, the first year loss is only $2.3 billion, about 5 percent of the 1971 reference business income tax; but, the loss rises to $16.4 billion by 1990 when it becomes 13.5 percent of the reference tax level. Although, in the very long run, a 20 percent shortening of tax lives will result in half the revenue loss of a 40 percent reduction, the revenue losses are less than half even in 1990 The reason for this is that revenue losses do not stabilize at their long run levels until at least one replacement cycle for all assets has been completed; and since structure loom so large in the total depreciable asset base and also have extremely long lives, not until well after the year 2000 would the revenue loss from 20 percent shorter lives reach half the level of that from 40 percent shorter lives.

The distribution of tax losses (and benefits) from shortening of lives is almost identical with that noted above for initial allowances (see Table 8). Non-farm, non-manufacturing enterprises absorb 76 percent of the revenue loss; overall, structures account for 68 percent of the revenue loss.

C. Declining balance depreciation at 300 percent the straight line rate

Somewhat less effective as an investment incentive than a 40 percent shortening of tax lives, but more effective than a 20 percent shortening would be, is the additional acceleration of depreciation deductions provided by the 300 percent declining balance method. It is not surprising, therefore, that the estimated revenue losses that would result from introducing 300 percent declining balance methods range between the two tax life shortening options. The estimated first year revenue loss with 300 percent declining balance depreciation, again kept low by the half year convention, is $1.7 billion, or about 3.5 percent of the reference business income tax for 1971, and rises thereafter to $8.6 billion in 1990 when it would be a little more than 7 percent of the reference level.

Although the distribution of revenue losses under 300 percent declining balance depreciation is not unlike the patterns for the other two depreciation liberaliaztion options portrayed in Table 8, it is noteworthy that the share of the long run revenue loss absorbed by structures is larger, 74 percent as compared with 69 and 68 percent under a 40 percent initial allowance and 40 percent shorter tax lives, respectively. The reason for this is traceable to the present law restriction on non-residential structures' depreciation to that computed by methods no more accelerated than 150 percent declining balance methods. Since machinery and equipment may be depreciated by 200 percent declining balance methods, a change to 300 percent declining balance depreciation is relatively more beneficial to investment in nonresidential structures.

To the extent the distinction between structures and other assets which is presently drawn in the Internal Revenue Code is based upon a real difference between the actual depreciation patterns of the two classes of assets, this serves to emphasize the likelihood that highly generalized changes in tax depreciation policy, or other investment incentives, will unintentionally induce distortions of private investment decisions. Not only do generalized changes have differential incentive effects on different classes of assets due to their differenecs in durability, as was shown in Part II above, but generalized changes will also disturb the relationship between tax depreciation and what might be called "true" depreciation. For example, at the present time there are doubtlessly assets whose economic depreciation, as manifested in established market prices for assets of different vintages, is more closely described by a large first year decline in value followed by a constant percentage decline; [16] presently allowable accelerated depreciation formulas impose a real penalty on the ownership of these assets. At the other extreme would be assets whose economic depreciation, also manifested in established market prices, follows a pattern in which there is little decline in value during the first portion of the asset's life and a progressively increasing rate of decline as it approaches its replacement date; [17] presently allowable depreciation methods confer a positive tax benefit, or bias toward, ownership of such assets. Then a change toward liberalization of tax depreciation policy would relieve the former class of assets of an implicit penalty but augument the tax subsidy to the latter.

D. The full year convention

The discussion of Part II concluded that permitting taxpayers to use the full year rather than half year convention would yield minimal investment incentive effectiveness. Accordingly, the estimated long run revenue cost of such a tax depreciation liberalization is also small, amounting to a mere $2.7 billion in 1990, or a little more than 2.2 percent of the reference business tax level at that time. However, inherent in the characteristics of this proposal is a large first year loss; $4.1 billion, which is 8.5 percent of the 1971 reference level. Since the incentive effectiveness of this policy change is negligible, it would appear that the prime function which might be served by its adoption is to generate a large one-time revenue loss with little or no long run consequences, an action which might be desirable under certain conditions.

E. Summary

Generally, tax depreciation liberalization results in relatively large short term (one to five years) revenue losses. This is particularly true for the initial allowance proposals and the full year convention, since neither is restrained the first year by the half year convention. In the long run, the extent of revenue losses are variable among the options examined, roughly proportional to thier incentive effectiveness. Excepting the full year convention, the policy options reviewed here tend to disproportionately benefit investment in structures, since this is the class of assets with the longest useful (and tax) lives. In all instances, the sectors of the economy which derive the greatest benefit are those included in non-farm, nonmanufacturing (public utilities, transportation, communication, trade, services, real estate and finance), since enterprises so classified for the bulk of investment in tax depreciable assets, particularly structures.

F. Concluding comment on induced growth rate increases and their role in evaluation of tax depreciation policy changes

It will be recalled that the computer model employed to estimate the revenue losses discussed above explicitly assumes the economic growth rate is independent of the stimulus to investment which may be produced by the policy changes examined. The objection may therefore be raised that the revenue estimates presented in Table 7 and Appendix B overstate the revenue losses which may occur, particularly over the period three or more years beyond the date of adoption. A principal reason for considering tax depreciation liberalization is that the result is expected to stimulate investment; a higher investment rate will result in a larger private capital stock; and a larger capital stock will raise the national output to a level higher than it would otherwise have been. If national output in the future has been increased as a result of tax liberalization, surely, so the argument runs, the increased taxes generated by the higher national income ought to be considered in the assessment of future tax revenues as an offset to the losses computed as in this report. Moreover, if the policy changes are being considered in a period of less than full employment, should not the increase in employment and output (which generates higher taxes) that would result from private business response to enactment of investment incentives be accounted for in the revenue estimates?

There is some merit in this criticism of traditional methods of tax revenue estimation with respect to evaluation of business tax policy options as is illustrated in this report.

The difficulty with all this is specifying how much an increase in depreciation deductions would increase the rate of investment. In the first place, a change in depreciation policy would increase the demand for investment goods subject to the changed rules. How much is a matter of dispute. This could mean a net increase of investment or merely a diversion of investment from short to long lived assets. The experience under the investment credit was that much of the response to business investment incentives was diversion of savings from structures (housing and otherwise) to machinery and equipment, since structures were not eligible for the credit. Given some net increase in investment, it is still a matter of some dispute how much this increases real output, and thus the tax base.

A further problem in all this is that there are other things that the government could do to increase investment, including spend more on education, spend more on research, reduce the corporate tax rate, etc. To talk authoritatively about the effect of a depreciation change, one would have to ask what were the growth effects of policies that might otherwise have been implemented with the foregone tax revenues.

A further problem is that some of the depreciation alternatives offered would considerably favor one kind of investment over another. To the extent that some investment is diverted from what would have been more efficient uses, absent the new tax considerations, these could be an offset to induced growth.

In view of the uncertainty surrounding these issues, it seems preferable to simply report how much government would be doing to increase the growth rate if we changed depreciation rules in particular ways. It remains open to supporters of any particular change to present their arguments as to just how much the change would affect the growth rate, and make appropriate adjustments.

FOOTNOTES

[1] Section 167(b) of the Internal Revenue Code authorizes these methods: (1) the straight line method, by which the depreciable basis is distributed over the life of an asset in equal periodic amounts; (2) the declining balance method by which the annual depreciation is determined by multiplying the remaining undepreciated balance by a constant rate, which may be no higher than twice the annual straight line rate except in the case of commercial and industrial structures for which the rate may not exceed 1.5 times the straight line rate for new property; (3) the sum-of-the-years digits method, by which the annual depreciation deduction is that portion of the depreciable basis equal to a fraction, the numerator of which is the remaining years of asset life (including the tax year in question) and the denominator of which is the sum of all the years' digits representing the useful life of the asset; and (4) any other consistent method which does not result in an accumulated total of depreciation deductions during the first two-thirds of an asset's life which is greater than

that which would have resulted from the double declining balance method. Further exceptions to the use of accelerated methods are provided in the case of *used* structures: in general used commercial and industrial buildings and used residential structures with a useful life of less than 20 years may be depreciated only by straight line methods while used residential structures with a useful life of 20 years or more may be depreciated by a declining balance method at a rate no higher than 1.25 times the straight line rate.

[2] For expositional simplicity the entries in the table for expensing neglect the slight discounting necessary to recognize that tax deductions cannot be taken until tax liabilities are accrued and payable. See note 1 to Table 1 for discounted values of full expensing.

[3] There are combinations of circumstances not infrequently encountered in business investment situations under which the DDB method yields a higher present value of depreciation deductions than does the SOYD method. Since the characteristic time pattern of DDB deductions always includes a higher deduction in the first year (see Table 1), for particular combinations of high discount rates and short lives of assets, the DDB method is more beneficial to taxpayers than the SOYD method. More importantly, if salvage value is a significant proportion (15 percent or more, in the cases of assets with tax lives of 10 years or more) of the acquisition cost, or other basis, of the asset, the DDB method is generally more favorable, since the declining balance rate may continue to be applied until the undepreciated balance of the asset equals salvage value: the higher the salvage value, the more quickly will a DDB rate write-off the *depreciable* basis of the asset. In contrast, either the straight line or SOYD method will distribute the depreciable basis over the entire useful life of the asset.

[4] An intuitive explanation of this somewhat surprising result takes the following form: a $1,000 asset will generate some stream of revenues over its life; if the cost is expensed and the tax rate is 48 percent, the net cost of the asset to the owner (ignoring the slight discount of the deduction as above) is only $520, after tax. However, in the future, each $1 of revenue will be taxed fully, with no allowance for depreciation, leaving $0.52 of net return on the $520 investment, the same ratio as $1 to $1,000 as if there were no tax. Incidentally, in those cases, as in minerals taxation, where the total *present value* of expensing and depletion deductions may actually exceed the cost of the investment, the effective tax rate is negative. That is, in some instances the tax rate equivalent of an investment tax incentive is a tax rate less than zero.

[5] Twenty-three and one-tenth percent is also the pre-tax rate of return which yields the after-tax rate of 12 percent used above in discounting cash flows. Since the effective tax rate in the case of expensing is zero, the pre- and after-tax rates of return are equal.

[6] For example, if the firm exemplified in Table 1 above were to possess a large number of 12 year assets each being more or less regularly replaced on schedule, the reserve ratio test would compare his accumulated depreciation deductions with the total value of all his assets. The ratio of the accumulated total deductions to total value of assets would be 50 percent, if he uses straight line depreciation, since that is the ratio of the total cumulated depreciation for each of his assets to their total acquisition cost, or basis. Similarly, the ratio would be 59 percent if he uses DDB, and 65 percent if he uses SOYD. Ratios are presented in Guidelines which also account for growth and allow for variances in retirement dates.

[7] See Richard L. Pollock, *Tax Depreciation and the Need for the Reserve Ratio Test*, Tax Policy Research Study No. 2; Department of the Treasury, 1968.

[8] A simple example may help to clarify the tax avoidance aspects of artificial lease agreements. Suppose that taxpayer A uses automobiles in his business and follows the custom of turning them in after three years. He pays $2,000 for each auto and assumes the turn-in values of these autos are $1,200, $700, and $500 at the end of the first, second, and third years, respectively. Under present law, his depreciable basis, with a three year holding period is $1,300. If salvage value were ignored, his depreciable basis becomes $2,000. However, if salvage value were ignored and he "leased" the car for the same three years and if the "lessors" "exchanged" the car at the end of each year, depreciation deductions for the same car would aggregate $2,000+$1,200+$700=$3,900. Thus, disregarding salvage would confront taxpayer A with the alternative of a present value of $2,000 of deductions if he holds title to the car or a present value of $3,900 in deductions if he were to "lease" the car.

[9] Similar calculations have been made with 8 and 15 percent discount rates but are not presented here. Copies of tables for these rates are available from the Office of Tax Analysis on request. In general, if 12 percent is the overall rate of return on equity, a higher rate would be appropriate for "riskier than average" investment situations, a lower rate for "less risky" situations. Higher discount rates generally *increase* the value of tax depreciation acceleration; conversely, lower discount rates generally decrease acceleration benefits.

[10] Since DDB is the standard of reference, the calculations reflect a switch-over to straight line depreciation of the undepreciated balance when this is favorable.

[11] For a 10 year asset, the initial year's depreciation would be 20 percent of depreciable basis under the DDB method; an initial allowance of 40 percent is double this. For a 50 year asset, the initial year's depreciation is 4 percent of depreciable basis, also under DDB; thus a 40 percent initial allowance would be ten times this. Computations discussed below are based on the assumption that the initial allowance is taken first, then the first year's depreciation (of the reduced basis) is taken. If the allowance were merely added to "normal" first year depreciation (and subsequent deductions reduced accordingly) the contrast between short and long lived assets would be greater.

[12] The reader is cautioned that the calculations assume taxpayers with assets of indicated useful lives in Tables 3–5 are in conformance with the reserve ratio test so that a 40 percent reduction in lives, in fact, benefits them all.

[13] It may be observed in any of the tables that the progression of benefits from a 40 percent shortening of lives is not uniform. This results from the necessity of rounding the shortened lives to the nearest whole year. For example, an asset with an expected life of 10 years would be allowed a tax life of six years, which is 40 percent shorter; but an asset with an expected life of 11 years would be allowed a tax life of seven years (6.6 rounded to 7) which is actually 36 percent shorter.

[14] Section 167 (c) limits the use of DDB to assets with useful lives of three years or more simply because, if the restriction were not imposed, two year assets would be expensed in the year of acquisition, since the DDB rate would be unity.

[15] This assumed growth rate may be compared with the Council of Economic Advisors' estimate of a *real* growth rate of 4.3 percent. In order to accommodate the built-in inflation bias of index numbers, which do not account for product improvement, and since depreciation deductions are based on current prices paid for depreciable assets, it appeared that a 5 percent growth rate is a conservative basis on which to project gross investment in current, rather than real, dollars, but without incorporating extraordinary inflation.

[16] Characteristic assets which would follow such a pattern are those for which installation (and removal) costs are large relatively to total acquisition cost and those, such as automobiles, which appear to give off successively "inferior" services as they age. For an econometric study of automobile depreciation study of automobile depreciation patterns, see Frank C. Wykoff, "Capital Depreciation in the Postwar Period: Automobiles," *Review of Economics and Statistics;* May, 1970, pp. 168–172.

[17] An analysis of office building operating expense and rental income data by Professors Taubman and Rasche suggest that such a pattern is typical for investment in this class of structures. See Paul J. Taubman and Robert H. Rache "Economic and Tax Depreciation of Office Buildings," *National Tax Journal*, pp. 334–346, September 1969.

APPENDIX A

INVESTMENT ESTIMATES AND PRESENT LAW TAX DEPRECIATION INPUTS TO DEPARTMENT OF THE TREASURY DEPRECIATION POLICY REVENUE ESTIMATING MODEL

Type of investment	Estimated gross investment 1971 (millions) [1]	Present law tax depreciation assumptions: Useful life [2]	Present law tax depreciation assumptions: Percent using straight line depreciation [2]

[1] Office of Tax Analysis estimates for 1971 based on expenditure data furnished by Robert Wasson of the Office of Business Economics, U.S. Department of Commerce.

[2] Based on lives estimated by Allan H. Young, "Alternative Estimates of Corporation Depreciation," Survey of Current Business, April 1968.

[3] It is assumed that 36 percent of the nonfarm, nonmanufacturing structures are depreciated under the straight-line method except that only 20 percent of the residential structures are depreciated under the straight-line method.

CALIFORNIA EAST SIDE PROJECT QUESTIONS ASKED

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. WALDIE. Mr. Speaker, the environmental impact of Federal public works projects is of tremendous importance and it is a most hopeful sign that local and State bodies are now giving public works more scrutiny than in the past.

An outstanding example of this scrutiny has been demonstrated by the State of California Resources Agency and its Secretary, Norman B. Livermore, regarding the proposed East Side project in the Central Valley of California.

In addition, Mr. Speaker, I would hope that similar concern and questions have been or will be asked by Mr. Livermore concerning the devastating impact the proposed peripheral canal diversions will have on the sensitivity balanced ecosystem comprising the delta, the estuary, and San Francisco Bay.

Mr. Speaker, I would like to place Mr. Livermore's questions of the Bureau of Reclamation with regard to the East Side project in the RECORD, along with my own letters on this matter directed to the Bureau of Reclamation and the California State Department of Water Resources.

These letters follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 23, 1970.

Mr. WILLIAM R. GIANELLI,
Director, California State Department of Water Resources, Sacramento, Calif.

DEAR BILL: I am sure you are familiar with Secretary Livermore's, "Partial List of Concerns About the East Side Project," submitted to Bob Pafford on July 8, 1970.

I feel that Secretary Livermore has a justifiable cause for concern and I would hope that this concern is shared by the Department of Water Resources.

Additionally, I would appreciate knowing whether similar questions have been submitted regarding the Peripheral Canal, especially regarding the environmental aspects of the project.

Thank you for your immediate consideration of this matter.

Sincerely yours,

JEROME R. WALDIE,
U.S. Congressman, 14th District.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 23, 1970.

Mr. ELLIS ARMSTRONG,
Commissioner, Bureau of Reclamation, Department of the Interior, Washington, D.C.

DEAR COMMISSIONER ARMSTRONG: I have enclosed a copy of several questions regarding the proposed East Side Project of the Central Valley Project sent to Robert Pafford of the Bureau's Sacramento office by Norman B. Livermore of the California Resources Agency.

Mr. Livermore's questions regarding available water supplies, future augmentation and environmental concerns are very well taken and I hope that the Bureau's response will be extensive and prompt.

I would appreciate a copy of the Bureau's response. Additionally, I would be most interested in knowing if similar questions were posed by State Officials with regard to the Peripheral Canal Project.

Sincerely yours,

JEROME R. WALDIE,
U.S. Congressman, 14th District.

PARTIAL LIST OF CONCERNS ABOUT THE EAST SIDE PROJECT

(By Norman Livermore)

I. FISH AND WILDLIFE CONCERNS

1. Should authorizing language include additional assurances for fish and wildlife mitigation?

2. Should authorization of the East Side Project be withheld until a more firm commitment for fish and wildlife enhancement has been developed?

3. (a) What are the detriments and benefits that could be associated with the East Side Project regarding fish and wildlife mitigation and enhancement in the tributaries of the San Joaquin River?

(b) Could the Project provide waterfowl enhancement in the San Joaquin Valley?

(c) What provisions could be made for waterfowl and upland game enhancement on the Canal right-of-way; and for retaining surplus lands acquired with the right-of-way for fish and wildlife purposes?

4.(a) What plan does the Bureau have for releasing water down various streams to satisfy fish and game needs?

(b) How will these water costs be paid?

(c) How will these releases relate to releases from the Peripheral Canal?

5. Some of the material included in the Fish and Wildlife Service report needs to be modified on the basis of information developed since 1965. Do you plan to have the Service revise the report?

II. GENERAL ENVIRONMENTAL CONCERNS

1. Is there enough water available to supply the anticipated demands for water for the East Side Division from supplies that can be developed from existing works and projects authorized for construction and still protect the ecology of the Delta, the Suisun Marsh and other similar areas?

2. What are the alternative sources of water other than imports of North Coast supplies that would be required to make up any water deficiencies in export requirements in order to guarantee ecological protection for the Delta and other areas as outlined in the previous question?

3. What effects would the East Side Project have upon environmental protection requirements of the Lower American River?

4. Has the East Side Project been evaluated to determine compliance with the "National Environmental Policy Act of 1969"? If not, should it not be?

5. Will new studies be needed to conform to the Environmental Policy Act before authorization of the Project?

6. Should not actual, successful operation of the Peripheral Canal be worked out, the net Delta outflow necessary to protect the Delta and San Francisco Bay ecology be determined, and related Delta problems be solved before there is additional, major diversion of water from the Delta as would take place with the East Side Project?

III. ECONOMICS QUESTIONS

1. Will a demand exist for the additional crops that would be grown from water delivered from the East Side Project?

2. What effects would the reduced population projections recently released by the Department of Finance have on the benefit-cost ratio of the East Side Project?

3. What pricing policies would govern the sale of water in the East Side Service Area? Please give examples for irrigation, and municipal and industrial.

4. Has a soil analysis been made as to productivity of proposed new acreages to be irrigated to prove their economic feasibility?

5. Has the Project been evaluated in view of inflation to determine if it is still economically feasible?

6. Should the premises upon which the East Side Report were based be reassessed to determine if those premises are still valid? (i.e., population trends, agricultural needs, alternate water supplies, etc.)

7. (a) Has the Bureau made any firm contracts for East Side Canal water?

(b) What plans does the Bureau have for getting firm contracts prior to authorization and/or construction?

IV. AGRICULTURAL QUESTIONS

1. What effects would the East Side Project have on agriculture in the Delta?

V. LAND USE QUESTIONS

(Illustrative maps would be most helpful in connection with answers to these questions.)

1. This Project will further add to the conversion of private land to public ownership in California. Which U.S. Bureau of Reclamation lands can be disposed of to offset tax revenues heretofore derived from those lands needed for the Project?

2. (a) How much land that is now under cultivation will receive a supplemental water supply from the East Side Project?

(b) Where is this land located?

3. (a) How much new land is to receive a new water supply from the East Side Project and where is this land located?

(b) How much of this new development will be non-agricultural in nature?

VI. DRAINAGE QUESTIONS

1. Why should not the San Joaquin Master Drain question be resolved before the East Side Project is authorized?

2. Would increased irrigation east and north of the San Joaquin River in Merced and Madera Counties cause drainage problems?

VII. MISCELLANEOUS

1. (a) Would authorization of Phase I of the East Side Project obligate the State to support the ultimate stage of the East Side Division?

(b) What is the cost relationship between Phase I and ultimate East Side Project?

(c) What water volume requirements are anticipated for each?

(d) What is the source of water for the ultimate phase?

2. Will the Peripheral Canal be in operation before the East Side Canal? Shouldn't it be?

FURTHER INVESTIGATION NEEDED

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HARVEY. Mr. Speaker, I recently received a letter from a constituent deploring the conditions which led to the stranding of some 3,500 college students in Europe as the result of the financial failure of a company operating a travel-study program. The frustration and disappointment of these students is understandable and regrettable. Certainly there should be a regulation such as a requirement for performance bonds, to prevent such unfortunate incidents from occurring. I urge the Civil Aeronautics Board to thoroughly investigate this situation and to adopt such a regulation at the earliest possible time. This appears to be one area where the CAB has not cracked down adequately. The Board is, however, to be commended for its increased effort in enforcing charter regulations for scheduled airlines, supplemental carriers, chartering organizations, travel agencies, and individuals alike.

In the same vein, I would like to commend the Civil Aeronautics Board for its recent proposal to tighten up charter regulations. I am astounded that the Board's proposals, intended to prevent an erosion of the charter concept, have come under attack. The Board's proposed regulations are intended to insure that the distinction between individually ticketed service and charter service is properly maintained.

By preventing practices which enable individually ticketed services to be offered under the guise of charters, the Board is carrying out its mandate from Congress to maintain the integrity of charter service.

The law requires the CAB to maintain a system of air transportation which embodies both regularly scheduled service over specified routes and charter service which may be provided within specific geographic areas whenever the demand arises. The Congress has authorized scheduled airlines to engage in both individually ticketed services and charter service. Supplemental airlines have been authorized to conduct charter service only.

It is my understanding that because various methods are now being used by agents and promoters, such as setting up fictitious groups, to offer individually ticketed services under the guise of group travel, the Civil Aeronautics Board has decided to strengthen its charter rules. One step which the Board has proposed to take to prevent these practices is the establishment of new requirements for organizations seeking charter eligibility. By limiting eligibility for charter service to organizations, many of these abuses can be eliminated. Critics have said that the Board's proposed regulations would seriously limit the participation of the public in group charter travel by excluding organization of more than 20,000 members. This is simply not the case. Beyond that, however, it is estimated that on the average each American is eligible for group travel in at least three different ways due to his association with church groups, civic groups, or social clubs.

Any group, no matter how many members it has, may be eligible to establish a charter trip. The CAB proposal merely states that a group with a membership of more than 20,000 is presumed to be open to the general public. If an organization is a bona fide one, however, it need only establish that fact to the CAB, even though its membership far exceeds 20,000.

LIFE MAGAZINE DISTORTS THE HIGHWAY BEAUTIFICATION ACT

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HARSHA. Mr. Speaker, a leading article in the July 24 issue of Life magazine depicting billboard blight levels a grave and unjust charge against Congress for appropriating only $150 million under the Highway Beautification Act and for the low level of authorizations. It is a glaring example of irresponsible journalism. Congress is accused of failing to fund a program for the removal of signs depicted in the article that are not within the purview of the act.

Stated another way, Congress is faulted for failing to fund a program that is not in legal force and effect. The montage of signs in the lead two-page picture, which is apparently grossly distorted by the compressing effect of a telephoto lens, are in a commercial or business area. With only two exceptions, all of the signs shown in this picture are so-called "on-premise" signs—"signs, displays, and devices advertising activities conducted on the property on which they are located." These are expressly excluded from control under subsection (b) of section 131 of the Highway Beautification Act and there is no authority to appropriate funds for their removal. The two exceptions—presumably "off-premise" signs in a commercial area are subject to control, but such signs are permitted under subsection (d) of the act. Most, if not all, of the signs shown in the other pictures contained in the article are also "on-premise" signs or in a commercial area and, therefore, not prohibited by the act.

The motivation for this reportorial inaccuracy is open to question, but at the very least it is submitted that a publication of this stature that seeks to influence public opinion should do so on an informed basis. A most casual inquiry would have advised the writers of the scope of the existing law.

TUNNEY SALUTES BASEBALL TRIBUTE, THROUGH EAST-WEST ALL STAR MAJOR LEAGUE CLASSIC, TO MEMORY, GOALS AND PROJECTS OF DR. MARTIN LUTHER KING, JR.

HON. JOHN V. TUNNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. TUNNEY. Mr. Speaker, organized baseball participated in a unique salute to one of the outstanding citizens in the history of our Nation.

Players, club owners, officials of the two leagues, and the commissioner of baseball participated in making the East-West All Star Major League Baseball Classic—honoring the late Dr. Martin Luther King, Jr., a success. And more than 30,000 fans crowded into Dodger Stadium in Los Angeles on Saturday, March 28, 1970 to see the eastern division team defeat the western division team 5 to 1.

As sportsmanship is defined, the importance of the game is not in winning or losing. It is in playing well. Through individual effort and teamwork, attaining the goal. The goal this day was a salute to the late Dr. King, his ideals, and his nonviolent efforts to make our Nation—and the world—a better place in which to live.

The game had great symbolic significance. It was a most beautiful and meaningful way to begin the first baseball season of a new decade. In the men on the diamond at Dodger Stadium, we had the cream of the crop. The men of several racial backgrounds and cultural heritage who represent the best that baseball, our national sport, has to offer. They represented fulfillment of an Amrican dream, where men in sports are judged on their skills and abilities.

It was not always so in baseball. But

change did come. And baseball is better for it.

As it is in baseball, it can be throughout our society.

Perhaps this was the collective wish of the men—the owners, officials, staffs and players—at the game. I choose to believe that this is what they wanted us of the general public to see as they played in a classic all star game dedicated to a man who did no more than try to make a dream—a most noble dream—come true.

An article by Brad Pye, Jr., sports editor of the Los Angeles Sentinel, captures the spirit of the day:

Today's East-West Major League Classic would have been one of Dr. Martin Luther King, Jr.'s proudest moments.

It would have rated with that day in August of 1963 when multitudes engulfed Washington, D.C., for that great march at which he delivered his now famous "I Have a Dream" speech.

Dr. Martin Luther King, Jr. had many dreams, but the most fervent dream of all was to see a freer America: an America like the one that will be exemplified by some of the best black and white baseball players in the world on the Dodger Stadium field this afternoon.

Dr. King lived, preached and believed in the brotherhood of man. He believed that all men are brothers—black ones, brown ones, white ones, red and yellow ones.

It seems fitting for baseball, from Commissioner Bowie Kuhn on down the line, to have given its blessing to today's game which will be played in memory of Dr. Martin Luther King, Jr. and for the benefit of the foundation which carries his name.

The move to get the U.S. Congress to declare Dr. King's birthday, January 15th, the first national holiday in history—in memory of a black man—hasn't met with success. Baseball, however, can take a bow for making today's Martin Luther King Classic a reality after one false start to get this game off the ground a year ago.

All of baseball—forty or so of the finest in the game—owners, umpires, managers et al.—have banded together to make today's Classic possible.

Dr. King would have loved this day. He was a spiritually filled man. And black, white and all the other colors of the rainbow working together would have caused Dr. King's cup to runneth over.

Dr. Martin Luther King, Jr. was the world's greatest apostle of non-violence and togetherness. He believed that non-violence is the most potent weapon of an oppressed people.

Dr. King believed all violence should be confined to the football field or some other athletic endeavor. He enjoyed the violent world of pro football as much as the next man—but he was a prince of peace otherwise.

It would seem proper for that homerun-hitting man from Atlanta—Hank Aaron—to put one in orbit today.

Dr. Martin Luther King, Jr. was a Nobel Peace Prize winner and in death, most of America is finally coming to the realization that he was for America. By today's demonstration, baseball moves up to the head of the class in this respect.

It is hoped that through this Classic, more people will realize that Dr. Martin Luther King, Jr. was an extremist—an extremist for love, an extremist for justice for all mankind.

Thanks to this timely gesture, baseball joins with black America throughout the world and all other men and women of goodwill to indicate that Dr. King will not be forgotten. His work and his memory will never die.

Dr. Martin Luther King, Jr. had a dream that the bank of justice was not bankrupt. Today's Classic is a demonstration that the "some day soon" he spoke of, when the sons of former slave owners and slaves would work together and walk this earth in peace and brotherhood, has come.

That today's Classic features baseball players of all colors is a living testimony to Dr. King's dream.

It seems apropos that the world of baseball which started integration to working back in 1946 when the late Brooklyn Dodger President, Branch Rickey, signed Hall of Famer Jackie Robinson as the first black player in modern times, should be the catalyst for this tribute to that man from Atlanta Dr. Martin Luther King, Jr.

Bowie K. Kuhn, Commissioner of Baseball, spoke for the organized sport.

Baseball has pioneered integration in professional sports.

It will be 25 years next October that Baseball, through the Brooklyn Dodgers, became the first professional sport in modern times to sign a Negro athlete, thus paving the way for the participation of a host of brilliant black athletes in the National Game.

It seems only right that Baseball should pause today to pay tribute to one of the great disciples of integration and brotherhood, a recipient of the Nobel Peace Prize, Dr. Martin Luther King, Jr.

It seems appropriate too, that the home of the Los Angeles Dodgers which started integration with Hall of Famer, Jackie Robinson, should be the site of today's East-West Major League Baseball Classic in memory of Dr. King.

As Commissioner of Baseball, and as an American, I am proud to give my blessings to this classic which demonstrates that Baseball is democracy at work.

I take this opportunity to commend the Southern Christian Leadership Conference for organizing this Classic and to thank the players for their participation, entirely voluntary, to this cause. I would also like to express my gratitude to the Major League clubs for their cooperation and their financial assistance to assure the game's success.

Joseph E. Cronin, president of the American League of Professional Baseball Clubs, stated:

It is a pleasure for the American League to provide the services of Emmett Ashford and Don Denkinger to help in umpiring the Memorial Martin Luther King Game. I would like to take this opportunity to congratulate players on both squads for their participation in such an ambitious venture.

Charles S. Feeney, president of the National League of Professional Baseball Clubs, said:

On behalf of the clubs and players of The National League of Professional Baseball Clubs, I should like to extend best wishes to you for a very successful Major League East-West All Star Classic Game.

All of us take great pleasure in giving our heartiest endorsement to this game and the very worthy cause for which it is being played.

Peter O'Malley, president of the Los Angeles Dodgers, in whose stadium the classic was played, wrote:

The Los Angeles Dodgers are proud to host the East-West Major League Baseball Classic at Dodger Stadium.

Proceeds from this unique game will benefit Southern Christian Leadership Conference Foundation and the Dr. Martin Luther King, Jr., Memorial Center in Atlanta, Georgia.

It is a game which brings together the outstanding players in Major League baseball for a cause which baseball is proud to support.

The eastern division team roster included Tommy Agee, New York Mets, outfield; Mike Andrews, Boston Red Sox, second base; Ernie Banks, Chicago Cubs, shortstop; Roberto Clemente, Pittsburgh Pirates, outfield; Mike Cuellar, Baltimore Orioles, pitcher; Ron Fairly, Montreal Expos, outfield; Bill Freehan, Detroit Tigers, catcher; Bob Gibson, St. Louis Cardinals, pitcher; Ken Harrelson, Cleveland Indians, outfield; Grant Jackson, Philadelphia Phillies, pitcher; Julian Javier, St. Louis Cardinals, second base; Al Kaline, Detroit Tigers, outfield; Darold Knowles, Washington Senators, pitcher; Tim McCarver, Philadelphia Phillies, catcher; Ken McMullen, Washington Senators, third base; Bobby Murcer, New York Yankees, shortstop; Reggie Smith, Boston Red Sox, outfield; Vada Pinson, Cleveland Indians, outfield; Frank Robinson, Baltimore Orioles, outfield; Ron Santo, Chicago Cubs, third base; Tom Seaver, New York Mets, pitcher; Willie Stargell, Pittsburgh Pirates, outfield; Rusty Staub, Montreal Expos, outfield; and Mel Stottlemyre, New York Yankees, pitcher.

Its coaches were Stan Musial, John McNamara, Billy Martin, and Satchel Page.

Joe DiMaggio, the Yankee Clipper and Hall of Famer, was manager of the winning eastern team.

Members of the western division team were Hank Aaron, Atlanta Braves, outfield; Sal Bando, Oakland Athletics, third base; Johnny Bench, Cincinnati Reds, catcher; Ken Berry, Chicago White Sox, outfield; Ollie Brown, San Diego Padres, outfield; Rod Carew, Minnesota Twins, second base; Orlando Cepeda, Atlanta Braves, first base; Willie Davis, Los Angeles Dodgers, outfield; Chuck Dobson, Oakland Athletics, pitcher; Jim Fregosi, California Angels, shortstop; Tommy Harper, Seattle Pilots, outfield; Reggie Jackson, Oakland Athletics, outfield; Dick Kelley, San Diego Padres, pitcher; Lew Krause, Seattle Pilots, pitcher; Tom McCraw, Chicago White Sox, outfield; John Martinez, Kansas City Royals, catcher; Joe Morgan, Houston Astros, second base; Roger Nelson, Kansas City Royals, pitcher; Tony Oliva, Minnesota Twins, outfield; Pete Rose, Cincinnati Reds, outfield; Ken Tatum, California Angels, pitcher; Maury Wills, Los Angeles Dodgers, shortstop, and Don Wilson, Houston Astros, pitcher.

Its coaches were Don Drysdale, Elston Howard, Sandy Koufax, and Don Newcombe.

Roy Campanella, the great Dodger catcher and Hall of Famer, was manager of the western team.

Emmett Ashford and Don Denkinger were umpires representing the American League. Stan Landes and Mel Steiner represented the National League.

Team members were selected from among ball players accepting invitations to play in the classic. The 24 men who took to the field were selected by members of the Southern California Sportscasters Association and the Los Angeles-

Anaheim chapter of Baseball Writers Association of America. All teams were represented. Only representative of the San Francisco Giants present was Willie Mays, who flew in from Japan for the game. The Giants were in spring training in Tokyo.

Mrs. Coretta Scott King, widow of Dr. King, was:

delighted that so many of the great baseball stars of the country have decided to honor my late husband, Dr. Martin Luther King, Jr., by participating in the East-West Major League Baseball Classic.

My husband would have been deeply moved by this tribute, because he had a keen interest in sports and he was always grateful for the kind of commitment to justice being displayed by the athletes in this Classic. Our four children, who are avid sports fans and participants, are also very grateful for this unprecedented game.

The world of sports has done much to point the way toward realization of our democratic ideals. In every field of athletic competition, players have demonstrated that where there is a will to do so, people can learn to work together, play together, win together, lose together, and travel together as team-mates, without consideration for race, religion, or background.

By supporting this Baseball Classic, you are expressing your solidarity with those of us who are dedicated to preserving the ideals for which my husband gave his life.

On behalf of the King family and the Martin Luthern King, Jr. Foundation, I extend our immense gratitude to those who have made this event possible—the Commisioner of Baseball and his staff; the participating players and the splendid retired stars; the baseball owners, and the thousands of volunteer workers and fans. With your help, we shall one day share in the realization of my husband's dream.

Reverend Ralph David Abernathy, president of the Southern Christian Leadership Conference said that:

Support of this game is a splendid way in which you are participating in the continuation of Dr. King's movement. I wish to extend my special thanks to the Commissioner of Baseball, Mr. Bowie Kuhn, and his staff; to the baseball owners; and to the great players, both active and retired, who have donated their valuable time and their marvelous talents to this unique event.

The benefits from the East-West Major League Baseball Classic are going to the Martin Luther King, Jr. Foundation and the Southern Christian Leadership Foundation, which supports the work of the organization I serve as Dr. King's successor.

The programs of SCLC are open to all regardless of race or creed, and are always conducted in the nonviolent tradition of Dr. King.

Dr. Martin Luther King, Jr. was many men—theologian, minister, scholar, and prolific author.

Born in Atlanta, Ga., on January 15, 1929, Dr. King was the eldest son of the Reverend and Mrs. Martin Luther King, Sr., and the grandson of slaves.

Through his formal education years—and before—Dr. King became painfully aware of the oppression of black people.

A well educated man, Dr. King, after receiving his doctorate in systematic theology in 1955, returned to the South. The young minister soon became the central figure in the modern civil rights movement.

Following the 381-day Montgomery Bus Boycott, Dr. King and Rev. Ralph David Abernathy founded the Montgomery Improvement Association, the direct forerunner of the Southern Christian Leadership Conference, which was established in 1957.

From this time until the date of his assassination in Memphis Tenn., on April 4, 1968, Dr. King championed the civil rights and peace movements.

He was undeniably one of the greatest Americans in history, and known internationally as a leader of growing power and respect. He was awarded the Nobel Peace Prize in 1964, and gained a total of 23 honorary degrees.

The Southern Christian Leadership Conference faces the decade of the 1970's fully dedicated to remain committed in the tradition of its founder-president, the late Dr. Martin Luther King, Jr., to the need for continued positive action and programs pinpointed to obtaining total freedom, full equality and justice, and peace for all men.

As they say in the vernacular of the sports world: "SCLC has its momentum going!"

The East-West Major League Baseball Classic is only one corner of the total picture designed to continue and expand the programs geared to bring Dr. Martin Luther King's philosophy and sincere beliefs into reality.

Through its 13 years of existence, the Southern Christian Leadership Conference has evolved from a regional organization combating racism in the South to a national organization involved in a host of sound programs.

It was founded in January of 1957 as an aftermath of the Montgomery bus boycott of 1955–56, led by Dr. Martin Luther King, Jr. and Reverend Ralph David Abernathy. The boycott paced the modern civil rights movement, and must be looked upon as the steppingstone from which the Southern Christian Leadership Conferenc launched numerous programs, all encompassing the key goal of securing economic development and basic human rights for all peoples.

From this humble beginning, SCLC started to grow. By the end of 1959, SCLC had affiliates in 10 Southern States and 22 cities. Dr. King and Rev. Abernathy the following year assisted in organizing the Student Nonviolent Coordinating Committee. In 1961, came the Freedom Rides. All the while, SCLC continued its work in voter registration, school desegregation and the use of boycotts to obtain desired results.

Two permanent programs of SCLC were launched in 1962—operation breadbasket, an economic arm originally designed to gain new and improved jobs for black people, and the citizenship education program, emphasizing literacy training and voter registration.

SCLC's demonstrations in 1963 against segregation in key southern cities, such as Birmingham and Savannah, led to the vital enactment in 1964 of the comprehensive Civil Rights Act which swept away the old segregation laws.

It was also in 1963 that Dr. King delivered the famous "I Have a Dream" oration at the march on Washington before an assembly of 250,000 persons.

The Nobel Prize for Peace was awarded Dr. King in 1964.

The Selma movement for the right to vote, featured by the 50-mile march from Selma to Montgomery, Ala., highlighted 1965 for SCLC. A total of 50,000 men and women participated in the lengthy march, with the result being the swift passing by Congress of the Voting Rights Act. SCLC followed up with a vast registration crusade which began to change the political life of the South.

In quick succession came the SCLC's participation against the oppression of black people in northern cities—Chicago and Cleveland; the Mississippi March Against Fear; and the establishment in 1968 of the ministers' leadership training program in 15 major cities.

On April 4, 1968, Dr. Martin Luther King, Jr. was assassinated in Memphis, where he had been working in support of a strike by poor garbage workers, and Reverend Abernathy was elected SCLC president.

The past year saw SCLC assist in obtaining higher wages, new respect and the right to organize for poor hospital workers in Charleston, S.C. SCLC also made a dramatic protest against poverty as men were launched to the moon. Demonstrators demanded that the Nation battle poverty with the same kind of skills and resources that went into the space program.

It was in 1969 also that SCLC became a major force in the buildup of the anti-war movement.

Programs, departments and specialized activities of SCLC are:

First. Department of affiliates and chapters: More than 300 local organizations across the Nation are affiliated with SCLC, receiving advice, direct aid and special services.

Second. Citizenship education program: Jointly sponsored by SCLC and the United Church of Christ, geared to develop local community leadership and serve the needs of the poor.

Third. Operation Breadbasket: A comprehensive economic development program dedicated to securing of employment for black people, as well as to assist in the growth of financial and business institutions.

Fourth. Department of voter registration and political education: Continued registration of voters promises a growing voice for the black and poor in all phases of the political process and the society.

Fifth. The Poor People's Campaign: This continuing drive enables SCLC to maintain an informal alliance with other groups, in addition to black people, including American Indians, Spanish-speaking Americans and poor whites.

Sixth. Organizing the working poor: In cooperation with labor unions, SCLC provides staff and resources to help organize this group.

Seventh. Students and youths: SCLC has and will continue to recruit students and other young people for campaigns of massive nonviolent action, enabling young Americans to work in local communities to change the quality and dignity of human life.

Eight. Housing for the poor: SCLC

has sponsored and cosponsored several model housing projects for the poor, featuring use of black architects and builders and the development of attractive, low-cost homes.

Ninth. Working for peace: Although essentially a human rights organization, SCLC has for one of its major concerns the need of peace and worldwide attack on the related evils of racism, poverty, and war. It is one of the strongest forces of the peace movement.

Tenth. Regional offices: SCLC maintains a full-time staff in key cities and communities, constantly available to serve local people.

Eleventh. Special Services: SCLC produces a nationwide radio program, "Martin Luther King Speaks," broadcast on Sundays over a network of 60 stations; publishes a monthly journal, "Soul Force," and stages special cultural, entertainment, and sports projects. The East-West Major League Baseball Classic falls into the sports projects category.

The Martin Luther King, Jr. Memorial Center, located in his home city of Atlanta, Ga., is a shrine of scholarly and cultural endeavors, coupled with appropriate memorials honoring Dr. King and the movement he pioneered and for which he crusaded.

The center has two major locations: One for active scholarship work research and cultural life is located in the vicinity of Atlanta University. The other combines a permanent entombment for Dr. King, a Freedom Hall, the home in which he was born, and the church he served as copastor with his father, Dr. Martin Luther King, Sr.

The first active element in the memorial center is the Martin Luther King, Jr. Library Documentation project, where the papers and other documentary works of Dr. King are being collected. Opened in the fall of 1969, the library is open to serious scholars.

The second element, the Institute of the Black World, opened in late 1969, bringing together black people and resources for the analysis and celebration of the Afro-American and black experience on a level unparalleled anywhere in the world. It is the eventual hope that the institute will offer certificates, degrees, and scholarships.

Long-range projects planned for the center include the museum of Afro-American life and culture, and the institute for nonviolent social change.

In the Auburn Avenue area, adjacent to Atlanta University, is located the entombment place, the Ebenezer Baptist Church, and the birthplace of Dr. King, to be preserved and maintained as an integral part of the center.

The final element of the center is a planned freedom hall where films, tapes, photographs, and other documentary material will be stored for public exhibition.

We were left with unfinished tasks at the passing of the founder, Dr. Martin Luther King, Jr. Through programs such as the East-West Major League Baseball Classic, we help to sustain his works—and those of the Southern Christian Leadership Conference—in quest of a better life for all men. Baseball, the great American pastime, has led the way.

TRIBUTE TO THE AMERICAN FLAG

HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. McKNEALLY. Mr. Speaker, I am most anxious that the membership of the House have the opportunity to read and ruminate upon a tribute to the American Flag composed by Monsignor George A. Rosso, Pastor of St. Thomas of Canterbury Church in Cornwall, N.Y.

The lofty sentiments contained in it are made the more significant by the fact that Monsignor Rosso served in the U.S. Navy over a long period of time. He achieved the rank of admiral. Monsignor Rosso was a dedicated naval officer as he is a dedicated pastor. It is inspiring to hear a man of his stature speak so feelingly about the American flag. This is especially so at a time when with great consternation we have watched the symbol of our country reviled and ridiculed. It goes without saying, Mr. Speaker, that Monsignor Rosso bespeaks eloquently the sentiments that most of us harbor deeply within our thoughts and hearts.

When a man with a record of great achievement admonishes us to love our country and to respect our flag, we should harken to his words. I, therefore, for the instruction of all who read this RECORD place this superlative tribute to our flag before the House today:

IN THE SPIRIT OF MEMORIAL DAY—ON THE RED, WHITE, AND BLUE

I guess I am an incorrigible patriot. Every time I see the flag going up the staff and hear the National Anthem I choke up a bit. I suppose it might be called an emotional weakness, but if this is so, I rather like it. It gives me a warm feeling and a sense of gratitude to Almighty God that among the many gifts He has given to me not the least is being able to call America my native land.

When I see that flag I am reminded of many things. I remember going into battle in the South Pacific against the Japanese and seeing and hearing that lovely symbol snapping, there is no other word, in the strong wind of the ocean. I have seen it layed on many and many a casket and had the privilege of folding it and handing it to the next of kin and saying that this was but a small reminder of the debt America owed to one of her dead sons. I have seen pictures of it being hauled down in defeat before the caves of Corregidor in the Philippines.

I saw it waving from the *Missouri* in Tokyo Bay. I have seen it lazily floating from homes and public buildings on the Fourth of July. I have seen literally thousands of tiny flags on tiny staffs sprouting from the graves in National Cemeteries on Decoration Day. And also in our small cemeteries in Cornwall. I have seen those who would destroy it, carry the flag in parades and shout defiance to law and order under its protection.

I have seen it caricatured in Communistic paintings, spat upon and trampled and burned by mad mobs here in the United States. I have marched with it in parades; gave it tribute as it went by in the safe hands of our beloved Marines. Watched it folded ceremoniously by Blue-jackets as the last rays of the sun faded into twilight.

I have watched it climb slowly up the flagpole at the Rose Bowl game as massed bands played the Star Spangled Banner, which is why I am sitting down at this moment writing this. It's my Flag and My Country, and in all my travels over the world I have never found a more beautiful flag or a better country. And if this is chauvinism then call me a chauvinist.

I remember a long, long time ago when I was serving with the United States Marines as a young "make-ye-learn" Chaplain. There was an old Battle Scarred Marine with whom I came in contact, and he seemed to take a liking to me. His name was Lieutenant Colonel Joseph Swinnerton; "Smokey Joe", as he was known in the Corps. He had a face like five miles of bad road and a voice an octave lower than a basso profundo. Yet, he was the epitome of kindness and understanding despite his looks and his voice.

On more than one occasion I went to him for advice and it was always good; something I would use all the years of my life in the service. One day I went to pay my respects to the Colonel and his lady as Navy protocol required. I was received most graciously and the three of us sat in his living room in San Diego and engaged in lively conversation. The radio was playing softly in the background. I was enjoying the visit immensely when all of a sudden Smokey Joe stood up at attention right in the middle of the conversation. I gasped in astonishment and wonder.

It was then, in the sudden silence, that I became aware that a band was playing the Star Spangled Banner over the radio. Joe stood there like a ramrod until the last note died away and then sat down quietly. He looked at me. There was a, well, shy look, I suppose you would call it, in his face as he explained that it was an old habit with him. He never sat during the National Anthem, no matter where he was. I have never forgotten that visit and even to this day, I am tempted and oftimes do the same thing in the privacy of my home.

That was, as I say, a long, long time ago; and he was a young man then. I suppose by this time "Smokey Joe" has gone to his reward. If he has then I say, God rest your soul Joe and thanks for the lesson that Sunday afternoon in San Diego.

Msgr. GEORGE A. ROSSO.

INEQUITY OF TAX STRUCTURE

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BROYHILL of Virginia. Mr. Speaker, I have been requested to insert into the CONGRESSIONAL RECORD an article written by E. Edward Stephens which appeared in the Evening Star on July 10. The article covers an inequity in our tax structure which would be corrected by the enactment of H.R. 14945 which was introduced by Congressman JERRY L. PETTIS from California:

[From the Evening Star, July 10, 1970]

COUNSEL FOR TAXPAYERS—TAX COURT DENIES A REVERSAL

(By E. Edward Stephens)

DEAR COUNSEL: Last Friday you told about a case where the Tax Court reversed itself. Can you now describe a situation in which this tribunal refused to do so?

Yes. A striking example is the Betty Bell Huelsman decision, filed June 29.

Mr. and Mrs. Alfred J. Huelsman, of Louisville, Ky., filed joint returns for '63, '64, and '65. The Internal Revenue Service later charged that Alfred had embezzled about $100,000 during these years and hadn't reported a dime of it as income in accordance with the Supreme Court's 1961 decision, James v. U.S. So IRS toted up deficiencies of $25,190, and added $12,595 for civil fraud penalties. When it couldn't collect from Al-

fred, IRS went after his wife, Betty, for the $37,785 plus interest.

Dumbfounded, Betty advanced these reasons why she should not be stuck for Alfred's staggering tax debt: (1) they had been divorced since February, 1967; (2) she had to work to support herself and their son; (3) her earnings were meager; (4) she knew nothing about Alfred's alleged illegal activities; (5) she had derived absolutely no benefit from the allegedly embezzled money; and (6) she wouldn't have signed the returns if she had known they were "dishonest." When IRS turned a deaf ear, Betty sought relief in the tax court.

She was barking up the wrong tree. After a short hearing in 1968, during which IRS dropped the fraud penalties, Trial Judge Theodore Tannenwald Jr. ruled against Betty. He said the court had "much sympathy for petitioner's unhappy situation" and was "appalled at the harshness" of its decision. But, he added, "the inflexible statute (section 6013(d)(3) of the Internal Revenue Code) leaves no room for amelioration."

Betty then turned to the Cincinnati-based Sixth Circuit U.S. Court of Appeals. This tribunal (one judge dissenting) decided last October, to give the Tax Court an opportunity to reverse its course. So the Sixth Circuit wrote a pile-driving opinion, and sent the case back ("remanded it") to the lower court "for disposition within the guidelines" of the opinion. Here are three key guidelines that virtually instruct the Tax Court to rule for Betty:

"We are not convinced . . . that the statute is so inflexible that an innocent wife who has been victimized by a dishonest husband must be subjected to an additional appallingly harsh penalty by the United States government."

"Courts very often hold in tax cases, at the insistence of the government, that substance should prevail over form. The form of this case is that petitioner signed in good faith tax returns with her husband which technically made her liable for the tax on their joint income. The substance is that the money which her husband embezzled without her knowledge was not income to her in the usual sense of the word and . . . did not benefit her directly or indirectly."

"It is argued by the government that petitioner's liability is based on a contract and that by signing the contract she assumed a role somewhat related to a surety or guarantor . . . The fallacy of this argument is that petitioner was fraudulently induced to sign a return which she obviously would not have signed had the embezzled money been included in it; and the presence of actual fraud has historically been considered as grounds for relief to the aggrieved party. Moreover, . . . a husband or wife who signs a joint return becomes liable as an individual debtor and not as surety or guarantor."

Amazingly, the Tax Court remained adamant in its June 29 decision despite these unmistakable directions. So the next move is up to Betty. She can try to pay for her divorced husband's crime, or she can appeal again to the Sixth Circuit—if she can scrape up enough cash to finance a fourth court battle in her search for justice.

MARIHUANA—WARNINGS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. COLLINS. Mr. Speaker, marihuana means problems. None of the drug debates solve anything. The extent of physical harm caused by marihuana may be uncertain. But the shattering effect that sale or possession of marihuana may have on an individual's life is startling. The editor of the Dallas Times Herald, Felix McKnight, lists the harsh penalties on marihuana users. Read the Dallas Times Herald editorial that sums up the present serious problem of marihuana. McKnight's statement follows:

Marijuana smokers, particularly the young, should know all the facts and penalties before they light the next cigarette.

It is conceded that the young are weary of being "preached to" but, as the writer commented in recent commencement addresses, we would be derelict if we did not raise a few caution flags for study.

The medical dangers of smoking marijuana are still being debated (without too much reason) but there are other undebatable facts about sale or possession of the drug.

It can radically change—or wreck—a citizen's life. For the following shattering reasons:

1—Possession of, selling or giving marijuana to another person is a felony, both under federal and state law. If a person is convicted under these charges and receives a penitentiary sentence—or even receives probation—he is recorded in police records as a felon. Which means, for the rest of his life.

2—Loss of the right to vote; a voiding of citizenship.

3—Loss of the right to hold many public offices.

4—Loss of eligibility to enter medicine, law, nursing and many other professional areas of postgraduate training.

5—Loss of eligibility for security clearances required in many jobs involving government contracts.

6—Serious impairments of job opportunities, since the fact of a felony indictment is made a part of the credit reference reports and police records.

7—Loss of eligibility for a commission in the armed forces.

8—Loss of eligibility for a Veterans Administration pension.

9—Loss of eligibility to be an officer in a small business investment company—and many other similar business areas.

10—Loss of eligibility to work as an investment adviser.

11—Loss of eligibility for a Civil Service pension or annuity.

12—Loss of eligibility to hold office in any labor union.

Roundup of these penalties should be credited to the Texas Association of Consumer Finance Companies. A very worthy public service.

But to the young, who soon will enter business and professional fields, there are additional warnings.

In Texas, and most of the others, a person loses for his lifetime the right to work in the following trades and professions if he is convicted of a felony:

Law, state banking department, barbering, hairdressing, cosmetology, dentistry, district clerk, funeral director or embalmer, life insurance counselor, nursing, optometry, pharmacy, physician or surgeon, plumbing, membership in a rural credit union, public school teaching.

A further reminder: Anyone convicted of a felony has a permanent police record with the local police, the state police and the FBI. Prospective employers and credit bureaus regularly check these sources when hiring.

The question? Is the arrest and conviction for possession, sale or passing of marijuana worth sacrificing citizenship and opportunity?

This generation—the brightest, healthiest and most promising of all—has mountains to climb to keep this greatest of free nations moving upwards.

It must win the true peace, it must establish true brotherhood, it must conquer cancer and heart disease, it must cleanse the earth of foul pollutants, it must destroy man's distrust of man.

It has work to do and it has all the equipment to do it.

It is unthinkable that it would foul its opportunity by risking felony conviction for the brief and fleeting experience of exposure to marijuana—or any other drug. To prove their right to challenge the "establishment," they could win the gratitude of a nation by suffocating the vile dope pushers who endanger their futures, their very lives.

Some argue that possession of marijuana should become a misdemeanor. But the very cold fact of it is—it is still a felony.

SECRECY IN THE HOUSE NO FIGMENT OF IMAGINATION, BUT A FACT OF LIFE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ROSENTHAL. Mr. Speaker, during debate on the Legislative Reorganization Act of 1970, it has been suggested that recent publicity about secrecy in the House of Representatives is the result of a great campaign instigated by the news media and that the charge of secrecy in the House is nothing more than a figment of the imagination of the news media. I must take issue with that allegation.

I will accept that perhaps the press is sensitive to House secrecy, because quite obviously secrecy in the legislative process hinders the press in discharging its responsibility to the public—the reporting of the activities of the elected Representatives of the people. But to assert that the press has contrived the secrecy issue out of whole cloth is a gross distortion of the facts.

Secrecy is not a figment of anyone's imagination; it is an undeniable fact of life in the House. It is also a well-documented fact of life as a result of an excellent report by the Democratic Study Group. The DSG report has been the basis for many editorials and columns supporting the bipartisan antisecrecy amendments. Some newspapers also reprinted the DSG report, among them the Wall Street Journal.

Mr. Speaker, the Wall Street Journal is not the kind of newspaper that concocts or prints figments of imagination. It has a well-deserved reputation for hard-nosed, accurate reporting of the news. It reprinted major excerpts from DSG's secrecy report in an article by reporter Norman C. Miller because the Journal's editors assessed the report not only as accurate but highly pertinent to the public interest. I agree. I commend the Journal article to my colleagues and I ask that it be printed at this point in the RECORD:

[From the Wall Street Journal, July 14, 1970]

IN THE HOUSE, A HASSLE OVER SECRECY

Congressional rules seem a dry-as-dust subject, yet they have a powerful and pervasive effect on legislative consideration of just about every important issue. Particu-

larly in the House of Representatives, an elaborate array of restrictive procedures has been developed over the decades to shield the decision-making process from public view and understanding. Rules encouraging secrecy in the House greatly enhance the power of chairmen in closed-door committee sessions and enable all Congressmen to escape public accountability for key votes in committee and even on the House floor.

Now, however, the long-entrenched system of secrecy in the House is under vigorous attack from a bipartisan reform group of generally younger Congressmen. They include liberals and conservatives who share a common concern that secrecy is a root cause of the low esteem in which the House is held by voters. A pallid Congressional reorganization bill which reached the floor yesterday gives the reform block a chance to attempt to rewrite House rules to provide for more open debate and decision making. An incisive analysis by the staff of the Democratic Study Group, a loose alliance of more than 100 liberal House Democrats, discusses the dimensions of the secrecy problem and outlines reforms the bipartisan group will urge.

Secrecy pervades the legislative process in the House of Representatives. Arbitrary and undemocratic procedures are so much the rule that they are hardly noticed let alone seriously challenged. Yet secrecy has a more debilitating impact on the House than its well-publicized companion, the seniority system.

Secrecy in the House is corrosive. It undermines the democratic process by denying members information they need to make intelligent legislative decisions and by denying voters information they need to make informed electoral decisions.

It destroys public confidence in the House as a responsive legislative body. It makes the House incomprehensible to the average citizen and contributes to the growing distrust of elected officials. . . .

Secrecy in the House takes many forms. It is closed committee meetings; it is refusal to disclose record votes taken in committee; it is the unavailability of reports and other information about the contents and effect of legislation; it is non-record votes on major amendments during floor consideration of bills; it is closed House-Senate conferences and more off-the-record votes; it is calling up conference reports and other measures for a vote before members have had adequate opportunity to study them. . . .

MANY CLOSED HEARINGS

Nearly half of the hearings and meetings of House committees are closed to the press and public. Most of the closed sessions are held by major committees such as Ways and Means, Armed Services, Foreign Affairs and Appropriations. Indeed the powerful Appropriations Committee holds all of its more than 300 annual meetings and hearings behind closed doors, out of sight of the taxpayers who foot the bill for its actions. The House Appropriations Committee is the only Congressional committee which always meets in secret session. . . . The Senate Appropriations Committee manages to hold 75% of its meetings open to the public and the press. . . .

Most committees open the majority of their hearings to the public, while closing their doors for mark-up sessions in which members vote on various provisions of the bill under consideration. . . . Except for the Education and Labor Committee, each member's vote on key provisions of legislation considered in House committees is withheld from his constituents and the public generally. . . .

Committee reports and hearings are frequently filed too late to permit members adequate time to review them before they must vote on the legislation. Appropriations Committee reports are generally unavailable until a few days before the multi-billion dollar measures are approved by the House. In most instances, transcripts of the closed-door Appropriations hearings—which average over 4,000 pages per bill—are published so late that even members of the Appropriations Committee not on the subcommittee involved do not see them until the day the full committee meets to report the legislation. Similarly, the several thousand pages of Armed Services Committee hearings are usually not made available until the day before floor consideration of the measure begins. . . .

The House considers most amendments to legislation while it is meeting as a committee of the whole, a procedure under which no-record votes are taken. Thus, constituents have no way of knowing how their Representative votes on most major amendments. These votes—regardless of how important—are either by voice or division (in which members stand in place to be counted) or teller (in which members file up an aisle between tellers who count them as they pass). No record is made, however, of how—or even whether—members voted. . . .

All House-Senate conferences (to work out differences between House and Senate versions of a bill) are closed to the public, the press and other members of Congress. Although conferences often significantly alter legislation passed by the two houses, no record of what occurs during a conference or how the conferees vote on the key issues involved is made available.

A LIMIT ON DEBATE

When the conferees reach agreement, they report back to their respective houses. In the House, a conference report may be taken up almost immediately, the only requirement being that it be printed in the record. Thus a report filed for the record at the close of business one day may be called up for debate and a vote at the opening of business the next day. Since conference reports are often obscure and complex and since debate is limited to one hour, such a procedure does not give members adequate time to gain an understanding of the conference agreements before voting to approve or disapprove the measure. Further, even when conference reports are not called up immediately after being reported, they are called up without notice. . . .

Non-record votes and closed committee sessions saddle all members of the House with the poor image that secrecy engenders. Non-record votes reduce participation and make it almost impossible for members to get support for amendments regardless of their merit. Less than one-third of all House members generally participate in non-record votes on amendments and the vast majority of them fail. . . .

Closed committee sessions pose additional problems for members by making it more difficult to reject the entreaties of interests seeking legislation not in the public interest. The lack of early availability of committee reports works to the disadvantage of members by denying them adequate opportunity to make an intelligent evaluation of pending legislation or to draft amendments and seek support for them. This often places members in a position in which there is little choice but to accept the recommendations of the committee which reported the bill.

Closed committee meetings, secret or non-record votes and lack of information prevent the press from meeting its obligation to fully and accurately inform the public about the conduct of public business in the House. Closed committee sessions make reporters dependent on "leaks"—thereby increasing the possibility of misleading reports or outright manipulation of the press through "leaks" designed to favor a particular point of view. . . .

Secrecy gives special interests an advantage over the public interest by permitting professional lobbyists to exert an influence out of proportion to the righteousness of their cause. Finally, the public interest is not served when such major issues as the ABM, the SST, the invasion of Cambodia, school desegregation, civil liberties and air and water pollution are decided anonymously. The poor attendance on many of these votes (in the current session) effectively disfranchised many constituents and in some cases permitted the continuation of programs and policies opposed by the public.

The legislative reorganization act of 1970, scheduled for House consideration in mid-July, provides the first major opportunity in a quarter of a century to attack the problem of secrecy in the House. . . . Numerous amendments are anticipated—including several designed to open House proceedings to more public scrutiny. . . .

One of the major proposals would simply authorize clerks to record the names of members as they pass through teller lines. . . . This is perhaps the most important reform amendment which will be offered. It would not only permit constituents to better evaluate the performance of their Representative, it would also significantly improve member participation in voting on amendments to legislation. Ironically, however, whether such record votes will be permitted will be decided by non-record vote under present procedures.

The public has a right to know how their elected Representatives vote on matters which come before them in committee as well as in the House. . . . The only change in this situation provided by the legislative reorganization bill is a meaningless requirement that committees announce the vote total on motions to report legislation—but without indicating how each member voted.

To provide substantive reform in this area, an amendment to the legislative reorganization bill is being considered which would require that each member's vote on committee and subcommittee roll calls be made public.

The legislative reorganization bill contains provisions stating that committee hearings and business meetings "shall be open to the public except when the committee, by majority vote, determines otherwise."

This language is only slightly different from the present rule and would therefore have little, if any, effect in opening more committee hearings and meetings. . . . An amendment is therefore being considered to require a two-thirds roll call vote to close a meeting or hearing, plus disclosure of the reasons for doing so. This would promote more open sessions while still providing committees with flexibility to close hearings and meetings involving national security matters or other sensitive issues.

THREE AMENDMENTS

Members must be provided with reports, hearings and other information sufficiently in advance of floor consideration of legislation so that they may know what they are voting on. . . . Thus, the following three amendments are being considered in this area:

1. An amendment requiring that the committee report on any appropriation bill be delivered to each member's office at least seven days before House action on the measure. Such a requirement is not unreasonable in view of the fact that appropriations bills involve the expenditure of billions of tax dollars.

2. An amendment requiring that the committee report on any non-appropriations measure be delivered to each member's office at least three days, excluding weekends and holidays, before House action.

3. An amendment requiring that House-Senate conference reports be available to members for at least three days before House action and that advance notice be given when such reports are to be called up. . . .

These amendments would end the practice of developing legislation behind closed doors and then rushing it through the House before

members have had an opportunity to analyze the measure. As the Joint Committee on the Operation of Congress noted in its 1966 report, bills which cannot survive scrutiny are bills that should not be enacted. "The world's most powerful legislature cannot in good conscience deprive its membership of a brief study of a committee report prior to final action," the bipartisan committee noted.

The rules changes demanded by reformers are certain to meet strong opposition from veteran Congressmen of both parties who feel their power threatened. It will be an upset if the reform forces win, and the results would not be immediately apparent in terms of legislative decisions. But a lifting of secrecy would fundamentally enhance the now-paltry influence of rank-and-file Congressmen, at the expense of House elders, and that would be bound to have a lasting impact on legislative decisions.

CAUTIOUS OPTIMISM POSSIBLE OVER MIDDLE EAST SITUATION

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BIAGGI. Mr. Speaker, I would like to express a word of cautious optimism over the recent developments in the Middle East. The positive response by the Egyptians to a U.S. proposal for a cease-fire and peace talks gives some hope for the future. However, we are still a long way from a settlement.

Two key elements in the proposal, if accepted, would represent real steps forward. The required recognition of the sovereignty, political independence, and territorial integrity of the countries involved is one essential point on which there can never be a compromise. The second very important element is the provision for a cease-fire and the start of peace talks.

Now, while a cessation of hostilities is necessary if meaningful negotiations are to be completed, there must be sufficient safeguards to prevent a buildup of weapons and missiles in Egypt or her neighboring Arab States. Israel would be foolish to accept even a temporary cease-fire if at the end of such a period it would face a much better equipped enemy army.

As it is, the military balance is quickly shifting to the Arab side. The introduction of Soviet SA–2's is a very grave escalation of the tense situation in the area. Now even the Syrians have the deadly SA–2's and will probably soon have SA–3's also. Libya, too, is getting in the act. The Soviets have shipped large amounts of military equipment, including tanks and troop carriers, to that oil-rich desert country. The French will soon sell them 110 Mirage jets.

These extensive arms buildups pose a very serious threat to Israel's future security. A cease-fire that would not bar arms buildups would be too great a risk for our tiny embattled ally. Until the Soviet Union and its near-puppet Arab governments stop the upward spiral in arms and missiles, Israel has no choice but to continue bombing the missile bases and other strategic installations. Regardless of what may come of the present peace proposals, I firmly believe we must supply Israel with the jets she has requested for her own defense. I would point out we are selling these jets to Israel, not giving them away. Unlike in Southeast Asia, it does not cost the taxpayers 1 cent to help our ally defend democracy and freedom in the Middle East.

As I pointed out in this Chamber several months ago, any settlement in the Middle East must contain guarantees for Israel's security and must be arrived at through negotiations between the countries involved and not as a result of a solution imposed from the outside.

I believe the present proposal embodies the spirit of my letters to the President and the Secretary of State last January. The recent U.S. peace initiative quite clearly points out the need for an eventual face-to-face discussion between Israel and her warring neighbors as central to a final solution. It further leaves the details of a settlement to the parties directly involved.

If the proper guarantees against arms buildups can be obtained, I hope that Israel would seriously consider following through on this move toward peace. I am confident that the wisdom and prudence of the Israeli leaders will guide them to the right decision.

LIMIT AID TO STOP ILLEGAL DRUG EXPORTS

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. COLLIER. Mr. Speaker, the importation of heroin and other hard narcotics is causing a catastrophic social dilemma to occur throughout the United States. While this country lends foreign aid assistance to countries such as Turkey, they, in turn, refuse to adequately police a drug traffic that is bringing ruin to a whole segment of our society.

H.R. 18397 may give a partial solution to our insidious drug problem that becomes worse each year. As a cosponsor of this legislation, I would like to offer two WCBS radio news editorials for the RECORD in hope that they will further elucidate the concern that many of us now hold.

The editorials follow:

[From WCBS radio, July 12]

New York City was chosen as the site of recent Congressional hearings on the drug traffic, and for the most unflattering of reasons. The city holds the dubious distinction of housing the country's largest concentration of heroin addicts.

Half of all the addicts in the United States live in New York City.

At the hearing, spokesmen for state and Federal law enforcement agencies and other authorities on narcotics control, repeatedly emphasized one argument: The war against drug addiction is foredoomed, unless the Federal government finds ways to cut off the flow of drugs from abroad.

The South of France is the major European center for the manufacture of heroin. Most of it, until fairly recently, was shipped to the United States—a circumstance that did not appear to disturb to any marked degree either the French people or their government.

But now, addiction has become something of a problem in France itself and penalties for narcotics dealers are becoming harsher there. Even so, there is little visible indication that large numbers of the heroin factories around Marseilles are being closed and their operators put out of business permanently.

The continuing flood of heroin into the United States makes it a problem to be handled as an emergency matter, and at the highest diplomatic levels.

Two Congressmen from the tri-state area see the problem in the same terms. New York's veteran Representative Emanuel Celler and New Jersey's Representative Peter Rodino are sponsoring jointly a different approach to narcotics control. They are introducing a bill that would authorize the President to suspend economic or military aid to any country which fails to take appropriate steps to prevent narcotics produced or processed within its borders from entering the United States unlawfully.

The bill would also permit American assistance in the form of agricultural subsidies to countries where poppy crops are being replaced by others.

A prime target of the proposed law would be Turkey, which receives generous development funds from the United States. Turkey is the original source of 80 percent of the heroin now smuggled into this country.

WCBS Radio urges all Congressional delegations, not only those from the tri-state region, to support the Celler-Rodino narcotics control bill.

[From a WCBS radio editorial, July 9–10]

Heroin addiction in the United States last year cost non-users about two billion dollars in stolen property. The robberies were used to finance a habit that in every way is the costliest of all bad habits.

In New York City, heroin took the lives of 800 addicts last year. Two hundred of those who died of an overdose were children. Drug addiction has become the leading cause of death in New York between the ages of 15 and 35.

The Federal Bureau of Narcotics and Dangerous Drugs has increased its staff of agents in New York and the police department is assigning more and more officers specifically to the narcotics beat. But heroin continues to surge into the Port of New York, by sea and by air.

From where does it come? Almost all of the heroin sold on American streets is manufactured in illegal French laboratories located around the port of Marseilles.

Clearly, the strongest Federal action must be taken to cut off the supply at its major foreign sources. That is, Turkey, Lebanon and Iran, where most of the opium is grown for the American market. And France, where it's converted into heroin.

Washington should take a much firmer line with the governments of all the countries involved in heroin traffic. We should insist on more rigorous and broader inspection of baggage and freight leaving European sea and airports. We should demand evidence of an intensive official crackdown on the heroin factories in France and the poppy fields of the Middle East.

Some American officials concerned with narcotics abuse see this as a simplistic approach. They claim it would achieve little to close down the opium producers and the factories in the offending countries. The growers and the large-scale dealers would simply transfer their operations to other countries.

But the United States has other options. It has economic weapons it could use against a

number of countries in Europe, the Middle East and Asia which display excessive tolerance of their own nationals who are guilty of trafficking in this killer drug.

Congressmen from New York and New Jersey have been considering legislation along those lines. We'll examine their proposed bill in another editorial later this week.

OUR YOUTH TODAY

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. MORSE. Mr. Speaker, I am privileged to bring to the attention of my colleagues a letter I recently received from an outstanding young American, Peter Johnson, of Woburn, Mass., who is president of the Massachusetts State chapter of the Future Farmers of America. He is an extremely thoughtful young man who loves his country and respects the principles on which it was founded, but who is acutely aware of our shortcomings in living up to these ideals, and is sincerely, conscientiously, and responsibly concerned with the future.

The questions he asked reflect the thinking of much of our youth today. He has not sought refuge in the rigid and unproductive extremes of the right or left. Indeed, his is a kind of patriotism on which the very future of our society depends, for he embodies the quotation—often incompletely quoted and incorrectly interpreted—which says "Our country, right or wrong. When right to be kept right; when wrong, to be put right."

Too many of us, out of an inability to keep up with the rapid pace of change in the world, out of weariness with the increasing complexity of problems, or out of a growing rigidity in attitudes that too often comes with age, or perhaps from a fear of questioning values which have guided our lives for so long, look upon those who ask these questions with suspicion.

Yet it is the very freedom to question, and the creative search for the answers, that has sustained this Nation for almost 200 years. I urge, therefore, my colleagues' understanding of the concerns—and the ideals, principles and hopes—which are expressed in this letter:

WOBURN, MASS.,
July 3, 1970.

HON. F. BRADFORD MORSE,
House of Representatives,
Washington, D.C.

DEAR BRAD: As Massachusetts state president of the State Chapter of the Future Farmers of America, I will be down in Washington for the week of July 19–25 for the F.F.A. State and National Officers Conference. Is it possible for me to talk with you at that time?

Ironically, this letter is being written on the eve of our celebration of our Independence. You, along with myself and most others, are for peace. I am also for America. However, I cannot with full conscience support an institution that is based on destruction, death, and hate. That is not America. Peace can occur through productive rather than destructive means.

Being in the field of agriculture, I see the problem with most underdeveloped countries is a badly needed education of necessities in the fields of health and agriculture. Who are we to say to our brother who doesn't want the American form of government that they are wrong? That in itself is not Democratic or American. But we can teach them how to take care of themselves so they can produce and live for themselves while being governed the way they want to. We must realize that America is the United States and not the world. Our world alliances are having us assume powers of the United Nations which is not our purpose. Education is one thing, where forced persuasion is another. Am I wrong to think that learning to kill or even being a member of an institution that is directed this way is un-American?

Amendment II of the Bill of Rights states that a well-regulated militia being necessary to the security of a free state shall not be infringed. Directly, American's freedom is not being threatened. Its form of government is only being questioned by others who feel that their governmental institutions speak better for their society. What we need for a defense army is only a handful of scientists to assume positions with our weapons and a handful of educators to solve questions at our tables. Wars can no longer be solved on a battlefield, for countries are too powerful to allow a handful of men and a piece of land, captured or denied, to determine the outcome of their enmity. The ony thing lost is our brothers and the only thing gained is an ounce of pride. Is it worth it? America can and must afford to be humble in exchange for a living, youthful male public who can direct themselves to a goal of their own—be whatever it is. That is a democracy. A government is by and for the people.

Sincerely yours,

PETER M. JOHNSON.

MURDER OF POLICE

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. WOLFF. Mr. Speaker I share the outrage of all civilized men at the sniper killings of two policemen in Chicago last week. By now everyone knows that these two men were doing volunteer work in community relations and this would seem to multiply the horror of these killings. However, as pointed out in an editorial in today's New York Times, this terrible crime has had an encouraging aftermath. I believe that all of us should be made aware of some of the hopeful signals that are a result of the work of these brave and dedicated men. Mr. Speaker, with that in mind, I am pleased to include the following editorial from the Thursday, July 23, New York Times:

MURDER OF POLICE

The police have been and are at the center of so many of the tensions that now roil the nation that individual policemen, police stations and police equipment have become frequent targets of attack by would-be murderers and bombers. It was in this pattern that two Chicago policemen were killed a few days ago by sniper fire from windows in a housing project.

However, this terrible crime had an encouraging aftermath. The victims were white policemen who were participating in a program designed to improve black community relations with the police. The program has apparently had significant success, and the housing project's residents, outraged by the murders, gave important aid to the investigation. Several arrests resulted.

The extremists who think of the police only as oppressors of blacks will no doubt be surprised at this phenomenon. But blacks know that they are the principal victims of black criminals, and that better police protection is one of the chief needs of many black communities. The aftermath of the atrocious murders in Chicago has only emphasized that efforts to improve understanding between police and the blacks are worthwhile, and that revulsion against cowardly crime is restricted by no color lines.

SMALL BUSINESS ADMINISTRATION CIVIL SERVICE POSITIONS

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. MOLLOHAN. Mr. Speaker, I want to call the attention of the House to the Jack Anderson column of July 18, 1970, in which he reveals some of the activities now being carried on at the Small Business Administration under the direction, or more properly the misdirection, of Administrative Hilary Sandoval, Jr.

From the experience in West Virginia, I can tell the House that Mr. Anderson's column only begins to uncover the activities of Mr. Sandoval's Small Business Administration. I have never seen such disregard of the civil service or such use of a Government program for political purposes in the more than 20 years I have known Washington.

In West Virginia, the SBA first downgraded their Clarksburg office from regional to district, on the pretext that this would give uniformity of level to the Government department. Then the SBA transferred to Philadelphia the regional Administrator, who had developed a considerable expertise in West Virginia business and finance, and who had built up a solid working relationship with the West Virginia businesses and banking community. I might add that the SBA in this case achieved its objective because the Administrator resigned rather than work in a position where his skills were not being used.

In the same Philadelphia regional office, the SBA now has an attorney from South Dakota who was transferred from the SBA office in Sioux Falls to Philadelphia at no increase in grade. The Philadelphia office is also employing the practice of reducing its employees in grade and transferring them to undesirable assignments in the hope that they will resign so that these employees can be replaced by political partisans of Sandoval's choosing.

Mr. Speaker, these transfers and downgradings do not involve the political or schedule "C" positions within the Government but civil service positions. These transfers do not involve top policymaking positions, and they are not restricted to regional and district Adminis-

trators. The sorry fact is that the administration is reaching down to field office personnel, and in the case of the Small Business Administration, to loan officers and secretaries.

Mr. Speaker, this practice is disrupting the entire Small Business Administration, and it threatens to make a sham of the Government's programs and the civil service system as such. Over the last two decades, through both Republican and Democratic administrations, the Government has attempted to establish a truly effective career civil service throughout the Government to administer our various programs competently and efficiently. We have done so in the realization that career civil service would yield us much better results than a spoils system.

But today, the Small Business Administration and other departments of Government as well, are dismembering the civil service. They are making a sham out of the careers of dedicated public servants, and emasculating the programs they are supposed to facilitate. The American public will pay the price of this arbitrary politics-over-performance policy for it will receive not only ineffective administration of the programs supposed to serve them, but it will also find that fewer and fewer competent men and women are willing to work for so arbitrary an employer.

Mr. Speaker, it is time for us to put a stop to this. The Congress is required to approve funds for every operating agency in Government, and it is time for us to start investigating the employment practices of agencies such as the Small Business Administration and any other department that employs these tactics.

Mr. Anderson's column, "The Washington Merry-Go-Round," follows:

THE WASHINGTON MERRY-GO-ROUND

(By Jack Anderson)

Hilary Sandoval Jr., sometimes called "Hilarious Hilary" by subordinates who retain their sense of humor, has kept the Small Business Administration in an uproar since he took it over 16 months ago. Consider these highlights:

He loaned $41,000 to a Denver dive, called the Body Shoppe, which features topless go-go dancers. This curious cultural investment of the taxpayers' money was justified, said a spokesman, because the go-go bar had been displaced by an urban renewal project.

As evidence that voters who elect Republicans will be rewarded with federal blessings, the Republicans arbitrarily approved a $315,000 loan that the Philadelphia regional office was ready to reject. This happy sum went to Lawrenceville Furniture Industries of Lawrenceville, Va., an enterprise that, unhappily, hasn't paid it back. Our investigation shows that the Republicans took the application away from Philadelphia after learning the regional office wouldn't okay it and forwarded it to Richmond with a Washington endorsement. This was intended as a political shot-in-the-arm for Virginia's GOP Gov. Linwood Holton, say insiders, to help persuade the electorate that it pays to vote Republican.

Sandoval has squandered hundreds of thousands of dollars to move civil service employees, whom he suspected of Democratic leanings, to undesirable posts. The taxpayers were stuck with the moving costs, per diem payments and other incidentals.

Unpublished records show astonishing mismanagement of the Small Business Investment Companies, which Sandoval likes to brag about. In fiscal 1969, with Sandoval in control for a third of the year, there were 1,500 violations by SBICs. Five hundred of them were major. For example, 40 small business investment loans were actually used to finance big business. There were also 62 guideline violations, 56 conflicts of interest and 25 floutings of agreements. During the first nine months of the 1970 fiscal year, another 725 violations were reported.

Sandoval has also boasted that he has loaned out $28 million to minority businessmen. Yet half of these loans were committed by the Democrats before he came to power. The bitter truth is that some of these loans went to poorly-run black businesses, which were given noncompetitive government contracts at far higher costs than the government previously had paid to established firms. Some of the established firms have now been bankrupted by the loss of business.

The House Small Business Committee, headed by Rep. Joe Evins (D-Tenn.), will take Sandoval over the coals at hearings scheduled next week.

TWO DANGEROUS PROPOSALS

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. LONG of Maryland. Mr. Speaker, the rising crime in the District of Columbia has been of deep concern to us all. However, two proposals of the Nixon administration to deal with crime have raised as much concern as the situation with which they deal. I have just read an excellent editorial in the Arbutus Times discussing the hazards of such legislation, and I should like to share this article with my colleagues by including it in the RECORD:

TWO DANGEROUS PROPOSALS

In understandable zeal to reduce the appalling crime rate in the District of Columbia, the Nixon administration has proposed two pieces of legislation that affect basic constitutional rights and should be rejected by Congress.

One proposal, the so-called no-knock law, would empower the police to break down the door of a habitat where authorities strongly suspect illegal drugs are being stored or used.

The other Nixon administration proposal, the preventive detention scheme, would allow the imprisonment without bail of certain persons whose records, in the opinion of authorities, are such that they pose a danger to the public if allowed to be free on bail while awaiting trial for an offense.

The no-knock proposal originated as a means of enhancing the enforcement by police of narcotic laws. Dealers in illegal drugs are crafty. They often get rid of contraband material before police have a chance to search their place. If only police could arrive in the middle of the night and burst in by surprise, the argument went, then their success at stamping out illegal drug traffic would be quadrupled.

It's a perfect example of a bad law being proposed in frustration over the inability to get the goods on a slippery criminal. The constitution of this country plainly declares against sudden searches of a man's home by government authorities, and the procedure of a judge issuing a search warrant before police may enter a dwelling to carry out a search is a basic part of the protections an individual enjoys in the United States. No matter how cautious a police agency may conduct its investigations, there will always be times when mistakes are made. A man's home, as Marylanders often have been reminded, is still his castle. As such it is sacresanct. The no-knock provise must go.

Preventive detention, is a vague term, but it boils down to nothing more than imprisonment without bail in non-capital crime cases. Such a thing is a giant leap backward for America, land of freedom and country where the individual is not trampled underfoot by the state as in the Soviet Union, Communist China and other despotic nations, including these of the right.

These two proposals—preventive detention and the no-knock provise—are being actively pushed by the administration in the sincere beliefs that they will help reduce the crime rate in the nation's capital. Vice President Spiro T. Agnew is among those in the forefront of the battle to get the two new laws, but this time Ted is mistaken.

Fortunately, the same constitution under attack by those proposals established the system of checks and balances in the federal government that will see the defeat of the two proposals. The U.S. Senate so far has resisted the President's attempt to ramrod these measures into law, and a majority of that body shows no sign of weakening. That is good.

PUERTO RICAN DAY CELEBRATED

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. RODINO. Mr. Speaker, once again I would like to call to the attention of my colleagues the celebration of Puerto Rican Day.

The Puerto Ricans are among those who have enhanced the diverse and unique traditions which have contributed to our heritage and have made us a multifaceted people.

The Puerto Rican community in my congressional district is a vitally active one, and in the best of America's tradition is playing a major community role in a continuing effort to achieve harmony within the community and in providing the opportunity for the self-realization for all citizens.

I was pleased to share on this occasion once again as my city of Newark celebrated with a statewide Puerto Rican Day parade at which Miss Marisol Malaret Contreras, Miss Universe, and formerly Miss Puerto Rico, reigned.

Mr. Pedro Diaz, president of the parade committee, Luz Miriam Hernandez, executive secretary, Jose Rosario, Pablo Rivira, Anthony Perez, and Marie Gonzalez, parade grand marshal, contributed selflessly to this event as they do to the community at large. I commend and congratulate these dedicated citizens and I am confident of their continued commitment and outstanding service.

RESULTS OF LEGISLATIVE QUESTIONNAIRE

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BROWN of Michigan. Mr. Speaker, the response of my constituents to my fourth annual legislative questionnaire is most gratifying. The extremely high degree of interest in their Federal Government and the critical issues of today manifested by the residents of the Third District of Michigan compares favorably with any area in our country.

These results demonstrate substantial agreement among a high percentage of my constituents on current critical issues. The highest percentage of agreement is on the handling of campus protest and disturbances. The lowest concurrence is on the question of requiring draftees to serve in combat areas in the absence of a declaration of war.

Substantial support of the Cambodian action ordered by President Nixon is shown; and, most would like to see an elimination or a restriction of the meeting of our military needs by means of the draft.

The 18-year-old vote is still not supported by most and even if it were to be authorized, more prefer that it be accomplished by constitutional amendment than by Federal statute.

Displeasure with the present system of lifetime appointments and voluntary retirement in our Federal judiciary system is demonstrated. In its stead, most would prefer a mandatory retirement age and some opportunity to review the record of a judge or a Justice during his term on the bench.

On the question of pollution, there is general agreement that more needs to be done. A substantial majority of the responses favor an increase in Federal assistance for sewage treatment programs; tax incentives to encourage industry to provide its own pollution control devices and programs; and there is even good support for treating the cost of disposing of wastes as a cost of the product of which the waste is an inevitable consequence.

In order that my colleagues might review the actual answer percentage, draw their own conclusions, and compare the opinions of my constituency with their own, I am including with these remarks the complete tabulation:

[In percent]

	His	Hers	All
Campus disorders:			
(a) Should peaceful protest activities be permitted on campuses so long as they do not interfere with the operation of the school?			
Yes	72	70	71
No	26	27	27
(b) Should student strikes and sit-ins be permitted, if they interfere with operation of the school?			
Yes	6	5	6
No	92	93	92
(c) Should colleges and universities be closed to end or prevent violence?			
Yes	31	32	31
No	66	63	64
(d) Do you think the authorities have been "too tough" in the handling of campus disorders?			
Yes	8	9	8
No	89	88	89
The draft:			
(a) Should deferments be limited to hardship cases only?			
Yes	70	62	66
No	27	32	29
(b) If Congress has not formally declared war, should draftees be required to serve in combat areas?			
Yes	50	42	46
No	45	50	47
(c) Should the "draft" be replaced with an all-volunteer military service, as soon as possible?			
Yes	59	60	59
No	36	33	34
18-year-old vote:			
(a) Should the minimum voting age be lowered to 18 years?			
Yes	34	36	35
No	64	61	62
(b) If the voting age is to be lowered, should it be done by amending the Constitution so that State legislatures can vote on the question?			
Yes	57	56	56
No	33	31	32
(c) Do you believe it is desirable for the Federal Government to have the power to regulate voter qualifications, such as voting age?			
Yes	52	52	52
No	43	41	42
(d) Should each State decide on the minimum voting age for itself?			
Yes	40	37	38
No	56	57	56

	His	Hers	All
Federal judges:			
(a) Do you believe that a mandatory retirement age, such as 70, should be established for Supreme Court and other Federal judges?			
Yes	77	76	77
No	20	20	20
(b) Should the continued occupancy of office by each Supreme Court Justice be voted on by the U.S. Senate every 12 years, or so?			
Yes	75	79	77
No	19	15	17
(c) Should the existing system of lifetime appointments and voluntary retirement be continued?			
Yes	14	11	13
No	81	82	82
Pollution:			
(a) Should much greater sums of Federal money be provided for improved sewage treatment systems?			
Yes	68	68	68
No	25	23	24
(b) Should Federal income tax incentives be enacted to encourage industry to provide its own pollution control devices and programs?			
Yes	70	70	70
No	24	20	22
(c) Should Congress pass additional laws requiring pollution-free products, with increased production costs passed on to consumer?			
Yes	61	56	58
No	31	32	32
(d) Should Congress ban all fuels, ingredients, and materials which cause air and water pollution?			
Yes	40	45	43
No	50	41	45
Southeast Asia and Cambodia:			
(a) Do you agree with the action that the President has taken?			
Yes	75	68	71
No	21	25	23
(b) Do you agree with the action the President has taken so long as it is limited to the purpose, territory, and time that he has stated?			
Yes	67	65	66
No	25	25	25
(c) Do you disagree with the action because you feel it will result in an escalation of the war?			
Yes	17	21	19
No	70	62	66
(d) Do you disagree completely with the President's action?			
Yes	18	21	20
No	72	66	69

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

YOUTH ON THE MARCH

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HALPERN. Mr. Speaker, a most worthwhile cause was called to my attention recently by a dedicated young student from my district, Diane Janoff, of Forest Hills, N.Y. I was so impressed by the activities of this girl and the other youths who are doing such worthwhile work to combat hunger, that last week in the CONGRESSIONAL RECORD I submitted some background on the Young World Development, part of the American Freedom From Hunger Foundation. I wanted to call such outstanding endeavors to the attention of my colleagues in the Congress.

Recent activity and marches, however, should also be recorded as an indication of the determination of these young people, and the constant challenge they present to us as legislators.

One such march for hunger was held in the late spring, and although Diane was a little disappointed in the amount they raised, a sum well in the thousands was collected to aid those fighting poverty and hunger around the world. Many

hundreds turned out for the march—either to walk or watch—which followed a circular route through Queens, starting and ending at Shea Stadium. Each mile was sponsored by patrons who had been canvassed or who had read about the march in the papers, and the overwhelming enthusiasm demonstrated the increased national awareness to the needs of the poor.

Thanks to programs like Young Development all over the country, the public everywhere is becoming aware that action is needed, and are contributing their time, talent, and money. The money collected from this march was sent to projects that have been set up to administer and conduct food classes on planning balanced diets or cultivating crops. Some of those which received aid were a program in California, Meals for Millions, a rural reconstruction project in the Philippines and a school in Uganda.

Diane is hopeful that more marches will be scheduled for the near future and she is looking forward to setting up a club in Hunter High School where she will be a sophomore. It is because of vision and dedication like Diane's that we will see a brighter tomorrow.

NEW LIFE FOR SENIOR CITIZENS

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of our colleagues a resident of Dade County, Fla., Dr. Federico Castillo. Dr. Castillo, a brilliant scholar and diplomat in his native Cuba, entered the United States in 1962 at the age of 77. Eager to gain useful employment in his new home, Dr. Castillo enrolled in adult education courses in Miami, Fla.

Dr. Castillo, along with many other senior citizens, is not content to remain idle simply because he has passed the first vigor of youth. No better tribute could be paid Dr. Castillo than a recent article by columnist Roger Peterson which appeared in the Miami Herald. The article points out that our senior citizens comprise a large, potentially re-educated work force that should not go unrecognized.

The article follows:

CUBAN SCHOLAR AND DIPLOMAT STARTS A NEW LIFE AT AGE 77

(By Robert Peterson)

Going back to school can prove intensely satisfying to older people with a scholarly turn of mind. It can also impart new knowledges and skills which may enhance employability.

Many past the brush of youth are reluctant to consider returning to halls of learning, feeling their minds aren't sufficiently active. But numerous folks well into their 60s and 70s have tried it and emerged enriched and victorious.

"I'd like to tell you about one of our most remarkable pupils," writes Dr. Keith N. Bennett, principal of the Senior High Adult Education Center in Miami, Fla. "His name is Dr. Federico Castillo. In 1962, when he was 77 years of age, this old gentleman entered the United States from Cuba without a cent in his pocket. Since then his frugal needs have been taken care of by Cuban Welfare, and he receives an income of $60 a month.

"Dr. Castillo had a brilliant background. His education includes doctorates in Law and Social Sciences from the University of Havana. He had been a teacher, a practicing lawyer, and a diplomat, and at one time was president of the Society of Fine Arts in Havana. Coming to the U.S. meant that he had to start all over again.

"He was eager to qualify for a job," continued Dr. Bennett, "and immediately enrolled for adult education classes. He has attended school continually the past eight years and has received two certificates in Techniques of 'Teaching Spanish to English-speaking Students'; a certificate in 'Teaching Spanish,' and certificates in first year bookkeeping and accounting and filing, payroll taxes and conversational English.

"At present he is studying second year bookkeeping and accounting at our center, and firmly believes that when he receives his certificate for this course he will be able to obtain a bookkeeping position.

"His faith seems boundless and all of us who know him are deeply inspired by his optimism and determination to improve himself and make himself employable."

Thanks for writing, Dr. Bennett. A book should be written about Dr. Castillo's saga—his notable career in Cuba and his splendid efforts to launch a new career in the U.S. late in life. He deserves national recognition for his magnificent determination despite his years to acquire new skills to enhance his employability and usefullness to mankind.

LET US PUT THE PRESSURE ON THE PUSHER

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. CONYERS. Mr. Speaker, I would like to call to the attention of my colleagues a matter that threatens the viability of our communities from one end of the country to the other. I refer to the problem of drug addiction. For a number of years this had been considered an inner city problem but now that the use of drugs is accelerating in the suburbs faster than anywhere else it finally has become a problem of national concern. There can be no peace and order in a society caught in the throes of narcotics addiction as we have lately come to realize. My concern has been heightened after meeting with a number of Detroit committees of community leaders, former addicts, and a number of medical experts. Unless we marshal our forces and effectively eliminate the narcotics problem our communities will shrivel to empty shells of fear, hostility, and death.

LET US PUT THE PRESSURE ON THE PUSHER

Let's take a look at the pusher. The drug pusher sells dope to the young and old, the rich and poor, the black and white. He destroys lives.

He is destroying New York City, where half the Nation's addicts live, where their numbers increase between 7,000 and 9,000 a year. He is destroying Washington, D.C., where 20,000 of the city's 800,000 people are addicts, and where as a direct result, crime runs rampant in the streets.

The drug pusher is destroying my community, where 25,000 Detroiters are addicts.

The drug pusher is a festering sore on any healthy community. The pusher is everyone's enemy and nobody's friend. Never has an evil united so many different groups in one cause. The pusher is repulsed by the Black Panthers, despised by religious groups, hated by the Parent-Teacher Association organizations and their members and loathed by the concerned citizen.

There are many agencies treating drug addicts in Detroit: NARCO, Lafayette Clinic, SHAR, Detroit General Hospital, Herman Keifer Hospital, Synanon, MCHRD, the model cities programs, and a score of indigenous programs. By and large they are performing in a dedicated manner under difficult and sometimes near impossible circumstances.

But even if we spent millions of dollars on treatment centers and clinics it would still fail to deal effectively with the narcotics problem.

Is it not about time we faced up to the fact that the drug crisis will continue as long as we permit organized criminal elements to bring into our community increasingly larger quantities of heroin?

To treat the drug addicts and not cut off the supply is like establishing an Alcoholic's Anonymous organization in a nightclub. Trying to cure an addict amidst a sea of narcotics is clearly unrealistic and yet that is what all too frequently we try to do. What is more, this drug traffic could not operate if it were not receiving help from some of those who are supposed to be preventing the flow of narcotics.

IF A 9-YEAR-OLD CAN FIND THE PUSHER WHY CANNOT THE LAW ENFORCEMENT AGENCIES?

Civil rights activist and humorist, Dick Gregory, has with his rapier-like wit gone to the heart of the matter by asking:

If a nine-year-old child can find the pusher why can't the law enforcement agencies?

The answer is simple. Corruption.

Corruption is the method by which organized crime is able to successfully operate in the community.

The primary target of this corruption is local law enforcement agencies. With ineffective enforcement against illegal drugs, the pusher is free to roam the community selling his bags of death.

To deal with the drug menace we need efficient, progressive, and above all, honest law enforcement agencies. We need agencies that will gear their efforts not against the addict, but against what I believe is the greatest evil—the pusher and organized crime.

Only if organized crime is thwarted will we be able to eliminate the pusher. If we eliminate the pusher, half the battle will have been won.

BUT WHAT ABOUT THE OTHER HALF?

Addicts do not commit crimes because they are high on drugs. The addict commits crimes because he is hooked on

drugs. He is like a diabetic whose body needs insulin. But, unlike the diabetic, the addict is forced to commit crimes to feed the disease of addiction that grips his body.

Robbery, theft, and mugging—crimes committed by the addict—are, in effect, crimes against the community. Therefore, it is the total community which must respond to this challenge.

But can our response be effective, intelligent, and humane?

The community methadone maintenance program is an example of a humane response, a humane response because it affords the addict an opportunity to seek relief from the painful task of heroin withdrawal.

The methadone program helps the drug addict in his fight back to normalcy—but unless the rehabilitation is complete—a new job, a new environment, another chance—we run the risk of his slipping back into his old habits.

In Detroit, there are over 1,000 addicts on waiting lists for methadone treatment. Any community with a drug problem as serious as ours ought to be getting all the help it needs from every level of government. But I regret to report that this is not the case. The programs, as I have found them, are uncoordinated and minimal.

What do we really need to do to meet this crisis?

I maintain that no amount of money effectively spent is too much to cut this cancer out of our society. This cannot be accomplished overnight, but with increased understanding and cooperation we will hasten the day when drug addiction is no longer a menace.

URBAN TRANSPORTATION FOR A BETTER ENVIRONMENT—SECRETARY OF TRANSPORTATION JOHN A. VOLPE PRESENTS HIS VIEWS

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. WIDNALL. Mr. Speaker, I should like to take this opportunity to introduce into the RECORD a commentary on a key issue by a key man. The issue is that of urban transportation and its role in our civilization. The man is Secretary of Transportation John A. Volpe, who by his background and his present position is certainly one of the primary sources to whom we should look in our search for the solution to urban transportation problem.

On June 19, 1970, I attended a conference held by the Institute for Rapid Transit in New York City, at which Secretary Volpe gave the following presentation. I was most impressed with his grasp of the situation and the informative manner in which he expressed his views to the conference members. For that reason, I commend this transcript of his remarks to the attention of my colleagues:

REMARKS PREPARED FOR DELIVERY BY SECRETARY OF TRANSPORTATION JOHN A. VOLPE BEFORE THE INSTITUTE OF RAPID TRANSIT, AT THE WALDORF ASTORIA, NEW YORK, N.Y., FRIDAY, JUNE 19, 1970

Your theme of "Urban Transportation for a Better Environment" is an idea whose time has come. Jackson may have been the first American President to ride a train, but you can bet your last commutation ticket that Richard Nixon is not going to be the last. This Administration is committed to rail transportation—and I mean urban rail as well as rail "roads"—as essential to balanced transportation for this country.

My enthusiasm for rails today is based upon a hard-headed appraisal of the potential of rail technology.

We know how to make dramatic changes in the quality and dependability of public transportation in our congested cities.

People are starting to realize that our cities can be made both green and prosperous if we design the right access to them. They are beginning to recognize that mass transit can not only determine the prosperity of the commercial core, but can shape the growth of entire urban regions as well.

Just look at the plain facts of the matter. We know that the automobile carries only about one and a-half people on the average trip. 34 cars, with 34 internal combustion engines, carry roughly 50 people in and out of the city. Yet one bus, with only one internal combustion engine, can carry those same 50 people and the new buses we are providing grants for these days all must have anti-pollution devices installed. And, of course, one bus takes up a lot less space than 34 cars.

On the rail transit side, it's a well-known fact that the efficiency ratio between rail and expressway is about 20 to one. Transit uses only one-fourth the land, yet can move 5 times as many people. And costs far less to build, as well!

Public transportation—whether bus, rail, a hybrid, or what have you—conserves green space, makes less noise, and generates far less pollution.

Yes, public transportation is—and can be—a major environmental asset.

And beyond this, public transportation lends itself without question to the application of new space-age spinoff technology. Some of our newest concepts used to be looked upon as science fiction. Well, that day has passed. As I am sure you are well aware, we are applying these new concepts to provide a new kind of mobility for the traveling American.

Take the TACV, the Tracked Air-Cushion Vehicle for instance. We are convinced that in certain special applications the TACV will vastly upgrade our mobility.

We announced just two weeks ago, our intention to build a 16-mile Tracked Air-Cushion system to serve Los Angeles International Airport. I predict the TACV will carry exceptionally heavy, continuous traffic.

It will reach speeds of 150 miles-per-hour. It will be fast, safe, clean, comfortable, and above all convenient. It will cut into the aggravating traffic jams. In my opinion, the Los Angeles TACV will be the greatest breakthrough in the history of world railroading.

And it is just the beginning. We expect to test a 3-hundred mile-per-hour advanced version of the air-cushion train at our new test facility at Pueblo, Colorado within 3 years. Think what this will mean to commuters of the future in speed alone.

Obviously, however, our downtown core areas have start-and-stop needs that require a different, more flexible kind of service; service which is safe, clean, comfortable, fast,—and if it's to succeed, even stylish—but which above all is reliable.

Yes, the essence of public transportation today must be an emphasis on innovation and balance. No transportation mode can be a means unto itself. As I said when I testified before the House Banking and Currency Committee in March on our transit bill, public transportation is an essential means of getting access to jobs, to recreation areas, to shopping facilities, and to a host of other personal endeavors. It is a powerful factor in shaping the quality of urban life.

If urban America is congested and polluted, if there is unrest, if we are unable to deliver a better life to more Americans, one of the prime reasons is that we have not invested enough in rapid transit, bus and subway systems. Every day, literally millions of citizens—and that may include a good many people right in this room—have to ride to and from their work in transit cars and buses that should have been scrapped long ago.

The truth is we got a very late start. Only since 1961 have we had any kind of Federal program in public transportation. Only since 1964 have we had authority to make capital grants for new systems, stations and equipment. Only since 1967 has a Federal Department of Transportation been organized to bring all modes of transportation together.

However, in the last 18 months we have provided seed money for a number of important demonstration projects and helped existing systems retain public confidence during the interim period until broad-based Federal assistance came on line.

For example, we have financed about 1-hundred-million dollars of the new Bay Area Rapid Transit system in San Francisco that will use cars of a completely new design. In March we granted 21-million dollars to the Southeastern Pennsylvania Transportation Authority (SEPTA) with 7-million dollars to follow for the purchase of 144 commuter cars for the Philadelphia region. We have financed extensions to the M–B–T–A in Boston, four new miles for airport rapid transit in Cleveland, helped open 15 miles of rapid transit in Chicago, gave 10.2 million dollars to buy 45 more "Jersey Arrow" self-propelled electric cars for the New Jersey Department of Transportation for use on commuter lines.

And just today I announced a grant of over 20-million dollars to New York Metropolitan Transit Authority. This grant will be used to assist in the purchase of 60 pairs of those 100-mile-an-hour "Metropolitan" electric passenger cars for the Long Island rail road.

This is the first step toward full approval of the M–T–A's application for a grant of 56-million dollars to buy a total of 350 cars.

Conventional rail service, of course, is not the sole answer to urban needs. Just eight days ago, for example, Senator Scott and I announced an 8.7 million dollar matching grant to help design and construct a unique "Teri" (Transit Expressway Revenue Line) system for Pittsburgh. The project will ultimately cost close to 230-million dollars and will meld modern buses moving on exclusive bus lanes with a system of automated, rubber-tired, electric-powered vehicles operating on elevated but unobtrusive concrete guideways.

Even more important than the new technology to be introduced is the concept of the multimodal planning and coordinating of passenger services.

It is incumbent upon the transit industry—in all cases—to think of more than just the transportation of people from point "A" to point "B". You must—and Pittsburgh is a good example—think in terms of airport access, fringe parking lots, feeder systems, and circulatory systems in the central business district.

I think too we can get a great deal more mileage out of some of our existing systems, particularly the subways. The older lines—in far too many cases—do not meet modern standards of comfort, cleanliness,

noise control, and reliability. Well, we're ready to take on that task too.

I am delighted to announce here the final approval of a grant that may well initiate a new phase in the history of the Institute for Rapid Transit as a trade organization.

It is a grant that will enable the I–R–T to respond to the new awareness of environmental challenges. It is a grant that will enable you, as a trade organization, to develop new environmental standards for modern, efficient subways. This is a sizeable grant: It amounts to $1,385,000.

I think the foregoing remarks show our direction at the Department of Transportation these last 16 months. Mass transit ranks high on our priority list, as all of you well know. We have de-emphasized those perennial studies and analyses of so-called "ideal" systems and instead we are trying to develop realistic programs to help the cities right now—today—not ten or fifteen years from now when the problems may be insoluble. We must shorten the delivery time of transit improvements to the riding public.

However, there can't be any transportation improvements across the board in American cities unless our Public Transportation Assistance bill passes the Congress. Just since last August, when President Nixon submitted the bill, another 23 transit companies have folded up, bringing the total in recent years to 258. And more will follow unless we act swiftly!

This one piece of legislation would alleviate traffic congestion and air pollution, boost property values, promote business activity, stop community decay, and assure access to jobs, schools, medical care, and recreation for the millions—the 25-percent—who are too aged, too handicapped, or too poor to drive their own cars. It will open up a real choice for millions or drivers who would like to escape the traffic tangle.

The bill enjoys very broad appeal, as shown when the Senate passed it by a crushing majority of 84 to 4 last February. Few of us would have expected that kind of commitment a year ago. The bill is now in the House hearings have been held by the Banking and Currency Committee, and I have every expectation that they will report the bill out shortly.

With your maximum support the House could act favorably by the end of the summer.

Without your support, the bill is doomed. So I say frankly that if you want this historic act to see the light of day—and I know you do—you will flock to tell your representatives in Congress the stark truth that your cities—and their cities—cannot survive without it. Tell them that every month of delay raises the cost of construction and impedes the task of recovering vital mobility in the hearts of our troubled cities.

Now I want to say a word about local matching shares. I am concerned over the failure of several cities to vote the necessary bonds for the one-third local share required by our two-thirds Federal matching grants. It appears to me that local public officials, transit equipment manufacturers, and local planning bodies, need to do a much better job in getting their cities, counties, and special districts to vote the money for their share of the cost.

The taxpayer can be persuaded. New York state was successful in voting a billion dollars for public transportation improvements in 1967.

And all of the constituent counties and local governments in Metropolitan Washington have voted "yes" for their share of the cost of the Washington Metro. The state of New Jersey has voted some 640-million dollars for transportation improvements. You can hardly expect Congress to fork over the Federal share of the financing if a city can't pay its own share of the tab.

The record on local transit bond issues is not a good one and deserves your most serious attention. Vital bond referenda have failed in Seattle, Kansas City, Los Angeles, and Atlanta. Your leadership is essential to persuade the public of the enormous private and public advantages of modern transit service.

I have confidence that you will supply this leadership. It is certainly vital if we are ever to create better urban surroundings based on balanced transportation systems. We must re-assure the public that we see the big picture.

Since we serve no special interest except the public interest, we should seek always to integrate all transport modes into effective multimodal systems for moving people and goods.

Indeed, the systems approach is our only hope if we are to double the carrying capacity of our transportation system in the next 20 years. We must fully exploit the potential of each of the modes, and make sure that each one contributes to its community.

Mass transit, I believe, is the misplaced key to urban progress, the royal road to a better life for all.

The success of our fabulous interstate highway system shows that we have the national patience, skill and daring to make long-range transportation investments.

And we have done the same for aviation. President Nixon recently signed into law a 10-billion dollar package that will vastly upgrade our nation's vital airways and airports system.

Such actions should give us confidence that we can invest with equal foresight in public transportation. And public transportation deserves no less.

With your help, we expect the year 1970 to be a great turning point in national transportation priorities.

And with national transportation priorities in proper order, we will then have marked what historians may call a major turning point in our concern for civilization.

We have the capacity to ruin our world—and we have the capacity to enrich it. Enrichment—in the most ethical sense of the word—can come if our cities and their transportation facilities reflect balance, harmony, and common sense.

With the continued concern of dedicated organizations such as the Institute for Rapid Transit, that goal can surely be met.

ALABAMA OWES MUCH TO DR. SIDNEY TARWATER

HON. WALTER FLOWERS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. FLOWERS. Mr. Speaker, it is with special pride that I call to the attention of my colleagues and others the distinguished career of one of Alabama's truly great citizens, Dr. J. Sidney Tarwater of Tuscaloosa.

Dr. Tarwater is retiring after almost a half century of service to his fellow man in the field of mental health.

In tribute to him, I am pleased to offer for inclusion in the RECORD, an editorial and article both of which appeared in the Tuscaloosa News on July 19, 1970. They eloquently describe this remarkable man and truly reflect the admiration, appreciation and esteem of his fellow Alabamians:

STATE OWES MUCH TO DR. TARWATER

Long service is a hallmark of men who have headed the state's mental institutions. Dr. J. S. Tarwater, who is retiring as superintendent of the state hospitals, has devoted all of his adult life to care and treatment of the mentally ill.

In this work he has made significant contributions to the state. And in his long association with Bryce Hospital and Tuscaloosa he has demonstrated outstanding ability as an administrator and a concerned citizen.

Dr. Tarwater's decision to stay in Tuscaloosa rather than move to Montgomery when the Mental Health Department headquarters was established there is further evidence of his dedication and deep loyalty to this community. Tuscaloosa is fortunate that he has chosen to retain residence here.

As he leaves his position at Bryce Hospital, his statement "we did what we could with what we had" is an appraisal of the state's approach to mental health problems during the last half century. During this time the struggle to provide care and treatment for the mentally ill has been severely handicapped by insufficient funds.

Much more could have been accomplished in the field of mental health. The money problem was a constant handicap. It is a tribute to Dr. Tarwater and his associates that so much was done with so little.

A person less dedicated to the plight of the mentally ill would long since have left the state hospitals. But Dr. Tarwater's great concern for his patients, his deep interest in improving mental health and his desire to serve this state kept him engaged to do the best possible job.

Alabama owes a debt of gratitude to him for his service. Those who attended the testimonial dinner for him Thursday night expressed appreciation for his service, his loyalty.

For Dr. and Mrs. Tarwater, the hope is that the years ahead will provide them with time for activities they can enjoy in an atmosphere free of the pressures and frustrations of a demanding job.

Having devoted all of their adult life to the affairs of the state hospitals, they richly deserve the time ahead they can call their own.

RECOLLECTIONS OF AN INTERVIEW

(By Paul Davis, News Associate Editor)

I walked slowly up that long flight of iron-capped stairs. On the second floor, somewhere, I was to keep an appointment with a man I didn't know and at the moment I really didn't care to meet.

I was in the main building at Bryce Hospital and my appointment was with Dr. J. S. Tarwater—a real, live psychiatrist. I had lived in Tuscaloosa most of my life, but like the majority of Tuscaloosans I had never even been inside the gates of Bryce. Now I was inside the building and there was a lonely feeling in my bones.

This visit was some 10 years ago and having just logged a 20th birthday, I felt somewhat incapable of the task before me. But my newspaper boss had said the mental hospitals would be a part of my beat and to get things started off right I was to interview the state's top mental health official, Dr. Tarwater.

Like most young reporters, I had spent hours the night and day before trying to frame some questions which would make the interview worthwhile and hopefully questions which would partially cover my ignorance.

I had wondered, too, if the good psychiatrist would be able to watch me and discover my secret fears, and learn that I really didn't know what I was talking about. Would he know that I had read all the clippings I could find about the hospital, and looked through the World Book to know some of the good names to drop.

Surely if he were the great man I had heard so much about, he would quickly figure me out. In fact, he might even be offended that The News had sent a boy out to take up his valuable time.

All these thoughts flashed through my mind as I slowly climbed those 20 or so steps. I hoped he would not be in, or that he would be with a patient and have to ask me to sit and wait—at least for a week or two.

At the top of the stairs, there was a beautiful, old clock on the wall, a spacious hall with a floor that had been polished like glass, a water fountain and a receptionist who showed me the way.

And there, sitting behind a massive desk in the dimly lit room was the man, not a monster, just a man. The room was large, paneled in dark, rich wood. The blinds were closed tightly and an air-conditioner hummed in the window. The desk was in perfect order, complete with a silver ashtray.

Dotting the walls were pictures of the great men of psychiatry like Sigmund Freud. I didn't know Sigmund, either. In about two minutes, my case of nerves vanished. The good doctor seemed to know that I needed help and it was provided, abundantly.

And down through the years he continued to provide help, good advice, and on most occasions he showed a bit of humor that only those who knew him best ever see. J. S. Tarwater has been a giant in mental health in Alabama. His depression—the financial variety—lasted too many years. He had the responsibility of building a state hospital system when the philosophy in Alabama was that the mentally ill are to be put away—not to be seen or heard.

There has never been enough money to operate the hospitals he supervised. Yet, somehow, the institutions kept their doors open, a tribute to the man who now steps down as head of Alabama's mental hospitals.

Those who know him best will not soon forget the warmth, compassion, and faith of Sidney Tarwater. He gave Alabama's mentally ill and retarded citizens 46 years of his life.

FISCAL RESPONSIBILITY IN THE WHITE HOUSE

HON. JOHN ROUSSELOT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ROUSSELOT. Mr. Speaker, it has been my good fortune to know Casper W. (Cap) Weinberger, a fellow Californian, for several years. From time to time, several of my fellow California Republicans have labeled Cap Weinberger a liberal Republican who really did not belong in their party. Though I have not always found myself in agreement with the former director of finance of the State of California and one-time chairman of the "Little Hoover Commission," I must state that Mr. Weinberger's recent remarks on radio and television provide, I believe, some insight as to the type of philosophical and technical direction that we might expect from Mr. Weinberger in his newly attained position within the framework of the Nixon administration.

Last January Mr. Weinberger was appointed by the President as Chairman of the Federal Trade Commission. Then just recently the President brought him over to the White House as Deputy Director of the new Office of Management and Budget, primarily because he needed a man who would take a hard-nosed look at the budget and at spending proposals.

On July 5, 1970, Mr. Weinberger appeared on "Meet the Press." Unfortunately, his appearance did not receive the type of coverage by the news media I feel it deserved.

I say unfortunately because I am certain that Mr. Weinberger's views, as expressed on "Meet the Press" would have been of great comfort to all those Americans who believe in fiscal responsibility and enforcement of the law and who do not believe that just spending money is the answer to all our problems.

I would like to quote some excerpts from Mr. Weinberger's answers on that NBC program:

Mr. WEINBERGER: There is a great American belief that I think is largely a fallacy, that the more money you have put into a government program the better it will be operated. I think this is true sometimes within very severe limits, but I don't think there is any automatic correlation between more money and better performance.

I think you need vigorous enforcement of the laws we have. I think you need uniform and certain enforcement so you don't have one rule for one or another rule for another.

It does seem to be very necessary that we keep our budget in balance or as close to it as possible. I know this is the puritan ethic in economics, but it is one to which I am quite dedicated, and I think that any actions that are taken knowingly that tend to throw the budget out of balance are bad for the economy in the long run.

In response to a question which clearly wanted Mr. Weinberger to approve precensorship of advertising, he replied:

I would prefer to reach the point that you and I both want to reach, I am sure, of honest advertising by some kind of voluntary acceptance of the fact that dishonest advertising is the worst business in the world.

Here is more:

The idea that you turn immediately to government and the federal government first of all for the solution of all of our problems is basically a false idea arousing false hopes.

Federal expenditures have to be accompanied by the most careful review of the result of that spending to make sure we are accomplishing something, and I believe that we have not accomplished anything near what could be done simply by the infusion of more federal funds.

The federal government hasn't any higher unit of government to turn to for more money and, as a result, we have to be more sure, I think, than anyone else that the people who are suggesting that the solution to all problems is more money, really have some worthwhile proposals to justify the amounts that they request.

I think there is plenty of proof that what has been given (to cities) hasn't been used wisely enough.

Mr. Speaker, I believe it would be difficult for any reasonable man to find fault with Cap Weinberger's views. The President is to be complimented for his choice of Mr. Weinberger for such a high post.

WOMEN IN COMMUNICATIONS

HON. ORVAL HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. HANSEN of Idaho. Mr. Speaker the free press is the anchor upon which many of our other freedoms are based. I want to salute the National Federation of Press Women for its objectives of promoting the highest ideals in communications, the exchange of the ideas and experiences of women in the field of communications and the coordination of efforts on matters of national interest to women.

Recently the 34th annual convention of the National Federation of Press Women was held in New Orleans with an outstanding array of speakers and panelists. Included was one of our colleagues, U.S. Representative EDWIN EDWARDS of Louisiana, who urged the women to present both sides of the communicated story fairly and honestly.

Other speakers included George Stone, vice president and public relations director for J. C. Penney Co., who told of the origin of the annual J. C. Penney-University of Missouri journalism awards. He cited the value of women's pages to the consumer. Others were Liz Carpenter, former press secretary to Mrs. Lyndon B. Johnson; Harnett T. Kane of New Orleans; Mrs. Hodding T. Carter, author and wife of the Pulitzer Prize winning publisher; Turner Catledge, former executive editor of the New York Times; Mary Alice Fontenot; and a number of outstanding speaker panelists.

Astronaut John L. Swigert Jr. of Apollo 13 praised the communications field for complete coverage of the space flights. Lt. Gov. Charles Sullivan of Mississippi told of the disastrous trials of Hurricane Camille and of present problems in the State.

The principal addresses given at the annual awards banquet were by Mr. Al Neuharth, president of Gannett Newspapers of Rochester, N.Y., and Mrs. Charlotte Schexnayder of Damas, Ark., who received the federation's woman of achievement award.

Mrs. Schexnayder's story of the efforts she and her husband made in publishing a country newspaper stands as a model for the strength of America's smaller newspapers. I know from personal acquaintance with most of the publishers of weekly newspapers in Idaho that such workers in communications are fine and delightful people who often work under extreme handicaps to do a wonderful job. Mrs. Schexnayder's comments are excerpted from the complete text of her talk, Being a Country Editor:

With your forbearance, I'd like to tell you what being a country editor means to me.

With just $4,000 capital and a new son, four months old, in 1954, my husband and I bought the weekly Dumas Clarion. Weekly might have been spelled w-e-a-k. It had just 300 paid circulation and was four pages of six columns, two pages of which were frequently the old boiler plate or canned copy. We inherited a hand-fed 50-year-old press, a folder that folded only when it felt like it, and a new, but cranky, linotype.

It was a struggle then as it is now for we have recently purchased a $50,000 offset press and all of the machinery needed to make that conversion.

But nowhere along the way has it been dull.

Many other adjectives might have been used to describe my 25 years in the weekly newspaper business. A fellow Arkansan, Richard Portis, who wrote a best seller, aptly

described weekly newspapering in the two words of his book's title, "TRUE GRIT".

These years have been challenging and exciting. To stay abreast of the technological changes and keep up with the improvements in the Fourth Estate have required continued foresight and initiative. We now have computerized typesetting operations, and the changes are coming so fast that today's techniques become obsolete tomorrow.

This quarter century has been rewarding. Many are the things which have warmed my heart. . . incidents like the 70-year-old man who walked a mile to town to bring me a wilted bouquet in thanks for an editorial I wrote. There is the town library for which I planned the furnishings with the money our scrapbook won in a town contest.

There are the editorials which have moved state officials to call me and make 30-minute telephone rebuttals . . . so that I know I have touched an Achilles heel. There are the stories and follow-up editorials which have opened up secret meetings of the City Council, called for a better school system and constantly hammered at the need for industrial development. To have seen the town's industrial jobs grow from 100 to the present 1000 and to have seen the town's population almost double when all of our immediate area was losing people is to feel that it is a privilege to have been a part of that change.

To have readers come into my office and bring their complex problems for discussion is heartwarming, although I am not likely to be able to solve those problems.

I am reminded of the country correspondent who had great faith in my ability to dress up the facts. She wrote:

"Dear Mrs. Schexnayder, will you please fix up this wedding write-up to sound as well as possible? If you ask me, it was a mess."

Then followed her story: "Mary Smith and Huey Jones were married in the local Baptist Church on Sunday evening which was decorated with red dahlias. Mary came down the aisle of the church with the best man, and poor old Huey came out of the Sunday School room all alone."

Bless these loyal country correspondents who have brightened my days with such gems as:

"Mrs. Jones was called to Chicago to the bedside of her son who was slugged by unknown parties."

When the correspondents fail to brighten my day, sometimes the typos haunt it.

Some wag years ago figured that there were at least two million chances for error in the average weekly newspaper. Multiplied by the 25 years that I have been a country editor, my chances for error have been in figures akin to the national debt.

Some of the boo-boos still haunt me. Once I had to leave the office when the society page went to press, so I let the shop foreman check it over. Some lines were omitted from a wedding, and no one was more chagrined than I to pick up the paper later and read that "the bride was attired in a string of pearls, a gift of the groom." Another time a D was changed to L, and a story read: "The social hour was hell in the Fellowship Hall."

There have been many lighter moments along the way.

The greatest part of my profession lies in the intangibles. Just to be a part of a community and record its heartbeat, to jibe enough to challenge it to change for the better, to stand up for tolerance when it is unpopular are the parts of my life on which I could hang no price tag.

These years have been frustrating and frightening to. I have stood before an irate reader who had a pistol in his pocket and venom in his heart. For my editorials during the Little Rock school crisis, physical violence was threatened to my husband. In that warped person's mind, it was ungentlemanly to threaten a lady. Recently, in the effort to build a new high school by voting a bond issue, my husband and I found ourselves temporarily alone before foes who sought economic reprisal. We never compromised our reasoning that a new high school plant must come, and although we lost the school bond issue as was the case in many places of the nation this year, many of the people of the community did follow the fight for a new school. To feel that one is following the right course and standing for one's conviction is gratifying.

A country editor is a durable lot, as I now attest, and the satisfactions have far exceeded the hard times and the pettiness of some people.

To be able to report the truth is a special charge in these times, and it is an almost sacred one. Much of the nation's course depends upon how well informed are its people. Perhaps not since the days of the American Revolution and the Civil War has the press been so challenged as we are today.

To be able to hear both sides of a controversy and report them fairly and truthfully require professional skill, great stamina and dedication. To avoid being swayed by the crowd demands wisdom and determination. This is as much so in a small town as it is in a great city.

The weekly newspaper is often ridiculed, but during the past score of years, most of the weekly press has changed greatly for the better. We who operate these plants and edit these newspapers are a fiercely independent breed. We cannot be intimidated. The weak can't last as a weekly newspaper where the editor in a sense is face to face with his readers. There is no room for phonies, either, for a small town quickly assesses sincerity and integrity.

I am proud to have been a country editor for 25 years because I think the independence of the country press mirrors the strength of America. Knowing full well that thousands are laboring daily with the same goals as I have—to report the truth and build communities—I salute all of them and share this honor with them.

I am grateful for this honor, just as I am for the quarter century that God has given me in the role as a country editor.

Thank you for an award that I shall always cherish.

Excerpts From Congressman Edward's Commentary—Report Both Sides

There are many ways to communicate and I salute the Members of the National Association of Press Women as one of the last bastions of loyal, patriotic Americans. I know you try to report both sides—and let your readers make their own decisions.

We have just passed the turbulent Sixties and are now entering the unrestful Seventies. It is time for the silent majority to become the eloquent majority. You should point out that only 2% of the American students are involved in the violence reported so widely in our country today.

As one who came from a sharecropper's farm to the halls of Congress, *I object* to those those who seek to tear this country apart and rebuild it without a blueprint. I object because anyone has the privilege and opportunity to do as I have done. So, I urge you as responsible members of the communications field to report not what seems to be happening, but what is actually and factually happening.

Excerpts from the text of Mr. Neuharth's talk follows—

Press and Our Society

Whether you are members of the National Federation of Press Women, members of Sigma Delta Chi, Theta Sigs, or just plain Women's Libs, I'd like to talk with you women tonight about yourselves and your relationship to the profession of journalism and to our society.

I'd like to tell you where I think you are today, in this so-called man's world; how you got there; what you are doing about it; and what I think you should be doing.

First, a comment with which most of you will agree:

It is still pretty much a man's world. Specifically, in our profession, the press is overmanned, especially at the top. Far too many publishers, editors, managing editors, city editors, magazine editors, broadcast station managers, are men.

As a result, most of our news and editorial products are still designed primarily by men, even though they are aimed primarily at women.

That's bad. Bad for you. Bad for our profession. Bad for our society.

Secondly, a comment with which many, or most, of you may not agree:

I believe the fact that this is still so much a man's world is mostly your own fault. This man's world, our own over-manned profession, is ready for you. Too many of you are not ready yourselves.

Let me explain what I mean.

Women today generally fall into three classes.

First, those who are the moderate feminists—or humanists—who want to be a part of this society on an equal basis with men. They want "in."

Second, those radical extremists of the Women's Liberation Movement who are so outraged by society's abuse of women that they seek to escape from womanhood or from society. They want "out."

Third, that great number of women who use their femininity as an excuse for lack of professional success, rather than the advantage which it is. They don't really care.

That third category isn't worth much of our time or attention tonight, but because so many women are in that group, let me give you an example of what I mean.

The women who don't care about reaching the top in business or a profession like to put down other women who have done so and generally draw a wrong conclusion.

I know of no top women in journalism today who got there by sleeping with opportunity. I know of many, many who have failed to get there because they slept through opportunities.

So much for the "don't care" category of women. Let's look at Category 2, the Women's Lib extremists.

They deserve attention, and concern and help. Because what they are saying about society's abuse of women is mostly right; the way in which they are saying it and what they are trying to do about it, is mostly wrong.

These are the women who do judo and hate all men. They view the kitchens as a ghetto. They are so outraged at the historical economic exploitation of women that they not only feel women should be treated equally, but that men and women must be treated totally alike.

We are not alike, of course, and never shall be. We are biologically different. We have different glands and thank the Lord for it. Otherwise there would not only be no men or women, but no human race.

So, the Women's Lib extremists are terribly wrong in their anti-man and anti-marriage ideas. They also are wrong in allowing their voices to be even higher than their aims.

Mostly, they are wrong about men. They are wrong in presuming that man is woman's natural enemy. They are wrong in wanting to escape from society, and from womanhood itself.

Unless they raise their aims and lower their voices, these extremists may actually block the very social changes which they seek.

Well, those are the women who want out, and the women who don't care. Let's turn to those women who, like many—or hopefully most—of you, want "in." You are the ones who can fan those great winds of social change which are ready to sweep across this over-manned world.

The modern, moderate feminists, or humanists, whose aim is as high as their voices, are the key to whether women can really be equals to men in this society. And it is the women in our profession of journalism who have the greatest opportunity to help bring about that social change.

Many of you are working at it. Most of you can do much more.

Because I believe women journalists are the key to this movement, I've visited in recent weeks with a number of women who have moved toward the top—or to the top—in our profession. Let me share with you some of their thoughts:

First, a couple of women writers whose bylines command as much national attention as those of most men.

Ann Landers has achieved fame and fortune writing about people and their problems. Her following is as great among men readers as among women. Her formula? Work!

"I've worked like a dog for 15 years. Seven columns a week, 365 days a year. But I love what I'm doing or I wouldn't be doing it." And, Eppie adds, "no girl ever had better support or more help from the men in our business—a great editor, a generous publisher, wonderful newspaper buddies who passed the word."

Gloria Steinam, one of the really bright new names, brains and personalities, is doing it differently, working outside the structure, freelancing.

She has her unhappy memories of men editors who would give her only assignments "on textured stockings and movie stars." But she stayed with it and now earns a good living and has developed a strong following by writing about such things as politics and other "unfeminine" subjects.

Gloria's advice: "While we're fighting for equal jobs and equal pay, we have to do a little consciousness-changing in ourselves too. Ground down by all the years of conforming to male standards, we need to put some starch in our spines."

Kay Graham, president of the Washington Post Company is a woman who readily acknowledges that she got to the top by accident—her father's newspaper ownership and her husband's death. But she's doing something with it and the Post is one of the country's most progressive newspapers in treatment of women in the newsroom and in the news columns.

Kay says: "The fact is attitudes have to change on both sides. There is great prejudice on the part of the men toward women—possibly less in editorial than in business parts of publishing.

"Women have accepted all this much too long. They have accepted the image of themselves as mentally and physically inferior. Only recently and generationally have they realized that there are no limits to what they can do if they don't accept any limits."

From the publisher's office to the composing room, here's a woman who really took down the "for men only" sign to get her job. She's Mrs. Sue Brown, composing room superintendent—that's right—at the Aiken (S.C.) Standard.

Sue says: "If there is any secret to moving up—whether you are a man or a woman—it is to apply yourself and your abilities." And, she adds, "I often find it easier to supervise men in my department than women."

To illustrate that we at Gannett Newspapers try to practice what I'm preaching, let me tell you about the city editor of our Yonkers (N.Y.) Herald Statesman, Eileen Campion.

Yonkers has a reputation as a man's town—race tracks, mafia manipulations. Eileen's woman's touch handles the most difficult situations on the city desk.

"I haven't had a hint of resentment from men reporters," she says. "The biggest problem was breaking tradition in my own thinking."

On our Plainsfield (N.J.) Courier-News, Rosemary Bachelor, recently named assistant city editor, puts it this way:

"Sometimes we women are our own worst enemies when it comes to getting better jobs. When we start thinking 'nothing I ever do will be good enough because I'm a woman' we are licked. Then we're reacting like a woman, in the old accepted sense. We need to react like a person."

Outside our profession, I heard the whole problem put in perspective just last week by Mary I. Bunting, president of Radcliffe College.

Mrs. Bunting told a group of us that Women's Liberation is 90 years old at Radcliffe, as old as the college itself. She sees the current movement in this light:

"Many women are over-educated for the jobs they are holding, but not fully prepared, psychologically or otherwise, for the really top jobs," Mrs. Bunting says.

Here is another way of putting it. Some months ago, I heard the Rev. Dr. Louis H. Evans Jr. of La Jolla, Calif., deliver a sermon at the White House for President Nixon and guests. His theme: "The Identity Crisis: Who Are You?"

Dr. Evans urged each of us "to paint our own portraits of ourselves, establish our own identity, select our own goals, instead of living by a picture others paint for us, or aspiring just to goals others select for us."

Pretty good advice.

Ann Landers says work.

Gloria Steinam says put some starch in your spines.

Kay Graham says you have accepted all this much too long.

Sue Brown says apply yourself.

Eileen Campion says break tradtion.

Rosemary Bachelor says react like a person.

Mary Bunting says prepare yourself.

The Reverend Evans says establish your own identity.

I say, if you do these things, not only will you benefit, but so will our over-manned profession and our entire society.

I. L. KENEN

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the excellent appendix to the statement of I. L. Kenen on the situation in the Near East before the Subcommittee on Near East of the House Foreign Affairs Committee on Wednesday, July 22, 1970.

"Si" Kenen's work over the years with the American Israel Public Affairs Committee and the Israeli delegation to the United Nations has made him one of the outstanding experts on the past, present, and future of the Near and Middle East. We Members of Congress, as well as the American people, are fortunate to have the benefit of "Si" Kenen's long experience and knowledge on matters concerning the Near East.

The appendix follows:

APPENDIX TO STATEMENT BY I. L. KENEN

In this Appendix there is a discussion of major issues since 1947: the partition fight at the United Nations; boundaries; the arms race; guarantees and commitments; the armistice agreements; the Suez Canal; the role of the United Nations; the Arab refugees.

In 1947, a Special Committee of the United Nations, consisting of the Middle Powers—none of the Great Powers served on that Committee—went to Palestine; it found that Arabs and Jews were both claiming the entire country. It recommended partition of Palestine, offering self-determination and separate states to both the Jews and the Arabs of Palestine. The Arabs rejected the recommendation; the Jews reluctantly agreed to it, although it did not seem to them to be responsive to their historical rights.

Prior to this time, President Truman had endorsed the concept of partition, but when the British brought the issue of Palestine to the United Nations our Government was slow to endorse the recommendation, largely because of the hostility of officials of our Departments of State and Defense and because of the lobbying activities of special interests.

However, the United States finally did vote for partition and the majority of the General Assembly endorsed the plan.

The partition proposal provided for implementation by a special Palestine commission. It also provided that obstruction of implementation would be a breach of the peace which would enable the Security Council to take appropriate action.

The official record confirms that the Arab states resisted implementation. The partition commission never went to Palestine. The UN Security Council failed to act. And the United States, instead of insisting on implementation, offered a plan to delay the partition proposal and to substitute a UN trusteeship.

The U.S. proposal, however, was hopelessly irrelevant because by this time the country was being automatically partitioned into Jewish and Arab areas, as the British withdrew their forces and gave up the Mandate.

On May 14, 1948, the Jewish state came into being in response to the resolution. The Arab states went to war to destroy the new state and to seize and divide Arab areas for themselves.

President Truman recognized Israel within a few minutes after she was established, much to the bewilderment of our Department of State.

But late in 1948, the Department of State endorsed a new proposal brought forward by the UN mediator which would have reduced Israel to a minuscule state by amputating the Negev and other areas. The Department went so far as to threaten sanctions against Israel at that time.

In 1949, the United States again brought pressure on Israel to make territorial concessions to the Arabs, threatening to reconsider its relations with Israel.

In 1956, the Arab-Israel war broke out again and the Israelis advanced to new positions which made their country more defensible. The United States then joined with the Soviet Union in forcing Israel to withdraw to the 1949 armistice lines without requiring the Arab states to renounce bel-

ligerence and to enter into peace treaties with Israel. The decision turned out to be a blunder.

MILITARY ASSISTANCE

There was a strange reticence on the part of our Government to approve Israel's requests for military assistance.

On December 5, 1947, six days after adoption of the UN partition resolution, the Department of State imposed an arms embargo in the Near East. Our Government was not willing to use its authority to prevent a war and to implement the partition resolution. Going further, it was not ready to let Israel have the weapons she needed to defend the new state.

In 1952, Israel asked to be allowed to purchase weapons in this country but the United States refused.

In 1953, the Department of State proposed to provide arms to Iraq and to other Arab states. It requested an appropriation of $100 million for military aid to the Near East. When your Committee learned that it was not intended to supply any arms to Israel, you voted to reject the Administration's proposal. Subsequently, however, Congress did approve a $30 million appropriation and our Government began to grant arms to Iraq, while still refusing to negotiate any military agreement with Israel.

The United States was then trying to cement the Baghdad Pact to establish a Northern Tier defense line to contain the Soviet Union in the Near East. But we excluded Israel from participation, even though she was the one state committed to democracy and even though she was threatened by her neighbors. Iraq, one of the most unreliable states in the area, became a keystone of Middle East defense.

Many Americans were opposed to sending arms to Iraq. Nevertheless, our Government went ahead with it. As a result, President Nasser turned to the Soviet Union for weapons, opening up the Near East to Soviet penetration in 1955.

The Israelis appealed to the United States for arms to counter the new Soviet threat. Our Government recognized the need to maintain an arms balance in the area. But it sent Israel off to France, to Italy, to Canada and to other countries. And in an effort to win Nasser, the United States offered to help Egypt build the Aswan Dam. Our diplomats thought that this would encourage Nasser to restrict his purchases from the Russians.

But our failure to act on Israel's arms request created a vacuum which the Soviet Union then filled with arms for the Arabs.

In subsequent years, the Israelis kept coming back to the United States for weapons because the Soviet Union expanded its supplies to Egypt, Syria and Iraq. It was not until 1962 that the United States finally decided to permit Israel to purchase the anti-aircraft Hawk missile.

Later, when Israel tried to purchase tanks in this country, the Administration referred it to West Germany. And when that avenue was closed because of Egyptian blackmail, there was a secret U.S. understanding to provide tanks to Israel even as we were providing them to Jordan; it did not remain a secret very long.

The Soviet Union always set the pace in the arms race in the Near East. It was encouraged to go forward because of our reticence. It could not lose.

In 1967, after the six-day war, the Administration imposed an arms embargo which lasted 135 days. During this period, while we sat tight and did nothing, the Soviet Union rearmed Egypt, Syria and Iraq.

Those who believe we have favored Israel should take note of the fact that we have extended grant military aid to seven Arab countries totalling $239.7 million and that we have never given arms to Israel.

[In millions of dollars]

Iraq	48.2
Jordan	56.8
Lebanon	9.3
Libya	18.1
Morocco	41.8
Sudan	1.8
Saudi Arabia	35.3
Tunisia	28.4

This does *not* include sales for cash and credit; the figures are not published.

In addition to $56.8 million in military aid, Jordan has received $566.7 million in grant economic aid—substantially more than our grant economic aid to Israel, which totaled $369 million. And the aid figure for Jordan does not include Jordan's share of the $455 million the United States has contributed to UNRWA.

Our country has been generous to other Mediterranean countries which have been menaced by Soviet expansionism.

Greece has had more than $2 billion in grant military aid and more than $1.6 billion in economic aid, most of it in grants. Turkey has had more than $3 billion in military aid and more than $2 billion in economic aid, half grant-half loan. And Iran has had $870 million in grant military aid and $431 million in military credits, as well as $739 million in economic aid.

COMMITMENTS

The Administration always softened its rejection of Israel's arms requests by reassurance that our country would oppose aggression. There were many such commitments.

The Tripartite Declaration

On May 25, 1950, England, France and the United States issued the Tripartite Declaration, in which they sought to allay the concern of the nations of the Near East by guaranteeing stability. This commitment to oppose force or the threat of force was intended to reassure both Israel and the Arab states. Paragraph 3 stated:

"The three Governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The three Governments, should they find that any of these states was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action, both within and outside the United Nations, to prevent such violations."

President Eisenhower reaffirmed the Tripartite Declaration on Nov. 15, 1955.

The Dulles statement

Early in 1956 the United States rejected Israel's request for arms to prevent an imbalance and referred Israel to the French. Yet, at the same time it became known that the United States was supplying weapons not only to Iraq but also to Saudi Arabia. Alarmed by this seeming disregard of Israel's peril, the Senate Foreign Relations Committee opened an investigation into these shipments of arms to Israel's avowed enemies.

Appearing before that body on Feb. 24, 1956, Mr. Dulles sought to reassure his critics with this strong statement:

"The preservation of the State of Israel is what I regard as one of the essential goals of United States foreign policy."

This was followed on Apr. 9, 1956 by a White House declaration:

"The United States, in accordance with its responsibilities under the Charter of the United Nations, will observe its commitments within constitutional means to oppose any aggression in the area.

"The United States is likewise determined to support and assist any nation which might be subjected to such aggression. The United States is confident that other nations will act similarly in the cause of peace."

The 1956 political platforms

Apprehensive of conflict, both the Republican and Democratic parties, meeting in national convention in August 1956, adopted strong platform declarations supporting American commitments to prevent an arms imbalance and to intervene against aggression.

The Republican party statement reaffirmed support for Israel:

"We regard the preservation of Israel as an important tenet of American foreign policy. We are determined that the integrity of an independent Jewish State shall be maintained. We shall support the independence of Israel against armed aggression."

Similarly, the platform of the Democratic party read as follows:

"To prevent war, to assure peace, we will faithfully carry out our country's pledge under the Tripartite Declaration of 1950. . . .

"The Democratic Party will act to redress the dangerous imbalance of arms in the area created by the shipment of Communist arms to Egypt, by selling or supplying defensive weapons to Israel, and will take such steps, including security guarantees, as may be required to deter aggression and war in the area."

In January 1957, President Eisenhower promulgated the Middle East Doctrine which formalized the U.S. commitment. Section 2 of that resolution read:

"The President is authorized to undertake, in the general area of the Middle East, military assistance programs with any nation or group of nations of that area desiring such assistance. Furthermore, the United States regards as vital to the national interest and world peace the preservation of the independence and integrity of the nations of the Middle East. To this end, if the President determines the necessity thereof, the United States is prepared to use armed forces to assist any nation or group of such nations requesting assistance against armed aggression from any country controlled by international communism: *Provided*, That such employment shall be consonant with the treaty obligations of the United States and with the Constitution of the United States."

If there ever was a country that is backed by *international communism* in a war against a neighbor—in every way, economically, militarily and diplomatically—it is Egypt. But it seems that this fact is apparent only to the Israelis. Others pretend that Egypt is independent. They argue that Communists are jailed in Egypt, which is probably also the case in the Soviet Union, and that a devout Moslem could not possibly accept Communist rule—a dogma which ignores the fact that Moslems are compelled to do so in Albania and in some areas of the Soviet Union.

There was turmoil in Jordan in 1957 and on Sept. 10, 1957 Mr. Dulles reassured Israel at a press conference. He said:

"We do not think that there is danger at the present time to Israel . . . Israel has the benefit of the declaration which was made by President Eisenhower in April of last year, 1956, that the United States would come to the assistance of any country that was attacked."

The 1960 platforms

In 1960, the platforms of both political parties again endorsed U.S. commitments against aggression.

The Democratic platform declared:

"In the Middle East we will work for guarantees to ensure independence for all states. We will encourage direct Arab-Israel peace negotiations; the resettlement of Arab refugees in lands where there is room and

opportunity for them; an end to boycotts and blockades; the unrestricted use of the Suez Canal by all nations.

"We urge continued economic assistance to Israel and the Arab peoples to help them raise their living standards. We pledge our best efforts for peace in the Middle East by seeking to prevent an arms race while guarding against the dangers of a military imbalance resulting from Soviet arms shipments.

"Protection of the rights of American citizens to travel, to pursue lawful trade and to engage in other lawful activities abroad without distinction as to race or religion is a cardinal function of the national sovereignty."

The Republican platform declared:

"In the Middle East, we shall continue to support the integrity and independence of all the states of that area including Israel and the Arab states.

"With specific reference to Israel and the Arab nations, we urge them to undertake negotiations for a mutually acceptable settlement of the causes of tension between them.

"We pledge continued efforts to eliminate the obstacles to a lasting peace in the area, including the human problem of the Arab refugees; to seek an end to transit and trade restrictions, blockades and boycotts; to secure freedom of navigation in international waterways, the cessation of discrimination against Americans on the basis of religious beliefs, and an end to the wasteful and dangerous arms race and to the threat of an arms imbalance in the area."

On Aug. 5, 1960, the late President Kennedy—then a candidate—said that the United States should make it "crystal clear" that "we will act promptly and decisively against any nation in the Middle East which attacks its neighbor."

Later, on May 8, 1963, when it appeared that Iraq, Syria and the UAR were about to unite under Nasser's leadership, President Kennedy said:

"Obviously there are political changes in the Middle East which still do not show a precise pattern and on which we are unable to make any final judgments. The United States supports social and economic and political progress in the Middle East. We support the security of both Israel and her neighbors. We seek to limit the Near East arms race which obviously takes resources from an area already poor, and puts them into an increasing race which does not really bring any great security.

"We strongly oppose the use of force or the threat of force in the Near East, and we also seek to limit the spread of communism in the Middle East which would, of course, destroy the independence of the people. This Government has been and remains as strongly opposed to the use of force or the threat of force in the Near East. In the event of aggression or preparation for aggression, whether direct or indirect, we would support appropriate measures in the United Nations, adopt other courses of action on our own to prevent or to put a stop to such aggression, which, of course, has been the policy which the United States has followed for some time."

A joint communique, issued by President Lyndon B. Johnson and Premier Levi Eshkol of Israel in June 1964, contained these words:

"The President welcomed assurances of Israel's deep concern, which the United States shares, for peace in the area.

"He reiterated to Prime Minister Eshkol U.S. support for the territorial integrity and political independence of all countries in the Near East and emphasized the firm opposition of the United States to aggression and the use of force or the threat of force against any country in the region.

"In this connection, both leaders expressed their concern at the diversion of vitally important resources from development to armaments."

It is also pertinent to put into this record the excellent statement which President Nixon made available to our Committee during the 1968 campaign. He said, on Apr. 22, 1968—foreshadowing his recent strong declaration on July 1, 1970:

"The Middle East today stands closer to the threshold of armed conflict than at any period since the June war. Outside of the cauldron of the Middle East itself, this new danger to regional and global peace can be traced directly to Soviet policy in the area—and indirectly to the absence of an effective American counter-policy.

"There is no question but that the Soviets were the losers in the six-day conflict itself. The belligerent Arab states to which they were allied suffered a stunning defeat; a Soviet-trained and equipped army was humiliated on the field of battle and a multi-billion dollar investment in arms and equipment had to be written off.

But if the Soviets were the losers in the six-day conflict, they are the principal beneficiaries of the uneasy post-war truce; and United States interests have suffered to the same extensive degree that Soviet interests have advanced.

"There naval manpower in the Mediterranean has been augmented five-fold since the war. Their client states have been rearmed and equipped with some of the most modern of weaponry in the Soviet inventory. Their influence has grown in the entire Arab and Near Eastern world—from Morocco to Iran—as they have stiffened the spine of the militants with encouragement and arms, established naval bases on the south shore of the Mediterranean, and assumed the leadership of the anti-Israel league in the United Nations. For the first time in history they are in the Mediterranean in power, and solidly entrenched on the World Bridge.

"Confronted with this diplomatic and military policy of expansionism and adventurism on the part of the Soviets, the American response has been halting and lame and ineffectual. Indeed, there seems to be no American policy at all in a region of the world where a single chance spark could ignite a local conflict that could bring the great powers hurtling together in a major confrontation.

"What should American policy be in the area, now that we have paid so dearly for the absence of an effective past policy?

"The first urgency is for America not to allow the balance of power to shift in favor of the militant Arab states bent on a new war. To this end, the United States must see to it that Israel's military strength is never at a level vis-a-vis the Arab militants that will invite a war of revenge, the consequences of which we could not possibly foresee and which at all costs we must avoid.

"Second, the United States must deal directly with the Soviets and impress upon them both the urgency of keeping their client states in check, and the dangers inherent to the peace in any renewal of the kind of wholesale Soviet irresponsibility evident just prior to the recent conflict.

"Third, the United States must take the diplomatic lead in forging an acceptable settlement. Included in the terms of that settlement should be solid guarantees that the currently occupied territories will never again be used as bases of aggression or sanctuaries for terrorism. Access for the ships of all nations through the re-opened Suez Canal and the Straits of Tiran should be guaranteed. It should include recognition of Israeli sovereignty, its right to exist in peace, and an end to the state of belligerency.

"With regard to the occupied territories, it is not realistic to expect Israel to surrender these vital bargaining counters in the absence of a genuine peace and effective guarantee. However, it is also my view that for Israel to take formal and final possession of these occupied areas would be a grave mistake.

"It is my belief from my own visits to Israel and my own talks with her leaders that the one thing that Israel values more highly than the peace she desperately seeks is her freedom and national independence.

"If the United States is to help secure this for the future, then we must strengthen our ties with America's friends in the Arab world. The channels of communication that have broken down must be repaired and the United States must re-establish its position on the side of all of those, Arab and Jew, who are appalled at the prospect of wasting their precious resources on another war.

"To find a just peace in an area of the world that has known only armed truces and three major and bitter wars in a generation is not an easy task. But the United States is not without diplomatic and economic resources, and its private and public men are not without cogent ideas to get directly at the underlying problems of refugees and water. And I think that we cannot wait longer to make the effort."

THE ARMISTICE AGREEMENTS AND THE SUEZ CANAL

After the first Arab-Israel war in 1948, Dr. Ralph Bunche, the UN mediator, undertook to bring the parties together on the island of Rhodes, where they met both directly and indirectly. Ultimately, armistice agreements were signed between Israel and four Arab states, each of which met separately with Israel under Bunche's auspices. This achievement won Dr. Bunche the Nobel Prize. But, regrettably, as often the case with UN declarations, the parties placed different interpretations upon the document.

The Israelis viewed the armistice agreements as stepping stones to peace, which they were intended to be. So did the United Nations. But the Egyptians insisted that the armistice agreements were merely intermissions in a state of war. They argued that they were permitted to remain in a state of belligerence against Israel and that Egypt therefore was justified in closing the Suez Canal to Israel shipping.

In a historic ruling on September 1, 1951, the United Nations upheld Israel's contention when it ruled that Egypt could not block Israel shipping in the Suez Canal. The United Nations thus rejected the Egyptian thesis that it could remain in a state of war. This is the central issue of the Arab-Israel conflict.

But the United Nations has been powerless to enforce its rule. After the 1951 decision, Israel tried to test the issue again. The Soviet Union then protected Egypt from censure by using its veto. Egypt remained free to enforce her blockade, to persist in belligerence.

When the United States and the Soviet Union joined in 1957, after the Suez war, to force Israel to withdraw from Sinai and from Sharm el-Sheikh, President Eisenhower promised, on February 20, 1957, that the Canal would remain open to all shipping. The Administration went on at that time to reinforce the commitment with the Eisenhower Doctrine.

But when we allowed the Soviet Union to write the 1957 settlement in Sinai, we enhanced its influence, and the results were disastrous to the West.

Jordan was compelled to oust its British officers and accept Nasser influence.

Lebanon suffered a bloody civil war aided and abetted by Nasserite agents and propaganda.

Iraq killed its pro-Western leadership in a savage revolt.

As a positive result of the 1956 war, the Straits of Tiran were opened to Israel shipping. This was backed by the reassurances of the maritime powers at the General As-

sembly of the United Nations, where some 17 rose to assert that Israel had a right to send her ships through the Straits. UNEF was placed at Sharm el-Sheikh to see that the Straits remained open.

The Convention on the Territorial Sea and Contiguous Zone, adopted by the UN Conference on the Law of the Seas on April 27, 1958, by a 62 to 1 vote, and effective from September 10, 1964, declared:

"There shall be no suspension of the innocent passage of foreign ships through straits which are used for international navigation between one part of the high seas and another part of the high seas or the territorial sea of a foreign state."

But in 1967 the garrison was blown away by Nasser's boldness and irresponsibility. UNEF was forced to withdraw. Israel's life line to Africa and the Orient was severed. Israel found itself surrounded and besieged on all frontiers.

What became of all the solemn commitments?

We all know what happened. No one was willing to move. Israel was isolated. The six-day war was the inevitable conclusion.

WHAT ABOUT THE UNITED NATIONS?

Since its historic partition decision in 1947, the United Nations has been unable to carry out its will. We who believe in the United Nations and a world of law have been dismayed by its inability to cope with Arab belligerence.

But the fault does not lie with the United Nations alone. The Soviet Union has used its veto in order to block any effective action in the UN Security Council. The United Nations is not a judicial body; it is a parliamentary institution ruled, not by law, but by bloc voting. The Arab states have contrived to control one-third of the votes in the General Assembly with a coalition of Moslem, Arab and some Afro-Asian countries. It is impossible for the United Nations to be an instrument for peace. The agencies established from time to time to deal with Near East problems have tried to maintain the status quo rather than to advance toward settlement.

Meanwhile, the United Nations has become a forum for the dissemination of anti-Israel propaganda because its decisions invariably overlook or apologize for Arab aggression and provocation and censure Israel for her reponses. Our own country has never used the veto except in the case of Rhodesia. Instead of registering opposition to one-sided resolutions initated by the Arab states and advocated by the Soviet Union, the United States has attempted to compete with the Soviet Union for Arab favor. It has gone along with consensus resolutions which write a deplorable anti-Israel legislative history. Such decisions are utilized in propaganda against Israel throughout the world. And Israel has suffered a critical propaganda setback, for it is cast in the role of violator of UN resolutions.

The United States has not gained from this procedure. The radical Arabs have always credited the Soviet Union for their support and initiative and the United States is regarded as an unwilling tool and prisoner of diplomatic and political circumstance.

THE ARAB REFUGEES

Another significant aspect of the United Nations' inability to deal with the problem has been the fact that for more than 20 years the United Nations has maintained centers for the care, rehabilitation and education of the Arab refugees. But it has lacked the determination to settle their problem by the only practical method—that of resettlement.

The Arab refugees should have been resettled in the many Arab lands which have water, oil and soil. They should have been welcomed by their own brethren. Instead, the Arab refugees were compelled to remain in the camps. Work projects which might have integrated them into the countries where they found themselves were opposed by the Arab states.

Instead of accepting resettlement, the refugees were encouraged to insist on repatriation in a ritualistic repetition of an isolated clause—Paragraph 11—in UN resolution 191 adopted in 1948. Those who cite that paragraph out of context, emphasizing the Arab shibboleth of repatriation, overlook the reality that the United Nations clearly intended that any such repatriation should be effected within the context of a peace settlement.

Over and over, Administration officials in and out of the United Nations stressed the concept of repatriation. Yet they knew very well that any mass repatriation would have meant death for Israel.

Throughout this period the United States has been the most generous supporter of the United Nations Relief and Works Agency (UNRWA), putting up more than $455 million—about 65 percent of the total budget—but receiving little credit or appreciation. The Arab states seem to hold the United States guilty of aggression against them and therefore obligated to maintain the UNRWA camps.

As a result of this lack of realism, UNRWA was exploited as an instrument for political action to project the cause of the Palestinian Arabs against Israel.

Now we hear the slogan that the Palestinian Arabs are a nation which is entitled to self-determination. Of course, they could have enjoyed self-determination and established their own state under the provisions of the UN resolution in 1947. But the independent Arab state envisaged in that resolution was denied life by the invasion of Transjordan, Egypt, Syria, Iraq and Lebanon, which wanted to seize and divide all of Palestine among themselves.

The Palestinian Arabs might still have their own state today if they wished to assert their authority in Jordan, which was part of Palestine until 1922. Mr. Winston Churchill then carved Transjordan away from Palestine to placate the angry Hussein family which had been embittered by the French mandate in Syria.

The Palestinian Arabs could take over Jordan and restore its original name—Palestine. Presumably, such a Palestine state could negotiate with Israel for peace and secure borders. Instead, the program of the Palestinian terrorists calls for the establishment of what is euphemistically described as "a secular state of Palestine" in which Arabs and Jews might live in blissful equality. However, the Jewish state, which we call Israel, would disappear under this program. Jews who came after 1917 would have to leave. In other words, the Jewish state would cease to exist.

The irony of the Palestinian declaration is that no such egalitarian state exists anywhere in the Near East today—unless it be the democratic state of Israel. Arab nationalism is intolerant of all minorities—the Copts in Egypt, the Kurds in Iraq, the Berbers in North Africa, the blacks in Sudan. The notion that Jews would have equality in an Arab state is belied by centuries of discrimination and humiliation meted out to the stiff-necked Jews who refused to accept Mohammad's teachings.

Those who espouse the Arab cause against Israel try to argue that the refugee issue is the root cause of the conflict. In truth, the refugee issue arose as a result of the conflict—the refusal of the Arab states to accept the judgment of the international community that the Jewish people had a right to restore their national life in their historic homeland.

The Arabs claim that the Palestinians were the victims of an injustice. But Palestine, it must be emphasized, was never an independent self-governing Arab country; it was part of an Arab empire which dominated the Middle East for just 434 years, almost a full 900 years ago. For ten centuries, Palestine was under alien rule. For much of that period it was a desolate and neglected land of rocky eroded hillsides and mosquito-infested malarial swamps.

The Jews, who did have self-government or a measure of autonomy in Palestine for some 2,000 years, until they were subjugated by the Romans—always prayed for return. There were always some Jews in the country. And when the Jews came to rebuild Palestine more than a century ago, much of the land was owned by a few rich absentee landowners, while the Arab peasants and Bedouin who lived in the country actually regarded themselves as Syrians, not Palestinians. Palestine was then known to the Arabs as southern Syria.

Prior to the Zionist reclamation, which began 100 years ago, Palestine was a country of Arab emigration. Many of the so-called Palestine Arabs are the sons and daughters of Arabs who came into Palestine from Lebanon, Syria, Iraq and Egypt, attracted by the opportunities created by the Zionist restoration.

But the major point that must be stressed is that the League of Nations and United Nations examined these issues and gave their blessing to the restoration of the Jewish homeland.

Moreover, it should be emphasized that the Arabs won their independence in vast areas. There are now 18 Arab countries, as a 1968 State Department document shows. They occupy an area of 4,600,000 square miles, more than 1½ times the size of the continental United States. They are rich in oil, water and fertile land. And they have room. In equity, they who demand self-determination for themselves must concede self-determination for others.

Those who speak glibly of the elimination of the Jewish state and its replacement by another Arab state must ask themselves: Will civilization gain more by the creation of a 19th Arab state than it will lose by the elimination of the one Jewish state, which has once again become the envoy of democracy in the area where democracy was cradled thousands of years ago.

U.S. AID TO ISRAEL

There were two refugee problems in the Near East. While some 600,000 Arabs came out of Palestine, an equal number of Jewish refugees came into Israel in the first three years. Many came from the former concentration camps which were liberated when Hitler lost the war in 1945. Many of them were refugees from discrimination and persecution in Arab countries, where Jews had lived as second-class citizens in squalid ghettos.

In 1951, Israel was trying to cope with this flood and the country was in dire economic straits. Israel requested economic aid from the United States. But the Administration was reluctant to agree because the Arab states were not asking for economic assistance at that time; the Administration feared that it would be accused of partiality toward Israel.

And so it was Congress—your Committee—which took action in 1951, despite reservations by the State Department and over objections of pro-Arab lobbyists who ominously predicted dire consequences for America and American economic interest in Arab countries.

At that time the Administration was asking Congress to approve a grant of $50 million for the relief and rehabilitation of the Arab refugees. Your Committee requested a similar authorization for the Jewish refugees. While the Committee voted equal sums for the two groups, the money was used much differently.

Israel swiftly absorbed and settled refugees; the Arab states forbade work and development projects. And the money given to the UN agency was used primarily for relief and thus to preserve Arab separatism.

We must ask whether it was really right and in the best interests of the Arab refugees themselves to continue to pour money into refugee camps—maintaining the status quo without insisting that the refugees be resettled and integrated into Arab lands.

In subsequent years, your Committee continued to vote generous sums for Israel, and this confidence in Israel was amply rewarded. She has repaid loans. She became a showcase for American aid. And, in turn, she extended technical assistance to many countries in Latin America, in Africa, in Asia and in Europe.

Your Committee realistically affirmed the sensible view that the Arab refugees should be resettled "on lands where there is room and opportunity for them." These declarations are found in many Committee reports, both in the Senate and the House, over the years.

American leaders have long advocated resettlement. But Arab leaders reject it.

In 1954, the U.S. delegation to the UN urged Arab governments to recognize that "the eventual solution of the refugee problem lies in a new and stronger economy for the Arab countries."

This view has been echoed by many UN delegates.

On August 26, 1955, Secretary of State Dulles announced that the United States would be willing to lend Israel funds to enable her to pay compensation and thus facilitate resettlement.

There have been many strong reports by Congressional committees.

"The U.S. should serve notice that it will not support the return of the Arab refugees to their former homes within the boundaries of Israel under existing conditions." (Smith-Prouty House subcommittee—1953)

"A permanent solution of the Arab refugee problem can only be found through rehabilitation and resettlement and the committee has repeatedly expressed its deep concern over the lack of progress in this direction." (Senate Foreign Relations Committee—1955)

"Resettlement in Arab lands with compensation for property left in Israel is, in fact, the only effective and realistic way of solving the Arab refugee problem. The fact is that the Arab states have for ten years used the Palestine refugees as political hostages. Nothing has been done to assist them in a practical way lest political leverage against Israel be lost." (The Humphrey report—1957)

"Unlike refugees in other parts of the world, the Palestine refugees are no different in language and social organization from the other Arabs. Resettlement, therefore, would be in familiar environment." (Hays-O'Hara-Church House subcommittee—1958)

The House Committee on Foreign Affairs said in 1961:

"Progress towards a final solution remains regrettably slow . . . The committee believes that the vast majority of the refugees will eventually have to be resettled in lands where there is room and opportunity for them."

The Democratic platforms in 1956, 1960 and 1964 called for resettlement in countries "where there is room and opportunity for them."

Regrettably, the Department of State did not insist on resettlement long ago. If it had, the Arab states might have been forced to face up to their responsibility. It is ironic that today rich Arab states like Kuwait, Saudi Arabia and Libya provide only token sums for UNRWA, and that the Soviet Union—the great friend of the Arabs—puts up not a single ruble.

Since Khartoum, the three oil-rich Arab states have been making annual contributions of $266 million to Nasser and $112 million to Hussein: $84 million from Libya; $154 million from Kuwait; $140 million from Saudi Arabia.

Yet, over the years, Libya has contributed only $464,000 to UNRWA, Saudi Arabia has given only $3,404,303, and Kuwait has donated only $1,922,860.

The Arab states and the Soviet Union are more interested in war against Israel than in the alleviation of the misery of the homeless Arabs.

THE REFUGEES BECOME SOLDIERS

Some years ago the Arab states started to convert the refugees into soldiers. While UNRWA provided rations, the Arab states offered arms and ammunition.

Your Committee protested against the misuse of UNRWA funds to finance the training of refugee warriors. Objections were voiced at the United Nations. And there was an amendment to the Foreign Assistance Act, drafted by your Committee, which forbade the use of U.S. funds contributed to UNRWA for the purpose of maintaining refugees who were being trained to go to war against Israel. But to no avail. UNRWA "complied" with the mandate of Congress with brazen indirection. It calculated the amount spent on rations for the training of the refugees and it then entered into a side deal with the Arab states to procure additional sums for this purpose so that it could piously assure you that U.S. funds were not being used for this unholy purpose.

Your Committee repeatedly protested the fraudulent use of UNRWA funds for the dead and departed. But UNRWA feared to lay down the law and it was not until 1967, when many of the refugee centers in the West Bank and Gaza were under the jurisdiction of Israel, that there was some real progress toward rectification of the rolls and elimination of ration fraud.

In the meantime, the refugee children were offered a unique education. They were indoctrinated with Hate Israel mathematics, geography and history. An international agency was thus misused as an incubator for a nationalism which was postulated—not on a historic past—but largely on violent Jew-hatred.

There are all kinds of nationalisms—some benign and some baneful. Those who speak glibly of recognizing the Palestinians as a national entity should consider their objectives.

WHAT THE TERRORISTS SAY

Yasser Arafat said on May 5, 1969:

"The main objective of El Fatah is to liquidate completely the political, economic and social existence of the Zionist base."

In Morocco, on Aug. 19, 1969, he said:

"The objective of our war at this stage is to do away with the social, economic and political fortress of Israel in a long and protracted war which must of necessity end in success."

Dr. George Habash, in Beirut, Dec. 22, 1969, said:

"We wage a national democratic war of liberation of a Socialist nature; the objective is to put an end to Israel's existence as a hostile, racist, robber state which is connected with world imperialism."

INCREASE NEED FOR MINERAL SCIENCE AND TECHNOLOGY

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. BURTON of Utah. Mr. Speaker, recently I received a letter from Professor Ferron A. Olson, head of the department of mineral engineering at the University of Utah indicating the need for increased emphasis for mineral science and technology. He stated, that "there is a danger that because minerals production is linked so closely with pollution that irreparable damage will be done in mineral science and technology. I doubt that any citizen in this country is more concerned about pollution than I am but the answer certainly is not to reduce metallurgy research funds from the Bureau of Mines or similar action to reduce research. Pollution associated with minerals can only be conquered through further research in metallurgy, mining and other disciplines in the minerals area."

He continued, "Possibly of greatest concern to me is the manpower situation. On the basis of this I am enclosing a brochure illustrating the upward trend we have caused at the University of Utah in the field of metallurgical engineering. The situation is also the same with regards to mining engineering at this institution. We are very pleased that we have been able to do this. However, to continue this growth in metallurgy it is necessary that we have undergraduate scholarships. I should like to propose that a move be made to have the Government assist with scholarship moneys in mineral science and technology. As the attached brochure points out if used properly scholarships provide a strong base from which students can be drawn into disciplines represented by mineral science and technology.

Last October the Committee on Mineral Sciences and Technology of the National Academy of Sciences issued a report on the subject, "Mineral Science and Technology—Needs, Challenges and Opportunities." Pointing out the serious condition of mineral science and technology in our country, the report indicates a current need of 360 professionals per year in mineral engineering and extractive metallurgy—and a supply of only 175 per year. The report stated that "The country is not running out of mineral resources but out of mineral technology needed for their profitable production and processing in world competition. The United States must change this trend by invigorating mineral engineering education and research."

The brochure and a summary of the National Academy of Science study follow:

A BIG JOB TO BE DONE FOR THE MINERAL INDUSTRIES

The cover chart illustrates the supply of and need for persons with bachelor's degrees in mineral science and engineering in the United States.[2,3,4] The extrapolated curves are sobering and illustrate the problem mineral industries face. As was forcefully stated in a report by the Committee on Mineral Science and Technology to the National Academy of Sciences October 10, 1969:[1] "The country is not running out of mineral resources but out of mineral technology needed for their profitable production and processing in world competition. The United States must change this trend by invigorating mineral engineering education and research."

MINERAL SCIENCE ENROLLMENT UP AT UNIVERSITY OF UTAH

Vigorous proselyting using a scholarship program has reversed this trend of national decrease in production of metallurgical engineers at the University of Utah. It has es-

---

Footnotes at end of article.

tablished and sustained an upward enrollment trend in the period from 1967 to 1969, as shown in Figure 1. Figure 2 shows the growth in undergraduate scholarships required to effect this, but as shown in figure 3 the increased scholarships did not change the fraction of students supported by scholarships since the total number of students was also increased. Retention of students recruited from high schools is excellent, as indicated in Figure 4. The surge of students from the freshman class of 1967 to the Junior class of 1969 should produce a marked increase in metallurgical engineers at this institution, commencing June 1971 as is concluded in Figure 5. Thus, this effective proselyting program based on scholarships seems worthy of support.

RECRUITING SUSTAINS UPWARD TREND

The present technique of recruiting was initiated by the University of Utah Department of Mineral Engineering in January 1967. Counselors or science teachers were invited from eight of the local city high schools to a luncheon in which the scholarship program was explained and the field of metallurgical engineering and its future was clearly presented. Subsequently, members of the departmental staff were assigned to the major high schools in the Salt Lake Valley and some adjoining schools. While various approaches were used by the different staff members, the best results were obtained when the staff member arranged to talk to a number of the top science students at the respective high schools. For example, at a typical high school the assigned staff member has talked for the past three years to groups numbering from 30 to as many as about 80 students, all outstanding science students. These talks are of a scientific or engineering nature, coupled with a brief sales pitch for metallurgical engineering and a comment about the scholarship program. Interested students submit a scholarship application and a week or two later are individually interviewed by the metallurgy staff member to determine the winning scholars.

SCHOLARSHIPS PROVIDE MARGIN OF EXCELLENCE

The scholarship program which is vital to proselyting consists principally at the present time of D.C. Jackling Scholarships; 35 of the present 38 undergraduate scholarships are of this type. With the D.C. Jackling Scholarship, students are awarded tuition scholarships for the freshman and sophomore years, which at the present time is $480.00 per year, and $750.00 per year for the junior and senior years. To maintain the scholarship the students must maintain a "B" average.

Additionally, should the student lose his scholarship, he may regain it when the required grade point average is regained. This rarely occurs, but does stimulate students to remain during the early years of schooling, acting as an incentive until they can really understand the metallurgical engineering field.

It is believed that the marked increase in the number of freshman students not supported by scholarships which rose from 18 in 1966 to 33 in 1968 and 28 in 1969 is largely due to the vigor of the proselyting effort and scholarship program.

Additionally, some high school students not receiving scholarships registered in metallurgical engineering because their peers of superior attainment did. This program not only produced more undergraduates but produced superior undergraduates due to the caliber of students attracted by the scholarships.

SUPPORT REQUIRED TO PRODUCE 20 METALLURGICAL ENGINEERS

On the basis of the results shown in Figures 3 and 4 one can deduce the number of scholarships required to produce a given number of metallurgical engineers, i.e., to produce 20 per year. For this, a conservative retention factor of 0.8 and a basis of scholarship support of 0.4 for seniors, 0.5 for juniors, 0.6 for sophomores and 0.8 for freshmen is used. The support level takes into account the decreasing fraction of students supported as the student progresses. It is at a slightly greater fractional support than shown in Figure 3 because the planned marked increase in students and because the wave of superior students expected requires an increased fraction of support for the upper classes over that given for the students summarized in Figure 3. Also, on the basis of the number of seniors registered each Fall as shown in Figure 1, and the graduates produced the following Spring (Figure 5), the factor of 0.8 is used for the fraction of seniors graduating; this is the same as the retention figure for the undergraduate classes. Thus, to graduate 20 metallurgical engineers, 25 seniors would be required of which 10 would be on scholarships. To produce such a class of seniors would require 30 juniors of which 15 would be supported. Similarly, the sophomore and freshman classes would number 38 and 48 respectively with the respective numbers of scholarships being 23 and 38. This would lead to an under-graduate enrollment four years hence of 141 and require 86 scholarships.

With a program of tuition scholarships of $480.00 for the freshman and sophomore years—followed by added incentive sums of $750.00 for the junior and senior years, the program would cost $48,000.00 per year and require $2,400.00 per metallurgical engineer produced.

Using a figure of $50,000.00, on the basis of possible increased tuition, $2,500.00 would be required per metallurgical engineering produced. This is a reasonable price for industry or other supporters if the desired engineers could be produced.

Should out-of-state students be encouraged as has been recommended,[4] the cost per student would be much greater, depending on the extent of support. Tuition is now $1,265.00 per academic year for out-of-state students and additional help required could raise this to as much as $2,500.00 per year per student supported—or about 4 times as much as for local students. This factor is not considered here but is worthy of study.

AN INVESTMENT IN THE FUTURE

The problem facing metallurgical engineering at the University of Utah is that funds are needed to implement this envisioned and needed growth. The staff and facilities justify such growth. Remember that $10,000.00 should produce at least 4 outstanding metallurgical engineers. Will you consider a grant to the Department of Mineral Engineering at the University of Utah to help accomplish this goal by 1974?

4. "Mineral Science and Technology—Needs, Challenges, and Opportunities," A report by the Committee on Mineral Science and Technology to the National Academy of Sciences, Washington, D.C., October 10, 1969.

The art, science and technology utilized in the production, upgrading and reduction to primary consumer products of mineral resources is generally termed mineral science and technology. It encompasses the fields of mining, mineral beneficiation, extractive metallurgy, ceramics, mineral fluids production, fuel science and technology, and mineral economics. Together these fields comprise the inner range of a spectrum of science and engineering, dealing with the finding, winning, conversion and utilization of mineral resources, as indicated in Figure 1. The status of mineral science and technology in the United States is the subject of this report, with special attention given to the situation in universities.

Mineral resources are analogous in many respects to agricultural resources. Development of the science and technology as applied to agriculture has been on a large and broad scale for many decades, with continuous federal and state appropriations to a college of agriculture in each state, and strong, well-funded federal and state agricultural organizations. Mineral science and technology has had no such support, with consequent waste of mineral resources, widespread acid-mine-water pollution of streams from abandoned mines, continuing mine disasters, and a falling behind by the United States in the technology of extraction and primary processing of many mineral resources. The U.S. Bureau of Mines has had inadequate funding in recent decades for the task expected of it. Responsibility for federal mineral policy is fragmented. State governments support very little effort in the field; many of the companies that comprise the U.S. mineral industry are small, and few are in a position to engage in or support massive programs of research and development. In fact, only a few major oil companies and a dozen or so metal and ceramic companies can be singled out as major contributors to scientific and technological advances in their own major lines of endeavor.

8 MINERAL SCIENCE AND TECHNOLOGY

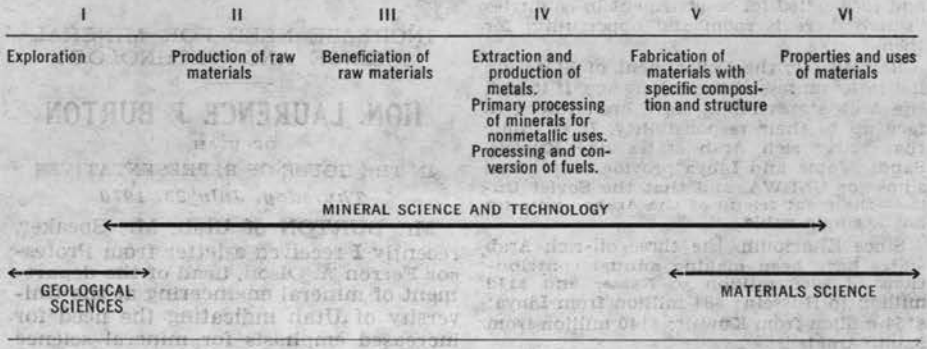

FIGURE 1. Steps in the utilization of mineral-based materials for commerce.

In addition to the need for wise use of our nonrenewable mineral resources, which represent an important trust and responsibility for each generation, it should be of some concern that imports of mineral products have in recent years been rising much more rapidly than exports. The situation is not so much the result of exhaustion of the country's mineral reserves as it is of our not developing the needed technology for efficient extraction, processing, and utilization of the resources we have.

The above situation is generally known, but the United States continues to make no significant move toward reversing the trend of deterioration in mineral engineering education and research in the universities or toward developing an energetic federal and state research-and-development program in mineral science and technology. Of paramount importance at the present time are a strong government program directed at developing the human resources involved (i.e., personnel trained in the fields of mineral science and technology) and a simultaneous program to develop the knowledge needed for the development and wise use of the country's solid, liquid, and gaseous mineral resources. The full resources of the nation, including the many presently scattered throughout the industry, must be brought to bear on coordinated solutions of the national and international problems in the mineral field that lie ahead.

The limited extent to which resources in men and money are being brought to bear on our mineral resources problems, and the present unsatisfactory state of mineral science and technology, can be gathered from the following summary statements on: the present U.S. resources in mineral scientists and engineers; the way the United States is organized to train men and develop the technology in the mineral fields; the funding picture for mineral science and engineering research, and conclusions regarding the status and needs of mineral science and technology in the United States.

RESOURCES IN MINERAL ENGINEERS AND SCIENTISTS

There are approximately 65,000 mineral engineers and scientists in the United States. About 80 percent of these are engaged in research, development, and production in the mineral industries, 7 percent are employed by government, 6 percent are located at educational institutions, and 7 percent have other employment. The total number is increasing about five percent per year, as indicated by membership data of the American Institute of Mining, Metallurgical and Petroleum Engineers (AIME) and the American Ceramic Society. The total graduated each year from mineral engineering and science curricula, however, is not increasing. The total number of B.S. degrees granted decreased to a minimum of 1,267 in 1963–1964 and has recovered only slightly since then, despite inclusion of "materials engineering" degrees with metallurgy in the last two years (see Table 1).

TABLE 1.—NUMBER OF BACHELOR'S DEGREES GRANTED IN MINERAL SCIENCE AND ENGINEERING, 1956–66 [1]

Year	Total	Mining engineering	Petroleum engineering	Metallurgical engineering	Ceramic engineering	Geological engineering
1956–57	1,813	231	650	577	128	227
1957–58	1,982	240	688	670	159	225
1958–59	2,114	239	731	724	177	243
1959–60	1,902	242	597	682	169	212
1960–61	1,724	220	455	720	167	162
1961–62	1,480	193	323	679	149	136
1962–63	1,391	180	228	721	174	88
1963–64	1,267	144	158	686	205	74
1964–65	1,436	146	174	[2] 851	[3] 195	70
1965–66	1,351	138	133	[2] 781	[3] 182	117
Total	16,460	1,973	4,137	7,091	1,705	1,554

With the production of graduates in the mineral fields static and employment of engineers and scientists in the mineral industries increasing, it is evident that the industry is absorbing increasing numbers trained in other fields despite an expressed strong preference by employees for graduates of mineral engineering and science curricula.

The decrease in total bachelor's degree production during the past decade (Table 1) is alarming and presents a baffling problem to the mineral industries. That there is a relatively small number of graduates per year in mineral engineering as compared with the number of engineers and scientists working in the mineral fields is indicated by a comparison with the field of chemstry. Using figures available in a recent report,[1] the ratio in 1964 of professional chemists in the United States (125,000) to B.S. degrees in chemistry granted that year (8,500) was approximately 15. This ratio for mineral engineering is about 50, meaning that there is only one mineral engineer graduated each year for 50 professionals in the field. Inasmuch as a strong demand is said to exist for B.S.-degree chemists, an exceedingly strong demand must exist for B.S.-degree mineral engineers.

Enrollment in the mineral enginering curricula is discouragingly small at the typical educational institution, commonly a state university, having one or more of these curricula. This low enrollment has caused the demise of bachelor-degree programs in mining at nine universities in the 5-year period of 1962–1967, leaving now only 17 accredited curricula in the country.

Among mineral engineering departments at universities, the median number of upperclass majors in the fall of 1967 varied from 12 in mining to 29 in petroleum engineering. The number in the senior class is about half this number, or 6 to 14. A department having this relatively small number in a graduating class and without large enrollment in "service" courses is considered by modern state universities as being of marginal size. For many of those university departments where the number of seniors is below the median, enrollment must increase or the curriculum will be surely abandoned in the next few years. (See Chapter 6 for further details.)

ORGANIZATION OF EDUCATION AND RESEARCH IN MINERAL SCIENCE AND TECHNOLOGY

UNIVERSITIES

Sixty-two educational institutions have undergraduate curricula in one or more of the mineral engineering fields as listed in the 1967 annual report of the Engineers' Council for Professional Development. A graduate and research program is generally also present. In distribution, size, and organization arrangement these are notably nonuniform. For example, one university has seven separate departments with a graduate and research program as well as an undergraduate curriculum in each of: mining, mineral preparation, petroleum and natural gas engineering, metallurgy, ceramic science, fuel science, and mineral economics; in addition there is a graduate program in solid-state science which is administratively coordinated with ceramic science, metallurgy, and fuel science. On the other hand, 35 institutions have departments in only one of these fields, usually metallurgy. Not uncommonly, research in metallurgy and ceramics is done in a materials science or materials engineering department, in which case the metallurgy research is likely to be entirely physical metallurgy.

Curricula in mining, petroleum engineering, and extractive metallurgy (including process and chemical metallurgy) exist in a relatively small number of universities, typically have few students, and almost half of the graduate students in these three fields are foreign (see Tables 2 and 5, pp. 62 and 65). For example, in the fall of 1967, 17 educational institutions had accrediated curricula in mining engineering. The median number of seniors was approximately six. There were at the same time 19 graduate programs in mining, the median department having eight graduate students with 48 percent of them foreign.

Ceramics and physical metallurgy curricula are in a better position both in number of students and in outside support of research and graduate work. The percentage of foreign graduate students is less—about 14 percent. These two fields are a part of the materials science and engineering wave in education funded especially by the Department of Defense in recent years but also by other federal agencies. The large materials science laboratories established at universities with federal funds almost all emphasize physical metallurgy and solid-state physics. The nonmetallic inorganic materials field (ceramics) has caught only the fringe, and extractive metallurgy has completely missed this development. Established ceramics departments where a strong background, interest, and competence in the field is naturally present have in general been passed over in this large funding of materials science during the past decade.

Fuel science and mineral economics are ordinarily not separate curricula. Both, however, are exceedingly important fields in the future of our economy and should be fostered and financially supported at universities. The Bureau of Mines is well known for its research in both fields and logically should become involved in support of these graduate and research programs in universities.

GOVERNMENT

The Bureau of Mines was established within the Department of the Interior by act of Congress in 1910. This Bureau was clearly intended to serve as the mineral science and technology arm of the federal government. However, there are several other agencies within the Department of Interior that also report, as does the Bureau of Mines, to the Assistant Secretary for Mineral Resources. These agencies include: the Geological Survey, the Office of Coal Research, the Office of Oil and Gas, the Office of Minerals and Solid Fuels, the Office of Water Resources Research, and the Oil Import Administration. Consequently, the Bureau of Mines is organizationally at a level where it finds difficulty in exerting major influence on national mineral policy considerations. Moreover, in recent years the Bureau of Mines has had

Footnotes at end of article.

several directors, some of whom served for relatively short periods; additionally, it has also undergone several internal reorganizations. Further, it has received grossly inadequate financial support for the job to be done.

Many other federal departments and agencies have or can have major impact on the mineral industry through regulations or support: the Tariff Commission, the Federal Power Commission, the Interstate Commerce Commission, the Department of Commerce, the Department of Health, Education, and Welfare, the Department of Transportation, the Justice Department, the Defense Department, the State Department and the Atomic Energy Commission, to name several but by no means all.

Within every state one or more agencies have some jurisdiction over the mineral industry. Every state is concerned with taxation and safety, some are concerned with regulation of production and many are concerned with providing adequate supplies of minerals to attract and to hold industry. Most of the effective state research programs in mineral engineering are operated by agencies affiliated with universities, and in some cases the state research is closely integrated with the state university program. State research in mineral science and technology is commonly directed toward problems of local interest, and in some cases directed toward the advancement of the mineral industries within the state in competition with other states. This arrangement has a particular advantage to the local industries because it allows close association between the localized industry and the research agency. In quality of personnel and facilities, the range within state agencies is from highest quality to inadequate. Also, with only a few exceptions, the level of financial support falls far short of the job that needs to be done within the state.

INDUSTRY

A few of the mineral companies have modern, well-staffed research laboratories. Laboratories of several of the major petroleum, steel, and glass companies are examples. In addition, companies in several of the industries have banded together in an organization to support research for the whole industry, for example, the American Iron and Steel Institute and the Glass Container Research Corporation, with annual expenditures, respectively, of approximately $3,000,000 and $325,000. Companies also turn for contract research to the nonprofit research organizations.

FUNDING OF MINERAL SCIENCE AND ENGINEERING RESEARCH

Research on mineral resources is similar in many respects to research in agriculture. In both cases an agency of the federal government was created with a responsibility for carrying out research—The U.S. Bureau of Mines and the U.S. Department of Agriculture. Fortunately for this country and the world, agricultural research is supported in each state by federal appropriations, a practice begun in 1887 with passage of the Hatch Act, which provided an annual appropriation for the Agricultural Experiment Station established at the land grant college in each state. Unfortunately, no such provision for support of mineral resources research at the land grant colleges or mining schools was made.

Funding of university research in mineral science and engineering is relatively small and comes from a variety of sources. Total extra-university funding of all mineral science and engineering research at universities, exclusive of physical metallurgy, was at an annual rate of only approximately $11 million in the fall of 1967 (see Table 9). The total outside research support of all graduate and research programs in mining departments was $681,000, of which $272,000 was from the federal government. The federal support figure for petroleum engineering is similar, and for extractive metallurgy it is about twice as much. According to a recent NSF report,[2] "On the average approximately $1 million in Federal funds is associated with the award of seven doctorates in science and engineering." Federal support of graduate work in mining and petroleum engineering is therefore sufficient for only two Ph.D's per year nationally in each of these fields if the programs received average federal funding per Ph.D. candidate, and for about four Ph.D's in extractive metallurgy. The NSF figure of course includes programs in physics, oceanography, astronomy and other high-cost research areas. In chemistry the cost is much less; it is estimated that not over $30,000[3] per Ph.D. is contributed by the federal government. In mining and petroleum where there are now granted about 20 Ph.D. degrees per year in each field, the federal contribution per degree is only about $15,000. The federal support per graduate student per year in mining, extractive metallurgy, and petroleum engineering was less than $2,000 in 1967 as compared with approximately $6,000 for chemistry graduate students in 1964.[3] On any basis, graduate programs in mineral science and engineering receive comparatively little federal support, and this may partly account for the lack of attractiveness of mineral engineering to graduate students.

In federal laboratories, research in mineral science and technology is largely the responsibility of the Bureau of Mines. In fiscal year 1968, approximately $36 million was spent (Table 14, p. 83). It is noteworthy that expenditures for research in the Bureau of Mines have decreased from 3 percent of the federal research-and-development budget in 1940 to 0.2 percent in 1968. The Bureau of Mines effort is concentrated in mining, extractive metallurgy, and fuel science and technology.

Comparable industrial research expenditure figures are not available. The Office of Coal Research of the Department of the Interior provided $10.7 million in fiscal year 1968 for contract research and development largely with industrial laboratories. Funds for research and development in 1966 in four broad categories are shown in Table 19, p. 88. Funds expended for research in the mineral industries seem relatively small. Research-and-development expenditures in 1966, expressed as percentages of net sales, were 1.0 percent in petroleum refining and extraction; 1.7 percent in stone, clay, and glass products; and 0.8 percent in primary metals, compared, for example, to 4.0 percent in the chemicals and allied products industries.[4]

CONCLUSION

In past decades the United States has held the lead or has been in an excellent competitive position in virtually all aspects of mineral science and technology. Studies by our panels indicate that this is still true in petroleum production, but in several other fields the United States is losing out. The mineral resources exist. It is the technology of mineral extraction and processing that is not advancing fast enough to keep U.S. mineral production and our mineral industries at the forefront.[5] In addition to mineral production, tremendous opportunities exist for developing the technologies that will make possible better general use of the solid earth, and the United States should be moving on this broad front. A recent report,[6] for example, emphasizes the importance of accelerating the development of rapid-excavation technology, and earlier reports[7] have shown the need for increased geological, geophysical, and geochemical research on the upper layers of the continental crust—research which will provide the long-range, basic information needed for mineral-resource evaluation and also will contribute substantially to mineral technology.

Of particular concern are the deteriorating situation of mineral engineering and science in universities and the lack of an appropriately organized and funded federal establishment for mineral science and technology. Regarding the former, the picture in mining engineering is especially serious. From 1937 until 1962 there were from 30 to 26 accredited university departments teaching mining engineering, and during those years as many as 500 first-degree mining engineers were graduated annually. The erosion since 1962 has become extremely critical, with only 17 departments left in 1967 and only 138 bachelor degrees granted.

At the same time, the demand for mining engineers has remained steady. A sampling of 55 companies in 1964 indicated an estimated 10-year requirement of 162 mining engineers per year for those companies alone.

One of the reasons for low enrollment in mining is that students in approximately two thirds of the states must attend college in another state to obtain a degree in mining engineering. These students ordinarily face the handicaps of paying a higher, out-of-state tuition and of more difficult admission within an out-of-state student quota. More students would no doubt enroll in this field if arrangements were made to eliminate these penalties.

In these fields of mining research, machinery manufacturers and mining companies do research directed toward meeting normal foreseeable commercial needs, but the more basic engineering research that might be done in universities is on a very small scale. Federal funds for modern research equipment and facilities and for graduate-student stipends is a pressing need at the few mining schools remaining.

In the field of nonmetallic materials (ceramics research), a study of published literature by the Panel on Non-Metallic Materials[8] shows that the United States is constantly falling farther behind the Soviet Union in quantity of scientific and engineering papers published in this field. In universities the problem with the nonmetallic materials program is partly one of organization and administrative concepts. The field is one where an interdisciplinary approach is highly desirable. It is a field where coupling with industry is a great advantage for support and stimulation of the university programs.

The position of extractive metallurgy is clearly unsatisfactory. Although the United States occupied a dominant position in this technology before World War II, the major significant postwar developments with few exceptions, have originated abroad.[9] The competitive position of the United States relative to major foreign groups is deteriorating. This worrisome trend will not be easily reversed inasmuch as current research publications show proportionately greater activity in this field in Western Europe, the Soviet Union, and Japan. Metallurgy departments in universities may look reasonably healthy because of current significant support of physical metallurgy by government agencies, but the numbers of extractive metallurgy graduates and the extent of research activity in U.S. educational centers has declined to the extent that effective continuing operation is threatened. It does not appear that current academic, industrial, and government research or student enrollments are adequate to meet the future requirements of our national goals. Federal support through traineeships and research grants to the extractive metallurgy programs still active is an immediate need.

Footnotes at end of article.

Although the position of petroleum engineering in the universities is very similar to that of mining and extractive metallurgy, U.S. technology has maintained its preeminence in the field through the very extensive research carried out principally by petroleum companies. The Committee does not believe that petroleum engineering curricula should be allowed to shrink and disappear. There is, however, a need for a more interdisciplinary approach to the large problem of the extraction, movement, and storage of fluids within the earth's crust and the transmission of these fluids. Combining university work in hydrogeology and petroleum engineering, for example, could be of great benefit for both and could stimulate the development of a larger, broader group of students and faculty with more chance for support from federal and state agencies.

The role of the federal government is bound to be of major significance in the development of mineral science and technology in the United States, as it has been in the field of agriculture, but strong actions must be taken soon to avoid costly crash programs later. The important element is to plan so that we can do things in time and avoid jumping from one crisis to another. Consider the following: (a) The United States is the largest producer, consumer, and importer of minerals and fuels in the free world. (b) By 1985 the nation's mineral and fuel requirements will nearly double (see Figure 2). (c) Facilities to produce the increased supply require, on the average, about 5 to 10 years of lead time and about $100 million per venture to bring them into productivity. (d) Because foreign ores are richer and readily adaptable to proven technology, because foreign labor is cheaper, and because tax and other financial concessions are possible abroad, a substantial part of U.S. exploration and investment for facilities in the future is being made in foreign countries. (e) If present trends continue, the nation's ability to produce minerals from domestic sources will not remain static, but in some cases, will disappear.

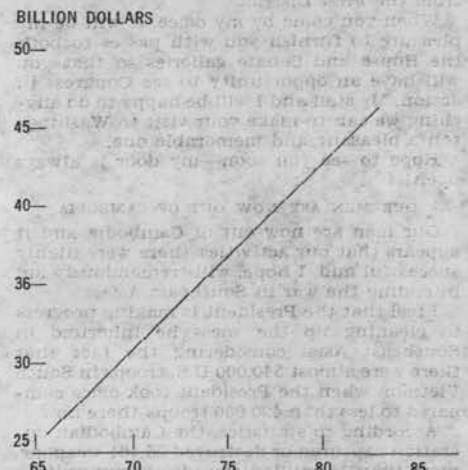

FIGURE 2.—Projected U.S. consumption of minerals (in terms of constant 1966 dollars)

Because of the critical problems facing the nation with respect to future shortages of minerals and the growing dependence on foreign sources of these minerals, it is in the national interest for the federal government to foster and encourage (a) the development of an economically sound and stable mining and minerals industry, (b) the orderly development of mineral resources and reserves necessary to assure satisfaction of industrial and security needs, and (c) mineral science and engineering research to promote the wise and efficient use of the nation's mineral resources.

The desired national mineral technology program should have many elements, such as federal research grant and traineeship programs at universities, a federal matching grant program with states to stimulate local mineral-technology research-and-development activities, and a far greater research effort by the Bureau of Mines on underground environments.

One of the pressing critical needs is a National Minerals Reference Center, located in the office of the Assistant Secretary for Mineral Resources. This should be a central, well-staffed information service to advise legislators and the executive branch of the government and to provide information and analytical services needed by policymakers. At present, efforts in this field are scattered among several agencies, principally the Bureau of Mines, the Geological Survey, the Department of Commerce, the Department of State, the Atomic Energy Commission, the Department of Defense, the Office of Emergency Planning, and the General Services Administration.

The Committee also recognizes the need for a continuing advisory group representing the mineral science and technology community to provide advice on the state and needs of mineral science and technology in the country, to aid in identifying the issues affecting the national minerals posture, and to help in resolving the problems that threaten both the adequacy and the dependability of the nation's supply of minerals and mineral fuels. This advisory group should probably be a part of the National Research Council, with recommendations channeled through normal procedures of the Council. Alternately, this advisory group might take the form of a Minerals Advisory Board appointed by the Secretary of the Interior to provide counsel to the government.

Finally, the Secretary of the Interior should provide the Congress with an annual report on the state of the mining and minerals industry, including a statement of the trend in utilization and depletion of mineral resources, together with such recommendations for legislative programs as may be necessary to meet the mineral demands of the nation in the years to come.

REPORT FROM WASHINGTON

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. QUILLEN. Mr. Speaker, I have just completed my special "Report From Washington," which will go out to all postal patrons in my district in a few days, and I would like to make it available for readers of the RECORD. Naturally I am not including the photographs contained in the report, but the cutlines are included.

REPORT FROM WASHINGTON, JULY 1970

DEAR FRIENDS: Since you received my 1970 Report from Washington in February, many important matters have come before the Congress, and I would like to discuss some of the issues with you in this special four-page report.

There are many world and national problems unsolved, but nonetheless, I feel there are several areas where improvements can be made in the 1970's if we continue to work together.

An all-important issue we face as a Nation is improving the quality of our environment. When we consider the environment, we envision fresh air, clean water, plenty of wholesome and adequate natural resources for both industry and recreation with lots of elbow room.

But present day realities force us to also consider the unpleasant aspects of our environment—congested cities, dirty rivers and lakes, polluted air and intense noise.

I am deeply concerned over the conditions of our environmental surroundings, and have joined in co-sponsoring seven bills to help remedy these problems.

Two very important issues I discussed with you in my February report were the Vietnam war and inflation, and they are still of primary concern to all of us.

In my opinion, inflation and the war are the two top problems we must solve. We must assure that a just and honorable peace is speedily obtained in Vietnam, and we must do everything within our power to ease the impact of inflation.

I have always supported the President's withdrawal plan and I will continue to do so because we must constantly work toward the goal of bringing all of our American fighting men back home.

Below and on the following pages, I have discussed other important matters which I hope will be of interest to you.

SOME 60,000 HAVE ATTENDED MY "OPEN DOOR" MEETINGS

When I was first elected to Congress, I said that my door would always be open to all of the people, and I am pleased that this policy has given me the opportunity to assist you with your problems down through the years.

I thoroughly enjoy my "Open Door" sessions, although they involve many hours of hard work, both for me and my fine staff. We set up an office in the courthouse of each county, and I meet with the people on a first-come, first-served basis. Often our lunch consists of a quick snack between visits.

It is certainly gratifying to me that the turnouts have exceeded my expectations. A conservative figure of the number of persons I have interviewed during my "Open Doors" is 60,000. I aso enjoy greeting those who just come by to say "hello."

In addition, I keep my door open throughout the year. I have my office in Washington in Room 102 of the Cannon House Office Building and I also maintain a Congressional

office in Kingsport in Room B–8 of the Post Office Building.

When there is no business scheduled in Congress, I try to come back to the District so I can devote my personal attention to your problems involving the Federal Government.

It has been helpful to me to discuss the current issues facing our country with you on my trips to the District, and it is my pleasure to assist you in every way that I can. Your ideas and suggestions are very important to me, as I want to do everything I can in your best interest.

Some of my colleagues have followed in my footsteps by initiating "Open Door" meetings in their Districts, and I commend them because I feel this is the best possible means to bring government as close to the people as is humanly possible.

So, please remember—my door is "ALWAYS OPEN" to you and your friends.

SOCIAL SECURITY BENEFITS INCREASED—BUT NOT ENOUGH

A 15% increase in Social Security benefits was passed during the closing hours of the session last year. In May, 1970, the House passed another bill providing an additional 5% increase in benefits which will become effective on January 1, 1971, when it passes the Senate. Recipients are now receiving the 15% increase. I was most heartily in favor of these increases and, of course, I voted for both of the bills.

The measure containing the 5% increase—when it becomes law—also increases the earnings limitation from $1,680 to $2,000. This means that a person can earn up to $2,000 without losing any benefits.

During fiscal year 1969–70, it is estimated that $53,366,000 in Social Security benefits was distributed to recipients throughout my Congressional District.

The bill—and I hope the Senate passes it without further delay—makes a number of other changes in the law which the Committee believed were most urgently needed at the present time and which can be financed from funds to be available. The House approved President Nixon's proposal for an automatic increase in benefits whenever the cost of living goes up by 3% or more beginning in 1972.

PERSONAL INCOME TAX EXEMPTION SHOULD BE INCREASED TO $1,200

I was highly pleased when the Senate and House passed a compromise bill to my legislation increasing the personal income tax exemption. However, I was deeply disappointed that my bill increasing the exemption from $600 to $1,200 was not enacted. I voted for the bill increasing the exemption from $600 to $750, over a three-year period, and I assure you I will continue to fight for my bill until a $1,200 exemption is realized.

MY BILL TO REPEAL GUN CONTROL ACT BOTTLENECKED IN COMMITTEE

I am continuing my efforts to get my bill repealing the 1968 Gun Control Act released from the House Judiciary Committee, so there can be a vote on it in the House.

As I have stated before, I am unalterably opposed to any gun control legislation and most of the residents of my Congressional District are too.

I strongly believe that the registration and licensing of firearms constitute an unwarranted invasion of privacy and legislation dealing with this subject should never be enacted into law. I feel the Gun Control Act is bad legislation and has no clear impact on the criminal misuse of firearms.

I also introduced a bill—H.R. 13409—which was enacted into law as a provision in another measure, making it unnecessary to register shotgun shells and ammunition suitable for use only in rifles. Please rest assured that I will continue to fight for the passage of my bill repealing the Gun Control Act of 1968.

COMMUNISM ON THE MARCH

The U.S. State Department's twenty-second annual report on communism says there were 45.9 million members of communist parties throughout the world in 1969—700,000 more than in 1968. This is frightening!

In connection with this report, I would like to say that I am still working on my bill which would prevent communists from working in defense facilities. The measure passed the House and is now pending in the Senate Judiciary Committee.

I have attempted to jar the bill loose from the Senate Committee, as I know how important the passage of this legislation is to our national security.

I feel this is one of the most important bills that ever could be enacted, and I will continue to press for its enactment.

MILK PROGRAM APPROVED

I was extremely pleased when the House passed the bill providing funds for the Special Milk Program for schoolchildren, despite the fact that $5,000,000 was cut from the authorization.

I had hoped the House would approve an authorization of $125,000,000, rather than accept a Senate amendment which trimmed the amount by $5,000,000.

However, the House agreed to accept the Senate bill approving $120,000,000 and I am sure this will do the job for the next fiscal year.

Several months ago, when there appeared some doubt that the bill would be passed, I wrote the Senate Committee in which the bill was pending, asking that the program be continued.

I am pleased that this measure has now been signed into law by the President and that the program will not be interrupted.

FOREIGN AID SLASHED

I was certainly pleased when the House Appropriations Committee slashed next year's foreign aid budget by 25 percent. I have always contended that we should eliminate foreign aid and give more impetus to the needs of the people in America.

My opinion is that while we spend billions of dollars overseas there are many of our citizens who are going hungry and without clothing here at home.

The House Appropriations Committee reduced the Nixon Administration's request by $555 million to $1.6 billion. All of the cut was made in economic assistance.

My feeling in strictly opposing foreign aid is that developing Nations must assume more responsibility for their own welfare. Our wealthy allies should be expected to do more in mutual support of the free world.

It is estimated that the United States will have provided economic and military assistance amounting to a net total of $131.5 billion of which only $28 billion is in the form of loans. The balance of $103.5 billion is in the form of grant aid.

FARMERS DESERVE MORE SUPPORT

The House approved a $7.4 billion money bill for the Department of Agriculture and related agencies for fiscal 1971. The bill provides $2.4 billion for food assistance programs to the needy, including the Special Milk Program, the Food Stamp Program, and the Child Nutrition Program. More than $690 million in the bill will go for pollution control.

Agriculture continues to be one of the most important elements of the economy in the eleven counties of the First District. Earlier this year, I testified before the House Subcommittee on Agriculture Appropriations in behalf of the budget for the Soil Conservation Service.

This program performs an outstanding service for farmers and other land users and has received international acclaim in this respect. It is certainly true that these dedicated men have long been in the forefront of the conservation movement.

It is very important for Congress to help the farmers at every opportunity. Every citizen depends on their valuable services. I will continue my efforts to help them in every respect.

SENIOR CITIZENS NEED A HELPING HAND

Just two months ago our senior citizens were officially recognized for their contributions to their communities and our Nation. I was certainly glad to share in this well-deserved salute, for so many times our senior citizens go unrecognized.

I might point out that our senior citizens helped our Nation win two world wars and overcome the great depression of the 1930's.

Many of them have played leading roles in efforts to wipe out disease and to provide better living and more leisure time for all of us today. I feel we owe them a great debt.

We have moved forward to solving some of the problems facing our senior citizens, but much remains to be done. According to statistics, the Federal Government is spending more than $3 billion annually on programs for them, excluding trust fund payments for Social Security. Social Security funds amount to more than $27 billion.

But inflation is the constant enemy of the aging and this is the area where we must place great impetus.

Retirement benefits must be increased, due to the ever-continuing rise in the cost of living. I have introduced measures to accomplish this and will continue to offer a helping hand.

WELCOME TO WASHINGTON

Whenever you are in Washington, I hope you will come by my office, located on the first floor of the Cannon House Office Building in Room 102—at the corner of New Jersey and Independence Avenues, SE., just across from the Capitol. It's always good to see friends from the First District.

When you come by my office, it will be my pleasure to furnish you with passes to both the House and Senate galleries so that you will have an opportunity to see Congress in action. My staff and I will be happy to do anything we can to make your visit to Washington a pleasant and memorable one.

Hope to see you soon—my door is always open!

OUR MEN ARE NOW OUT OF CAMBODIA

Our men are now out of Cambodia and it appears that our activities there were highly successful and, I hope, will tremendously aid in ending the war in Southeast Asia.

I feel that the President is making progress in cleaning up the mess he inherited in Southeast Asia, considering the fact that there were almost 540,000 U.S. troops in South Vietnam when the President took office compared to less than 420,000 troops there now.

According to statistics, the Cambodian operation captured or destroyed 25,401 weapons, more than 15 million rounds of ammunition and more than 14 million pounds of rice.

Our military advisers in the fields of Cambodia report that the Cambodian operation was a success and, in fact, far exceeded their expectations.

As I pointed out in my introductory remarks of this special report, I believe the Vietnam war is one of the most important tasks facing the Nation. This terrible conflict must be brought to an end so our men can be brought home.

CUT LINES

A visit to the Billy Graham Crusade.—One of my most inspiring and enjoyable moments came the evening of May 28 when I visited

the Billy Graham Crusade in Knoxville with President and Mrs. Nixon and several other members of the Tennessee Congressional Delegation. In the picture above, we are shown together after we deplaned. From the airport we went on to Neyland Stadium for the service which was attended by more than 100,000 persons.

White House visit.—Mrs. Quillen (left) and I had the pleasure of attending an evening at the White House recently in honor of country music star Johnny Cash and Mrs. June Carter Cash. The nationally prominent singer and musician was invited by President Nixon to perform. Cecile and I were also invited by President and Mrs. Nixon and we certainly enjoyed the evening. In the picture above we are shown with the Cashes.

Vice Presidential visit.—The name of Vice President Spiro T. Agnew has practically become a household word throughout the country because of his outspoken position on major issues. I share many of the Vice President's views, and I had the honor of discussing the problem of campus unrest with him recently in his office in the Capitol. The picture above was taken during our visit.

Visit with veterans.—During the Midwinter Conference in Washington in February, I visited with members of the National Disabled American Veterans organization. I am shown here chatting with members who came from as far away as California. I also enjoyed meeting with James E. Collins of Kingsport and others from my District at this meeting. Mr. Collins is a very active member of the DAV and is presently serving on the National Executive Committee.

Awards from all five national veterans' organizations received.—Shown above are the citations and awards I have received from all National Veterans' Organizations. The awards, presented to me for distinguished service in Congress and service to veterans and servicemen, are from (left to right) Veterans of World War I, The American Legion, Veterans of Foreign Wars, AMVETS, and Disabled American Veterans. As a veteran of World War II, I am especially proud of these awards and I will continue to support legislation to benefit veterans and servicemen.

My committee at work.—The members of the powerful House Rules Committee are shown above. I am the fourth ranking Republican member of this Committee which sets the rules on the legislation that goes to the House floor. This picture was taken during a recent session when an important piece of legislation was being discussed.

IN CONCLUSION

Although I was involved in many other decisions and activities during the past few months, I believe the information I have included in this report gives you some of the highlights of this session so far.

In closing, I would like to say that it is my hope that the high cost of living can be lowered, taxes reduced, the war ended speedily and honorably, and that law and order can be restored throughout the land. I will continue to do everything I can to achieve these goals.

Sincerely,

JAMES H. QUILLEN.

CONGRESSMAN ZWACH SCHEDULES MEETINGS DURING RECESS

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. ZWACH. Mr. Speaker, Minnesota is a land truly blessed. It was endowed by our Creator with a profusion of sky-blue lakes, meandering streams, verdant fields, and stately forests.

Our greatest asset, however, is our people—healthy, long lived, clear thinking, ambitious, God-fearing, thrifty, and hard working.

It is a great privilege for me, and I am highly honored, to have been elected by the people of the Sixth District of Minnesota to be their Representative in the Congress of the United States.

In our congressional district, we have 3,871 lakes totaling more than half a million acres, an average of 134 acres per lake. While most of this water is still unpolluted, clear, blue, and drinkable, problems are arising where the lakeshores are too densely built with summer homes using septic tanks.

As we move into the decade of the 1970's, we must evolve new techniques for disposing of the wastes from these homes. We cannot pollute our lake waters and endanger our bountiful fish life.

Marvelous Minnesota is a delightful place to live. Almost endless recreational opportunities are right outside the door, summer, fall, winter, and spring. The recently passed Resource Conservation and Development Act, which I had introduced, will further enhance these recreational opportunities.

Snowmobiling, a universal wintertime activity, has given birth to whole new industries and has necessitated new courses in our vocational schools.

Boats are almost as numerous in Minnesota as automobiles and again new industry thrives as a result and vocational schools are offering new courses.

Our forests provide a steady income from the harvesting of timber and pulpwood, giving employment to our people in lumber and paper mills. The forests are home for a wide variety of wildlife and a happy hunting ground for our people.

With all of this, the Minnesota Sixth Congressional District is one of the most thoroughly agricultural districts in the entire Nation. We have 32,500 farms on which live some 130,000 people. Each farmworker provides food and fiber for himself and 44 others. Agricultural production in our district provides eventual employment for over 650,000 people. Our farms have 25 percent of Minnesota's dairy cows and 28 percent of our State's pigs. We are a leading producer of corn, soybeans, and flax.

Our public school system ranks among the best. We are a leader in vocational education for those who are not college bound. We are proud of the seven colleges in our district whose graduates take their places among the leaders of our great Nation.

Mr. Speaker, I am deeply grateful for the opportunity to serve the people of this most generously endowed area.

I believe in keeping these people informed about my activities in Congress. Each week I send a news column and one or more news releases to each of our 87 weekly and 9 daily newspapers as well as our 21 radio stations. I also provide a separate weekly radio report for these stations.

So that I can know what my constituents are thinking, each year I send a congressional questionnaire to each of the 134,000 households in our district, asking their opinions on the main issues facing our country. The response to these questionnaires has been outstanding.

As the Representative of this outstanding district, I have considered it my duty not only to be well informed of the opinions of my constituents, but also to be of the greatest possible service to those persons or local governmental units having problems dealing with agencies or departments of our Federal Government.

To close the 1,200-mile gap between these people and their Government in Washington, I hold grassroots conferences each year throughout our district at times when Congress is not in session.

During the time I am in Washington and unable to visit with my constituents in person, I have a competent secretary in our district office in the Federal building in St. Cloud to help them with their requests for aid in dealing with the Federal Government.

This year, during our official August recess, I am again taking time to hold grassroots conferences throughout our district at convenient public buildings. Because of the shortness of the recess, I must confine these meetings to the county seats this year.

I deeply appreciate the fine cooperation of the many public officials who have made these meetings possible by making conference sites available so that I can render this public service.

I have arranged the following schedule. All of the meetings will be held in the county courthouse.

The schedule follows:

SCHEDULE

Tuesday, August 18: 9:00 am to 11:30 am, Kandiyohi County in Willmar.

Wednesday, August 19: 9:30 am to 11:30 am, Redwood County in Redwood Falls.

Thursday, August 20: 9:00 am to 11:30 am, Meeker County in Litchfield; 2:00 pm to 4:30 pm, Wright County in Buffalo.

Monday, August 24: 9:00 am to 11:30 am, Stevens County in Morris; 2:00 pm to 4:30 pm, Big Stone County in Ortonville.

Tuesday, August 25: 9:00 am to 11:30 am, Lac Qui Parle County in Madison; 2:00 pm to 4:30 pm, Swift County in Benson.

Wednesday, August 26: 9:00 am to 11:30 am, Stearns County in St. Cloud; 2:00 pm to 4:30 pm, Benton County in Foley.

Thursday, August 27: 9:00 am to 11:30 am, Crow Wing County in Brainerd; 2:00 pm to 4:30 pm, Morrison County in Little Falls.

Friday, August 28: 9:00 am to 11:30 am, Mille Lacs County in Milaca; 2:00 am to 4:30 pm Sherburne County in Elk River.

Monday, August 31: 9:00 am to 11:30 am, Lincoln County in Ivanhoe; 2:00 pm to 4:30 pm, Lyon County in Marshall.

Tuesday, September 1: 9:00 am to 11:30 am, Yellow Medicine County in Granite Falls; 2:00 pm to 4:30 pm, Chippewa County in Montevideo.

Wednesday, September 2: 9:00 am to 11:30 am, Renville County in Olivia.

Anyone wishing to see me may do so at the location most convenient for them. No appointments are necessary. I sincerely urge individuals and groups to call on me if I can be of help to them in solving any of their problems dealing with the Federal Government.

The knowledge I obtain from these conferences will enable me to render better service, both legislative and personal, to all of the people of our important Sixth Congressional District.

TEMPORARY PERSONNEL SERVICES

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. WOLFF. Mr. Speaker, I would like to call attention to a significant contribution to the small businessmen of our Nation by one of my constituents, William Olsten. As president of the Olsten Corp., one of the largest temporary personnel services in the country, Mr. Olsten is an expert on many aspects of the labor scene, with particular knowledge of temporary help. He has offered the benefit of his knowledge and experience to small businessmen as author of a booklet, recently published by the Small Business Administration, entitled "Pointers on Using Temporary-Help Services."

We are all aware of the precarious position that many small businesses occupy in our economy. They have limited capital and limited credit, limited resources and limited ability to rebound after even a mild slowdown. They suffer from a number of critical shortages, not the least of which is skilled manpower.

Rising payroll costs are aggravating a situation where there is already strong downward pressure on profits. What Mr. Olsten offers is an approach to personnel management that can check the inflating ratio of payroll costs to the total volume of a small business without sacrificing any of the productive capacity needed to keep the business healthy and growing.

"Almost every business needs extra help at one time or another," Mr. Olsten points out in the new SBA booklet, "in order to cope with rush orders, employee absences, seasonal peaks or special tasks." The extra workload puts a strain on the businessman and his employees as well as the budget when overtime is required to meet the emergency.

Rather than undertake the prohibitive expense of staffing a small business to meet these peak periods, Mr. Olsten recommends the use of temporary workers who can satisfy production requirements when and where they are needed. Mr. Olsten notes that these workers may be obtained from temporary-help firms for part of a day or for extended periods, and they are available for a wide range of office, professional, and industrial jobs.

The advantage of using a temporary personnel service shows up in the cost for getting the work done, Mr. Olsten explains. It costs considerably less than keeping extra employees on regular payroll, and it is also more economical than hiring temporary employees directly. But he also points out that in some circumstances—because of employee morale or specific job requirements—it is advisable to meet work emergencies with overtime.

The most efficient use of the efficient management tool that temporary help represents lies in long-range planning, Mr. Olsten emphasizes. Production and personnel emergencies are always there, but they need not turn into wasteful crises. That can be avoided: "Study your production schedules. Note peak periods. Compare this year with previous years. A pattern will begin to emerge, and you'll be able to see where some extra help would have avoided problems and kept your costs down."

In the SBA booklet, Mr. Olsten also advises the small businessman on the important details of how to select a temporary-help firm and the mechanics of requesting and utilizing temporary employees so as to get the most out of the temporary work dollar. The booklet, distilling the experience and advice of Mr. Olsten in the critical personnel area, is indeed a valuable tool for the small businessman.

We can also look beyond the small businessman to appreciate the benefits that temporary work holds out for the employee involved and the Nation as a whole. Temporary workers comprise a significant portion of the labor force, and the large majority of them are women. Typically, they are housewives—or recently widowed or divorced—who cannot or do not have the need to work at a permanent job. They enter the labor market for a number of reasons: to lead a more active and rewarding life; to supplement regular family income that may otherwise be inadequate; to help pay for large expenses such as hospital bills or college tuition; or to buy special items that they would otherwise not afford.

The fact that these women want to join the labor force and find temporary work the most convenient way is certainly a benefit to business and industry that needs their skills. Many of them worked regularly before getting married and need only a brief refresher course, provided free of charge by a number of temporary service firms, in order to bring their skills up to date.

A smaller, but important group of workers who benefit from temporary employment, includes senior citizens and those who retire early. As a supplement to social security or pensions, their earnings allow older people to live more comfortably. More important, temporary work gives them a feeling of being useful, and allows them to lead a more vigorous and active life when they don't want to retire completely. Employers also value older workers because of their dependability and the years of experience they bring to their temporary jobs.

A variety of skills and services are thus mobilized for the mutual benefit of temporary workers, businesses that use them and the entire economy of the country.

SENATE—*Friday, July 24, 1970*

The Senate met at 11 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O God our Father, all the ways of our need lead to Thy throne and Thou satisfieth us early with Thy mercy. As we turn from the tumult and tension of our troubled times, in this quiet moment we pray that Thou wilt "take from our souls the strain and stress, and let our ordered lives confess the beauty of Thy peace."

Grant us, Lord, not the peace of escape from our burdens, but the peace of work well done. Seal our lives against cynicism, doubt, and fear and all the little evils which blight the spirit and break fellowship with Thee and with one another.

Keep us young in heart and mind, growing in all that pertains to Thy kingdom. And may there come at eventide the realization of the prophet's words: *The work of righteousness shall be peace; and the effect of righteousness, quietness, and confidence forever.*

In Thy holy name we pray. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 24, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND A JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Geisler, one of his secretaries, and he announced that the President had approved and signed the following acts and joint resolution:

On July 17, 1970:

S. 3564. An act to amend the Federal Youth Corrections Act (18 U.S.C. 5005 et seq.) to permit examiners to conduct interviews with youth offenders.

On July 18, 1970:

S. 1455. An act to amend section 8c(2)(A) of the Agricultural Adjustment Act to provide for marketing orders for apples produced in Colorado, Utah, New Mexico, Illinois, and Ohio;

S. 3592. An act to amend the Federal Meat Inspection Act, as amended, to clarify the provisions relating to custom slaughtering operations; and

S. 3598. An act to amend section 32(e) of title III of the Bankhead-Jones Farm Tenant Act, as amended, to authorize the Secretary

of Agriculture to furnish financial assistance in carrying out plans for works of improvement for land conservation and utilization, and for other purposes.

On July 20, 1970:

S. 1519. An act to establish a National Commission on Libraries and Information Science, and for other purposes;

S. 3215. An act to amend the National Foundation on the Arts and the Humanities Act of 1965, and for other purposes; and

S.J. Res. 201. Joint resolution to extend the reporting date of the National Commission on Consumer Finance.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore (Mr. ALLEN) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Commerce.

(For nominations received today, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE— ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes; and it was signed by the Acting President pro tempore (Mr. ALLEN).

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, July 23, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, with the forbearance of the distinguished Senator from Ohio (Mr. YOUNG), who is to be recognized now, I ask unanimous consent that at the conclusion of his remarks, there be a limitation of 3 minutes on statements in relation to the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

OFFICE OF TELECOMMUNICATIONS POLICY

The assistant legislative clerk read the nomination of Clay T. Whitehead, of California, to be Director of the Office of Telecommunications Policy.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

U.S. AIR FORCE—U.S. ARMY—U.S. NAVY

The assistant legislative clerk proceeded to read sundry nominations in the U.S. Air Force, U.S. Army, and U.S. Navy.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Air Force, Army, and Navy nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

The assistant legislative clerk read the nomination of Colston A. Lewis, of Virginia, to be a member of the Equal Employment Opportunity Commission.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—IN THE ARMY, IN THE NAVY, AND IN THE PUBLIC HEALTH SERVICE

The assistant legislative clerk proceeded to read sundry nominations in the Army, in the Navy, and in the Public Health Service, which had been placed on the Secretary's desk.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. At this time, in accordance with the previous order, the Chair recognizes the distinguished Senator from Ohio (Mr. YOUNG) for not to exceed 20 minutes.

ANOTHER PYRRHIC VICTORY

Mr. YOUNG of Ohio. Mr. President, nearly 300 years before the birth of the Saviour, Pyrrhus King of Epirus defeated the Roman legions at Asculum at heavy costs in lives to his own forces. His name has survived as the symbol of a victory won at a cost so excessive as to make the victory meaningless.

It is evident that in no war in the history of our Nation have we suffered so many pyrrhic victories as in this the longest war waged in the history of our country, and at that an undeclared and immoral war.

Furthermore, not in any war in which Americans fought was there such a policy followed as the body count indulged in by Pentagon officials from 1963 to the present time.

When General Eisenhower and John F. Kennedy were our Presidents, we had military advisers in Vietnam and no combat soldiers. President Johnson made the ruinous decision to expand the war in Vietnam by sending over combat troops to fight in an undeclared war and in a small country 10,000 miles distant from our shores and of no importance whatever to the safety of the United States. This was the gravest blunder ever made by any American President. Due to this, President Johnson, who had been elected by a tremendous margin in 1964, bowed out directly following the New Hampshire primaries.

Richard Nixon claimed in 1968 that he had a secret plan to end the war. Citizens believed him. He was elected our President. That plan is still his secret. Instead of ending the war, he has expanded and escalated it without consulting Congress or even all the members of his Cabinet. Without informing congressional leaders or seeking their advice and, it is said, without even informing his Secretary of Defense, he ordered the invasion or as he termed it intrusion into Cambodia. With approximately 30,000 soldiers and with our huge B–52 bombers accompanied by soldiers of the Saigon militarist regime, we invaded Cambodia whose neutrality we had guaranteed. Up to that time, Americans were not being killed in Cambodia.

In this morning's Washington Post there is a rather hideous picture of an alleged Communist solidier taken prisoner in Cambodia with his triumphant victor standing beside him. The prisoner of war has his head hooded and his hands manacled behind him.

Mr. President, those of us who fought in World War II never saw German prisoners of war manacled, with their heads hooded, or being tortured. The facts are that as a signatory to the Geneva agreement, we pledged humanitarian treatment to all prisoners of war. But, here we can tell from pictures of this sort that we are aiding and abetting the forces of the militarist regime of Saigon in the cruel torture of prisoners of war.

It happens that in 1943 in North Africa, on many occasions I saw German prisoners of war from the Africa corps. Never did I see any of them with their hands manacled or their faces hooded. Frequently they would march with their hands over their heads, but they marched in dignity. They were losing the war. They were prisoners of war, but they were humanely treated.

Mr. President, believe it or not, one dark morning when it was hardly daylight, I was walking along alone, the safety catch on my .45 revolver was still on. Suddenly out of an alley seven big German soldiers came to surrender to me. Fortunately they surrendered to me. I did not order them hooded or manacled.

I was happy, almost unbelieving that they had surrendered. I proceeded along until I came across an American MP and, with a sigh of relief, I delivered the prisoners to the proper authority. We never thought of torturing prisoners in those days.

Now, President Nixon terms our Cambodian invasion the "greatest military success of this war." Here is another pyrrhic victory. At the same time our B–52 bombers are bombing Laos and American Army officers in disguise are in every area in Laos, President Nixon has expanded our involvement so now Pentagon terms this as an Inchochinese war.

We Americans, without any declaration of war by Congress, have taken up where the French, seeking to expand their lush and oppressive Indochinese colonial empire, were compelled to quit when their garrison at Dienbienphu was overrun and captured May 7, 1954.

Pentagon officials have supplied statistics on bodies of Cambodians, Vietcong, and North Vietnamese allegedly killed and rice, ammunition, and weapons reportedly captured. The facts are, Mr. President, before this so-called "quick, surgical strike" into Cambodia, the Vietcong were said to have some guerrilla hideouts along the border areas in the jungles and were said to use paths along the so-called Ho Chi Minh Trail bordering on Laos and Cambodia with South Vietnam.

At the present time, Cambodia, instead of being a neutral area, is occupied by guerrillas of the South Vietnam National Liberation Front and by North Vietnam soldiers. They control eight provincial capitals, ruling all the northeastern provinces and virtually all approaches to the national capital of Phnompenh. Our action has resulted in Prince Sihanouk, long a neutralist, now in Peking becoming a confirmed ally of the Communists. Prince Sihanouk apparently enjoys the support of most of the peasants in Cambodia. The likelihood of a civil war engulfing Cambodia is high. Furthermore, open hostilities are occurring daily between the ill-equipped Cambodian ground forces and our friendly forces of South Vietnam.

For more than 1,000 years, the Vietnamese and the native habitants of Cambodia have been hostile. Those South Vietnamese soldiers who are too friendly to fight alongside Americans, have enjoyed killing Cambodian men, raping Cambodian women, and looting Cambodian villages.

In an effort to offer quantitative proof of the great American victory, military and administration officials quote at will the statistics already too familiar to Americans. What they do not mention is that senior commanders on the scene have estimated that allied forces found only 30 to 50 percent of the material the Communists had stored in the border sanctuaries. The strange variety of materials captured indeed suggests that much was missed.

It is to be noted, for example, that nearly half of the ammunition found by American troops in the so-called fishhook area was .51 caliber antiaircraft rounds, yet in the past, this has been a relatively small item in the Communist arsenal. Of all the rifles captured, only about 2,000 were AK–47's, the basic individual weapon used by the Communists.

In fact, the whole cache-counting syndrome is a waste of time, for, as one officer said: "It can all be replaced with one boatload."

The facts are that most of the Communist forces had foreseen an invasion of the border areas as soon as Prince Sihanouk's neutralist government was overthrown, and had already begun moving out of the area. The bulk of the enemy forces were able to escape with their basic armaments intact. The President claimed on April 30 to be invading the sanctuaries in an effort to capture the main Communist headquarters, COSVN, and yet no mention was ever made thereafter of the results of this move. In fact, COSVN, too, escaped virtually unscathed.

It is also interesting to note that several weeks ago Vietcong forces captured two trains bound for Phnompenh and in one easy blow captured an amount of rice equal to one-fifth of that taken from the sanctuaries in 6 weeks of work by American forces.

It is now evident that as a result of the invasion of Cambodia the war in Vietnam has become the war in Indochina. It is being called that. It has expanded and extended into practically all areas of that part of Southeast Asia. This is done under the authority of President Nixon who said that he had a secret plan for ending the war in Vietnam.

The President says that all American forces have been withdrawn. However, American planes flown by American pilots are still bombing deep inside Cambodia. Thousands of South Vietnamese troops are still operating inside Cambodia, and there is no hint as to when they may leave. The administration claims strong support from Thailand, the country whose own security would be most affected by a Communist victory in Cambodia, and the Thais have made indirect references to sending a few troops. Yet more than 3 months after the Lon Nol government asked for help from its neighbors, Thailand has supplied exactly 10,000 pairs of black socks, 5,000 raincoats, 20,000 mosquito nets, and five American-built, propeller-driven T–28 light planes. It is quite obvious that the rest of Southeast Asia does not see the situation in the same light as the Nixon administration.

Mr. President, despite all these facts, the administration continues to talk of a great military victory in Cambodia. It is apparent that because of the American and South Vietnamese action, regardless of whatever shortrun tactical gains may have accrued, Cambodia has been turned into a new battlefield and its former ruler, a neutralist, has turned to Communist China and has brought in that powerful nation as a friend of the unfortunate Cambodian people.

Before the American invasion, Cambodia was a neutral country which was, despite undeniable Communist presence in a few border regions, maintaining a delicate and precarious position outside the terrible war in Vietnam. Now the prospects are for a protracted war in Cambodia and a long-term enemy presence in a large part of the countryside which will likely result in a bloody civil war.

Mr. President, it is so-called victories such as this which have cost the people of Southeast Asia and the United States so much over the last 6 years. As long as the Nixon administration and the high command in Saigon insist on using the tired rhetoric of military success to cover up defeats and until the administration ceases to dream of a conventional military victory in a war that cannot be won, the prospects for an end to the senseless waste in Southeast Asia are dim indeed.

YANKEE, GO HOME

Mr. YOUNG of Ohio. Mr. President, a Gallup poll, or survey made by the U.S. military command in South Vietnam completed recently and, then suppressed on order from Ambassador Bunker and top U.S. Army officials in Saigon shows 65 percent of the people in all South Vietnam want all Americans out of the country. The American Broadcasting Co. reported that 30 percent had no opinion but 5 percent mostly in Saigon, wanted Americans to stay.

CONSUMERS BEING SHORTCHANGED

Mr. YOUNG of Ohio. Mr. President, the failure of Federal bureaucrats to implement consumer protection laws is shocking and inexcusable. Officials of the National Commission on Product Safety created by Congress recently reported that amendments to the Flammable Fabrics Act passed in 1967 have not "saved a single life, ameliorated a single burn injury, or reduced pain or disfigurement."

Fires involving fabrics cause more than 3,000 deaths and up to 250,000 injuries in our country every year. Many elderly patients killed in the tragic nursing home fire in Marietta, Ohio, last January would be living today except for the flammable carpeting in that institution. Nevertheless, officials of the Commerce Department have failed to take steps to apply even the weak existing flammability standard to dangerous

flammable blankets, bedding and other interior furnishings. Not until recently were special standards set for children's clothing.

The report also accuses the Food and Drug Administration of intolerable delays noting it took 2 years to propose a ban on the highly dangerous poison carbon tetrachloride, a home drycleaning agent. The fact is the FDA's Bureau of Compliance has but one full-time employee responsible for enforcing the banning or labeling of thousands of potentially hazardous products. It is high time that Federal agencies take swift action to enforce laws and protect consumers from unsafe, untested merchandise.

ORDER FOR ADJOURNMENT TO MONDAY, JULY 27, 1970

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, when the Senate completes its business today, it stand in adjournment until 12 noon on Monday next.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

S. 4118—INTRODUCTION OF AGRICULTURAL ACT OF 1970

Mr. DOLE. Mr. President, this Nation's farmers urgently need some assurance that a farm bill will be enacted this year, so I am introducing a bill today which is identical to the one reported favorably by the House Committee on Agriculture.

I recognize this bill is far from perfect and that it does not enjoy the support of farm organizations generally and, in addition, recognize the critical importance of passing farm legislation this year.

I have great respect for the House Committee on Agriculture and the leaders of that committee—the chairman, Mr. POAGE, and the ranking Republican member, Mr. BELCHER.

Having served on the committee for 8 years, I am also aware of the difficulties in reaching an agreement on any farm legislation—particularly in the House because that body is dominated by Members from urban and suburban areas.

In my home State of Kansas, and the surrounding States, the wheat that was planted last September and October has been harvested.

The wheat producer must plant his next winter wheat within 60 to 80 days from now. Before planting he must plan and prepare his ground as a seedbed for the crop and comply with the farm program. The present wheat program expires December 31 of this year. How can he plan his crop without knowing the provisions of the farm legislation with which he must comply?

I wish to emphasize the urgency of the passage of a farm program as soon as possible.

As initially indicated, this bill may not be perfect, and I would assume changes will be made by the Senate Committee on Agriculture and Forestry. However, it deserves serious consideration.

It is my hope that introduction of this bill will assure Members of the House and farmers throughout America that the Senate is aware of the need for quick action on farm legislation.

Mr. President, I ask unanimous consent to have printed in the RECORD the principal provisions of the Agricultural Act of 1970.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). The bill will be received and appropriately referred; and, without objection, the provisions of the bill will be printed in the RECORD.

The bill (S. 4118) to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes, introduced by Mr. DOLE, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

There being no objection, the provisions were ordered to be printed in the RECORD, as follows:

PRINCIPAL PROVISIONS OF THE AGRICULTURAL ACT OF 1970

TITLE I—PAYMENT LIMITATIONS

Places an annual payment limitation of $55,000 per farmer for each of the three major commodity programs, wheat, cotton and feed grains.

TITLE II—DAIRY

1. Extends and amends the authority for the Dairymen's Class I Base Plan in federal milk market order areas. It specifically guarantees competitive access to Class I Base Plan markets by established producers outside the market order area. Appeal procedures under present law remain unchanged.

2. Suspends the operation of the mandatory butterfat price support program for farm-separated cream and permits the Secretary to set lower support prices on butter.

3. Extends the Secretary's authority to donate dairy products owned by CCC to the Armed Services and Veterans Hospitals.

4. Extends the Secretary's authority to make indemnity payments to dairy farmers who through no fault of their own have their milk contaminated by and condemned because of the presence of pesticides and residues.

TITLE III—WOOL

1. Extends the National Wool Act of 1954, as amended, through December 31, 1973.

2. Continues the present incentive price of 72 cents per pound for shorn wool and 80.2 cents per pound for mohair for each year of the extension.

TITLE IV—WHEAT

1. Suspends both the marketing quota program for 1971, 1972, and 1973.

2. Provides domestic marketing certificates to farmers participating in the set-aside program in an amount equal to U.S. food consumption (about 530 million bushels annually).

3. Sets the face value of these domestic certificates at the difference between the wheat parity price (currently $2.82 per bushel) and the average price received by farmers during the first five months of the wheat marketing year (which starts on July 1.)

4. Provides for a "preliminary" payment to participating farmers as soon as possible after July 1. This payment would be the amount estimated by the Secretary to be 75 percent of the value of the domestic certificate. The balance of the payment (if any) would be paid in December. If the Secretary's estimate were too high, no refunds by farmers would be required.

5. Continues the cost of certificates to wheat processors at 75 cents per bushel.

6. Authorizes the Secretary to set non-recourse loans to participating farmers from zero to 100 percent of the parity price for wheat.

7. Establishes a "set aside" program under which wheat farmers, in order to be eligible for loans, certificates, and payments under the program, must set aside or divert from the production of wheat and other crops an acreage determined by the Secretary.

8. Authorizes payments to participating farmers for any additional set-aside acreage and for permitting public recreational access.

TITLE V—FEED GRAINS

1. Establishes a voluntary feed grain (i.e. corn, grain, sorghum, and barley) program for 1971, 1972, and 1973.

2. Provides that price support payments to participating farmers on one-half of their feed grain base will be the difference between not less than $1.35 per bushel (for corn) and the average market price for the first five months of the marketing year (which starts on October 1 on corn and grain sorghum and July 1 on barley). In no event, however, would these payments be less than 32 cents per bushel for corn (with corresponding rates on grain sorghum and barley).

3. Authorizes the Secretary to set non-recourse loans at zero to 90 percent of feed grain parity prices.

4. Authorizes additional set-aside and public recreational access payments.

5. Establishes a "set-aside" program under which participating farmers would be required to set aside or divert feed grain or other cropland in order to become eligible for feed grain loans and payments.

6. Provides for a "preliminary" payment of 32 cents per bushel on corn to participating farmers as soon as possible after July 1. If the difference between the average market price and $1.35 were more than 32 cents during the first five months of the marketing year, an additional payment would be made. In no event would refunds by farmers be required.

TITLE VI—COTTON

1. Provides a guaranteed support of 35 cents per pound (middling one inch basis) on the estimated production from 11.5 million acres for the 1971 crop and an equivalent amount for the 1972 and 1973 crops.

2. Makes assistance available to participating cotton farmers through loans and payments. The loan would be 90 percent of the estimated average world price. The payment would be the difference between 35 cents and the average market price for the first five months following the beginning of the marketing year (which begins August 1), but in no event less than 15 cents per pound. No refunds by farmers would be required in the event market prices were greater than 20 cents per pound.

3. Authorizes payments to participating farmers on acreage made available to the public for recreational purposes.

4. Provides for a set-aside of cropland (not to exceed 33⅓ percent of the cotton allotment) as a condition of eligibility for benefits under the program.

5. Establishes a voluntary program under which marketing quotas, penalties, and acreage restrictions would be suspended for three years.

6. Requires participating farmers to plant cotton to receive payments, with two exceptions: (a) if unable to do so because of natural disaster or other condition beyond producers' control; (b) if not less than 90 percent of allotment is planted.

7. Allows the sale of cotton allotments within a State, permits the lease of allotments within a State, and provides for the release and reapportionment of allotments during the 3-year life of this legislation.

TITLE VII—PUBLIC LAW 480

1. Extends without change the provisions of P.L. 480 (the "Food for Peace" program) which authorizes donations and long-term dollar credit and foreign currency sales of U.S. farm commodities to underdeveloped nations. Under the Act most foreign currency sales are scheduled to end by December 31, 1971.

TITLE VIII—GENERAL AND MISCELLANEOUS

1. Continues the "Cropland Conversion" and "Greenspan" (long-term land retirement programs) at an authorized appropriation level of $10 million annually for each program.

2. Continues the current exemption from marketing quotas for boiled peanuts.

3. Permits farmers or other land owners who do not desire to hold an allotment on any crop under a government program to voluntarily relinquish it. (This would be a permanent provision.)

4. Establishes an indemnity program to reimburse beekeepers for losses caused by pesticide residues.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I may proceed for 8 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

CONGRESSIONAL ACTION ON BUDGET REQUESTS

Mr. PROXMIRE. Mr. President, last weekend President Nixon charged the Congress with contributing to inflation by increasing the Executive's budget requests. The President is picturing Congress as the "big spender." I think he is getting away with murder. I do not think Congress is as big a spender as the President himself. The President hinted that Congress was being irresponsible in the appropriations it has passed. He said:

> There is a persistent and growing tendency to approve increases in expenditures without providing the revenue to pay the costs.

Mr. President, in trying to pin the "big spender" label on the Congress President Nixon was both unfair and historically incorrect. The Congress has, and I am confident it will continue to be, the force in the Federal Government which is preventing irresponsible spending. Since 1946, for the past 25 years, the Congress has in every year made substantial cuts in appropriations below the President's budget requests. This includes every single Eisenhower budget submitted to a Democratic Congress, and that was seven times, and seven times Congress cut the Eisenhower budget, and the Nixon budget last year which the Congress cut.

For a look at who is the "big spender" we need only examine the President's budget requests last year and compare them with the amount Congress appropriated. Congress cut President Nixon's appropriations by $5½ billion. Yes $5½ billion. Of the 14 appropriations bills sent to Congress we cut 10 of them. We cut the Treasury bill, the Post Office and executive offices bill, the independent offices and HUD bill, the Interior bill, State, Justice, Commerce, and Judiciary bill, the legislative branch bill, the military construction bill, the District of Columbia bill, the Defense Department bill, the foreign aid bill, and the supplemental appropriations bill.

And what about this year? The President apparently believes we will spend more than he requested. Well I would like to reassure him that it just is not so. This Congress will cut the President's overall appropriations requests. As of today, the only fiscal 1971 appropriations bill to pass Congress and be sent to the President is the District of Columbia appropriations bill. We cut that bill by a whopping 22 percent. And we will cut others.

It is true that we have been adding to such bills as education and housing. These additions, however, will be more than balanced by cuts in other areas especially the military. I remind President Nixon that the Armed Services Committee has already cut the military authorizations bill by $1.3 billion. And I believe that is only the beginning. I am convinced that bill will be even further reduced when it comes onto the floor.

What we are faced with here is a difference in emphasis. The Congress has taken a more radical turn than the White House. It has turned away from unnecessary military expenses and extravagant programs and toward more emphasis on human resources. What we are discussing here is the difference between hospitals and the C–5A, between food programs for our children and the ABM. The Congress hopes to hold the line on spending while continuing its massive attack on domestic problems.

It is my belief that the administration should be out in front of the move to reorient our Nation's priorities. I think it unfortunate that the President continues to place such emphasis on unnecessary and extravagant programs. It is ironic that while the President is accusing Congress of contributing to inflation he supports projects that, because they contribute to no specific human need, are particularly inflationary.

President Nixon's intentions are good. He is as concerned as we all are with the economic health of the Nation. It is a fact he has joined the reorientation of our priorities. I only wish he had gone further.

But there is one thing I think must be made perfectly clear. In reorienting our priorities the Congress has not become a bigger spender than the Executive. In the last quarter of a century the Congress has consistently reduced the President's requested expenditures. I am so sure that the Congress will again do a responsible job for the taxpayers of this country that, if it does not, I will contribute $1,000 to the campaign of my Republican opponent in this fall's Wisconsin election. Should the Congress not complete work on the budget until after the November 3 election, and if the Congress fails to cut the budget, I will contribute the $1,000 to my opponent's favorite charity.

I do not make this commitment as a long shot or a risk. I am not taking a risk. I do so to make the point that I am confident Congress will cut back the President's request for appropriations. I wish to emphasize that the President was dead wrong when he implied Congress was this Nation's big spender.

The President's remarks are beginning to frame the Congress as a villain in the eyes of the public. Even that completely honest and sensitive cartoonist for the Evening Star, Gib Crockett, has accepted the misconception. In a cartoon this week he portrays Congress as a Sugar Daddy buying gifts for his miniskirted girlfriend—Miss Inflation. A minister with an unmistakable resemblance to President Nixon is shaking his finger, as Miss Inflation tells her Sugar Daddy to "Pay no attention, Daddy—let's keep going." Congress has all kinds of goodies to offer, but the President is depicted as refusing every request for extravagance and trying to caution Congress to hold down spending or inflation is going to pull us down.

Mr. President, through my willingness to contribute $1,000 to my opponent if Congress fails to cut the budget, I am trying to clear up this misconception and it has been reflected in newspaper articles throughout the country, including those by some of the best informed commentators in the country.

I have sent President Nixon a letter telling him of my commitment to contribute to my opponent if his requests are below congressional actions. I hope it will move him to reexamine the role Congress has played in the last quarter century. We have cut back, not increased Presidential requests for appropriations. And we will do so again this year. Of course, we may not cut spending where the President wants it cut but overall we will cut it.

Mr. President, I ask unanimous consent that the text of my letter to President Nixon be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 23, 1970.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: While I respect your right to challenge the Congress in its actions, I also respectfully submit that the Congress has done a responsible job in considering fiscal proposals from the Presidents.

In each of the last 25 years, the Congress has reduced the Presidents' budgets. It has always appropriated less than the Presidents have requested. I am sure this Congress will do so again.

I am so positive that I am proposing this: Should the Congress appropriate more than your budget request, I shall contribute $1,000 from my own pocket to the campaign fund of my Republican opponent in this year's Wisconsin general election.

My feelings are strong that the Congress is responsible fiscally. That is why I make this offer. I await your reply.

Sincerely,

WILLIAM PROXMIRE,
U.S. Senator.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will please call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of Virginia. Mr. President,

I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that I may speak for 7 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SCHOOL DESEGREGATION

Mr. BYRD of Virginia. Mr. President, in its July 22 edition, the Richmond News Leader published an open letter to the Supreme Court, together with several editorials and a sampling of national comment on the subject of school desegregation.

I agree wholeheartedly with the views expressed in the open letter and the views expressed in the editorials.

In the open letter, the newspaper makes the point that education is the proper function of the schools and that classrooms should not be made laboratories for sociological experiments. I have many times made the same point in comments on the floor of the Senate.

The purpose of this open letter to the Supreme Court is to attempt to bring before the Court some of the many problems involved in recent court decisions.

The Richmond News Leader is attempting to bring about an understanding on the part of the Court that many of its decisions are destroying the public school system. The purpose of the open letter is to attempt to have the Court realize many of the practical problems involved in some of its decisions. I feel that this open letter to the Court is a fine public service. I hope it will be effective. I hope that the Court will pay some attention to the views expressed by this outstanding Virginia newspaper.

Mr. President, I know well the executives of the Richmond newspapers. I know how much at heart they have the welfare of the citizens of that community. I know how deeply they want to be helpful to the parents and to the children in the Richmond public school system.

The open letter points out that the freedom of choice plan now in effect for the schools of the city of Richmond has been effective. It has resulted in substantial desegregation without disrupting the educational process.

In my view, freedom of choice is the logical method for the assignment of pupils to public schools. Under freedom of choice, the rights of parents and students of all races are properly safeguarded.

The open letter also notes that compulsory integration, which would be accomplished by extensive busing of students, is a form of reverse discrimination.

The letter comments that "under compulsory integration, all children in Richmond—particularly minority children—would be denied admission to a school by reason of their race." I am convinced that this is correct, and that the same kind of reverse discrimination will occur wherever compulsory busing is forced upon a school district.

The open letter also includes the observation that compulsory busing plans are expensive. It estimates that as much as $4 million might be required to carry out a court-approved plan requiring the busing of Richmond schoolchildren. It is this busing requirement, this busing of children from their own neighborhoods all the way across the city to another area, an area unknown to the children, which the Richmond newspapers are protesting, and it is what the people of Richmond of all races are protesting.

This $4 million, if it is to be spent, might better be used to improve the educational facilities of the city. And the same holds for any other community required to make a large outlay for the purchase and operation of buses.

Another point made in the open letter is that "if compulsory busing were required under an integration plan imposed by the courts, the role of the school in the community would be destroyed."

I think this is an important observation. Schools should be an intimate part of the communities they serve. Children should have the sense of security and identity that neighborhood schools provide. Parents should have easy access to the schools their children attend.

I might say, Mr. President, that I believe parents of all races want their children to go to school as near their homes as possible. They do not want their young children to be sent any farther away from home than is necessary to obtain an education.

Freedom of choice is a fair method for the assignment of pupils. Compulsory busing is an unfair method.

As the News Leader observes:

Children bused to achieve an arbitrary racial mix would be denied the same protection of the law granted those children who would not be bused to achieve an arbitrary racial mix.

All Americans—black and white, in the South and outside the South—pay taxes that support public schools. They have the consequent right to select which schools their children will attend.

Mr. President, I feel that the Richmond News Leader has rendered a fine public service in publishing its open letter to the Supreme Court, together with three excellent editorials and an interesting collection of comments from Negro leaders, the press, government leaders, the Federal courts, and others.

I ask unanimous consent that the text of the open letter to the Supreme Court, together with the editorials and commentary published by the Richmond News Leader, to which I have referred, printed at this point in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO THE SUPREME COURT OF THE UNITED STATES

JULY 22, 1970.

MAY IT PLEASE THE COURT:

This newspaper, seeking to reflect the sense of the people it serves, respectfully requests the Supreme Court to consider what is happening to the nation's public schools as a result of school integration compelled by the Federal judiciary. And it respectfully requests the Court to consider what would happen to public education in Richmond if compulsory busing were required to replace freedom of choice.

On June 30 Judge J. Braxton Craven, Jr., of the Fourth Circuit Court said in a dissenting opinion about a desegregation plan for Clarendon County, South Carolina, "It is true that constitutional principles may not be allowed to yield to community opposition. . . . It is equally true, however, that judges, in fashioning remedies, cannot ignore reality."

Through this open letter we invite the Court's attention to some realities that exist in, and relate to, the City of Richmond:

GOAL IS GOOD EDUCATION

The Court has held that education "is perhaps the most important function of State and local governments." The people of Richmond agree. They are concerned that the quality of education in the Richmond public schools would decline if children were assigned to schools solely on the basis of race.

RICHMOND SCHOOLS ARE GOOD

According to the Virginia Education Association, in the 1968–69 school year (the last year for which complete figures are available) Richmond's public schools ranked as follows:

	Per pupil cost	Student teacher ratio	Average teacher salary	High school dropout rate (percent)	High school graduates entering college (percent)
Richmond	$701	19.8	$7,919	6.4	47
Virginia	619	21.2	7,328	4.5	51
U.S.	696	23.2	7,952	21.5	(1)

[1] Unavailable.

In view of the large number of students from low-income families in Richmond's schools, the drop-out rate is remarkably low. For the same reason, the percentage of high school graduates entering college is spectacularly high; moreover, a high percentage of Richmond high school graduates are awarded advance placement in college.

Richmond's school system is a nationally recognized pioneer in economics education, in technical education, and in foreign language instruction.

NO OFFICIAL SEGREGATION IN CITY

In 1948 the Court held racial covenants in property deeds to be unconstitutional. It is wrong to cite these covenants as evidence of officially sanctioned segregation now.

Indeed, many Richmond neighborhoods already are integrated. The fact that few Negro and white parents have chosen to send their children to distant schools within the City demonstrates their confidence in the neighborhood school system. The Supreme Court never has ruled that racial imbalances resulting from residential living patterns are unconstitutional.

FREEDOM OF CHOICE HAS WORKED

Since 1966 the City has operated under a freedom-of-choice plan with no geographic zones. This plan was authorized by a 1965 consent decree issued by the Federal District Court, and upheld by both the Fourth Circuit Court of Appeals and the Supreme Court. Under that plan, parents had the

choice of sending their children to any school within the corporate boundaries of the City.

Under freedom of choice, Richmond's schools have been integrated:

In 1961, without freedom of choice, only 630, or .01 per cent, of 34,956 school-aged children in the City attended integrated schools.

In the 1967–68 school year—the second year of freedom of choice—19,504, or 44.6 per cent, of the City's school population attended integrated schools by choice of their parents.

In the 1969–70 school year, 21,156, or 50.2 per cent, of the City's school children attended integrated schools.

In fact, in the 1969–70 school year, every white child attending a regular public school in Richmond attended an integrated school.

COMPULSORY INTEGRATION

Is reverse discrimination

In *Brown v. Board of Education*, the Court held that *no* child could be denied admission to a school by reason of his race. Yet, under compulsory integration, *all* children in Richmond—particularly minority children—would be denied admission to a school by reason of their race.

Under freedom of choice, no child in Richmond has been denied admission to a school by reason of his race. In 1969, the Court defined a unitary school system as one "within which *no* person is to be effectively excluded from any school because of race . . ."

Results in resegregation

Washington, D.C., offers the most telling example. Between 1950 and 1967, the number of white children in Washington's schools decreased from 46,736 to 11,784. During the same period the number of Negro school children increased from 47,980 to 139,364. Two years after the school population reached racial parity, the number of Negro enrollment had climbed to 75 per cent. Of 157,565 school-aged children in Washington schools during the past school year, only 8,449 were white.

Similar resegregation can be predicted for the City of Richmond if the enrollment of each school were forced to reflect the racial ratio of 60 per cent black 40 per cent white of the over-all school population A local study of resegregation in the City's Northside showed that whites will stay in schools that are not more than 40 per cent black The record of John Marshall High School, on the City's Northside confirms this finding. In the 1967–68 school year the school's enrollment was 42 per cent Negro. In the 1968–69 school year, the Negro enrollment increased to 51 per cent. In the past year, the school's Negro enrollment reached 60 per cent.

Makes schools social labs

Even today, 16 years after the Brown decision, experts disagree on the value of integrated education. Richmonders accept integration when it occurs naturally. They oppose court-ordered artificial race mixtures, which, by uprooting children of both races, do more harm than good.

The parents of Richmond regard as racist the premise that a Negro child cannot learn unless he is in a classroom with whites. That is an arrogant variation of the notion that a white child will suffer from being in a classroom with blacks. Both notions are perverse.

Has altered role of schools

Under Richmond's freedom-of-choice plan, this City's schools have been almost free from violence.

This has not been the case elsewhere. Studies by the Senate Juvenile Delinquency Subcommittee, the House Subcommittee on General Education, and a private research corporation have disclosed that almost no school above the elementary school level in the nation was free from violence or disruption—most of it racially motivated—during the past school year. Another study by the U.S. Office of Education early this year failed to find a single integrated high school—anywhere—that was not torn by racial conflict.

In such urban areas as Chicago, New York City, and Washington, D.C., racial animosity in the high schools is so intense that only the presence of large numbers of police can assure order. This has turned many schools into custodial, rather than educational, institutions.

COMPULSORY BUSING

Would damage city financially

When compulsory busing plans have been adopted elsewhere, blacks and whites have voted against the busing plans by moving away. The pattern is not a product of race: Middle-income families of both races are leaving the City even now.

In the current fiscal year, $27.3 million has been appropriated for Richmond schools—by far the largest item in the budget. The taxpayers of Richmond support their public schools. Yet if a court-approved plan required the busing of Richmond school children, many of those taxpayers—desperately needed by the City—would leave instead of underwriting the possible $4 million initial outlay for the purchase of buses.

Could delay school opening

Virginia law requires that public schools be open 180 days each year. Delay in opening Richmond's schools, until enough buses could be acquired, would force local children to attend school well into next summer—if not all summer—to meet the 180-day requirement. This would cause many hardships to them and to their families.

As the Richmond case now stands, $16 million in badly needed school construction has been halted by order of the District Court. Further construction postponement will mean increased costs to the City and will result in further overcrowding in the schools.

Is impractical and inconvenient

In the past, the neighborhood school has functioned as a community institution. If compulsory busing were required under an integration plan imposed by the courts, the role of the school in the community would be destroyed. Extra-curricular activities would be curtailed. Children—especially those in kindergarten and elementary schools—would lose the sense of security and identity that their neighborhood schools provide.

Parental contact with schools, and influence on them, would be lost. Parents wishing to talk personally with teachers about their children's education would be severely inconvenienced. When a child became sick at school, his parents would face great difficulty in getting him home.

Many Richmond parents feel that compulsory busing would expose their children to needless risks during peak traffic periods. They also feel that compulsory busing would force their children to spend many hours aboard buses—hours that could be better spent in extra-curricular activities, in the classroom or studying at home.

Is opposed by parents

In a recent referendum in Denver, seven out of ten voters rejected compulsory busing. A more recent nationwide Gallup Poll showed that eight out of nine Americans oppose compulsory busing.

Negro parents and their children have organized boycotts and demonstrations against compulsory busing plans in many communities across the nation.

Many parents do not mind transporting their children by bus to school voluntarily, but they do object to compulsory busing to achieve an artificial racial mixture in the schools.

FREEDOM OF CHOICE IS FAIR

Children bused to achieve an arbitrary racial mix would be denied the same protection of the law granted those children who would not be bused to achieve an arbitrary racial mix.

All Americans—black and white, in the South and outside the South—pay taxes that support public schools. They have the consequent right to select which schools their children will attend.

Under Richmond's freedom-of-choice plan, that right was assured. Under all other plans proposed to the District Court, it would be lost.

The parents of Richmond ask that the Court make explicit the right of a parent to have his children educated in the public schools of his choice.

We beg the Court to do so with all deliberate speed.

Respectfully,

THE RICHMOND NEWS LEADER.

AN APPEAL TO THE COURT

On the page opposite today, this newspaper appeals publicly to the Supreme Court of the United States to make explicit "the right of a parent to have his children educated in the public schools of his choice." We are asking Richmond area residents to sign the open letter, and to return it to us at Box 1–H, Richmond 23201, by August 7. Signed letters will be forwarded to the Supreme Court. Copies of the open letter, together with copies of this page, will be available to the public free of charge in the main lobby of Richmond Newspapers, Inc. Copies will be sent to the President, the Vice President, the Cabinet, all members of Congress, every governor, and every member of the Federal judiciary. Copies also will be sent to syndicated columnists and major daily newspapers. It is our hope that other newspapers will undertake similar projects.

Perhaps this letter is a forlorn endeavor. Surely no one who signs it should expect it to accomplish any miracles. Nor by this letter do we suggest, or countenance, defiance of the law. But freedom of choice is a defensible doctrine. It stands firmly in the tradition of American liberty. We believe the Supreme Court ought to know that under freedom of choice, integration has gone forward in Richmond's schools—albeit at its own insistent pace. We believe the Supreme Court ought to know that under freedom of choice, the high qualtiy of education in Richmond's schools has been maintained. And we believe the Supreme Court ought to know that the people of the Richmond area support liberty—for all races—and oppose force.

The Supreme Court ought to be informed about these things, because the Supreme Court has wrought the Orwellian changes in pupil assignments in the past 16 years. Only the Supreme Court can call a halt to further manipulation of the nation's school children. No matter what the decision in the Richmond case, Federal District Judge Robert R. Merhige, Jr., ultimately will be bound by decisions on school integration handed down by the Supreme Court. Until the Supreme Court clarifies the contradictory and confusing points in many Federal court decisions, it would be impractical for Judge Merhige to do anything in the Richmond case. Pending such a clarifying decision from the Supreme Court, Judge Merhige should reinstate the City's freedom-of-choice plan.

The South has been to Appomattox before. It has experienced adversity and defeat; it knows the name of the game. But no hardship visited on it by the egalitarians—not even the relegation of freedom of choice to the legal ash heap—will warrant the South's retaliating against children, black or white. Richmond area parents want the best possible education for their children; they do not

want incipient race war in the public schools. Those parents understand that unlike claims for equal treatment, demands for compulsory association are neither legitimate nor truthful. They remain convinced that reason will prevail. And they sincerely hope that through full airing of the arguments, the Supreme Court will turn away from anti-rational procustean theories that threaten to tear the social fabric of this nation apart.

A TRAGIC FAILURE

On the right side of the editorial page today, a number of persons, representing a cross-section of the population, express their disillusionment with integration as a first-priority national goal. The impact of their disillusionment is even greater because most of these persons in the past have been fervent advocates of compulsory integration.

Yet they are not afraid to say that their former dedication to integration was misplaced, and that compulsory integration has not worked. *Newsweek* columnist Stewart Alsop appraises the situation on the basis of reality, not idealism, when he calls forced integration a tragic failure. The depth of that failure can be seen in the opposition to forced integration by many prominent Negro leaders.

During the past 16 years since the *Brown* decision, the goals of the Negro race have changed dramatically. At first, the Negro sought integration as a means of social and education uplift, and as a means of bringing about social acceptance on a basis of equality. Now, through forced integration, Negroes find their racial culture and their racial identity threatened, and increasing numbers of them no longer want integration. They want their own schools, in which their culture can be preserved, and they want to exercise control over those schools.

Negro leaders have not hesitated to articulate the change in direction desired by their followers. Negro discontent with integrated schools became explicit when civil rights leader Roy Innis, who has fought long and hard for the cause of integration, said, "Integration is dead." In place of integration, he suggests a return to separate-but-equal schools. He proposes the establishment of two school districts in each urban center, one predominantly white, one predominantly Negro. The majority race in each district would have full control over the schools, and children of both races could attend schools in either district if they wished. In other words, many Negroes, like this newspaper, believe in freedom-of-choice.

Innis' plan for improving the schools where they are by eliminating the racial factor altogether has been well received in the South; it is possible that his suggestion will be implemented in a pilot program in Mobile, Alabama. Predictably, liberal politicians in the North have given him a cold shoulder, because Innis' plan would eliminate the influence of white liberals on the civil rights movement.

The views of a growing number of Negroes in positions of leadership and influence cannot be ignored, for these views are held by a growing number of Negroes. In homogenization through integration, they fear the loss of their identity as a race; they now recognize the importance of maintaining a pluralistic society in which cultural diversities can be preserved.

These Negro leaders represent, not a separationist point of view, but a valid line of reasoning that bi-racialism or co-existence, not integration, offer the Negro race the best future in America. If the courts, the Congress, and the Federal government ignore their appeal to reason, the results could lead to ultimate tragedy for all Americans. Negro and white.

THE PRINCIPLE OF BUSING

In the controversy currently raging about the possibility of cross-city busing for Richmond's school children, the point inevitably is made: About 9,000 children in the city's public schools rode buses to reach their schools during the past school term. The question then comes up: What's the difference, and why worry?

In principle, there is a great deal of difference. During the past four school years, when a freedom-of-choice plan was in effect in Richmond, parents had the right to select what schools their children would attend. If they chose schools too far away from their homes to permit the children to walk to school, they bought school bus tickets, and the children rode buses. In some instances, even when children attended the schools closest to them, those schools still were too far away for the children to walk. A number of other Richmond children rode buses to private schools—again by choice of their parents.

Under court-ordered plans that require city-wide busing to achieve certain levels of integration, however, the Federal court seizes all control over a child's education. The court determines what school each child will attend, and how he will reach it. The parent no longer can exercise even the smallest degree of control over his child's education.

The difference, quite simply, is that free choice gives way to compulsion, by court decree. If a parent uses his freedom of choice in a way that requires his child to ride a bus, that is his own business, and outside the state's domain. But if a Federal court approves a plan requiring that any child be bused—not to gain an education, but to achieve a certain racial mix—that plan can be implemented only through compulsion, and only the state has freedom of choice.

The principle of free choice transcends any sociological hogwash about the value of integrated education, or the arrogant notion that a parent lacks the ability, experience, and knowledge to decide for himself what is best for his own child. Once robbed of free choice, parents lose a vital influence on their children's education, as well as their status of authority in the household. These facts should not be overlooked in any attempt to obscure the important difference between free choice and compulsion on the question of busing.

INTEGRATION IS DEAD: FOCUS TURNS FROM FORCED MIXING TO QUALITY EDUCATION

(This compendium of quotations, gathered from many sources, illustrates the extent of growing disenchantment with the goal of compulsory integration as an end in itself.)

NEGRO LEADERS

Roy Innis, head of the Congress of Racial Equality:

"Integration is dead. Its epitaph has been in the coming for a hell of a long time. Integration came to be viewed by the civil rights aristocracy not as a means to an end, but as an end in itself." (March, 1970).

James Farmer, former head of Congress of Racial Equality, now Assistant Secretary of Health, Education, and Welfare.

"Our objective should be to provide a high-quality education. The real problem is not integration or segregation. It is the quality of education. Busing is not relevant to high-quality education. It works severe hardships on the people it affects. In the South, I found blacks complaining of being bused to schools." (October, 1969)

Ben Holman, head of the Justice Department's Community Relations Service:

"Of course it's true. I started out at 14 picketing for integration, but it's just not going to work. We've got to admit publicly that we've failed, so we can stop pursuing this phantom, and concentrate instead on gilding the ghetto—a massive diversion of manpower and money to the central city schools." (February, 1970)

Julius Hobson, a black militant leader in Washington, D.C.:

"Of course—integration is a complete failure . . . What we've got is no longer an issue of race but of class, the middle class against the poor, with the Federal government standing idly by . . . The schools in Washington have deteriorated to a point almost beyond repair—if I could afford it, I'd send my own children to a private school. . . . I have an opinion I hesitate to voice, because it's too close to George Wallace, but I think it's time we tried to make the schools good *where they are* . . . the integration kick is a dead issue." (February, 1970)

Dan Watts, editor of the black militant publication, *The Liberator*:

"There's more race hatred in New York today than there is in Mississippi, and it all goes back to the schools. It's a traumatic experience, anyway, for a black kid to be bused clear across town . . . we've got to move away from integration and toward co-existence." (February, 1970)

Mrs. Thelma Miller, head of the New York City district of the New York State Congress of Parents and Teachers:

"Let's stop kidding ourselves about integration. Let's make all schools equally good for all children. Then nobody will mind what school his child attends. People who advocate busing for integration are still living in a dream world." (March, 1970)

Congressman Adam Clayton Powell, of Harlem:

"Young and old alike have become disillusioned with the idea of integration. Many young people in the ghetto do not want to mix with whites or to be bused from their neighborhoods or go to white schools." (February, 1970).

William Cousins, Jr., City Alderman and lawyer, Chicago:

"Since integration seems so remote and unattainable, the best approach at this time is to emphasize improving education in the schools our children now attend—and increasing our community control over those schools." (March, 1970).

THE PRESS

Columnist Stewart Alsop, Newsweek magazine:

"Surely it is time to face up to a fact that can no longer be hidden from view. The attempt to integrate this country's schools is a tragic failure.

"Among those who know the realities, that ugly truth is almost universally recognized." (February, 1970).

Vermont Royster, editor and senior vice president of the Wall Street Journal:

"There are many things wrong with the forcible transfer of children from school to school to obtain the 'proper' racial mix. It is, for one thing, wasteful of time, energy, and money that could better be applied to making all schools better.

"To this practical objection there is also the fact that in concept it is arrogant. The unspoken idea it rests upon is that black children will somehow gain from putting their black skins near to white skins. This is the reverse coin of the worst segregationist's idea that somehow the white children will suffer from putting their white skins near to black skins.

"Both are insolent assertions of white superiority. Both spring from the same bitter seed." (February, 1970).

The New York Times:

"Racial fears and resentment are steadily eroding relations between white teachers and administrators and black students in many, possibly most, high schools here. In a few schools this erosion has gone so far as to

create conditions of paralyzing anarchy in which large police detachments have been deemed necessary to keep classrooms functioning and put down sporadic outbursts of violence by rebellious students . . . The widening gulf between white adults and black youths in the schools convinces increasing numbers of blacks and whites that the fading promise of school integration can never be more than a hollow piety." (February, 1970.)

William Raspberry, Negro columnist for the Washington Post:

"It may be that one reason why the schools, particularly in Washington, are doing such a poor job of educating black children is that we have spent too much effort on integrating the schools and too little on improving them . . . Integration was simply a means to an end. Much of the confusion today stems from the fact that the means has now become an end in itself." (February, 1970).

GOVERNMENT LEADERS

Former President Lyndon Johnson, in a letter to 19 Senators who had protested HEW guidelines drawn up contrary to anti-busing provisions of the Civil Rights Act of 1964:

"The guidelines are not designed to compel desegregation beyond that inherent in a fairly working free choice plan, to strike down freedom of choice, or to achieve 'racial balance' . . . In short, the guidelines do not abandon freedom of choice, they seek to guarantee it in fact." (May, 1966).

Columnist Joseph Alsop, *The Washington Post:*

"The terrible fact is that that the Supreme Court's decision in *Brown v. Board of Education* has wholly lost the majority support it unquestionably had in 1954." (February, 1970).

George Romney, secretary of Housing and Urban Development:

"Busing is not the basis for overcoming the vital problems resulting from separation of our people in most communities. It is a superficial compromise . . . I believe that every American school child is entitled to the opportunity to attend a quality school within a reasonable distance from his home." (March, 1970).

Attorney General John N. Mitchell:

"[Every citizen has] the right to reject unreasonable requirements of busing and to send their children to neighborhood schools. [This right] is just as important as the right to all our citizens to be assigned [to schools] without regard to their race." (June, 1970).

Senator Abraham Ribicoff, former Secretary of Health, Education, and Welfare:

"Let us not kid ourselves. Whenever we go across this land, when blacks move in, the whites move out, and if they have children, they move as far away as they can. What shall we do? Shall we chase the whites with buses, with helicopters, or with airplanes, to try to get an equitable distribution?" (February, 1970).

Congresswoman Edith Green, chairman of the House Select Subcommittee of Education:

"We simply cannot afford to let our classrooms turn into battlefields. We really have to go back to quality education and put out emphasis on that." (March, 1970).

President Richard M. Nixon:

"One of the mistakes of past policy has been to demand too much of our schools: They have been expected not only to educate, but also to accomplish a social transformation. Children in many instances have not been served, but used—in what all too often has proved a tragically futile effort to achieve in the schools the kind of multiracial society has failed to achieve for itself.

"If we are to be realists, we must recognize that in a free society there are limits to the amount of government coercion that can reasonably be used: that in achieving desegregation we must proceed with the least possible disruption of the education of the nation's children; and that our children are highly sensitive to conflict, and highly vulnerable to lasting psychic injury . . . If our schools fail to educate, then whatever they may achieve in integrating the races will turn out to be only a pyrrhic victory. (March, 1970).

OTHERS

John Gardner, chairman of the Urban Coalition and former Secretary of Health, Education and Welfare:

"We should proceed to upgrade the schools where they are now, and not sit around waiting for integration that may never happen." (February, 1970).

Rhody McCoy, Negro administrator of the Ocean Hill-Brownsville district in Brooklyn:

"Integration has never worked. What kind of a hypocrite am I to tell black children to do their thing in school and college so that they can take their rightful place in society? Where is that place?" (March, 1970).

James L. Flournoy, a prominent Negro attorney in Los Angeles:

"More and more black people these days are changing their views on integration. Just a few years ago, most of them wanted integrated schools and were willing to accept busing as the only way to achieve this goal. But now they are more concerned over the quality of education their child will get. Blacks are saying that they would rather have better schools in their own neighborhoods.

"Black parents are urged to take more interest in their schools, and in such activities as the Parent-Teachers Association. But they can't do this if their children attend schools halfway across town."

John March, director of public relations for the board of education in Pittsburgh, Pennsylvania:

"The climate has changed. The most militant, outspoken blacks are not interested in integration. They want separation. You wonder how you can justify busing under these conditions.

"This puts the school boards right in the middle. We are under pressure from the State Human Relations Commission to desegregate. But the militants don't want it. The children even segregate themselves in our high-school cafeterias. We have separate black and white areas that the blacks are mostly responsible for creating. The old rules just don't seem to work any more."

Dr. Alan Westin, of Columbia University:

"We've got to make sure that we don't sell out integration where it's been successful—in Teaneck, N.J., where I live, for example. But that's admittedly an atypical situation. Where integration has failed, the answer may be some sort of biracialism" (February, 1970).

William Tinderhughes, associate superintendent of schools in Baltimore:

"There has been a very definite change in thinking about busing for integration in recent years. A few years ago, there was demand for busing. But not now. Parents now are more concerned with the quality of education that their children are getting." (October, 1969).

Dr. Ernest Van Den Haag, professor of social philosophy at New York University, in testimony before a House subcommittee on education:

"This legislation before the committee assumes fundamentally that academically and socially effective classroom groups can be formed by putting back and white students together in larger numbers in a single classroom regardless of their wishes, and that this will improve their education and decrease the differences as well as hositilities which now exist between them.

"Yet such an enforced congregation of two identifiable racial groups, one deprived in relation to the other, does not diminish, but rather increases the divisive forces which now exist between these students, and the consequent increase in classroom tension leads to a substantial decrease in the educational accomplishment of both groups and multiplies the disciplinary problems which detract from the essential student attention required for effective study. If such integration is compelled, as this bill proposes to do, it will injure rather than assist the future educational accomplishment of the nation's schools." (June, 1970).

Alexander Bickel, professor of law and legal history, Yale University:

"To dismantle the official structure of segregation, even with the cooperation in good faith of local authorities, is not to create integrated schools, any more than integrated schools are produced by the absence of an official structure of school segregation in the North and West. The actual integration of schools on a significant scale is an enormously difficult undertaking, if a possible one at all. Certainly it creates as many problems as it purports to solve, and no one can be sure that even if accomplished, it would yield an educational return." (February, 1970).

Dr. John W. Letson, superintendent of schools in Atlanta, Georgia:

"Many of the court orders are self-defeating. This is because of resegregation, which has been Atlanta's experience. Resegregation is evidence to me that someone should take a look at what we are doing: going blindly down a programmed alley to accomplish something when all the evidence suggests that we are not accomplishing it. Why go through all this turmoil and wind up with an all-black city?" (March, 1970).

Robert Finch, Former Secretary of Health, Education, and Welfare:

"You don't solve [de facto integration] by busing—I mean by hiring more buses.

"That's not the best use of your resources. But beyond that, it's not the best educational experience, because to haul young children for an hour or more—across long distances, as you have, particularly in the Los Angeles situation—means that they can't get any tutoring after school, the parents have great difficulty getting to the teacher to talk about their child. . . . It's not good educational policy. So I feel very strongly that those decisions are moving in the wrong direction." (March, 1970).

THE FEDERAL COURTS

Judge John Parker, chief judge of the Fourth Circuit Court:

"[The Supreme Court] has not decided that the States must mix persons of different races in the schools or must require them to attend schools or must deprive them of the right of choosing schools they attend. What it has decided, and all that it has decided, is that a State may not deny to any persons on account of race the right to attend any schools that [the State] maintains. [The Constitution] does not forbid such segregation as occurs as the result of voluntary action. It merely forbids the use of governmental power to enforce segregation." (1955).

Fourth Circuit Court of Appeals, in a ruling upholding freedom of choice:

"The present suggestion that a Negro's right to be free from discrimination requires that the state deprive him of his volition is incongruous." (April, 1965).

Fourth Circuit Court of Appeals, ruling in the Charlotte-Mecklenburg County, N.C., case:

". . . All schools in towns, small cities and rural areas generally can be integrated by pairing, zoning, clustering or consolidating schools and transporting pupils.

"Some cities, in contrast, have black ghettos so large that integration of every

school is an improbable, if not an unattainable, goal.

"Nevertheless, if a school board makes every reasonable effort to integrate the pupils under its control, an intractable remnant of segregation, we believe, should not void an otherwise exemplary plan for the creation of a unitary school system." (May, 1970).

Federal District Judge Ben C. Connally, in approving an equi-distant zoning plan for Houston, Texas, that took note of barriers such as expressways and canals:

"A child is not required to swim or fly to school." (June, 1970).

Chief Justice Warren Burger, United States Supreme Court:

"These school cases present widely varying factors: Some records reveal plans for desegregating schools, others have none or only partial plans; some records reflect rezoning of school districts, others do not; some use traditional bus transportation such as began with consolidated schools where such transportation was imperative, others use school bus transportation for a different purpose and unrelated to the availability of a school as to which such transportation is not required.

". . . From what is now before us in this case it is not clear what issues might be raised or developed in argument; as soon as possible, however, we ought to resolve some of the basic practical problems when they are appropriately presented, including whether, as a constitutional matter, any particular racial balance must be achieved in the schools; to what extent school districts and zones may or must be altered as a constitutional matter; to what extent transportation may or must be provided to achieve the ends sought by prior holdings of the Court." (March, 1970).

SECTION 202 MUST BE SAVED

Mr. WILLIAMS of New Jersey. Mr. President, approximately 2 weeks ago the Senator from Vermont (Mr. PROUTY) joined me in a bipartisan effort to make a last ditch effort to save the section 202 housing for the elderly program.

Thanks to the leadership of the Senator from Rhode Island (Mr. PASTORE), this effort was successful.

Today there are numerous examples of outstanding 202 projects in practically every State.

In my own State of New Jersey, there are eight successful projects with nearly 1,600 units. Two additional projects, which will have more than 300 units, are now under construction in Hazlet and Wildwood.

With the $25 million provided in my amendment, many more desperately needed units can be constructed.

But, the battle is still not won because the House bill appropriates no money for 202. The fate of this amendment will be determined next week when House and Senate conferees meet to resolve differences in the two bills.

The reasons for continuing the 202 program are compelling. As chairman of the Senate Committee on Aging, I have been informed time and time again by expert witnesses, elderly persons, and Government officials that section 202 has been one of the most successful housing programs ever passed by Congress.

During its 10 years of existence, there has never been a default. Approximately 43,000 units are now completed or under construction. It is estimated that about 45,000 older Americans occupy these completed units.

Moreover, the program has enabled persons living on limited, fixed incomes to have comfortable housing and at reasonable price.

In the 1969 Housing Act, the Congress enthusiastically supported the extension of the 202 program by authorizing $150 million for this purpose. This strong mandate, I believe, should be fulfilled.

Today millions of older Americans are in a "no-man's land" with regard to housing. Many have been forced to sell their homes because of prohibitive property taxes and other rapidly rising costs. Yet, high cost apartments make it impossible for them to locate suitable alternative housing.

In the name of millions of older Americans in urgent need of pleasant, reasonably priced housing, I urge the conferees to accept the Senate amendment.

This proposal, I might also add, has the enthusiastic support of numerous organizations concerned about housing for older persons, including:

American Association of Homes for the Aging.

National Jewish Welfare Board.

National Council of Senior Citizens.

National Retired Teachers Association-American Association of Retired Persons.

National Council on the Aging.

National Farmers Union.

Episcopal Church Ministry to the Aging.

National Conference of Catholic Charities.

U.S. Catholic Charities.

American Federation of Labor-Congress of Industrial Organizations.

United Automobile Workers.

Teamsters Union.

Mr. President, I ask unanimous consent that a listing of 202 projects in the various States be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

APPROVED SECTION 202 SENIOR CITIZENS PROJECTS AS OF OCTOBER 1969

(Addresses included only for projects completed and under construction. Location and mailing address for projects are not necessarily the same)

	Number of units
ALABAMA	
Approved:	
Gadsden: Holy Comforter House, Inc.	200

PROPOSED COAL MINE SAFETY REGULATIONS TO BE OPEN TO PUBLIC COMMENT

Mr. WILLIAMS of New Jersey. Mr. President, on June 29, 1970, I urged the Secretary of the Interior to permit all interested members of the public to comment on proposed amendments to the Department's regulations under the Federal Coal Mine Health and Safety Act of 1969.

I am pleased to inform my colleagues that the Department of the Interior has agreed, by letter of July 21, to open these proposed amendments to public comment.

I ask unanimous consent that my letter to the Secretary and a letter to me from the Acting Secretary, informing me of this decision, be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 29, 1970.

The Honorable WALTER J. HICKEL,
Secretary of the Interior,
Interior Building,
Washington, D.C.

DEAR MR. SECRETARY: On Friday, June 19, 1970, the staff of the Senate Labor Subcommittee was invited by your Department to observe a series of meetings, which began on June 22, 1970, between representatives of the Department of the Interior, the Bituminous Coal Operators Association, the National Independent Coal Operators Association and the United Mine Workers of America. The expressed purpose of these meetings was to consider proposed amendments to regulations issued under the Federal Coal Mine Health and Safety Act.

The present regulations were issued on March 28, 1970, to become effective on March 30, 1970. The short notice and lack of opportunity to comment on the March 28 publication contributed material to the administrative problems and confusion in the mine fields, which have developed in the first phase of the administration of the Act.

Although my representative has reported that these meetings are serving a constructive purpose, it is clear they would have been of considerably greater value had they been held six weeks to three months prior to the publication of the March 28 regulations.

It is also clear, however, that several critical deficiencies attach to the meetings. They have been held with no prior public announcement. No record has been made, and participation has been limited. In other words, the statutory safeguards, assuring that all interested parties will be heard, are not being observed.

In view of the growing discontent of the Nation's coal miners and the growing loss of confidence in the enforcemet of the health and safety law, this is a most unfortunate procedure. Because of the adverse criticism and unnecessary problems caused by the failure to allow comment on the March 28 publication of the regulations, to bar comment again would create further doubt as to Interior's ability to administer this Act competently and effectively.

I believe that it is vital, in these tumultuous times in the coal fields, for you to take appropriate steps to assure that the statutory safeguards are applied to these meetings concerning issues of life and death to the Nation's miners, including the broadening of opportunities for interested parties to comment.

Sincerely,

HARRISON A. WILLIAMS, Jr.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., July 21, 1970.

Hon. HARRISON A. WILLIAMS, Jr.,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: This will respond to your letter of June 29, in which you express views regarding our coal mine regulations filed on March 28, 1970, and regarding the meetings we held starting June 22, 1970.

Please understand that we are of the opinion that our issuance of regulations under the Coal Mine Health and Safety Act does not require hearings or requests for comments, except when the Secretary proposes regulations which exceed the requirements of the Act and therefore did not require hearings or comments.

The recent meetings, which began on June 22, were not meant to be hearings. Rather, they were a practical effort to get information which would serve as a basis for our developing more effective regulations which would improve coal mine health and safety.

You will be pleased to know that we now are in the process of republishing a revised set of regulations. They will replace the present ones. Although in our opinion not required, we intend to invite written comments on the rewritten regulations. We believe that such a procedure will enhance understanding, will generate usable suggestions which we can incorporate in the rewritten regulations, and thus will promote the maximum coal mine health and safety results.

We will keep you informed of our progress on these replacement regulations.

Sincerely yours,

FRED J. RUSSELL,
Acting Secretary of the Interior.

THE WALL OF SILENCE

Mr. HANSEN. Mr. President, the wall of silence erected by the North Vietnamese between the 1400 American prisoners of war and their families here still remains.

The North Vietnamese violation of the Geneva Prisoner of War Convention continues, even though that government is a signatory.

But, as Alexander Pope wrote:

"Hope springs eternal in the human breast."

We shall not give up hope that our efforts to persuade the North Vietnamese to obey the convention will in the end prevail.

DRAFT CALLS RETURN TO PRE-VIET SIZE

Mr. HANSEN. Mr. President, I note that the Secretary of Defense yesterday announced that our draft calls for the rest of 1970 will average below 10,000 a month, which will be a return to the level that existed before the escalation in the Vietnam war.

Specifically, this is the lowest monthly draft call since March 1965 when the call was for 7,900.

I should also like to point out that in October 1967, 49,200 of our young men were drafted to serve in our Armed Forces. A goodly percentage of these, perhaps as many as three-quarters of them, were sent to Vietnam; and, on the basis of estimated casualty rates, we would have to assume that approximately 1,000 of these may have lost their lives.

The President of the United States ran for that office in 1968 with the promise to wind down the war.

He is doing it. This is an example of what he has accomplished.

I ask unanimous consent that the article published in the Washington Post this morning on this subject be printed in the RECORD at this point:

[From the Washington Post, July 24, 1970]

DRAFT CALLS RETURN TO PRE-VIET SIZE

Secretary of Defense Melvin R, Laird said yesterday that draft calls for the rest of 1970 will average below 10,000 a month, a return to pre-Vietnam levels.

"In the remaining months of this year," Laird said, in a speech for about 550 students working as summer interns with the government, "I anticipate that draft calls will average below 10,000 per month."

In the past, he has predicted that total draft calls this year will fall between 150,000 and 170,000 young men, compared with the 290,000 drafted in 1969.

Aides said Laird still sticks to that forecast. Through August, draft calls this year have totaled 124,500.

COMMUNICATION FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letter, which was referred as indicated:

TEMPORARY ADMISSION INTO THE UNITED STATES OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting temporary admission into the United States of certain aliens (with accompanying papers); to the Committee on the Judiciary.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

H.R. 14619. An act for the relief of S. Sgt. Lawrence F. Payne, U.S. Army (retired) (Rept. No. 91-1035).

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. DOLE:

S. 4118. A bill to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes; to the Committee on Agriculture and Forestry.

(The remarks of Mr. DOLE when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. HARTKE:

S. 4119. A bill to amend chapter 15 of title 38, United States Code, to provide for the payment of pensions of World War I veterans and thier widows; to the Committee on Finance.

(The remarks of Mr. HARTKE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. NELSON:

S. 4120. A bill to protect the public health and welfare by providing for the inspection

of imported dairy products and by requiring that such products comply with certain minimum standards for quality and wholesomeness; to the Committee on Agriculture and Forestry.

(The remarks of Mr. NELSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. THURMOND (for himself and Mr. HOLLINGS):

S. 4121. A bill for the relief of Baptist College at Charleston, Charleston, S.C.; to the Committee on the Judiciary, by unanimous consent.

(The remarks of Mr. THURMOND when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. STENNIS:

S. 4122. A bill for the relief of Nicholaos Demitrios Apostolakis; to the Committee on the Judiciary.

By Mr. ALLOTT (for himself, Mr. DOMINICK, and Mr. HANSEN):

S. 4123. A bill to designate the Chatfield Dam and Reservoir and the Blue Mesa Reservoir as the Edwin C. Johnson Dam and Reservoir and the Eugene D. Millikin Reservoir, respectively; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. ALLOTT when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4119—INTRODUCTION OF THE "WORLD WAR I PENSION ACT OF 1970"

Mr. HARTKE. Mr. President, I introduce today a bill to provide World War I veterans and their widows with badly needed and long overdue pension increases. As each succeeding Congress convenes and adjourns the need for this legislation grows ever more necessary.

The tendency to forget things of the past should not be allowed to cause want and deprivation to those who are heroes now as well as when they fought in the trenches of France. We must do for them at least what we are doing for the present day GI.

Mr. President, each year our World War I veterans are growing older, and their ranks and those of their widows are growing thinner. A man who was only 18 when the war ended will be 70 this year. Those who were 28 will be 80. For them there was no GI bill of rights as there was for the World War II and Korean veterans. They are truly the forgotten heroes. Today there are approximately 1,500,000 World War I veterans. Widows number approximately 1,350,000. Their ranks thin at the rate of over 600 per day. The costs of this bill would be minimal. Yet the economic benefits to those receiving the pensions would provide these forgotten Americans with peace of mind and dignity in their last years. Also, we should not forget the benefit to the economy by the substantial increase in purchasing power represented by this bill. The time is long overdue to grant these veterans and widows the recognition and benefits that are theirs in all fairness.

These men are still living among us. Many of them are in need of the kind of benefits this bill would give, if only to put them on some plane of equality with those who have in more recent times marched to preserve this country and all it stands for.

Mr. President, the bill sets a requirement of 90 days of service or more during World War I for eligibility, or shorter service if it culminated in discharge or release for service-connected disability. A World War I veteran would receive $100 per month if unmarried and with less than $2,400 annual income; or if married and with less than $3,600 income. If the veteran is helpless or blind, or requires the regular aid or attendance of another person an additional sum of not less than $70 per month would be given.

There is also provision for widows of World War I veterans at the rate of $75 per month. But to qualify the widow must have married the veteran before December 14, 1944, or have been married for at least 5 years before his death or be the mother of a child born to them.

This bill represents no bonanza for anyone. The income test sees to that. It provides income for those who really need it. It provides dignity for those barely subsisting on personal or governmental handouts. It will help raise from abject poverty many who are now in their final years. Let us now act to make those last few years—years of security and dignity.

Mr. President, the time is long overdue to provide these veterans and their wives or widows what they have a right to expect.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). The bill will be received and appropriately referred.

The bill (S. 4119) to amend chapter 15 of title 38, United States Code, to provide for the payment of pensions of World War I veterans and their widows, introduced by Mr. HARTKE, was received, read twice by its title, and referred to the Committee on Finance.

S. 4120—INTRODUCTION OF THE "FOREIGN DAIRY QUALITY ACT OF 1970"

Mr. NELSON. Mr. President, today I am introducing legislation, for appropriate reference, establishing stricter regulations to prevent unsanitary or badly contaminated foreign dairy products from coming onto the American market.

Food and Drug Administration figures show nearly a 10-percent annual rejection rate for the small portion of dairy imports now inspected.

Our customs officials often check less than 10 percent of incoming shipments of foreign dairy products. Yet, they find contamination of unsafe additives in about one dairy import in every 10 offered to the American market.

American dairy farmers and processors have been for too long on the short end of a double standard because of the strict sanitary standards they must meet.

Farmers and businessmen must invest thousands of dollars for special equipment and buildings to meet local, State, and Federal health regulations.

But we have no assurance that foreign dairy farms and plants whose products are marketed in the United States will be operated under comparable sanitary requirement.

Imposing this financial burden on American dairymen without similar requirements on producers of foreign products which compete directly with U.S. commodities is unfair and discriminatory.

This legislation will require foreign dairy farms and processing plants producing dairy commodities for U.S. consumption to meet sanitary standards set by the U.S. Department of Agriculture.

The quality controls established by this bill would insure that the health of the citizens of the United States is not jeopardized by substandard conditions in other countries.

The U.S. Government maintains a stringent quality control program for all American dairy operations produced for export under U.S.-supported export programs.

In effect we are protecting the health of citizens in foreign countries receiving our products through the food for peace programs and various AID projects, but are failing to apply the same safeguards to dairy imports from many of those same countries.

I ask unanimous consent that the text of this bill be provided at this point in the RECORD.

The PRESIDING OFFICER (Mr. HUGHES). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4120) to protect the public health and welfare by providing for the inspection of imported dairy products and by requiring that such products comply with certain minimum standards for quality and wholesomeness, introduced by Mr. NELSON, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 4120

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Foreign Dairy Quality Act of 1970".

SEC. 2. For the purposes of this Act:

(1) The term "Secretary" means the Secretary of Agriculture.

(2) The term "person" means any individual, partnership, corporation, association, or any other business unit.

(3) The terms "dairy products" and "milk products" mean those food products derived from milk, including milk such as butter; cheese (whether natural or processed); dry, evaporated, stabilized, condensed or otherwise processed milk, cream, whey and buttermilk; edible casein; frozen desserts; and any other food product which is prepared in whole or in part from any of the aforesaid products as the Secretary may hereafter designate.

(4) The term "wholesome" means sound, healthful, clean, and otherwise fit for human food.

(5) The term "labeling" means labels and other written, printed, or graphic matter on or attached to the container of any dairy product.

(6) The term "purity" means free from poisonous or deleterious substances which may render the product injurious to health.

(7) The term "quality" means the minimum quality standards defined by the Secretary in accordance with this Act.

(8) The term "administration and super-

vision" means the administrative review of foreign country laws, regulations, and enforcement procedures offered as being comparable to United States laws, regulations, and enforcement procedures, under the provisions of this Act, and the supervision of inspection personnel both here and abroad.

(9) The term "inspection" means the official service rendered by the Department of Agriculture, under the administration and supervision of the Secretary, for the purposes of carrying out the provisions of this Act.

SEC. 3. (a) No dairy product shall be imported into the United States unless it has been inspected and found to be wholesome and unless the foreign farms and plants in which such products were produced, manufactured or processed comply with all the inspection, grading, and other standards prescribed by the Secretary pursuant to the provisions of this Act.

(b) The standards established by the Secretary for any imported dairy product and for the establishments in which such imported dairy product is produced, manufactured or processed shall be comparable to those standards prescribed by the Secretary for the same kind of dairy product produced, manufactured or processed in the United States and for establishments in the United States in which the same kind of product is produced, manufactured or processed whenever the Secretary, in connection with any dairy product program carried out by the Department of Agriculture has established standards for such product and for the establishments in which such product is produced, manufactured or processed. The Secretary shall establish standards with respect to those kinds of imported dairy products (and the establishments in which they are produced, manufactured or processed) for which no Federal standards have been established, and such standards shall be equivalent to those standards heretofore established for other kinds of dairy products and the establishments in which such other kinds of dairy products are produced, manufactured or processed.

(c) The labeling of imported dairy products shall comply with the requirements of the Fair Packaging and Labeling Act and shall be otherwise marked as the Secretary may require.

SEC. 4. (a) For the purpose of establishing comparable inspection requirements and preventing the importation of dairy products produced, manufactured, or processed in foreign dairy farms or plants not approved for inspection by the Department of Agriculture, the Secretary shall, where and to the extent necessary, require such products to be accompanied by a certificate of compliance issued by the exporting country in accordance with rules and regulations prescribed by the Secretary establishing minimum standards as to the quality of the milk, farms, and plant facilities, equipment, and procedures used in the production, manufacture, and processing of such products.

(b) The Secretary shall cause to be inspected, in accordance with such rules and regulations as he may prescribe, all dairy products imported into the United States.

SEC. 5. (a) All imported dairy products shall, after entry into the United States, be subject to the Federal Food, Drug, and Cosmetic Act, and other Acts providing for the inspection, testing, or grading of dairy products to insure their purity and to insure that they are wholesome in the same manner and to the same extent as if such products were produced in the United States.

(b) The Secretary is authorized to prescribe rules and regulations to carry out the purposes of this Act, and such rules and regulations shall provide for the destruction of dairy products offered for entry and refused admission into the United States, unless such dairy products are reexported or brought into compliance within the time fixed therefor in such rules and regulations.

(c) All charges for storage, cartage, and labor wtih respect to any article which is imported contrary to this Act shall be paid by the owner or consignee, and in default of such payment shall constitute a lien against such article and any other article thereafter imported under this Act by or for such owner or consignee.

SEC. 6. In carrying out the provisions of this Act, the Secretary may cooperate with foreign governments, other departments and agencies of the Federal Government, and with appropriate State agencies, and may conduct such examinations, investigations, and inspections as he determines necessary or appropriate through any officer or employee of the United States, of any State, or of any foreign government, who is licensed by the Secretary for such purpose.

SEC. 7. (a) The Secretary may prescribe such assessments and collect such fees as he determines necessary to cover the cost of the inspection services rendered under the provisions of this Act.

(b) Except as provided in subsection (a) of this section, the cost of administering and supervising the provisions of this Act shall be borne by the United States.

SEC. 8. There is hereby athorized to be appropriated such sums as are necessary to carry out the administration and supervision of the provisions of this Act.

SEC. 9. Any person who knowingly violates the provisions of this Act shall be guilty of a misdemeanor and upon conviction thereof shall be fined not more than $1,000 and imprisoned not more than one year, or both.

SEC. 10. If any provisions of this Act or the application thereof to any person or circumstances is held invalid, the validity of the remainder of the Act and of the application of such provision to other persons and circumstances shall not be affected thereby.

SEC. 11. This Act shall take effect 180 days after enactment.

S. 4121—INTRODUCTION OF A BILL FOR THE RELIEF OF THE BAPTIST COLLEGE AT CHARLESTON, CHARLESTON, S.C.

Mr. THURMOND. Mr. President, I introduce a bill for the relief of the Baptist College at Charleston, Charleston, S.C. I ask unanimous consent that it be referred to the Committee on the Judiciary.

The PRESIDING OFFICER (Mr. PACKWOOD). The bill will be received and referred, without objection, to the Committee on the Judiciary.

The bill (S. 4121) for the relief of Baptist College at Charleston, Charleston, S.C., introduced by Mr. THURMOND (for himself and Mr. HOLLINGS), was received, read twice by its title, and referred to the Committee on the Judiciary, by unanimous consent.

S. 4123—INTRODUCTION OF A BILL IN HONOR OF EUGENE D. MILLIKIN AND EDWIN C. JOHNSON, FORMER U.S. SENATORS FROM COLORADO

Mr. ALLOTT. Mr. President, on May 30, Colorado's former Senator, Edwin C. Johnson, died.

The Denver Post recognized this recent loss in a lead editorial on June 1. In its recitation of his many accomplishments, the following is stated:

In the U.S. Senate—with his equally brilliant Colorado colleague—U.S. Senator Eugene D. Millikin—Colorado had a one-two punch that was remarkable. Millikin was Republican but they saw eye to eye on the issues of paramount relevance to the state and nation.

Gene Millikin died July 26, 1958. There is no doubt of the highly distinguished contributions and service of both Edwin C. Johnson and Eugene D. Millikin and, as the Denver Post editorial points out, though Democrat and Republican, partisan interests were laid aside when it came to the vital questions affecting Colorado and our Nation.

Senator Johnson and Millikin served their State and Nation with great distinction, and it was my honor to have known them both.

Thus, Mr. President, I am introducing today, with Senators DOMINICK and HANSEN a bill to establish monuments to their preeminent dedication and illustrious public service.

The bill we are introducing will change the name of the Blue Mesa Reservoir in Colorado to the Eugene D. Millikin Reservoir, and the name of the Chatfield Dam and Reservoir in Colorado to the Edwin C. Johnson Dam and Reservoir.

Both of these men loved the high Colorado Mountains which overlook the cold clear waters of these reservoirs. Each was committed to, and outstanding in, his work to meet the great challenges of the West including those presented by nature. Each was brilliant in his accomplishments on behalf of proper water conservation and control measures and I deem it highly fitting and proper to name these water conservation features in their remembrance.

It is especially decorous to make this tribute and memorial in a single measure in view of their many united endeavors and common interests.

It should also be noted that each completed his elective public service career at the same time. Ed Johnson retired from the Senate in 1954 after 18 years and then served as Colorado's Governor through 1956. And, in the fall of 1956, Gene Millikin, after 15 years in the Senate, determined not to seek reelection due to his ill health.

Thus it was that the State of Colorado, which had reaped many benefits from the service of these statesmen, suffered a dual loss; it is all the more proper to make this dual memorial.

Mr. President, I send the bill to the desk for appropriate reference to accomplish this purpose on behalf of myself and my colleague, Mr. DOMINICK, and ask that the bill be printed in the RECORD, together with a statement, immediately following my remarks, of my colleague, Mr. DOMINICK.

The PRESIDING OFFICER (Mr. COOK). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD together with the statement of Mr. DOMINICK.

The bill (S. 4123) to designate the Chatfield Dam and Reservoir and the Blue Mesa Reservoir as the Edwin C. Johnson Dam and Reservoir and the Eugene D. Millikin Reservoir, respectively, introduced by Mr. ALLOTT (for himself, and Mr. DOMINICK), was received, read twice by its title, referred to the Committee on Interior and Insular

Affairs, and ordered to be printed in the RECORD, as follows:

S. 4123

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the dam and reservoir known as the Chatfield Dam and Reservoir, located on the South Platte River in Colorado, is hereby designated as the Edwin C. Johnson Dam and Reservoir.

SEC. 2. The reservoir known as the Blue Mesa Reservoir, located on the Gunnison River in Colorado, is hereby designated as the Eugene D. Millikin Reservoir.

SEC. 3. Any law, regulation, document, or record of the United States designating or referring to the Chatfield Dam and Reservoir or the Blue Mesa Reservoir shall be held to be a designation of or reference to the Edwin C. Johnson Dam and Reservoir or the Eugene D. Millikin Reservoir, respectively.

The statement of Mr. DOMINICK is as follows:

Mr. President, it gives me great pleasure to join my distinguished senior colleague in sponsoring this bill to commemorate two great Coloradans and Americans. Without question, the service rendered to the people of Colorado by these two men was outstanding in the history of our state and in the country as a whole.

Eugene Millikin served in the United States Senate from 1941 until physical disabilities forced him to retire in 1957. For two years he served as Chairman of the Senate Finance Committee and expended exhaustive efforts to rewrite and codify the tax code. He was also a prominent member of the Interior and Insular Affairs Committee as well as Chairman of the Republican Conference. Renowned for his wit and debating skill in general, Gene was beloved by his fellow members and by the people of Colorado.

Gene Millikin's senior colleague in the Senate for 14 years was Ed Johnson. Although Gene was a Republican and Ed a Democrat, the two Senators' respect for each other and mutual dedication to the people of their State often caused them to join forces in an unusually effective partnership to further the interests of Colorado.

For a continuous period of 35 years, Ed Johnson represented the people of Colorado as Governor, member of the Colorado House of Representatives, Lt. Governor, and for 18 years, a member of the United States Senate. While a member of this body, he was a conscientious and tireless member of the Senate Committee on Military Affairs, Finance, Manufacturing, Interstate Commerce, and Indian Affairs. The esteem in which he was held by the people of Colorado is perhaps best evidenced by the fact that he was undefeated in eleven straight elections. His following was not restricted to the citizens of Colorado alone. On the contrary, his understanding of the problems of water distinguished him in the eyes of citizens of most Western states.

As a man, "Big Ed," as he was affectionately called by all who knew him, was one of the warmest and most sincere human beings it has ever been my pleasure to know. It was indeed a privilege to have known him on a personal basis for some twenty years.

Mr. President, it is only fitting that these two men be honored in the manner this bill proposes. In addition to working extensively and successfully for the Upper Colorado Storage Project, the Purgatory River Dam, and numerous other measures to help solve the water problems of the West in general and Colorado in particular, Gene Millikin and Ed Johnson also accomplished much of the groundwork for the Fryingpan-Arkansas Project which was enacted in 1962 when I was a member of the House and my distinguished senior colleague a member of this body. That is why, Mr. President, I co-sponsor and urge favorable action on this legislation to honor and commemorate these two distinguished former members of this body and honored Coloradans.

Mr. HANSEN. Mr. President, with the permission of the Senator from Colorado, I should like very much to be included as a cosponsor of his bill.

It was my distinct privilege to know both these very fine Senators. I too, held them in high regard, as has just been attested to by the Senator from Colorado; therefore, if it is not inappropriate, I should like to be added as a cosponsor.

Mr. ALLOTT. Mr. President, I know that the distinguished Senator from Wyoming as a former Governor of Wyoming worked with both Senators Millikin and Johnson. and not only in a political sense.

My colleague, Mr. DOMINICK, and I are most happy and believe it would be most appropriate to have his cosponsorship of the bill and, Mr. President, I ask unanimous consent that the name of the Senator from Wyoming (Mr. HANSEN) be added as a cosponsor.

The PRESIDING OFFICER (Mr. COOK). Without objection, it is so ordered.

Mr. HANSEN. I thank the Senator from Colorado very much.

Mr. ALLOTT. I thank the distinguished Senator from Wyoming for his support.

SENATE CONCURRENT RESOLUTION 75—SUBMISSION OF A CONCURRENT RESOLUTION TO MAKE CORRECTIONS IN THE ENROLLMENT OF S. 2601

Mr. BYRD of West Virginia (for Mr. TYDINGS) submitted an original concurrent resolution (S. Con. Res. 75) directing the Secretary of the Senate to make corrections in the enrollment of S. 2601, which was considered and agreed to.

(The remarks of Mr. BYRD of West Virginia when he submitted the concurrent resolution appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 3844

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Massachusetts (Mr. KENNEDY), the Senator from Maine (Mr. MUSKIE), the Senator from Texas (Mr. YARBOROUGH), the Senator from Michigan (Mr. HART), the Senator from Wisconsin (Mr. NELSON), the Senator from New York (Mr. GOODELL), and the Senator from New Mexico (Mr. MONTOYA) be added as cosponsors of S. 3844, the Franchise Full Disclosure Act of 1970.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). Without objection, it is so ordered.

S. 4039

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Nevada (Mr. BIBLE) I ask unanimous consent that, at the next printing, the names of the Senator from Alabama (Mr. SPARKMAN), the Senator from West Virginia (Mr. RANDOLPH), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Wisconsin (Mr. NELSON), the Senator from New Mexico (Mr. MONTOYA), the Senator from Oklahoma (Mr. HARRIS), the Senator from New Hampshire (Mr. MCINTYRE), the Senators from Alaska (Mr. GRAVEL) and (Mr. STEVENS), and the Senator from Montana (Mr. METCALF) be added as cosponsors of S. 4039, to amend the Internal Revenue Code of 1954 to provide income tax simplification, reform, and relief for small business.

The PRESIDING OFFICER (Mr. PROXMIRE). Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, July 24, 1970, he presented to the President of the United States the enrolled bill (S. 3279) to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes.

ADDITIONAL STATEMENTS OF SENATORS

ADDITIONAL DEATHS OF ALABAMIANS IN VIETNAM

Mr. ALLEN. Mr. President, I have previously placed in the RECORD the names of 997 Alabama servicemen who were listed as casualties of the Vietnam war through March 31, 1970. In the period of April 1 through June 30, 1970, the Department of Defense has notified 45 more Alabama families of the death of loved ones in the conflict in Vietnam, bringing the total number of casualties to 1,042.

I wish to place the names of these heroic Alabamians in the permanent archives of the Nation, paying tribute to them, on behalf of the people of Alabama, for their heroism and patriotism. May the time not be distant when there will be no occasion for more of these tragic lists.

I ask unanimous consent to have printed in the RECORD the names and next of kin of these 45 Alabamians.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF CASUALTIES INCURRED BY U.S. MILITARY PERSONNEL FROM THE STATE OF ALABAMA IN CONNECTION WITH THE CONFLICT IN VIETNAM, APRIL 1, 1970, THROUGH JUNE 30, 1970

ARMY

Capt. Willie J. Ridgeway, husband of Mrs. Ingeborg M. Ridgeway, 705 Raines Drive, Mobile, 36609.

Pfc. John L. Smith, son of Mr. and Mrs. John Smith, Route #1, Box 120, Millbrook, 36054.

Sgt. James F. Lee, husband of Mrs. Mattie A. Lee, Route 1, Box 120, Gallion, 37742.

Pfc. Richard L. Higginbotham, son of Mr. and Mrs. Billy L. Higginbotham, 516 Cedar Hill Drive, Scottsboro, 35768.

Pfc. Leroy Nelson, son of Mrs. Eula M. Nelson, Route 4, Box 770, Theodore, 36582.

FUTURE FARMERS OF AMERICA LAUNCH COMMUNITY DEVELOPMENT PROGRAM

Mr. PEARSON. Mr. President, this morning the Future Farmers of America officially launched their new build our America community program. I have reviewed the informational literature on this new program and I am very much impressed with the quality and imagination of the material.

I am encouraged and pleased by the commitment of this organization of young people to a most worthwhile and challenging effort—that of strengthening and improving our rural communities.

This new program will do a great deal to encourage and assist tomorrow's leaders in becoming more active and more effective in the development of their local communities.

This is a most timely effort. The Nation as a whole is becoming increasingly aware of the need to improve the economic, social, and cultural conditions of our rural communities. We must improve the quality and quantity of opportunities in our smaller communities so that fewer persons will be forced to migrate to the overcrowded and overburdened metropolitan centers.

The Federal Government can and must provide a range of aids and incentives for rural development but, in the final analysis, much of the initiative must come from the local communities themselves. They must identify their problems and define their future goals for improvement. Our young people will necessarily constitute a major source of this initiative. This program now getting underway will help to substantially increase the number of interested and trained local community leaders.

This program is also timely because it affords young people the opportunity to get involved in community affairs, and to make a genuine contribution of their own. Today's youth are distinguished by their eagerness to participate in solving this Nation's problems and the strengthening of that which is best in our country. This program will provide an excellent avenue for greater youth participation.

Mr. President, this program was developed in cooperation with the Farmers Home Administration of the Department of Agriculture. Therefore, I want to salute and commend not only the leaders and advisers of the Future Farmers of America but also the Farmers Home Administration for its important and critical role in putting this program together.

RANDOLPH VOTES TO STRENGTHEN LAW ENFORCEMENT TO CURB CRIME IN THE NATIONAL CAPITAL

Mr. RANDOLPH. Mr. President, I voted in support of the District of Columbia crime bill.

It provides a total and complete overhaul of the hopelessly inadequate court system in the Nation's Capital and will provide better means for more effective law enforcement. I commend the Senator from Maryland (Mr. TYDINGS) for his well-reasoned leadership in this constructive effort.

The court reorganization provisions are critical to effectuate permanent reduction in the criminal case backlog in the Capital. The bill's codification of portions of criminal law in this city is the first in half a century. The expansion of the public defender service and the bail agency will result in mechanisms to provide adequate representation and supervision of criminal defendants. The second offense minimum mandatory sentencing and wiretap provisions make applicable to local crimes in the District of Columbia penalties and procedures instituted by Congress in previous crime legislation.

Two provisions of the bill have developed into considerable controversy; namely, pretrial detention and no-knock warrants. One of these is a closely safeguarded form of pretrial detention for dangerous criminal defendants, coupled with court reorganization to promote speedy trials and increased bail supervision by an expanded bail agency. It should be emphasized that recent studies have demonstrated that crime committed by persons on court-ordered release is of large enough proportions to be considered of major consequence to law enforcement. The National Bureau of Standards report indicated that 25 percent of persons charged with dangerous crimes and 17 percent of those charged with violent crimes can be expected to be rearrested for further crime while on pretrial release.

The measure conforms the District of Columbia law on search and arrest with Supreme Court decisions which permit a police officer to dispense with the standard notice of his identity and purpose when he serves a search or arrest warrant. Nothing in the conference bill, passed 332 to 64 in the House of Representatives and concurred in 54 to 33 by the Senate, enlarges the authority of officers to search without a warrant. It codifies the Supreme Court decisions which specify that a police officer may enter premises without knocking, when an announcement of his presence and purpose would endanger his life or result in destruction of the evidence for which the court has authorized him to search.

Additionally, the bill increased the number of local trial judges, provides a

modern juvenile code, and provides the temporary assignment of Federal district judges to the local trial bench.

The need for action and the time for action is now. We must curb the increasing crime rate. This measure will provide the comprehensive approach necessary to resolve this crisis.

INCREASE IN TEXTILE IMPORTS AND JOB OPPORTUNITIES

Mr. THURMOND. Mr. President, two recent articles in the Augusta (Ga.) Chronicle, should be of interest to Members of Congress regarding the legislation in the House on textile import quotas.

First, the Chronicle of July 14 contains an article entitled "Textile Imports Balloon." The article indicates that cotton, wool, and synthetic fiber textile imports totaled 355 million square yards in May, up 3 percent from April, and 12 percent above the same period last year.

The Chronicle of July 13 contains another article, entitled "Negro Employment Jump Noted in Textile Industry." This news story showed that Negro employment in the textile industry increased 21 percent to a level of 14.3 percent of the entire industry during the first half of 1970.

Mr. President, both articles are important. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

NEGRO EMPLOYMENT JUMP NOTED IN TEXTILE INDUSTRY

WASHINGTON.—Negro employment in the textile industry increased by 21 per cent to a level of 14.3 per cent of the entire textile work force during the first half of 1970, the American Textile Manufacturers Institute reported Sunday.

The institute, using Bureau of Labor Statistics figures, said this non-white textile employment compares with an average of 10.1 per cent of non-white employment in the nation's entire manufacturing industry.

This improvement in Negro employment in textile manufacturing occurred at a time that the textile employment level was declining, the institute said. The institute also pointed out that the non-white employment percentage for all manufacturing remained unchanged during the past six months.

Negro textile employment in certain counties of North Carolina and South Carolina has reached levels above 40 per cent, the institute said.

TEXTILE IMPORTS BALLOON

WASHINGTON.—Cotton, wool and synthetic fiber textile imports totaled 355 million square yards in May, up 3 per cent from April and 12 per cent higher than May a year ago.

For the January-May period, textile imports totaled 1.7 billion square yards, up 19 per cent from the first five months of 1969.

The value of textile imports in the first five months of this year was $710 million while textile exports totaled $286 million.

Imports from Japan, Hong Kong, Taiwan and Korea accounted for 56 per cent of the trade in the January-May period, up 11 per cent from the same months of 1969.

Cotton imports totaled 142 million square yards, 17 per cent above April but 5 per cent less than May, 1969.

Synthetic fiber imports totaled 201 million square yards, down 4 per cent from April's record but 34 per cent above May, 1969.

Wool imports totaled 13 million square yards, down 7 per cent from April and 27 per cent below May, 1969.

IN PRAISE OF MORMON PIONEERS

Mr. CHURCH. Mr. President, at midday exactly 123 years ago today, Brigham Young and his company of rugged pioneers had at least reached their journey's end. In the "Promised Land" of Salt Lake Valley they sensed that they had found their sanctuary. On this day, atop a high plateau overlooking the valley, President Young lay in one of the caravan's 73 prairie schooners, his body weak with mountain fever. The great Mormon leader was raised gently from his bed to view the towering snow-dusted mountains guarding the peaceful plain below and the brilliant blue waters of the lake. Looking out from the plateau, he exclaimed: "This is the place."

The 102 days exodus West was over, leaving far behind the assassins whose bullets had downed their beloved prophet, Joseph Smith, leaving behind those who sought to persecute them for their religious beliefs. The seemingly endless vistas, the constant danger of attack, the scarcity of food and water, the narrow passes, the mountains to climb, the rivers to ford, the bogs to pull through, the timber wolves, the rattlesnakes, the tired, aching muscles, the sickness, the death—all these hardships had led finally to that glorious day.

Hardly resting from the epic march the Mormon pioneers set out with characteristic determination upon a new mission: the establishment of a distinctive community based on the Bible and the teachings of Joseph Smith. Having for the time being outdistanced their human persecutors, these dauntless men and women now pitted themselves against the challenge of a sparse environment. A flinty soil—and several bent plows—led them to build small dams on streams in order to store and divert a flow of precious water onto the parched earth. With tenacity and trial-and-error ingenuity, the Mormon pioneers became the founders of modern irrigation in America.

Their resourcefulness in bringing water to the desert is representative of their success in other areas. While continuing to resist persecution throughout most of the latter half of the 19th century, the Mormons undertook one of the most remarkable colonizing efforts in the history of our country. They assimilated into their intermountain community thousands of European converts, making them immediately welcome and content in their new homeland. They seeded the entire mountain west with towns and cities, and were the first to settle in my own State of Idaho, founding Fort Lemhi in 1855. Five years later they established the first permanent town in Idaho—and the first school—at Franklin, named for a noted Mormon pioneer, Franklin D. Richards.

Nor have the spiritual ancestors of the Mormon pioneers settled for lesser achishments. The faith and vitality of Mormonism of the 19th century still characterizes the church in 1970. Over 4,000 young LDS members give a year or more to the work of spreading the teaching of their church throughout the United States and overseas, where they have proved outstanding citizen-ambassadors for our country as well as for their church. Partially as a result of this missionary work, the Church of Jesus Christ of Latterday Saints now has more than 2.8 million members, an increase of 74 percent during the 1960's. The Mormons continue to offer a model of church service: they are quick to help those members suffering from illness or want, and the excellence of their programs for young people is well known.

The quality of the LDS commitment to education is equally outstanding; the most Mormon State in the Nation, Utah, is also the most extensively educated. Brigham Young University, the keystone of the church's own higher educational system, has grown to more than 25,000 students and, nestled in the tree-shaded foothills of Provo, it is surely one of the most beautiful universities in the world. In my State at Rexburg, Idaho, the LDS Church can take pride in Ricks College, which now enrolls over 4,500 students on an expanding campus where 16 new school buildings have been erected since 1962. The Mormons have also constructed 69 other new schools during the 1960's located chiefly in South America and the South Pacific. The church publishes a magazine in 17 languages and lesson manuals in 21 languages.

The achievements of Mormons in public life are considerable. One has been a presidential candidate, others have played important roles in Congress, and held such prominent executive positions in Government as Chairman of the Federal Reserve Board, Treasurer of the United States, Secretary of Agriculture, U.S. Commissioner of Education, and Secretary of the Interior, serving under both Democratic and Republican Presidents.

In other human endeavors, Mormons have always been at the forefront, whether the contest be for Miss America or for a boxing championship. Just recently a young athlete at Brigham Young University shattered the world record in the men's 440-yard hurdles race. And, in the world of music, who has not been deeply moved by the Mormon Tabernacle Choir?

The accomplishments of the early Mormon pioneers and their modern counterparts have been extraordinary; they have set a high mark in Christian living. Certainly in the period of divisiveness that presently troubles our land, their strong sense of community is exemplary. I am very proud to join with the people of my State and with those of our sister State to the south, Utah, in paying tribute to the Mormons on this anniversary of the arrival of their forebearers in the Great Salt Lake Valley.

DRAFT U.S. SEABEDS TREATY DISCUSSIONS SHOULD BEGIN

Mr. HOLLINGS. Mr. President, in recent years we have seen growing international interest in the resources of the seabeds, particularly as technology has

developed to make seabed resources economically extractable at ever greater depths. Oil, gas, helium, nitrogen, carbon dioxide, water, geothermal energy, sulfur, saline minerals, and manganese nodules on and under the seabeds are among the resources of interest to the United States and other countries.

Facing the United States and other countries as we turn toward use of resources of the seabed and subsoil are many complex problems. Scientific, technical, military, legal, and political issues are raised by our prospective use of the seabeds and incursion into territory to which no nation has a traditional claim of sovereignty or sovereign rights.

The Stratton Commission stated the problem, quoting President Johnson:

> Under no circumstances must we ever allow the prospect of rich harvest and mineral wealth to create a new form of colonial competition among the maritime nations. We must be careful to avoid a race to grab and to hold the lands under the high seas. We must ensure that the deep seas and the ocean bottoms are, and remain, the legacy of all human beings.

In addition, the Stratton Commission cited other objectives that any international framework for minerals exploration and extraction must have:

> It must encourage scientific and technological efforts and the other major capital investments needed for such exploration and exploitation by making it possible to conduct these activities in an orderly and economic manner.
>
> It must give the United States and all other nations a fair chance to engage in minerals exploration and exploitation.
>
> It must minimize the creation of vested interests that will inhibit changes in the framework deemed desirable in the light of unfolding experience with actual exploration and exploitation.
>
> It must seek to avoid and not to provoke international conflict.

While President Johnson's statement and the Stratton Commission's report set forth objectives clearly, the Johnson administration and the Nixon administration did not have a clear statement of policy regarding the ocean seabeds. Indeed, this was the subject of much discussion, and a special study on U.S. suboceanic lands policy was conducted by the Commerce Committee last fall, of which I had the privilege to be chairman. Other committees were also interested. The Senator from Rhode Island (Mr. PELL), of the Foreign Relations Committee, had introduced Senate Resolution 33, and spoke eloquently on the need for clear U.S. policy regarding the seabeds. The Senator from Montana (Mr. METCALF) is chairman of a Special Subcommittee on Outer Continental Shelf of the Committee on Interior and Insular Affairs, and has also conducted extensive hearings late last year and into this spring. Until May 23 this year, the U.S. Government had no position on the seabeds; it was busy formulating one.

On May 23 the President announced a bold, thoughtful and controversial U.S. oceans policy. He proposed that:

> All nations adopt as soon as possible a treaty under which they would renounce all national claims over the natural resources of the seabed beyond the point where the high seas reach a depth of 200 meters (218.8 yards) and would agree to regard these resources as the common heritage of mankind. He proposed establishing an international regime for exploitation of seabed resources beyond the 200 meter limit, providing for the collection of mineral revenues for international community purposes. The treaty he proposed would establish general rules to prevent unreasonable interference with other uses of the oceans, to protect the ocean from pollution, to assure the integrity of the investment necessary for such exploitation, and to provide for peaceful and compulsory settlement of disputes.

Importantly, the President proposed that the treaty provide that coastal nations act as trustees for the international community in an international zone extending from the 200 meter limit to the edge of their continental margin. He also proposed that international machinery to authorize and regulate exploration and use of seabeds resources beyond the continental margins be included in the treaty.

At the same time, the President announced an effort to obtain a new law of the sea treaty, establishing a 12-mile limit for territorial seas and providing for free transit through international straits.

Mr. President, anyone knows that when he holds to the middle of the road he is bound to get hit from both directions. The President's proposal is no exception. Some in the United States have accused the President of renouncing portions of its sovereign territory. And at the recent Pacem in Maribus conference in Malta, representatives from less industrialized countries accused the President of another colonialistic grab.

Those of us who had a chance to study the President's proposal saw many ideas and problems couched in the general language. The President promised that specific proposals would be introduced at the next meeting of the U.N. Seabeds Committee to carry out the objectives of his proposal. We have all waited those specifics, and recently many here on the Hill received copies of a draft of the proposed treaty, which finally puts specific proposals on paper.

I welcome seeing the draft treaty, because now the process can begin in earnest and we can talk specifics. No more do we need vague statements and broad outlines; the draft provides specific approaches to grapple with. But I stress that this is the beginning of a process that is like the legislative process with which we are more familiar. A draft treaty, like a newly introduced bill, is not a final commitment or enactment of law. When proposed and introduced, it begins a process of discussion and negotiation that may or may not result in a treaty.

The exploration and extraction of mineral resources of the seabeds is a complex subject. Any treaty on the subject will necessarily be complex also. A great deal of consultation with Members of Congress and our staffs, with environmental, scientific, industrial, international, and other interests will be necessary before any treaty results.

Mr. President, it is important that these talks begin soon and that the United States be the leader in initiating specific discussions. For this reason I am supporting the President's proposal to introduce the proposed draft seabeds treaty at the August 3 convening of the U.N. Seabeds Committee in Geneva.

I give this support in full knowledge of the controversy that has arisen around the draft treaty. But I emphasize that it is important to begin and important to understand that the present draft is not necessarily the final version that may result. Complex international discussions must begin, and the U.N. Seabeds Committee, in which the United States has a strong voice, is the obvious and proper place for the talks to begin, for the committee represents a broad segment of international interests.

I have had an opportunity to review the draft treaty and there are several reasons why I have concluded that it is in the national interest to begin the international discussions of it now. First, it represents U.S. leadership in an important area in days of waning influence. Second, the draft treaty seeks to rectify an imbalance in the law of the sea that generally works to the detriment of less industrialized countries and countries with no coastlines. It is fair, and in its fairness it protects vital U.S. interests.

It protects national security interests, particularly by proposing an international agreement that would control the excessive creeping jurisdictional claims by certain nations. It protects legitimate interests of U.S. petroleum companies. I was informed that top representatives of U.S. oil interests were consulted as the draft went although various revisions. In fact, counsel for our Subcommittee on Oceanography was present at a meeting at which one of the foremost representatives of oil interests stated unequivocally that oil companies could "live with the President's policy." Representatives of hard mineral companies have also been consulted during the drafting process, and I understand that their interests have been considered and taken into account in the draft treaty. Living resource interests, and scientific interests have also participated and made substantial contributions to the draft. All of these are protected I am convinced.

The proposed treaty has several features that are important and that I want to point out:

It would not turn control over to the United Nations. Coastal states would act as trustees of an international area and would exercise a control and bear responsibilities that are based on a realistic balance between powerful and less powerful nations. The United States would have an effective voice in the international machinery that would be established.

It would provide a mechanism for firm control of exploration and exploitation of minerals such as oil so as not to pollute the ocean environment.

It would provide a mechanism for speedy settlement of international disputes.

It would provide for free and open scientific research, continuing this important freedom of the sea.

It would clearly define the limits of the Continental Shelf and the rights of coastal nations in the area beyond the Continental Shelf over the continental margin.

Despite the fact that the proposed draft treaty is long, complex, and imperfect, it is a good, thoughtful start toward full consideration of the specific issues relating to seabed resources. At some point the Senate may be called upon to give its advice and consent on a seabeds treaty. We would have to know whether the international community would support the President's proposal, to decide whether it is in the best interests of the United States. The time to begin and to find out is now, while the leadership is ours. We should support the President's leadership in this proposal and begin.

Mr. President, in conclusion, I urge that the U.S. representatives to the U.N. Seabeds Committee introduce the proposed treaty at the Geneva meeting in August. And in recognition of the controversy and legitimate concerns many people have about the draft, I also urge that the State Department, the Defense and Interior Departments, and all other affected interests continue full discussions with the Commerce, Foreign Relations, and Interior Committees of the Senate, and with the appropriate committees in the House of Representatives. Together I hope we shall arrive at a sound seabeds treaty.

Mr. President, the distinguished Senator from Washington (Mr. MAGNUSON), chairman of the Committee on Commerce, is necessarily absent today. I ask unanimous consent that a statement by him on this subject be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MAGNUSON

I very much appreciate and support the statement just made by Senator Hollings, the distinguished chairman of the Subcommittee on Oceanography. The points that he makes that we must begin international discussions of a seabeds treaty and must continue full discussions between the affected interests and the appropriate Congressional committees are important.

The uncertainties in the law of the sea regarding seabed resources in the area beyond the 200 meter limit of the continental shelf have been compounded since the Continental Shelf Convention came into force. Now, when technology has advanced to permit mineral exploitation in depths greater than 200 meters, there is an unacceptable uncertainty in the law of the sea that would threaten the security of any economic investment made to extract mineral resources from the continental slope or over the continental margin. We could let the law of the sea develop by custom and by letting nations go out and assert claims the way certain Latin American countries have regarding fishing. Or we could sit down with the many different countries and interests and try to negotiate a rational treaty. Exploitation of seabed resources is too complex and important a subject to let the law of the sea develop haphazardly.

The uncertainty in the law of the sea regarding seabed resources has existed for at least ten years. The pace of individual claims for these resources is accelerating. After long deliberation the President has announced a United States seabeds proposal for introduction at the U.N. Seabeds Committee meeting in August. Rather than risk eroding the leadership the President has exercised, I support the effort to have the President's proposal introduced at the Committee meeting.

I also want it clearly understood that the Committee on Commerce, as well as the Committee on Foreign Relations and the Committee on Interior and Insular Affairs, has considerable interest in this matter and expects to be kept fully informed of the discussions and negotiations on the seabed treaty while they progress. In addition, our Committee expects to continue discussions with all of the affected interests, private and public, as an attempt is made to arrive at a sound seabeds treaty.

SENATOR MILLER ON "CAPITOL CLOAKROOM"

Mr. DOLE. Mr. President, recently the CBS radio program "Capitol Cloakroom" featured the senior Senator from Iowa (Mr. MILLER). Facing questions from three correspondents, our distinguished colleague, a member of the Committees on Finance and on Agriculture and Forestry, and the Joint Economic Committee, provided an incisive analysis of current national issues. The questions focused on an area of the Senator's special knowledge and expertise, the economy, and those who may have missed the broadcast should find Senator Miller's comments interesting and worthwhile.

I ask unanimous consent that the transcript of the July 15 broadcast of "Capitol Cloakroom" be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

CBS CAPITOL CLOAKROOM

Produced by Ellen Wadley.

Guest: U.S. Senator Jack Miller (R-Iowa).

Panel: Bruce Morton, Anchorman; Daniel Schorr; Stephen Rowan.

BRUCE MORTON. Senator Miller, will the economy get better by election time?

DANIEL SCHORR. Senator, will the family assistance plan come out of Congress this year?

STEPHEN ROWAN. Senator Miller, what will the continuing war in Indochina do to the Republicans' hopes of gaining control of Congress this year?

ANNOUNCER. Capitol Cloakroom. From the nation's capital, CBS Radio brings you the 1,123rd presentation of Capitol Cloakroom, a spontaneous and unrehearsed interview with an outstanding public figure. This week's guest is Senator Jack Miller, Republican of Iowa. He meets with CBS news correspondents Bruce Morton, Daniel Schorr, and Stephen Rowan. First we hear from Bruce Morton.

Q—Senator Miller, welcome to Capitol Cloakroom. Our guest is Iowa Republican Jack Miller, first elected to the Senate in 1960, reelected six years later; a member of the Finance and Joint Economic Committees and the Agriculture Committee. Senator, those first two qualify you, I suppose, as as much of an expert as anybody else is these days on the economy. Administration spokesmen keep telling us that things are going to get better. Do you think they'll get better by election time, or do you see the economy as a major issue in this fall's campaigning?

Senator MILLER. I think the economy will be an issue in this fall's campaign. I'm naturally hopeful that it will get a little better but I'm not optimistic about it because I *do* think that when we're moving from a wartime to a peacetime economy, you're bound to have a period of readjustment. There are fewer people working in defense industries now than there were a year ago, and there will be fewer working in the months ahead. There will be fewer people in the armed forces because they're dropping out the numbers in the armed services. And, when you take those factors into account, it looks to me as though we can expect to have an unemployment rate around five percent, perhaps even up to five and a half. And I said myself, a year ago, that after the inflationary binge we'd been on for several years in this country, my knowledge of economics told me that we must expect a period of hurt. Secretary Kennedy stated a year ago that we were paying for our past sins. Now, hopefully, a recession that we would have (and I believe in calling it a "recession") would be a mild one, which might mean five percent unemployed and, hopefully, it would be a short-lived one, which would mean eight or ten months.

I don't see that that eight or ten months' period, if it is a short-lived recession, will be over before the fall elections. And I personally think we'll be doing very well, taking into account the inflationary binge, taking into account the movement from the wartime to a peacetime economy . . .

Q— . . . inflationary binge, Senator Miller?

Senator MILLER. Well, I have to look at who was in control of the Congress. I'm not talking about who was the President because, after all, what the President has to say is just paper and just words. It's the Congress, those in control of the Congress, that implement economic policy, and I must tell you, as you well know, that the Democrats were fully in command of the Congress during those years.

Q—It's almost bound to translate though. It may be that the Democrats were to blame, but people tend to vote on today's bad news. Isn't that going to hurt the Republicans in the fall?

Senator MILLER. Well, I think it's a two-edged sword. I think it depends upon how well-informed the public is. I think it depends upon how well the candidates point up where the responsibility lies. I have always done so in my state; I see no reason why candidates in other states can't do the same thing.

Q—Aren't the Democrats simply going to say, "Well, President Nixon has refused to put into effect any of the proposed controls that we've given him"?

Senator MILLER. Well, of course they will say that but, when you get down to bedrock, the most important thing in this inflation-high interest problem is whether we come out with a reasonably balanced budget. Now, when you have those in control of the Congress exceeding, as of this date, the budget requests of President Nixon by $4 billion, when you had those in control of the Congress run this federal government of ours $25 billion deeper in debt two years ago, I must say that that's where inflation starts. And we've had recent testimony by I. W. Abel, the President of the United Steel Workers, pointing out that wage increases did not really get moving until you had a cost of living increase. And the cost of living increase, or inflation, started right here on Capitol Hill with the inflationary binge, the multi-billion dollar deficit spending binge, by those in control of the Congress. And I think it's high time that the American people understand that the President can make speeches and he can write out anti-inflationary programs on paper, but they're not worth any more than that paper unless the Congress, those in control of the Congress, implement them. Now, let me give you an example of what I'm talking about. Three months ago I was out in Los Angeles on a forum, and James Tobin, a Democrat and former member of the Council of Economic Advisers under President Kennedy, praised—

publicly praised—the Nixon Administration's anti-inflationary program. So, it's a good program, I think, but I must repeat it's no better than the piece of the paper that it's written on unless those in control of the Congress, and I'm of course talking about the Democrats who control the Congress, carry it out. And the most important aspect of carrying that out is to match outgo with income of the federal government.

Q—Well, as Mr. Morton said, the voters are going to look at today's bad news and today's bad news, as you've admitted, in November is likely to be more inflation and a deeper and deeper recession.

Senator MILLER. Oh, wait just a minute. I didn't admit that there's going to be more inflation. Please don't quote me on that. I suggest that we can have an unemployment rate of five percent in November, yes, but I do think that inflation, if anything, will tone down. But I'm not expecting it to tone down very much.

Q—Well, now, you've been blaming the Congress. Mike Mansfield has been saying all year that the Congress cut the President's budget by something like $7 billion last year. Is that wrong?

Senator MILLER. Well, of course that's wrong. This was fully aired out on the floor of the Senate. In fact, it all started back at the time of the HEW appropriations bill, and some of the Democrats were pounding their chests and pointing out that they had cut the Nixon budget—I think it was $5 billion—and they were referring to $135 billion in the budget. They were a little embarrassed when I said, well, after all, the spending budget is up around $200 billion—why are you only talking about the $135? And then it was brought out that on the extra amount over and above $135, they had actually increased the Nixon budget. But as far as cutting the Nixon budget was concerned, that was actually done by the Administration. I'll grant you that, when the original budget came over a year ago, that it was up around $135 billion, but in subsequent weeks, before the Administration came before the appropriations committees, they, of their own volition, cut the budget about $5 billion. So when they came before the appropriations committees, all they were asking was that the appropriations committees ratify the cuts the Nixon Administration had already put into effect. So, I think it ill behooves them to try to tease the public by saying "we" cut the Nixon budget. All they did was to ratify what the administration had already done. But I think it's important to note that in this fiscal year, as of today, those in control of the Congress have exceeded the Nixon budget by $4 billion, and we have several appropriations bills yet to pass.

Q—Getting off appropriations bills, Senator, to what may be future appropriations if the program ever comes about. I guess, for listeners, I'll have to fill in a bit of background before I even ask you the question.

The House, by a large vote, passed the family assistance plan that the Nixon Administration had submitted, intended to overhaul the welfare system by providing a minimum income system accompanied by incentives to work. It came up before the Senate Finance Committee for hearings. The Committee sent it back to the Administration to get some bugs out of it about inequities and lack of smooth incentives. The program has now been sent back. The Senate Finance Committee is going to schedule hearings on it, next week, I believe, but there's a great deal of talk of lack of enthusiasm in the Senate Finance Committee. Conservatives don't like it very much, and the liberals don't like it for other reasons. Daniel Patrick Moynihan says if your Committee will bring it out, he's sure the Senate will pass it. If you don't bring it out, if it isn't passed, it may be the last chance in a generation to overhaul welfare. So, with that brief introduction, what's going to happen?

Senator MILLER. Well, with all deference to Dan Moynihan, I do think that he has, perhaps, exaggerated the matter a little bit. Just because the Congress might not pass something this year doesn't mean they won't pass something next year. And to suggest that we won't do something about a long outmoded welfare system within the next decade because we haven't acted this year, I think is carrying it a little far. But there's no question but what after the hearings, the original hearings before the Finance Committee, and after particularly the excellent staff work that was done in locating the bugs in the bill, that there was some disaffection on the part of even the proponents. I myself, endorsed the idea, the concept, that President Nixon advanced because I think we've been going in the wrong direction on welfare for thirty-five or forty years, and for once we had a President of the United States who came over and suggested a new philosophy, a new approach, which would be designed to get people to want to move out of this welfare cycle that family after family has found itself in. Now, when the bugs showed up, it was found that, although the theory behind this legislation was generally enthusiastically received by both Democrats and Republicans on the Committee—it was found that the bill didn't implement that philosophy because we found cases in which there would be a disincentive to work, where you would find somebody who was earning some money who would receive less overall, counting his earnings and counting other welfare-type programs—food stamps, medical assistance, public housing and so on—he would have received less than if he just sat home and did nothing.

Q—For a certain number.

Senator MILLER. That's what we call disincentive. And so we told the Administration to take this bill back and do a job of correlating all of the various types of welfare-type programs—not only the family assistance program itself but food stamps, public housing assistance, medicare, medicaid—and put them all together and revise this . . .

Q—You don't mean medicare?

Senator MILLER. Medicaid. And put them all together so that they would be able to show us that they had debugged the disincentives from the program. Well, they've done that, I think, although the staff is still going through it to see whether or not they have actually done a complete and thorough job on it. But where I am hung up a little on this is that I look at a schedule, for example, covering Phoenix, Arizona, and I note that they have laid out what would happen as between somebody who earned nothing and somebody who earned $720, and a thousand, and two thousand, and three thousand; and the total take, you might say, that they have with their earnings, with the family assistance plan benefit, with a state supplemental benefit, food stamps, the medical insurance bonus which they're proposing, and the housing bonus under public assistance housing or rent supplements, and so on. And I find that, while there is no disincentive, that the incentive is very low, very slight. For example, somebody who earned a $1,000 out in Phoenix under this overall program might be encouraged to earn two thousand, but if he earned two thousand he would end up with only about $90 net benefit as against just earning a thousand. Now, my question is whether or not that extra $90 is enough of an incentive for a person to take the time and the trouble to earn $2,000 instead of only $1,000. And you'll find a similar closeness between the various stages of earned income—two to three, three to four, four to five—which bothers me. And I don't know whether that's enough of an incentive as between these various income brackets to get the job done that we want to get done. So give them credit for debugging it and taking out the disincentives, but you have to have enough incentive for people to really want to go out and work longer and work harder.

Q—Senator, without going into a great deal of detail on what will be coming up at your hearings, if Republicans like you are still not convinced and the Democrats on the Committee don't seem to be very helpful, do you think that bill is going to come out?

Senator MILLER. Well, no, I don't, but I would hasten to suggest that I do think there are some Democrats on the Committee who are quite open-minded about this and who do definitely want to try to support something that is going to change the philosophy that we've been operating under for a long time. Republicans like me still want to be shown, but I emphasize that I have endorsed the idea from the very beginning and, if it entails some further work to try to provide a greater incentive, or if I can be persuaded that the differences in these income areas are sufficient incentives, then I will support it and I hope my colleagues on the Republican side will do likewise.

Q—But you're saying you don't think it's going to come out this year?

Senator MILLER. No, I haven't said that, and it's possible that it will, but I think it—I've been on the Finance Committee long enough to tell you that you never quite know what the Finance Committee is going to do. I think most of us in there are asking questions and we're not asking questions for the purpose of destroying. We're asking questions for the purpose of trying to be constructive because we do like the philospohy. I don't know of any member of the Senate Finance Committee who hasn't bought the philosophy. The important thing is whether or not the bill squares with the philosophy sufficient so you'll have a majority vote in the Committee.

Q—We were talking earlier of the effect of recession on Republican chances in the November election. The Administration has made it clear that this bill is the centerpiece of President Nixon's domestic program. This would be the one new innovative thing that he had hoped to do before the election. Is the election any factor in your thinking on this?

Senator MILLER. I don't think so because this bill would not be implemented anyhow until next year, so it would have no impact on the . . .

Q—You could talk about it being passed. They made a great deal of talk about the House passing it.

Senator MILLER. You can talk about it being passed, but until actually you have the mechanism in effect I don't think you're going to have much voter effect.

Q—Senator, if my recollection is correct, there are twelve Republican seats and about twenty-three Democratic seats up in the Senate this year. You've got to gain seven to win control of the Senate. Are you going to be able to do it?

Senator MILLER. Well, I have said that I think that if I were inclined to make a wager I would wager that there would be a net gain of Republican seats, but I don't think I would wager that there's going to be a net gain of seven. In other words, I don't think I'd put a lot of money on that. I'm quite confident that there will be a net gain, however. But, as to whether or not you're going to have a net gain of two, four, six, seven, or eight, you're getting into areas where, because of the speed and the intensity of communications today and the developments that take place rapidly around the world and in this country, you can have changes almost overnight right up to election day.

Q—As long as you're betting, which states would you bet are the safest and which perhaps the weakest for the Republicans this year?

Senator MILLER. Well, I don't like to pinpoint, but I do think that there's a very

strong probability that we'll end up with a Republican Senator, another Republican Senator, from Florida, for example. And from Texas. There are other states where you could flip a coin and the outcome could be determined again by developments that take place right up to election day. Wyoming can be a very—can be a toss up.

Q—Senator, let me broaden Dan's original question about Florida a little bit. What kind of Republicans do you see winning this year? Is there a conservative trend? I mean, do you see Charlie Goodell-style Republicans or conservatives or what sort of new Senator? Senator Miller—Looking at the stable of Senate candidates that we have seeking those twelve Democratic seats that you're talking about, I think you'll find that most of them are what you would call moderate to conservative types. None of them arch-conservatives. They'd be moderate to conservative. For example, George Bush in Texas. For anybody to suggest that George Bush is a rock-ribbed conservative just hasn't followed his record down here. On the other hand, he certainly is no flaming liberal. He's a moderate to conservative type, and I think that you'll find that that's the general pattern of our stable of candidates in the election coming up.

Q—If the Senate goes more conservative and if particularly the Republican side of the Senate goes more conservative, do you foresee a challenge to Senator Scott next year?

Senator MILLER. Well, of course, that's always a possibility. One just doesn't know. We're fairly evenly divided in the Senate on conservative, liberal, moderate. If you analyze the voting records of the Republicans in the Senate, I think you'll find they're rather split up three ways: what you would call liberals, what you would call conservatives, and what you'd call moderates.

Q—How would you rate Hugh Scott's leadership? Have you been comfortable with him as leader?

Senator MILLER. Well, I have been comfortable with him. I think he has a horribly difficult problem. You know Senator Dirksen was having a horrible problem before he passed away. There was talk around the Senate that Everett had lost control of things. Well, I don't know that Everett had lost control of things, but we had had some new members come in and they were just not about to take the advice and counsel of their leader. And Hugh Scott simply fell heir to that situation. And you put yourself in the shoes of a leader and he's got three groups of Senators and they're equally divided—a group of liberals, a group of conservatives, and a group of moderates—and you've got yourself one horrible leadership problem.

Q—Not to even mention the problem of working with the White House.

Senator MILLER. Well, I think that from all I understand that Hugh Scott has worked pretty well with the White House.

Q—Even though they occasionally pull the rug from under him?

Senator MILLER. Pardon me?

Q—Even though they occasionally pull the rug from under him?

Senator MILLER. Well, I wouldn't say that they pull the rug out from under the Republican leader any more, if as much, than Lyndon Johnson pulled the rug from under Mike Mansfield.

Q—Did the incursion into Cambodia pull the rug from under some of the Republican candidates this fall, do you think?

Senator MILLER. If it has, I haven't heard about it.

Q—Do you think that there are going to be those who will be seriously affected by that move?

Senator MILLER. I don't think that Cambodia will be an issue in the fall campaign. I think it's a dead duck.

Q—You don't think all this talk of peace candidates, citizens groups, and all that kind of thing is going to have much effect on the fall voting patterns, then?

Senator MILLER. I would doubt it. I can see where it might in certain specific areas such as happened out there, for example, in Jeff Cohelan's district in Oakland, California, but I think you will find it's rather limited. I'd be inclined to guess that it would have more effect on Democratic primaries around the country than anywhere else.

Q—Senator, I'm sorry to interrupt but our time is up. Thank you very much for being our guest on Capitol Cloakroom.

SENATOR SYMINGTON'S POSITIVE RESPONSE TO THE NEEDS OF RURAL AMERICA

Mr. EAGLETON. Mr. President, the plight of Rural Americans in the last quarter century has become increasingly serious. Increased production as well as improved farming methods have multiplied the problems of agricultural workers. Migration to the cities in greater and greater numbers has been the inevitable result. This addition of significant numbers of people to our already overcrowded urban centers has forced us to consider ways and means of developing the resources of rural areas.

Recently, my distinguished senior colleague from Missouri (Mr. SYMINGTON) delivered a thoughtful address on the subject at the dedication of Missouri Rural Electric Cooperatives Headquarters in Jefferson City, Mo.

Mr. President, I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

RURAL AMERICANS IN URBAN AMERICA—THE CHALLENGE

(By Senator STUART SYMINGTON, July 8, 1970)

In recent years I believe it fair to say that most of the nation's attention has been fixed on the plight of our decaying cities and our urban poor. At the same time it would appear just as important, if not more so, that we find solutions to the problems of rural America and its citizens—particularly the poor, the aged, and the unemployed.

Today less than 30 percent of the nation's population is rural; but 46 percent of the people with poverty-level incomes in this country live in rural areas; and 60 percent of America's substandard housing is located in rural regions. Millions of rural Americans are undernourished and ill-clothed. Over 35,000 rural communities are without water systems and 45,000 need sanitary disposal systems.

For too many of our rural citizens the good life is but a dream of an earlier America which counted 19 out of every 20 citizens among its rural population. Today that number has dwindled to 6.

Now what are the basic reasons for rural deprivation?

For the past 300 years, agriculture has been the anchor of rural America. In the last quarter century, however, we have experienced an agricultural revolution. Research, improved fertilizers, increased mechanization, and vast irrigation programs have transformed America's countryside.

Since the end of the Second World War crop production per acre and livestock production per breeding unit have increased almost 100 percent. In 1945, we produced 2.6 billion bushels of corn. In 1969, by contrast, we produced 4.6 billion bushels on one-third fewer acres. In 1945, the average milk yield per cow was 5000 pounds a year. Today it is 9200 pounds.

In the last 15 years productivity has increased by more than 6.6 percent per year—more than twice as fast as productivity in the economy as a whole.

This is a great testimonial to the resourcefulness and ingenuity of the American farmer. As a result, today he is one of our very best foreign exchange earners.

But as agriculture has become more and more mechanized, and as farm yields have multiplied, fewer and fewer people have been employed in agricultural work.

As agricultural employment shrinks, in their search for opportunity rural Americans in ever-increasing numbers have been forced to migrate to our already overgrown cities. Many small communities and crossroads villages which over the years have been sustained by the farmer are dying; and their populations too are streaming into our cities.

In recent years this flow has developed into a flood. Except for developments that create major improvements, such as the Table Rock Dam, most of our counties in the past two decades have been losing population. During this same twenty year period, however, the population of the United States as a whole rose by some 33 percent.

Unfortunately, this migration has only intensified the already serious problems facing our cities. Thousands of rural people arrive in those cities with high expectations; but they lack the skills and education necessary to find adequate employment. Thus, all too many become names on the metropolitan welfare rolls.

If we do not act now, I believe that within thirty years many hundreds more of our small towns will become ghost-towns; and rural America could become a vast empty land, inhabited by a relative handful of agricultural technicians cultivating gigantic tracts with computers and drone tractors.

At the same time, most of our population would thus be further concentrated in huge urban agglomerations, compounding the problems of congestion, pollution and crime.

If we are to prevent this from occurring, there must be genuine recognition of the fact that rural America's problems are urban America's problems; and unless we begin, now, to solve the problems of the countryside, there can be no real long-term hope for our cities.

It would now appear essential to restore an urban-rural balance in America; and this would call for some redistribution of our population across the map of the United States.

Let us begin, therefore, a real and practical effort to revitalize our small towns in effort to accelerate rural development efforts.

I would now present seven possible key elements in a total town and country development program.

First, we should do our best to try to eliminate more of the opportunity gap that exists between urban and rural America. Today a lack of jobs often prevents many individuals who would like to do so from living and working outside the city. But in order to draw new industry to our rural areas, and thereby create new jobs, we will need to have a trained and educated labor force.

Unfortunately, in the past vocational training programs in rural areas have either been too oriented towards agricultural efforts alone or designed with an emphasis on home-economics skills. There is now an urgent need for greatly expanded vocational training programs which will emphasize non-farm job skills, and thereby prepare rural youth for today's highly technical world.

Secondly, we should strive to make our small communities and rural areas more attractive and appealing places in which to live. In this regard, I believe we should consider developing a national "Rural Renewal" program—one similar to our urban renewal

efforts. This would mean loans and grants available for modernizing and refurbishing the fading main streets of small town America; and would also mean sorely needed planning and technical assistance would be available to small towns.

Thirdly, the quality of life in rural areas must also be improved.

Over the years perhaps no other activity has more enhanced rural life than rural electrification. Although electricity was slow in coming to many farms and small towns in the early part of this century, since the Rural Electrification Administration was established in 1935, remarkable advances have been made. In 1935, for example, less than 11 percent of America's farms possessed electricity. Today 99 percent of the nation's three million farms are electrified.

Telephone service has also increased rapidly. As late as 1950, only 38 percent of our farms had telephones; but today over 80 percent of our farm people have this convenience; as do virtually all small town residents.

Missouri has the third largest number in the nation of consumers who benefit directly from the REA program. Of this we should be very proud.

The Rural Electrification program has been the one great incentive for bringing new jobs and new opportunity to America's heartland. Since 1961, it is estimated that over 300,000 new jobs have been created as a result of this superb REA program; and as a result, the standard of living among rural people has increased in recent years.

Much remains to be done, however. Rural America continues to lag behind our cities in terms of modern roads, water and sewer systems, schools, hospitals, and other public facilities.

In the years ahead, therefore, we should make a concerted effort to improve these services and facilities, and thereby lessen the disparity that continues to exist between rural and urban modes of life.

Fourth, I believe that experience demonstrates the construction of Federal reservoir projects can be of inestimable benefit in promoting economic development in rural areas. Not only do reservoirs bring needed flood control, water supply, hydro-electric power, and recreation to rural America, but they bring enormous social benefits as well.

Again I mention Table Rock Reservoir in southwest Missouri as an excellent example of the progress which accompanies reservoir development.

In the short period of 11 years, from 1958 when Table Rock was completed, to 1969, the combined assessed valuation of the seven county Table Rock area climbed from $87 million to $140 million; and as a result of the new investments generated by the reservoir, on June 1, 1966, Taney County was removed from the list of the 50 most depressed counties in the United States.

Surely we will all agree that our expansion of water resource development programs would be a most important step in the promotion of rural development, all across the nation.

Fifth, the possible construction of "New Towns" as is necessary in the case of Pattonsburg offers great latitude for dealing with some of the problems of rural America. This approach could in some cases provide an alternative to the present policy of relatively haphazard national growth. It could also help locate those tens of millions of new Americans who are expected in the coming decades. It could aid cities from many of their worsening problems; and at the same time, act as regional growth centers to stimulate rural development. It is with this thought in mind that I recently called for consideration of constructing some 300 new towns of 300,000 people each by the end of the century.

Sixth, in order to give proper recognition to the problems of rural America, we should consider expanding the Office of Small Town Services in the Department of Housing and Urban Development to sub-cabinet status.

Seventh, for too long we have maintained a policy of two Americas in meeting the complex challenges facing us here at home—one set of programs to deal with urban America, and another to deal with rural America. Today, I believe it fair to say that there is an increasing recognition of the fact that the problems of urban and rural America are so interrelated we must take steps to develop a common national policy for both.

In the United States today, our human resources constitute the foundation of our basic strength. With that premise I know we will all agree that the unfulfilled hopes and untapped resources of rural America present us with a great challenge and a great opportunity. To fulfill that opportunity will take imagination, hard work, and money. Nevertheless the reward we can rightly expect from that vision and effort would be a major contribution on our part to the future security and prosperity of America.

DEATH OF JAMES G. LUCAS, SCRIPPS-HOWARD WAR CORRESPONDENT

Mr. THURMOND. Mr. President, the untimely death of Scripps-Howard Correspondent James G. Lucas is a loss to the citizenry of our Nation.

Jim distinguished himself by accurate and informative coverage of military life during World War II, Korea, and Vietnam. He was the Ernie Pyle of the last two decades.

Mr. President, I feel a personal loss in his passing. I ask unanimous consent to have printed in the RECORD an editorial entitled "Jim G. Lucas," published in the Washington Daily News of Tuesday, July 21, 1970.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JIM G. LUCAS

One of many amazing things about Scripps-Howard War Correspondent Jim G. Lucas was that a lifetime of witnessing and writing about the tragedy of wars left him without a trace of inner hardness or cynicism.

He was, until the end, what one speaker said of him years ago in bestowing upon him some particular medal: "A truly modest man—an old Marine with a soft heart."

And he could, and did, write with the best of the journalists of any era.

He undoubtedly saw more combat than any newspaperman in U.S. history. He seemed to be always at the front—until age and a long, losing bout with cancer caused him to return from Vietnam three years ago for the last time. When, for example, Gen. Omar Bradley at a Washington banquet in 1953 awarded Jim with glowing terms the VFW's Gold Medal for conveying the feel of the battlefield in his stories, Jim was on the frontlines in Korea. When he was awarded the 1954 Pulitzer Prize for his human interest stories from Korea, he already was in Hanoi covering still another war. (He was in Hanoi when Ho Chi Minh's troops took over North Vietnam.)

Still, 25 years of frontline reporting in three major wars never shook his belief in the worth of the individual, the value of life, or the love of country.

He never married. He loved young people and there are countless stories of his help to the young, particularly young newspapermen on their first assignment to a war zone. He could, and did, oratorically wave his country's flag at the slightest provocation.

Jim Lucas was a great reporter with a rare gift for chronicling the miseries and joys, heroism and humdrum of the life of the American soldier on the frontlines in three wars.

Thousands upon thousands of ex-GIs will long remember him from the clips of his stories they have pasted in their scrapbooks.

Scores of young newspapermen in the future, we are sure, will be studying his work and seeking to emulate it—just as has been true in the case of Jim's predecessor, Ernie Pyle.

For those of us in Scripps-Howard, it has been an exceptionally rare privilege to have worked with Jim Lucas.

IMPORTANCE OF TRANSPORTATION TO KANSAS

Mr. PEARSON. Mr. President, the importance of transportation to the State of Kansas cannot be overemphasized. Lying in the strategic center of the United States, our landlocked State would be isolated and forgotten but for the highway, rail, and air transportation available to us.

Regrettably, rail transportation in Kansas is rapidly deteriorating and disappearing. Perhaps in a few years the great iron horse that opened our region of the country to westward expansion will serve us no more. Accordingly, the importance of air transportation becomes each day more vital for the growth and potential of our State.

As one who has been keenly interested in aviation for over 20 years, I am particularly pleased by the progress which one air carrier, Air Midwest—a third level commuter carrier—has achieved in increasing and improving air service to Kansas. It has moved aggressively into the air passage market partially abandoned by Frontier Airlines as well as expanding new markets in our region. I have met with the men who are the officers at Air Midwest and I have been encouraged by their imagination and determination to provide adequate and efficient service to my State. I salute them and wish them well.

Indicative of their increasing success, an article published in a recent edition of an aviation magazine, Airline Management and Marketing, highlights the efforts of these men to get this new airline off the ground—both literally and financially.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR MIDWEST: "FLAG AIRLINE OF KANSAS"

In this election year, a lot of politicians would do well to study the "grass roots" support being built up by Air Midwest in Kansas.

Faced with minimum service by some airlines and a pullout by another due to the uneconomic nature of the short-haul routes, Kansans—particularly western Kansans—are doing all they can to keep themselves in the transportation mainstream. That's where Air Midwest comes in.

The company, based in Wichita, started life in 1965 as Aviation Services Inc., a one-plane, one-employe air mortuary/charter operation. The employe (and founder) was Gary Adamson, now president of Air Midwest, which flies one Beech 99 and three Sessna 402s on its scheduled flights, has two 402s for backup and three Cessna 206s for charters.

Although Air Midwest is classed as a

"commuter air carrier," the 70-employe organization, serving 14 cities in four states, is providing "local service" with small aircraft and 133 weekly flights.

"Most of our customers need hub airport connections rather than commuter service," Adamson told AMM/AA. Dubbed "the official flagship airline of Kansas" last year, Air Midwest is providing the only scheduled air transportation from some points, the only frequently scheduled service from others, and the only nonstop service at still others.

Dodge City, a 45-min. nonstop from Wichita, is an example. An agriculture-oriented town of 15,000 with a thriving cattle-sale/meat-packing center, Dodge is now served on a scheduled basis only by Air Midwest, following a Frontier Airlines suspension in 1968. The city also has two trains daily and some bus service.

According to an editorial in the *Dodge City Daily Globe*, the community should support and cultivate the commuters: "Reliance on a major carrier, either to return or remain, is pure folly."

To show its appreciation for the third-level service, Dodge floated a bond issue to extend the airport runway, is building a new ticket counter from funds provided by local businessmen, and kicked in $12,500 as one portion of a five-city, $100,000 loan to Air Midwest for expansion and operating capital.

David B. Ross, executive director of the town's Chamber of Commerce, said: "They're really part of the family in Dodge City. We're aware of their problems and background, and work with them closely because of the mutual advantages."

Dodge isn't alone in that thinking. According to Albert L. Kamas, a Wichita lawyer and member of the state's Economic Development Commission: "We're trying to keep our children in Kansas, but we need something for them to do. So we have to get industry in and industry wants transportation, so we follow 'these kids' (median management age is 30) around." KEDC can't give Air Midwest actual funding, "but it can do almost everything else," Kamas said.

One instance where there was some resistance, but where Air Midwest came out on top, was at Great Bend, an oil products center with 20,000 population and no rail service. Frontier still serves the community with three flights daily, while Air Midwest provides 11. The airport, a former military base has three 8,000-ft. runways and growing business jet traffic.

When Air Midwest first started Beech 99 operations in Great Bend last year, "we actually had people come to the airport to see if the plane would be there when we said it would," said James Pickett, vp-marketing/corporate planning. As of last month, Frontier had applied to suspend service at Great Bend, and Air Midwest told CAB it would fill the breach. Although there was some minority dissent, the city council okayed the move.

If approved, Air Midwest will not only increase the passenger service there, but plans to provide all-cargo service, a big potential money-maker in that area of the state, and to add Air Express.

Air Midwest has "done everything it said it would," Gene Cole, manager of Great Bend's Industrial Development Inc. project, said. "We went through Continental's growing pains, then Central's. All of them outgrew Great Bend."

It might seem a paradox that, in a state boasting "the air capital of the world" (Wichita), selling air transportation would be a problem. But, Pickett said, "our people aren't commuters like they are in the East. Most people would rather jump in their cars and drive three hours to Wichita from western Kansas."

One good method of making sure people become air-transportation-minded is Air Midwest's recent intrastate stock offering. The way the carrier figures it, spreading the ownership is going to gain a lot of additional salesmen. With 360,000 shares going public at $1.25 a share, the stock will be "so widely held we'll gain all that many more people interested in making it go."

The support is by no means limited to Dodge and Great Bend. Other towns in the state, such as Colby and Hays, are building new counters, terminal facilities and navigation aids.

What, in turn, is Air Midwest doing for Kansas? "Our purpose is to serve our customers," said Pickett, "and everything is aimed at that goal." What this translates into is that when Air Midwest has connecting passengers coming in, it waits. The scissoring of flights that takes place at Great Bend every afternoon to make connections to Kansas City or Wichita is a sample. Some customers have to change planes from a 402 to a 99 or vice versa, but "no one complains."

Late last year, when losses started to mount higher than anticipated, the airline initiated a cost-cutting campaign. No part of that, however, affected the primary goal of serving the passenger. By spring, management was pretty well satisfied that the loose ends had been pulled together.

"Every position requires people who can solve problems," Pickett said. "We must have creativity without spending dollars for it." For example, all of Air Midwest's signs at Wichita Municipal, including the one at the carrier's attractive ticket counter, were done by airline employes.

Walter Troyer, Air Midwest's 23-year-old chief pilot and holder of an ATR, was rewriting the crew training manual when we visited Wichita. Troyer said he spends a lot of his time with FAA "trying to work things out. They're just as new in this business as we are. Cooperation with the local FAA man has helped in circumventing some of the problems."

Air Midwest has 20 pilots. Qualifications include a 1,500-hr. total with 200–300 hr. multi-engine time. Age must be between 20 and 25. Every crew member starts as a copilot and upgrading comes in 6–12 months Although pay is low, turnover rate is also low. What pilots may not get in salary they make up for in company stock and being in on the development of a young company.

Maintenance work is performed in a facility at Wichita Municipal purchased from Bevan Radio in 1969. Air Midwest has eight maintenance personnel, a complete engine shop and a 402 spares shop, and is one of the few commuters approved for progressive maintenance on the 99.

A sophisticated marketing approach is not something characteristic of third-levels. But Air Midwest is one carrier that is making a good try.

The airline hired an agency, Crow Advertising, after it changed its name last year. A new image was the goal. The company set aside $30,000 for the campaign for the first year, and arranged for some $24,000 in media tradeouts, but went over that figure. "Everything cost more than we figured," Pickett said. However, the one-time development costs included in the image change are completed.

How does a commuter sell its services?

Going on two-day "sales blitzes," which means pounding on doors of business people in one community.

Giving free airplane rides and refreshments when a new plane is delivered, or a new route started.

Aids to travel agents, such as the new combined gate pass/travel itinerary in Air Midwest colors.

A no-charge, long-distance reservations phone number for people throughout the system when the local reservations office is closed.

A mini-stewardess aboard 99 flights to help passengers with gate connections and information and to serve as a public relations rep.

Air Midwest also takes pride in its growing sophistication in providing customers with wide accessibility to reservations data. An electronic switching system was installed during the winter. An Arinc system is set up at the ticket counter that allows a check of the passenger list before takeoff. Air Midwest is now listed on Braniff's reservations computer, and is planning to work out a similar agreement with Continental.

And, no less than its big brothers who are moving into areas such as hotels and ground transportation to facilitate the passenger's travel, Air Midwest is looking into establishment of airport bus service and involvement in hotel/convention development.

Like most commuters, Air Midwest lost money last year on revenues of $470,000, although it did show a profit in 1968. The loss, according to Adamson, was attributable to the route expansion last year (the carrier added Denver, Omaha, Hutchinson and Colby), buiding its new image and offering "super-excellent" service. With the passenger increase starting up again in March and the cost-cutting measures, Adamson hopes the company will show a profit in 1970 with the additional revenue gained from taking over as sole carrier into Great Bend and Hutchinson.

After the stock offering, which will be used to acquire a second 99, retire the $100,000 loan and as a buffer for operating capital, shares owned by a group of 15 inside investors will be escrowed until the company is able to pay a 6% dividend.

LEADERSHIP OF SENATOR McGOVERN ON HUNGER AND MALNUTRITION INVESTIGATION

Mr. HOLLINGS. Mr. President, the Senate over the years has had many examples of fine leadership on important national issues. No example has been more outstanding, however, than that provided in the past year and a half by the Senator from South Dakota (Mr. McGOVERN) on the issue of hunger and malnutrition which affects millions of our less privileged citizens.

As chairman of the Select Committee on Nutrition and Human Needs, Senator McGOVERN has conducted a searching investigation of hunger throughout the country. This investigation has imprinted the reality of this problem on our national consciousness and has resulted in major food stamp and school lunch legislation being passed on by the Congress.

The distinguishing characteristic of the Senator's leadership has been his determination to stick with this problem until it is actually resolved, regardless of its current popularity with the press. I was particularly pleased to see this quality of leadership recognized in a recent TRB column in the New Republic magazine.

I recommend highly the reading of this column and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRB FROM WASHINGTON

NO BITE

It's a big room paneled in pine with cork floors and hardly anybody in it. The TV

camera lights are on but the crew is reading newspapers. The witness is Dr. Arnold Schaefer, head of the government's National Nutrition Survey that Congress ordered two and a half years ago. A couple of experts sit beside him, one of them seemingly intent on keeping him from saying anything dramatic about hunger. Last year Dr. Schaefer spoke his mind and probably cost the government several million dollars in extra food grants. He is short, sober, middle-aged, prosaic and obviously watching his step. This year he sticks to graphs, tables and a dull text.

Normally a dozen senators sit behind that semicircular dais up front that looks down on the witness, but this time there is just one man there, George McGovern of South Dakota. He is all alone.

All the drama has gone out of it. The country was shocked and incredulous when McGovern and others went out a couple of years ago and showed there is hunger, malnutrition and even starvation in affluent America. But a lot of other excitements have come up since then. Congress ordered a national nutrition survey and this is part of it; today we will hear about two of the 10 states surveyed, Louisiana and Texas. But, it's like counting the ballots where the election is already conceded—old stuff. Yes, there's a direct correlation between poverty and malnutrition; who doubted it? Yes, in counties where the survey has been weighted toward low income groups there is almost complete lack of dental care. (It is interesting, though, to think of an area where 18 percent of all subjects over 10 "found it difficult to bite or chew." Curious, eh?) Then there is that bit about infants and lactating mothers; they are always the ones who show up with iron deficiency anemia, vitamin deficiency and what not. And of course, Negroes and Spanish Americans.

Out of 26 counties surveyed in Texas, 19 have food distribution programs, but only 10 percent of the households in the 19 counties participated. "That's odd; why is it?" asks McGovern as though he didn't know. Well, says Dr. Schaefer almost morosely, suppose a family has income of only $100 a month—then it's eligible for food stamps. But the head of the family must come into town and put down $40 cash to get his $21 food bonus. It's hard for a near-destitute family to rasie $40 cash. It's not easy to get the right papers or to get transportation, or to know when and where. Only 10 percent participate.

Dr. Schaefer says that 40 percent of the children studied in the hungry areas were smaller than a comparable group of kids in Iowa. McGovern tries to put life into it. How about mental retardation? (Scientists know that underfed baby mice are mentally retarded; they think humans are too, and that it's irreversible, they can never catch up.) Dr. Schaefer says that mental tests weren't included. He looks at his colleague as though tempted by an indiscretion. He mutters that so far as he is concerned he thinks undernourished children will score lower; be "harder to teach."

Sitting up there alone McGovern keeps asking questions. He never quits. He lacks the drama of McCarthy; the glamor of Kennedy. He's got no style or wealth. Somewhere out in the Adriatic one time he crash-landed a collapsed B-24 and got a Distinguished Service Cross. But his clothes aren't Fifth Avenue. He's got a slight Midwest nasal accent and kind manner. He doesn't look like a hero. He went to Dakota Wesleyan, and got into politics as a history teacher. He looks like a YMCA secretary.

It is awfully hard to stop men like McGovern. They have iron in them. When they think about hungry children it bothers them. When they go out and find the facts and come back with them then, by golly, before the Senate knows what it's doing it appropriates money—as much as $200 million of it, because McGovern and others won't let up. Will he get his bill through Congress? I don't know. Mr. Nixon had his celebrated "White House Conference on Hunger" which rode off in all directions as expected, and that was *that*. Now the President has more sensational things to spend money on, like Cambodia. But McGovern is still there. "For a quarter of a century," he says in his mild voice, "America has been caring for the rest of the world. The time has come for America to care for its own."

Don't underestimate him.

SLOW APPROACH TO PASSAGE OF APPROPRIATION BILLS

Mr. ALLOTT. Mr. President, the Baltimore Sun of July 14 contains an editorial which expresses a view I have long held.

It concerns Congress' increasingly slow and cumbersome approach to passing appropriations bills.

So that all Senators may read the Sun's stern words, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONEY GAP

One of the most irritating faults of Congress is its perennial failure to pass appropriations bills on time. The government runs on a fiscal year that begins July 1. More often than not, most agencies start the new year without knowing what they will be allowed to spend that year, because Congress hasn't acted on the 14 major appropriations bills. Makeshift arrangements have to be made. Last year Congress set a record, we believe, by not passing a single appropriations bill until after the new fiscal year started. In fact, it was three months into the year before the first one was finally passed. Seven of the 14 weren't passed until December, or about half way through the year.

The House, which originates appropriation bills, was to blame last year. It only finished up with two bills before the end of the year. This year, everybody agreed last year, was going to be better. For the House, it has been. All but two appropriations bills were sent to the Senate by June 24, a week before year's end. But the Senate has completed action on only four. House-Senate conferences to smooth out differences have been completed on only one. That, by the way, is the one for the District of Columbia, $636 million, or about one-half of one percent of the total to be appropriated.

SENATOR JAVITS ARGUES FOR GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, one of the highlights of the recent hearings on the Genocide convention by a Senate Foreign Relations Subcommittee was the cogent and well-reasoned rebuttal to the major arguments against Senate ratification by the distinguished Senator from New York (Mr. JAVITS). His rebuttal is particularly important today since it comes to grips with the major legal and moral issues of the convention at a time when Senate action on the issue is drawing near.

It has been argued, for example, that the Convention on Genocide would commit the United States to an international treaty—if ratified—at a time when a substantial portion of the American people wish to contract rather than expand their international obligations.

Senator JAVITS' rebuttal was this:

One must distinguish between different kinds of international obligations. It is true that many people have argued that the American military committments should be contracted. This view, however, does not entail the further argument that the development of international law should be halted. Treaties of a great variety of kinds not involving military commitments have been negotiated and have provided for more ordered relations among nations. It is hard to imagine that one would argue against the Genocide Convention on the grounds that it expands American international obligations.

In a further statement, Senator JAVITS answers the question of whether individuals as well as public officials would be subject to trial and punishment for offenses which have always been regarded as matters falling within the domestic jurisdiction of the various nations. In his answer, Senator JAVITS states that the protection of human rights has always been an international concern. The United States has shown that it agrees with this view by ratifying the World War II peace treaties, the United Nations Charter, the Slavery Convention of 1926, and more recently the Supplementary Convention on Slavery, 1967, and the Supplementary on Refugees, 1968.

The Senate must answer a call of conscience in this session. The arguments have been made time and time again for the urgent need to ratify the United Nations Convention on Genocide. The time has long passed us by on this issue. We must act as a responsible deliberative body before it is too late.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The ACTING PRESIDENT pro tempore. The bill will be stated by title for the information of the Senate.

The assistant legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, what is the pending order of business?

The ACTING PRESIDENT pro tempore. The pending order of business is the authorization of appropriations for military procurement, H.R. 17123.

Mr. STENNIS. I thank the Chair.

Mr. President, the Senate now begins the consideration of the annual military authorization bill for fiscal year 1971. I propose today to give an outline of the high points of the bill; the committee's action thereon; and, briefly, some of the major reasons for the items in the bill and the action of the committee.

I expect and I hope that we have a healthy debate on the bill. I do not believe there is reason for unusually prolonged debate. I shall point out the hearings we have had, the availability of the testimony in printed form, and the availability of the report in the course of my remarks. But I do hope that Monday next we can move immediately into consideration of the bill and then on to votes as soon as possible.

This legislation provides the authorization, first, for the procurement of aircraft, missiles, naval vessels, tracked combat vehicles, and certain other weapons; second, for research, development, test, and evaluation for all of the Armed Forces; third, for the fiscal year 1971 personnel strength of the Selected Reserves; and fourth, for the use of defense appropriations for the free world forces in Southeast Asia under certain stated conditions.

This year, Mr. President, as for fiscal year 1970, the bill contains the fiscal year 1971 military construction authority for the Safeguard anti-ballistic-missile system. That is an item that is ordinarily in the other bill. It was brought over for reasons that I shall give later. I shall discuss now the remaining provisions during the course of my remarks.

Heretofore, for the information of the Senate, I have given brief speeches on the floor. One concerns the commitments that we have around the world with reference to mutual security defense compacts.

I also made another speech on the dollar value of our military program today as compared with fiscal 1964. I have also referred to a special subject matter that we dealt with more at length this year. That concerns the item ordinarily called research and development.

That comes under the subcommittee chaired by the Senator from New Hampshire (Mr. McINTYRE). He will speak on that subject, I hope, today and many times later.

I also had a preliminary speech concerning the surveillance that the Senate Armed Services Committee has been giving during the course of the last 6 months over certain major Department of Defense contracts for weapons.

I refer to those now for the information of the Senate. I ask unanimous consent that I may later have printed in the RECORD at this point, the places in the CONGRESSIONAL RECORD where those speeches can be found.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

NATURE OF STATEMENT

Mr. STENNIS. Mr. President, I emphasize that this general statement on the entire bill must necessarily be in the nature of a summary. The various items in the bill will, of course, be treated in much greater depth as we proceed to debate the separate elements of the bill.

I would also point out that there is before each Senator a copy of the committee report totaling some 121 printed pages along with five volumes of hearings including a separate volume on the CVAN–70 and the appendix.

Mr. President, those printed hearings are not all on the Senator's desks. There are five volumes. One volume is on the desk and the other four volumes are on the racks underneath the desks.

I do not have the total number of pages before me. However, there are more than 2,500 pages of those hearings. I think they are the most comprehensive and completely detailed hearings that we have had in modern times, at least, on this military program. It is all indexed. This is a very valuable aid to anyone who wants to find a particular item.

In addition, there is this 122-page printed committee report which also includes a vast number of tabulations for comparison purposes. I think that any Senator who wishes to do so will find this report a very valuable aid, as will the press.

Every weapons system is identified in these hearings and in the report with something about the nature of it, something about its cost and its relative position in the whole list of weapons.

This report has been filed for some time, and printed copies of the RECORD have been available.

I believe, Mr. President, that every Senator, having this substantive information before him, will be enabled to make a judgment upon every matter of substance. We cannot have it available ad infinitum, of course. But I think Senators are entitled to the substance of the facts, pros and cons. That is what we have tried to do in this report.

We will be glad to furnish any other information that we might have to any Senator. We also have a very competent staff. The staff knows these hearings from beginning to end. They know these weapons.

The staff will be available for any Senator, regardless of that Senator's position on any particular item. The staff will be available to give any Senator a briefing on the facts and such information as we have available. That is part of the process, and it is part of our committee's position.

I want to emphasize that I want everyone to be free to use that source. Of course, other sources are open and available to Senators in such ways as they might wish.

GENERAL SUMMARY IN DOLLAR RESULTS

Mr. President, in terms of procurement and research and development, the bill now before the Senate is 6.6 percent below the amount recommended by the House and 6.7 percent below the Department of Defense request. The House version was reduced by $1.329 billion. The committee is recommending a total of $18.9 billion for procurement and research and development as compared to $20.237 billion recommended by the House and $20.271 billion requested by the Department of Defense. To this amount the committee has added $334 million for Safeguard military construction authorization.

That item was taken from another bill so that both of these items would be in the same bill and in the same debate. This makes the total amount of the bill now before the Senate $19,242,889,000.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Florida.

Mr. HOLLAND. Mr. President, first I warmly congratulate the Senator upon the exposition he has has given of the hearings and of the voluminous report which is available.

There is only one question that I want to ask. I note that there is one Senator, a member of the commitee, who filed individual views relative to the C–5A program. Does that indicate that he was the only Senator who had minority views with reference to the bill?

Mr. STENNIS. He was the only one who submitted minority views for the report. There were others who voted against that item. The best I can recall now, the amendment lost by a vote of 12 to 6.

There was only one Senator who filed minority views.

Mr. HOLLAND. There was some disagreement in the committee relative to the C–5A program?

Mr. STENNIS. Yes.

Mr. HOLLAND. Was there disagreement on the report other than that just mentioned within the committee?

Mr. STENNIS. The general answer to that question is "No." There was a split vote from time to time on various items. We really put this bill together item by item. Each major item was passed on.

I remember that we had a good debate about the amount of funds that would be necessary for research on the B–1, the new bomber. It was a very small amount. We were in disagreement on it. Some favored $50 million. Some favored $100 million. Those who favored the $50 million were in the majority. So that is the amount that is in the bill.

Generally speaking, I think after a division was had, the ABM excepted, it was the intention of the Senators to go ahead and support the items.

Mr. HOLLAND. In other words, the report speaks for an undivided committee in general, and the only Senator filing individual views, the Senator from Pennsylvania (Mr. SCHWEIKER), is not taking issue with the committee in general on the whole report, but only with reference to the C–5A.

Mr. STENNIS. Yes; that is correct. I emphasize that there were divided votes on some items, but many of them were just a question of where did the majority lie, and the others would go along with it. ABM was an exception; there was a division on that, as we had last year, although the Senator from Nevada decided, in view of the fact we had already started it, this was the second section and he would support it as he announced later.

Mr. HOLLAND. Mr. President, if the Senator will yield further, this is a very prestigious committee and it is a committee composed of a group of very fine Senators. I ask unanimous consent that a list of the members of the committee be printed in the RECORD. It is my understanding there are 18 members of the committee.

Mr. STENNIS. The Senator is correct.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

ARMED SERVICES

John Stennis, of Mississippi, *Chairman.*
Richard B. Russell, of Georgia.
Stuart Symington, of Missouri.
Henry M. Jackson, of Washington.
Sam J. Ervin, Jr., of North Carolina.
Howard W. Cannon, of Nevada.
Stephen M. Young, of Ohio.
Daniel K. Inouye, of Hawaii.
Thomas J. McIntyre, of New Hampshire
Harry F. Byrd, Jr., of Virginia.
Margaret Chase Smith, of Maine.
Strom Thurmond, of South Carolina.
John G. Tower, of Texas.
Peter H. Dominick, of Colorado.
George Murphy, of California.
Edward W. Brooke, of Massachusetts.
Barry Goldwater, of Arizona.
Richard S. Schweiker, of Pennsylvania.

Mr. HOLLAND. I simply wanted to bring out the matter as to whether there was serious division on the report in general, and I think the Senator has covered that in his answers. I thank the Senator for yielding.

Mr. STENNIS. I thank the Senator from Florida.

I want to be certain now. Another split vote has occurred to me. The Senator from Massachusetts (Mr. BROOKE) proposed certain matters about the MIRV, for instance, and he reserved his rights to present something on the floor of the Senate. He may have some amendments along that line, but I do not know.

Those things are conclusive proof that this matter was really put together by the committee and weighed on the evidence and actual votes taken—not as to everything, not as to all items, but any item that was questioned. I think that most of these major items were explained more than once as we went along, and we had a very thorough discussion.

I thank the Senator.

PRELIMINARY REMARKS

Mr. President, prior to discussing the bill in detail, I would like to make several preliminary observations, some of which have already been covered.

EXTENSIVE COMMITTEE CONSIDERATION

Mr. President, the committee began hearings on this bill February 20 and continued on a systematic basis until June 11, 1970, resulting in printed testimony of 2,715 pages. In addition, there were lengthy hearings and printed testimony on the part of the special Joint Subcommittee to study the CVAN–70 with a special report already published on this matter. I recite the foregoing in order to show the intensive examination extended to this bill this year.

I would also emphasize that the committee was unanimous in its final vote on reporting the bill. I would not imply, however, that all of the committee recommendations were unanimous since many of these decisions were vigorously debated with naturally differing views on some issues on the part of the committee membership.

I wish to acknowledge the cooperation of the entire committee membership. I especially want to thank our ranking Republican member, Senator SMITH of Maine, who will be back with us in a short while. She has been a source of great strength to me in her service and support on this bill as a whole.

I also want to mention the outstanding work of the Senator from Nevada (Mr. CANNON) who was chairman of the Ad Hoc Subcommittee on Tactical Air Power and the Senator from New Hampshire (Mr. MCINTYRE) who was chairman of the Ad Hoc Subcommittee on Research and Development. The work of both of these subcommittees, which will be fully discussed later, was crucial to the outcome of this legislation. They also made quite a contribution last year.

BASIC CONSIDERATIONS INVOLVED

Mr. President, the basic task the committee must perform in this legislation is twofold: first, to decide what major military hardware will be needed by the Armed Forces in the period of from 1 to 7 years ahead; and, second, to project the research and development needs for the period of from 1 to 10 years ahead.

In trying to make a sound judgment, the committee was faced with a number of conflicting considerations. We were acutely aware of the severe financial condition of the Federal Government and the need of recommending the lowest possible authorization consistent with our national security requirements.

At the same time, we are confronted with the grim fact of rapidly increasing Russian strategic forces which could place this country in jeopardy in the years ahead. We all know of the increase in the SS–9's and other types of missiles, their growing naval power, both strategic and conventional, as well as the growing momentum of the entire Russian military research and development program. We are also aware that this country has some sort of mutual defense arrangements with approximately 44 foreign countries. Let me say that I personally favor a thorough review of our commitments, but until these obligations are revised, we must continue to provide the means of honoring them.

Mr. President, at this point I ask unanimous consent to have printed in the RECORD an excerpt from a speech I made on July 16, 1970, entitled, "Defense Budget and Worldwide Military Commitments."

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

DEFENSE BUDGET AND WORLDWIDE MILITARY COMMITMENTS

The basic point that I am making today is that, as long as we have these heavy worldwide commitments, we are obligated to provide the resources to meet them. If we are not willing to do this, then we should take prompt action to divest ourselves of at least some of the obligations which we have assumed. The matter of the approval of our treaty obligations was within the primary jurisdiction of the Committee on Foreign Relations, not the Committee on Armed Services. Similarly, any change or reduction in our treaty obligations would be within the jurisdiction of the Committee on Foreign Relations, not the Committee on Armed Services. However, as long as these treaty obligations remain in existence, it is the obligation of the Committee on Armed Services, and the Senate as a whole, to recommend the weapons and other resources which are essential to meeting them.

Mr. STENNIS. Mr. President, the committee, therefore, has the duty of recognizing not only the needs for protecting this country but also the needs arising from our foreign obligations. Underlying all of the issues and problems in this bill, Mr. President, is the overwhelming priority of providing for our national survival. I always want to make that clear. I refer to commitments we have and our obligations to them. Whether I stated it every time or not, the overwhelming priority of providing for the matters in this bill is for our own national survival to be properly protected.

Mr. President, the committee has produced a bill which, in its judgment, adequately meets our defense requirements and the need for austerity.

REDUCED BUYING POWER OF DEFENSE DOLLAR

In emphasizing the austerity of this bill, I would like to make a significant historical comparison. I call this especially to the attention of Senators. In terms of buying power, the procurement and research development recommendation of $18.9 billion before the Senate is 20 percent less than the equivalent authorization bill for fiscal year 1964, the last prewar year. Let me explain. The procurement and R. & D. funding enacted for fiscal year 1964 was actually $14.4 billion. If we add to this figure the additional items which presently require authorization, the fiscal year 1964 figure would have been $18.9 billion which is identical to the figure in the present bill. That is quite a coincidence but that is the way it came out. The factors of inflation and price increases have reduced the buying power of the bill before us by about 20 percent as compared to fiscal year 1964. To put the matter another way, if the factors of inflation and price increases since 1964 were eliminated from the fiscal year 1971 authorization, the present bill would not be $18.9 billion but only $15.1 billion. In reality, therefore, the bill before us represents a 20 percent lower bill in terms of buying power as compared to the 1964 level.

That 1964 level, as Senators know, represented the last fiscal year before the special buildup in Vietnam. That special

illustration there will hold up, and it shows that when an allowance is made for those increases based upon outside factors like inflation and price increases, this bill is comparable to the one in 1964, and in buying power is 20 percent lower.

ITEMS OF SPECIAL INTEREST

Mr. President, I shall discuss several items of special interest in the bill.

REDUCTION OF $334.8 MILLION IN RECOGNITION OF UNUSED PRIOR APPROPRIATIONS

Mr. President, the Committee reduced the new obligational authority in this bill by the amount of $334.8 million in recognition of certain prior-year unused appropriations which the Department of Defense anticipates will not be obligated during fiscal year 1971. In the opinion of the committee these funds should be used if needed in lieu of adding new obligational authority in that amount to the legislation. The committee report itemizes, beginning on page 13, the various categories affected by this decision and discusses the matter in detail.

That $334.8 million, by the way, is almost identically offset by the amount we took out of the military construction bill on the ABM construction program and put over into this bill, solely for the reason that we wanted to get all of that ABM money in the same bill, thus avoiding a duplication of its consideration.

SAFEGUARD ANTI-BALLISTIC-MISSILE SYSTEM

Mr. President, the Safeguard system with the subject of many days of debate last year in the Senate, and an equally intensive discussion will undoubtedly occur in this connection with the pending authorization. At this juncture, I would make the following points with respect to the matter.

First. The committee effected a fundamental policy change in limiting the role of the ABM system to the protection of our land-based strategic deterrent. It was the view of the committee that the present circumstances do not justify the so-called thin defense against a potential Chinese threat. And I would emphasize, Mr. President, that this limitation as set forth is a matter of law since the bill precludes funding at any sites other than the four covering our Minuteman forces.

Funds were approved for four sites: Grand Forks and Malmstrom, both of which have been previously funded; Whiteman Air Force Base; and advance preparation funds only for Warren Air Force Base. The total request for the Safeguard program approved by the committee is $1,349,400,000. This sum includes $334 million for military construction mentioned a few minutes ago. No other funds will be needed for fiscal 1971.

Second. The basic issue posed was whether we need an ABM system at all and, if so, at what time. It was the conclusion of the committee this year, as last year, that this Nation must have an ABM system. We all know from the recent announcement of new evidence of additional SS–9's that the Russian threat is growing ever more serious. The present number of these intercontinental missiles, each of which can carry a 25-megaton warhead, and either under construction or operational, exceeds considerably the number which last year at this time was in evidence of being either operational or under construction.

The next issue is whether there is an alternative ABM system which would be as effective as Safeguard would be available in the same time period, and at roughly no greater cost. The evidence fails to show any such alternative system which would meet our needs. I emphasize that, Mr. President.

As I understand the testimony now, with the exception of two or three, or perhaps a few more—it makes no difference where they testified or when—all the scientists and all the witnesses agree that if the SS–9's are going to continue to increase in number, we must have, if at all possible, an ABM system.

There is no dissent on that basic principle, or perhaps only a very slight one.

That brings us into the question, then, what about this system? There are those who say it is inadequate, and likewise, or unlikewise, at least, there are those who say it is well on its way to being a successful anti-ballistic-missile system.

Allowing for the differences there, a great majority agree that so far this is the best we have, and there is a great abundance of special, respectable authority that this system, being ahead of the others, can be perfected to the point where it will serve the purpose.

Let me point out that, as a general proposition—and I am no authority in this field, but I have been on the committee as long as we have had these major missiles, and each year I have learned about the progress, the setbacks, and the final successes that they have all had—this is not something as to which one can just go to 12th and Pennsylvania Avenue, blow a whistle, and get somebody who can make these missiles and make them work. That was not the way Thomas A. Edison perfected the incandescent lamp. He labored and labored and labored and made many mistakes, but in the end he came forward in an almost miraculous way, and all these years, although there have been some improvements, most of his basic ideas are found therein, as I understand.

So we come down to the proposition of knowing there is an increase in the SS–9's and the almost unanimous feeling that, if that is going on, we almost have to have some kind of system to protect our aggressive weapons. According to what I think is the better estimate, it is the best start we have made, and since I think all agree that time is getting short, it is almost basic that we move on.

Third. The other aspect concerns the relationship of the Safeguard system to the SALT talks. The first question is whether the 1971 increment for Safeguard will jeopardize the SALT talks—I mean our side of the situation in those talks. The committee does not believe this to be the case. On the contrary, a decision not to proceed with a reasonable Safeguard program would seriously weaken the negotiating position of the United States. We would have a situation where Congress would deny to our President the very item—the major item, I believe—of the bargaining arrangement. On the other hand, Mr. President, if the SALT talks should result in a mutual limitation on ABM systems, President Nixon would make the necessary adjustments to our program. Of course, I should add, Mr. President, that by limiting its role to the protection of our strategic deterrent, the anticipated total acquisition cost of the Safeguard program would be reduced from $10.7 to $6.5 billion based on 1970 dollars.

Now, of course, that is an estimate, but relatively speaking, we have enough information to hit somewhere near home base with reference to that estimate; and, basing it on 1970 dollars, which will not allow for inflation, increases in salaries, and so forth, I believe this is a fairly reasonable anticipation of what those costs will be.

These foregoing considerations leave us no realistic alternative but to proceed with the Safeguard program.

Mr. President, the debate on this issue has already started. It starts today, at least. We shall have this subject under discussion perhaps more than any other during our consideration of this bill. But to my mind, it starts again with the idea of cutting the rug out from under the Chief Executive of this Nation at the SALT talks. We all know this is a major issue at that negotiating table. I am not expecting a whole lot to come out of it all of a sudden, or within a few months, or maybe within the next year. I do believe there is a chance that something good will come out of it.

But if we stop now, in midstream, it is just sending a clear call, a clarion message to those on the other side that "Well, after all, the Government of the United States does not know what it wants to do. It is divided and the Executive head of the Government, after going into this matter, has had a setback, now, with reference to the ABM, so he does not speak for the Nation."

That is the first point they would make. The next would be that "No one else speaks for the Nation in matters like this," and the next would be that "We do not have to concede anything, because they have already taken away from him the major matter in which we are primarily interested."

So I invite the earnest consideration by every Member of this body of that major point.

C–5A PROGRAM

The C–5A, Mr. President, which is the largest aircraft ever built, was conceived in the early 1960's for the primary purpose of carrying the outsized equipment—the tanks, large guns, and other items—of our combat divisions. The original program contemplated a total of 120 of these aircraft. This program was reduced, however, because of cost and other factors. In November 1969 the Secretary of Defense announced that the program would be held to 81 aircraft. I approve of that decision and that conclusion. I think it is enough. That will be enough under all the circumstances; and, in fact, I think it is a very satisfactory cutoff point on this particular aircraft.

The fiscal year 1971 budget request totals $622.2 million for the C–5A aircraft including $344.4 million for unfunded prior-year production commitments;

$200 million in contingency funds which is an amount in excess of the contract ceiling as interpreted by the Air Force; $66.2 million for initial spares; and $11.6 million for research and development.

The committee is recommending the approval of these funds subject to two very important statutory conditions I shall shortly discuss.

Mr. President, we had just as well get these figures into our minds. This $66.2 million for initial spares, I think, is a matter of course; we will not have to bother with that any more.

The $11.6 million for research and development is well understood; these planes have to continue to have a certain amount of spending in the fields we designate as research and development.

The $344.4 million I have referred to is for unfunded prior year production commitments. There is no dispute about that amount.

The $200 million in contingency funds, which is an amount in excess of the contract ceiling, as interpreted by the Air Force—that is the item here in contest, one might say. That is the item which will be the major part of the debate on this issue.

This was an unusual contract. I do not defend it, and never have, and I hope we never have another one like it. But we cannot just wish it away; we have this one, and we have to deal with it.

I do not know what will finally be determined by the contractor and the Air Force, or the Department of Defense, as the level of the obligation of the Federal Government. But this $200 million is above what the Air Force says the contractor is due under the contract. They just bring it right out in the open and stand on that, and that is the way I have put it here today. The Air Force could be proved wrong in negotiations or in the courts, but for the time being—and this is an unfinished contract—the Air Force claims the Government is not obligated beyond this $344 million for the 81 planes.

Mr. President, we all are familiar with the controversy surrounding this aircraft and its contractual arrangement. I certainly do not stand on the Senate floor and attempt to defend the so-called total package procurement contract of the C–5A and all the various issues and problems that have arisen during the history of this total package contract.

The issue for the Senate on this matter is how this body should deal with the C–5 program under the present circumstances and at this point in time. The committee has recommended that we go forward with the C–5A program for one basic reason—the need for this aircraft for our national defense.

What alternatives does the Congress have at this time with respect to the program? Let me say first, Mr. President, that the total amount which has been appropriated for the C–5A program—that is, for fiscal year 1970 and prior years—is approximately $3.4 billion. If the Congress should decide that there should be no further program at all—that is, no funds appropriated for fiscal year 1971 for the C–5A—the Air Force would receive about 17 completed aircraft for $3.4 billion, which would be a unit cost of about $200 million each. There are, of course, in the production pipeline literally millions of parts of every description, as well as a number of partially assembled planes. With no further funding, substantially everything that is in the present production pipeline, costing millions, therefore would be wasted.

Mr. President, as another alternative, if only the $344 million is approved, the Government would receive about 30 5–C aircraft for the total program. This sum would finance the program through about December 31, 1970, but no further. Under this alternative, $3.75 billion would have been spent for a unit cost of about $125 million per aircraft.

If the entire $544.4 million is authorized, which of course includes the $200 million in contingency funds to which I have referred, the Government would receive about 42 aircraft, with a cost of about $94 million each. The question of funding beyond the 42 aircraft is not before the Senate at this time since further funding is not being requested. If the program is completed, however, for the total of 81 aircraft, the average unit cost for the entire program will be about $56 million each.

Under that, we would have 81 aircraft costing $56 million each, in round figures. That would include all the cost of research and development for the whole program. So I emphasize, Mr. President, that the cost of the additional aircraft after the $344 million has been authorized will be about $16 million each.

I emphasize that again. The cost of the additional aircraft after this $344 million has been authorized—that is the first item in the bill that I mentioned—then would be approximately $16 million additional for each. We put very effective restrictive language in this bill as a part of this $200 million.

Mr. PROXMIRE. Mr. President, will the Senator yield for a question?

Mr. STENNIS. I am glad to yield to the Senator.

Mr. PROXMIRE. I want to ask the Senator a question about the C–5A. When he said that the cost of additional aircraft after a certain point would be $16 million each, I did not get the precise reference. I wanted to get it correctly.

Mr. STENNIS. I was referring to this money after the $344 million. That would be the $200 million extra we have talked about for this year, and then the sums for next year which are estimated now. It means that the additional cost—all of that added together and figuring in the number of extra planes we are going to get—would be approximately $16 million. But I did not mean to say that the planes would cost only $16 million.

Mr. PROXMIRE. The overall cost, I understood the Senator to say, if we completed the program, would be $56 million for each plane. But the additional cost, if instead of stopping the program without appropriating the $200 million that is asked and all additional sums asked in connection with that—the difference if Congress goes astray would be, as I understand it, $16 million on the planes that could be built, the additional authorizations. Is that correct?

Mr. STENNIS. That is the way it works.

Mr. PROXMIRE. I thank the Senator.

Mr. STENNIS. I do not want to leave any inference—and I am glad the Senator brought that point up—that it would cost only $16 million apiece. And I do not want to leave any inference here when I say that the matter of additional money is not before us now. If this is approved and we go on with the program, it will be before us next year for additional money.

RESTRICTIVE COMMITTEE LANGUAGE

Mr. President, the issue in controversy on the C–5A is the $200 million in so-called contingency funds, which is an amount in excess of the contract ceiling as interpreted by the Air Force. I would note at this point that the contractor does not agree with the Air Force position. Moreover, the committee takes no position on the merits of the contractual disagreement. We are not trying to say which one is right—the contractor or the Air Force. We are not saying it now. Of course, it shall be the duty of the Department of Defense and the Department of the Air Force to represent the Federal Government with vigilance in settling with the contractor as to the contractor's obligation and the Air Force's obligation under the original contract. No one has waived anything. The Federal Government is not waiving anything. The committee does not want to inferentially waive anything. But the committee says that it is the duty of the Department of Defense and the Air Force to represent the Federal Government with vigilance in settling with the contractor as to his obligation and what is the obligation of the Air Force.

The C–5A matter received the most intensive consideration by the committee. In fact, four different hearings were held. Mr. Packard, the Deputy Secretary of Defense, appeared before the committee on three separate occasions in connection with the C–5A. In addition, the Secretary of the Air Force and other military officials testified separately on the matter. The fact is that unless additional funding is authorized, the contractor will be without the financial resources to proceed with the C–5A program after about December 31 of this year. The committee therefore decided, for the reasons I have outlined, to recommend that the program proceed under certain restrictive conditions.

Mr. President, the committee was of the firm view that this $200 million in contingency funds should not be used until there is a complete understanding as to how the $200 million will be utilized. The committee, as a part of the bill itself, is recommending statutory language providing that none of the $200 million will be obligated until the Secretary of Defense has submitted a plan for the use of the $200 million and this plan has been approved by both the Senate and House Committees on Armed Services. In effect, Mr. President, there will be submitted to the two committees for approval not only a plan for the use of the $200 million, but also an overall proposal

as to how the remaining portion of the 81-plane program will be completed. This plan must necessarily set forth what will be the proposed final arrangement between the Government and the contractor with regard to the completion of this program.

That is a matter that the committee, naturally, would not seek and would not like to get into. But this is a situation in which the Government should have this plane. It must utilize the moneys already spent. Someone has to share part of that responsibility, and we decided that we had the history and the staff and the means of getting at this matter, and we, therefore, decided that the committee should assume this responsibility.

The second provision insures that the $200 million in contingency funds will be used only for the C–5A program insofar as the contractor is concerned. I can accurately state that this provision is the tightest statutory language ever drawn from a defense contract with respect to precluding any possible intermingling or diversion of these funds to other programs of the contractor. The Defense Department has indicated that it is in agreement with this restrictive language. That restrictive language will require that, as a part of the plan that Mr. Packard brings back to the committee, it will have to include compliance with this language, so that it is airtight, that this money is going to be used in the channels here that will produce these planes for us.

SOUNDNESS OF AIRCRAFT

Mr. President, with respect to the soundness of the C–5A, a rather complete report by a special group has been submitted to the Department of Defense indicating certain problems with regard to the aircraft. The Armed Services Committee has been assured by the Deputy Secretary of Defense, Mr. Packard, that he is of the firm opinion that the technical problems which have arisen in connection with the plane can be resolved.

With the exception of those categories in that report, everything else about the plane is favorable. It is being flown now extensively and is in the proces of evaluation and testing. I think it has been flown by a member of our committee and perhaps by another Member of the Senate, and those things will come out in the debate. We followed up on this special group, submitting a report; and Mr. Packard, with his open frankness about matters and with his experience, said that that problem can be resolved. Anyway, it is his reponsibility, with the special attention we are requiring to this contract from here on out, to cover not only that point but also to have a plan that covers the other and protects the Government in every way.

In summary, Mr. President, in the interest of wise management and the need for this specialized aircraft for our national defense, the committee thinks that the Senate should proceed to approve the entire funds requested for the C–5A program.

PROCUREMENT

ARMY AIRCRAFT

Mr. President, the committee recommends a total of $292.1 million for the procurement of 814 Army aircraft. I should note that all of these are helicopters, and 600 are of one type—the OH–58 observation helicopter. About 65 percent of this number will be to replace losses, and about 35 percent will represent a modernization program by replacing the older and less efficient types.

NAVY AND MARINE CORPS AIRCRAFT

The committee recommends a total of $2,337.7 million for the procurement of 259 aircraft. This number, Mr. President, represents the smallest number of aircraft procured by the Navy since 1946. By any standard, Mr. President, this is a most austere program, and even with this buy, the average age of aircraft in the Navy inventory will increase rather than hold its own.

I would like to mention several separate items. The Navy aircraft request contains funds of $658 million in the procurement amount for 26 F–14A's. I would observe that this is the new air superiority fighter for the Navy and, as the Senate may recall, is the follow-on for the TFX which was cancelled as a Navy program. That cancellation, by the Navy, and the start of a new plane, was a congressional act.

This aircraft, which is a long-deferred modernization item, will enter the fleet in the 1973–1975 time period and will replace the F–4 which dates to 1955 in terms of technology. The Navy must have a modern fighter capable of air superiority against any potential enemy.

I would also mention that the bill as passed by the House contained $79 million for two of the S–3A antisubmarine warfare carrier-based aircraft. This is a new program, Mr. President, and the committee recommends that this sum be deleted from the procurement account and transferred to the research and development account since these are, in effect, test aircraft and should be more properly in the research and development program.

AIR FORCE AIRCRAFT

The committee recommends an authorization of $3,225.5 million involving the procurement of 375 aircraft. This request represents a reduction of $89.4 million under the House and $148.8 million less than the amount recommended by Defense.

Mr. President, I would emphasize that the 375 aircraft are the smallest number that have been procured by the Air Force since 1935, and I should add also that over half of this 375—that is, the smaller aircraft—are earmarked not for our Air Force, but for the free world forces. Those are small planes and helicopters.

Several items deserve special mention. First, the request of $30 million in procurement funds for the so-called International Freedom Fighter was denied by the committee on the premise that $28 million was authorized in fiscal year 1970 which has not yet been expended. Moreover, in view of the need for austerity for the entire Defense program, this item is not of the highest priority.

Mr. President, the F–111F aircraft also deserves special mention. The bill contains $563.3 million for this item, of which $283 million is for new aircraft procurement and the remainder for prior over target costs and other items, all of which are set forth on page 27 of the committee report. I would emphasize that this is the only all-weather, deep interdiction tactical aircraft that will be in the Air Force inventory.

The Senate generally is familiar with the long history of structural problems on this fighter. Because of the need for this aircraft, however, the committee is recommending approval, but only on two conditions. First, it is on the understanding that the funds in this year's bill will represent the final procurement of this aircraft, and the committee has received a formal statement from the Air Force to this effect. Second, the committee has recommended statutory language which will preclude the obligation of any of the $283 million for new aircraft until certain certifications are made by the Secretary of Defense to the House and Senate Committees on Armed Services insuring that the structural problems of this aircraft have been successfully resolved. In other words, this aircraft must be completely airworthy in every sense of the word before this new money can be obligated. That item has been one of some controversy in the past. It is the last active buy of the old TFX. It is the last one that the committee will approve and the last time the Air Force will request it. One of the big points is that this is the only all-weather, deep interdiction tactical aircraft that will be in the Air Force inventory. There are some there like this, but this will fill out the last part.

MISSILES

ARMY MISSILES

Mr. President, the committee is recommending authorization of $1,031.6 million for the procurement of Army missiles. The largest element in the Army missile procurement account is $650.4 million for Safeguard, which I have previously discussed. Of the remaining items, the largest is $106.3 million for the TOW missile, the Army antitank missile, which is the wire-guided missile that will be used by Army combat troops against enemy tanks.

I would observe, Mr. President, that the committee deleted a $37 million request for the procurement of the Hawk antiaircraft missile in view of the unused prior-year appropriations already available for this item and the only partially successful testing program for this item.

NAVY MISSILES

The committee is recommending approval of $932.4 million for Navy missiles for fiscal year 1971, covering 12 different items.

Mr. President, I would observe that of the total, $559 million constitutes funding for the ballistic missile program—$540.5 million for Poseidon, and $18.5 million for Polaris.

MARINE CORPS MISSILES

Mr. President, the committee is recommending $12.8 million for the Marine Corps missile program. This is a reduction of $14.8 million which represents the deletion of the funds for the procurement of the improved Hawk for the reasons I have already cited in connection with the Army Hawk program. The ground support equipment for this item was not deleted, however.

AIR FORCE MISSILES

Mr. President, the committee recommends a total of $1,479.4 million for the Air Force missile request. The largest single item is $475.7 million for the Minuteman II and III programs.

NAVY SHIPBUILDING AND CONVERSION

The committee recommends an authorization of $2,276.9 million for the Navy shipbuilding and conversion program for fiscal year 1971. This represents $452 million less than the $2,728.9 million recommended by the Department of Defense and is $737 million below the amount recommended by the House, which was $3,013.9 million. In support of the general fiscal year 1971 shipbuilding and conversion program, Mr. President, the amounts recommended, in the opinion of the committee, are the bare minimum which are essential for modernizing the over-aging fleet of United States Navy. Let me emphasize, "modernizing the over-aging fleet."

At the present time, the Navy has about 750 ships in the active fleet and approximately 47 percent of these are over 20 years of age. This country has reached the point where adequate modernization can no longer be delayed if we are to have an effective modern naval force. The entire shipbuilding and conversion program, together with the committee's action on each item, is set forth in the committee report on pages 55 through 60.

In line with the need for austerity the committee did make certain deletions.

The committee deleted an addition of $435 million by the House for five additional naval vessels of various types. These items were not in the President's budget request although the Secretary of Defense did indicate that if the ships were authorized and appropriated for, the funds would be obligated. The Senate committee felt, however, that in view of the necessity for austerity, these ships should not be funded this year.

DISAPPROVAL OF FUNDS FOR NUCLEAR ATTACK CARRIER

The committee has recommended the deletion of funds for the procurement of the lead items in the amount of $152 million for the third *Nimitz* class carrier known as the CVAN–70.

I emphasize, Mr. President, that the committee did not reject the concept of an additional carrier. That was expressly understood by each member of the committee. The committee's action was based on the fact that the executive branch of the Government has not made a firm, unconditional budget request for this item. The request for $152 million was contained in the President's budget. However, the budget message stated that the funds, even if approved, would not be obligated until studies on the need for the carrier had been completed by the National Security Council. The committee, just prior to markup of the bill, requested the Secretary of Defense to provide a final position of the executive branch on the CVAN–70, and we were advised that the position had not been changed. Under the circumstances, the committee did not feel justified in recommending the $152 million in lead funds.

I should also note, Mr. President, that as a result of a provision in last year's authorization bill directing a joint study by the House and Senate Committees on Armed Services on the need for the CVAN–70, a joint subcommittee of the two committees was appointed. Extensive testimony was taken; a subcommittee report has been issued; and the hearings totaling 768 pages have been published.

I would make two observations, Mr. President: First, a majority of the subcommittee recommended the additional carrier, principally on the basis of need for modernity and second, the joint subcommittee made every effort to obtain and seek out all witnesses who might want to testify against the concept of the carrier—and I might add there was some difficulty in this regard.

We did have certain outside witnesses who gave different points of view. Some of those who were thought to be in opposition, however, did not appear. I would observe that we also had testimony from the Senator from Minnesota (Mr. MONDALE) and the Senator from New Jersey (Mr. CASE) on this matter.

Mr. President, I personally made quite an effort to get some outstanding witnesses to appear in opposition to the concept of a carrier.

I remember over the telephone one very outstanding man, who asked to be excused, saying that all he could contribute would be about the same as any other witness. He could give the pros and the cons. And there were some well understood pros on the matter and oft-repeated cons.

That is about the way that any kind of a hearing or investigation of this matter would turn out. Personally, I believe that the greatest single deterrent force we have day after day around the world is the proper presence of these carriers at key points in key areas of the world. They have a tremendous potential. They can be seen by any seaman or by people on the shorelines and have been for years, time after time. That is not to say that we threaten anyone or that we have a reputation of being a Nation that threatens other nations. But I think the psychology of this great power, its availability and movability, is a tremendous factor in maintaining the balance of power in the world in which we are now living.

DELEGATION OF HOUSE LANGUAGE PROBLEMS

Mr. President, on page 56 of the committee report the committee indicated its reasons for deleting three statutory provisions contained in the House bill relating to the shipbuilding and conversion program. These concern, first, the requirement that $600 million of the shipbuilding request be spent only in naval shipyards; second, that no fiscal year 1971 shipbuilding funds be obligated until a recommendation has been received from the National Security Council on the CVAN–70; and, third, the provision requiring that the contract for the DD–963 destroyer program provide for the construction in at least two shipyards.

As I say, these matters are covered in full on page 56 of the report. It was decided after consideration and discussion not to include those. They will be in conference and will have such consideration as the conferees see fit to give to any of them.

The matter concerning the amount of money that would be spent only in naval shipyards, as I recall, is actually usually settled in conference, where it can be done in rather excellent fashion.

TRACKED COMBAT VEHICLES

Mr. President, for the Army the committee is recommending $182.2 million for fiscal year 1971 for tracked combat vehicles. This amount can be compared to $206.2 million in the House bill and $207.2 million in the budget request.

For the Marine Corps and the Navy, the committee recommends the amount of $47.4 million as compared to $48.4 million which is the sum of both the House version and the budget request. This account covers the procurement of tanks, personnel carriers, and other tracked vehicles, all of which are set forth by line item in the committee report.

Mr. President, this category covers the entire Army tank program and I shall devote some brief remarks to the requested programs.

The Army request contains funds for three different tanks. The first is the M60A1 which is the basic standard tank, or what I refer to as the workhorse. The committee is recommending $56.7 million for this item which will permit the procurement of 300 of these tanks.

The next tank is known as the M60A1E2. This is the tank started in 1965 which represented an attempt to adapt the Shillelagh missile to the old model tank, M60A1. Funds have been provided in prior years, but the technical problems have never been resolved. Under the circumstances, the committee has deleted the $12.1 million for further work on this tank. These funds would have continued the effort of resolving the technical problems involved in the marriage of the Shillelagh to the M60A1. The committee was of the opinion that this program was at the point where no further investment should be made and all energies should be concentrated on projecting the M60A1 and on refining and accelerating the development of the MBT–70, the main battle tank. That is the one in the process of researching.

I am able to report to the Senate that all of the investment will not be lost since a substantial number of the chassis for the so-called M60A1E2 tank can be used for the standard M60A1 tank to be produced. The M60A1 program was reduced from $67.6 million to $56.7 million because of the application of savings resulting from the cancellation of the M60A1E2 program.

The last tank item concerns the MBT–70, known as the main battle tank. Mr. President, the bill contains a total request of $77 million for this item—$36 million for research and development plus $41 million for advanced production engineering. This tank, which is still in the development stage, has undergone considerable change as compared to fiscal year 1970. It will be produced independently of Germany and will be on a much

more austere basis as a result of the program reviews which have been undertaken by Mr. Packard, the Deputy Secretary of Defense.

Mr. President, we must have a new tank for the 1975–80 time frame, and the MBT–70 in its revised program offers the only hope of attaining this goal. The committee, therefore, strongly urges the approval of this request for $77 million.

I would like to say a special word on that. Along with other Senators, I made a special effort to get information and try to find out what the trouble was. I think that we got to the bottom of this matter.

We brought one witness back from the Armed Forces in the field, near the Czechoslovakian border. He is an outstanding Army colonel. I had seen him in action as head of the training units over there. He is unusually well qualified from the standpoint of being a field soldier and a fighting colonel to testify on this matter. I especially refer any Senator interested in the matter to his testimony. He was quite convincing in covering this matter.

Mr. President, I shall supply the page number and the volume where his testimony is to be found. The hearings on page 1444 contain the testimony of Col. Paul Baltas on this matter.

OTHER WEAPONS

Mr. President, as a result of an amendment last year to the military procurement bill, there is now a new category which requires an authorization prior to appropriation known as other weapons. In fact, this category covers weapons which serve individuals and crews and for the most part consists of machineguns and rifles. The total request for the Army account for fiscal year 1971 for this category being recommended by the committee is $67.2 million, and for the Navy and Marine Corps, $4.4 million. The only adjustment made by the committee was a slight reduction of $1 million representing a recognition of prior funding already available for this purpose. I would note as a matter of interest that this Army request includes $27.1 million for the procurement of 253,738 M–16 rifles. The committee has eliminated restrictive language added by the House concerning manufacture of the M–16 rifle with fiscal year 1971 funding.

REQUIREMENT FOR AUTHORIZATION OF TORPEDOES BEGINNING FISCAL YEAR 1972

Mr. President, as a result of the development problems that have arisen in connection with the Mark–48 torpedo, the committee has recommended language in the bill requiring that beginning in fiscal year 1972 the procurement of naval torpedoes will be authorized prior to an appropiration, in the same manner as for other weapons now contained in the bill.

RESEARCH AND DEVELOPMENT

Mr. President, I now turn to the research and development portion of this bill. I have already made a separate speech on this feature of this legislation. The Senator from New Hampshire (Mr. McINTYRE) will also treat research and development funding requests in great depth. I hope he has some remarks to make on it today. My remarks at this point, therefore, will be limited to the highlights of the committee's research and development actions.

Mr. President, the committee is recommending a total of $7.016 billion for research and development for the Department of Defense representing a reduction of $385 million below the Department of Defense request and $249.1 million below the House bill. In reality the Senate committee is reducing the research and development programs by a total of $464.1 million or 6.3 percent below the request. There was a transfer of $79 million for two S–3A aircraft from the Navy procurement budget to the research and development account which has reduced the dollar reduction to $385.1 million.

TWO SIGNIFICANT ASPECTS OF RESEARCH AND DEVELOPMENT

Mr. President, I would emphasize to the Senate that out of this $7 billion being reduced only about $400 million goes to basic research. More than $3.7 billion, or over half the entire Research and Development budget, is spent for engineering and operational development programs which involve the actual fabrication of completed weapons systems used for the test program.

Another large segment of the program, about $1.2 billion, pays for the management and maintenance of the Department of Defense test and research and development organization. There are included the salaries of 88,000 civilian personnel—scientists, engineers, and technicians.

That is one of the most extensive and most important aspects of this entire military program. I mention these aspects to indicate the vast magnitude of the Research and Development program.

SPECIAL ITEMS IN THE BILL

Mr. President, the committee report from page 70 through 100 discusses in detail the Research and Development funding requests. I shall mention only several highlights of the committee action.

First. The $17.6 million requested for further development of the Cheyenne helicopter was deleted in view of the committee's approval of $27.9 million for the AX for the Air Force program and $17 million for the Army advanced helicopter technology program.

Second. The committee reduced by $50 million—from $100 to $50 million—the request for development funds for the B–1 advanced bomber for the Air Force. The committee observes that $65 million of funds approved last year remain unobligated.

Third. The committee denied the request for $33.6 million for the subsonic cruise armed decoy because the Department of Defense has delayed the start of this program, and some $8 million of fiscal year 1970 funds approved have not been used.

LANGUAGE PROVISIONS ON RESEARCH AND DEVELOPMENT

Mr. President, there are several language provisions being recommended by the committee, none of which were contained in the House bill, which deserve special mention.

DEFENSE-RELATED REQUIREMENT

The committee has recommended in section 204 of the bill the reenactment of the restriction adopted on the Senate floor last year which prohibits the use of any research and development funds for research projects and studies unless they have a direct and apparent relationship to a specific military function.

This provision sponsored last year on the Senate floor by Senator MANSFIELD has proved to be a very effective and worthwhile control on the defense research and development program and the committee is recommending its reenactment for fiscal year 1971.

INDEPENDENT RESEARCH AND DEVELOPMENT

Mr. President, the committee is recommending a new provision of law for the control of independent research and development within the Department of Defense. This provision now set forth as section 203 is the result of long and intensive hearings by Senator McINTYRE's subcommittee. This activity which has not been the subject of a budgetary control will be under a ceiling of $625 million for fiscal year 1971 as well as under certain other controls set forth in the provision.

DOMESTIC APPLICATIONS OF RESEARCH AND DEVELOPMENT

The bill, as a result of a recommendation by Senator BROOKE, contains a provision set forth in section 205 which will provide for the creation of interdepartmental machinery under which Defense research and development projects, where applicable, may be utilized for civilian domestic purposes. Certain permissive grant authority is also contained in this section.

CHEMICAL AND BIOLOGICAL WARFARE PROVISIONS

The remaining language change for research and development relates to certain provisos regarding chemical and biological warfare: First, reinstating last year's provision prohibiting procurement of delivery systems for lethal chemical and biological warfare agents; second, adoption of provision relating to safety procedures with respect to the disposal of lethal chemical and warfare agents; and, third, proviso directing a study on the ecological and physiological effects of the use of herbicides.

CONTINUED AUTHORITY FOR THE USE OF DEFENSE FUNDS FOR FISCAL YEAR 1971 FOR FREE WORLD FORCES IN SOUTHEAST ASIA

Mr. President, this bill continues for fiscal year 1971, with two modifications, the same authority that has been enacted for each fiscal year beginning with fiscal year 1966, authorizing the use of defense appropriations for the support of the Vietnamese and other free world forces as well as local forces in Laos and Thailand.

Let me first emphasize that this authority does not relate to the use of funds for U.S. forces. These funds relates only to what we call foreign military aid. It does, however, authorize the use of Defense funds for the support of Vietnamese and other free world forces in Vietnam and, as amended by the committee, or certain limited operations in Cambodia and for local forces in Laos and Thailand. This support and related

costs is authorized on such terms and conditions as the Secretary of Defense may determine.

As a matter of historical interest, Mr. President, this provision was adopted for fiscal year 1966 in order to accomplish a merger of funding for the support of allied forces in a combat area with that of the U.S. forces engaged in the same area. This was the practice followed during the Korean war.

Ordinarily this is what we would call foreign military aid, but for the reason given here it has been handled since fiscal year 1966 in this bill. It really is not related to military procurement and authorization. I do not think that they both should be in the same bill, although our committee is not running from the handling of this matter, especially as long as the war is going on. Next year if they insist on putting them both in the same bill. I want our committee to insist on taking it out of the military procurement bill and putting it into a separate bill so that it will be brought here as a separate matter. It is confusing, in a way, in the debate, to have all these items concerning research programs, all the authorizations concerning tanks, airplanes, missiles and everything else, tied in with policy questions on how the war should be operated.

COMMITTEE LIMITATION OF $2,500 MILLION

The bill as passed by the House contained no ceiling on the amount of funds that could be used for the support of free world forces under this authority. The committee has adopted a limitation of $2.5 billion which could be used for this purpose from fiscal 1971 funds. This ceiling is identical to that adopted for 1970 funds.

CLARIFICATION OF AUTHORITY

Since fiscal 1966 a provision has authorized the use of defense funds for the support of the "Vietnamese and other free world forces in Vietnam."

When this bill was before our committee the Cambodian sanctuary takeover was raging as a part of the battle in South Vietnam. The words "in Vietnam"—all this activity was limited to South Vietnam itself—have given rise to some doubt as to whether such funds are available for support of the free world forces outside of Vietnam in the so-called sanctuaries of Cambodia. In order to remove any doubt in this matter the committee deleted the words "in Vietnam" and substituted the words "in support of Vietnamese forces." The reason for this substitution is discussed in detail in the committee report on pages 105 to 107. Our reason was to make clear that this authority did extend to the support of free world forces in border sanctuaries and related operations in Cambodia in order to accomplish protective reaction strikes or to protect U.S. forces in Vietnam. The entire purpose, of course, of any operations in Cambodia would be to accelerate the Vietnamization program or protect the U.S. forces.

It still is a limitation of the use of these funds as far as this authorization goes to matters concerning the taking of sanctuaries and related activities and the protection of our own troops and the carrying out of the Vietnamization program.

The word "Vietnamization" is a rather long word there, but it means that the use of this money must have to have some relationship to the President's program as carried out so far in a broad sense in the recent operation.

I would emphasize, as the report states, that there was no intent to permit the use of Defense appropriations under this authority to support Vietnamese and other free world forces in actions designed to provide military support and assistance to the Cambodian Government.

I personally did not want us to undertake—not through this method here; I do not favor it under any circumstances that I know of here—to underwrite the sustaining of the Cambodian Government. We already have our hands full.

The committee's basic purpose was to allow a reasonable latitude for operations in these limited areas of Cambodia for the purposes I have already explained.

There was no other plan of operation before the committee. I want to make clear that, as far as I know and believe, the President of the United States has not made any promises to the Government of Cambodia. I do not want to leave any possible inference from what I have said on that score, and I say there was no other plan presented to the committee.

I have said many times that I thought if Asia was going to save itself, it was going to have to be done by the help of Asian nations, one to the other. If there is a good, clean, clear-cut plan for the use of mercenaries—and I do not think that is a bad term—I am not saying I would be opposed to that, but if it is tied in in any way with the underwriting or sustaining of any other government or any other country in Southeast Asia, I think that is beyond our call of duty and beyond the call of reason. As far as any clear-cut plan is concerned with respect to mercenary troops, if the President wants it and is going to be responsible for it, I would not rule that out at all, in my view, as a part of some additional legislature effort.

REQUIREMENT OF CONSENT FOR DEFENSE ARTICLES GIVEN TO THIRD PARTIES BY SOUTHEAST ASIAN COUNTRIES

The bill also contains a provision set forth in section 502(a)(2) which requires notification to and consent of the U.S. Government in the event Southeast Asian countries transfer U.S. defense articles received by them to third countries. This authority is similar to that already contained in existing law with regard to items now furnished under the military assistance program and the military sales program. This provision was adopted following a suggestion of Senator SYMINGTON.

AUTHORITY FOR THE SALE OF AIRCRAFT TO THE STATE OF ISRAEL

Mr. President, the committee in section 501 of the bill has recommended a statutory provision which authorizes the transfer of aircraft and supporting equipment by this country to the State of Israel on the basis of sale, credit sale, or guaranty. The committee adopted this provision on the premise that the special authority was justified in order to provide the State of Israel with a greater means for its own security.

PERSONNEL STRENGTH OF THE SELECTED RESERVES

Mr. President, existing law requires that the personnel strength of each of the selected reserve components be authorized on an annual basis.

For fiscal year 1971 the committee has recommended all of the strengths contained in the House bill and as recommended by the executive branch except for the U.S. Coast Guard Reserve. Except for the Coast Guard the total strengths being recommended for the Department of Defense components total 972,514, with each element as follows:

Army National Guard	400,000
Army Reserve	260,000
Naval Reserve	129,000
Marine Corps Reserve	47,715
Air National Guard	87,878
Air Force Reserve	47,921

For the Coast Guard Reserve the committee has recommended an average strength for fiscal year 1971 of 10,000. The budget submission recommended a zero strength for fiscal 1971 and the House version of the bill recommended a total strength of 16,590.

SUMMARY STATEMENT

Mr. President, the foregoing remarks summarized the various provisions of the pending legislation. It is an adequate bill and it is also an austere bill which represents the minimum in the judgment of the committee necessary to support the increment of hardware and research and development for fiscal 1971.

On that basis, I urge the Senate to give the bill its full support.

Let me say this, in addition. These are not casual things we have in the bill. They have been well considered by the committee membership, all of whom have had some experience in these matters and some of whom have had a great deal of experience. It was determined that, whatever our recommendations were going to be, they were going to be developed on facts and proof by responsible people, and that proof was to be developed by knowledgeable people and checked out, and contrary witnesses called where it was thought necessary. Some of the hearings were open. As many of them are open as we thought possible.

I again call special attention to the report and the testimony, all of which is as complete as could be made under the circumstances.

I repeat again, our staff is ready, and I know they are able, and I know they are willing, to go into any matter with reference to this entire important measure, that any Member of the Senate, off the committee or on the committee, might wish.

In that spirit and on those facts, we are honored to present the bill to be considered by the Senate.

Mr. McINTYRE. Mr. President, will the Senator yield for a question?

Mr. STENNIS. I yield.

Mr. McINTYRE. For the purpose of

emphasis, would our chairman again state the request of the Department of Defense as initially coming to us as opposed to what we are recommending, so that the record will indicate clearly the amount of the reduction that our committee in this particular area is recommending?

Mr. STENNIS. I shall be glad to do that. There are two answers to that question, in this way: We took out of the military construction bill $334 million, as the Senator knows, on the Safeguard. So I will give an answer leaving that change out and then give an answer including it.

The Department of Defense requested for procurement, research, and development $20.271 billion. We recommended for procurement, research, and development $18.9 billion. The House has recommended $20.237 billion for that purpose.

That leaves in the Senate bill for those items $18.9 billion as against the Department of Defense request of $20.271 billion.

However, when we add in the $334 million to which I referred, which we took from another bill for the sake of uniformity in debate and presentation, our bill then contains $19,242,889,000.

Mr. McINTYRE. I thank the Senator. I also wish to commend our distinguished chairman for his fine explanatory remarks concerning this difficult bill, because this undoubtedly signals the debater that will occupy this distinguished body for let us hope not longer than the next 4 weeks.

Mr. STENNIS. I thank the Senator very much, and I thank him for what he did in making this bill possible and for taking part in the debate.

Mr. President, in connection with the Senator's question, I ask unanimous consent that page 8 of the report on this subject, which gives the statistics in reference to this matter, be included in the RECORD at this point.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

SUMMARY BY MAJOR CATEGORY—ARMY, NAVY, AIR FORCE, AND DEFENSE AGENCIES

[In thousands of dollars]

Procurement	Authorized 1970	Appropriated 1970	Prior year programs to be reauthorized (included in total requested 1971)	Total requested 1971	House: Change from request	House: Authorized	Senate Armed Services Committee: Change from House	Senate Armed Services Committee: Recommended amount
Aircraft:								
Army	570,400	554,400	(2,400)	296,900	−2,400	294,500	−2,400	292,100

[1] Authorization for other weapons not required prior to fiscal year 1971.

[2] Of this amount, $350,000,000 to be derived by transfer from stock funds.

Mr. STENNIS. Mr. President, as soon as I finish yielding for questions, I shall be glad to yield the floor.

I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I, too, commend the Senator from Mississippi for his, as usual, extremely able explanation of a highly complicated bill.

I should like to ask the Senator about the C–5A once again, because I want to get clear in my mind what the issue is. I must say that the Senator and the report of the committee present a very powerful case for going ahead with authorization above the contract, and substantially above the contract.

As I understand it, the original contract called for something like $3.7 billion for 120 planes. If we go ahead with the fourth alternative listed here on page 18, which is the full 81 planes, the cost will be $800 million above that, as I understand it, so that the cost per plane would then be $56 million, which compares with a much lower contract cost, of course, even if the highest figure in the contract were assumed—and the contract was one which had a low and a high estimate involved.

I should like to ask the Senator from Mississippi if either the committee or the Pentagon has given any consideration to securing another tenant, someone else to complete this operation. I ask that question in all seriousness, because this plant in Marietta, Ga., in which the plane is being built is owned 100 percent by the Federal Government, as the Senator knows; the equipment, much of the equipment is owned by the Government; progress payments have been paid to the tune of 90 to 100 percent, including labor costs, and so forth, by the Federal Government.

One could make the case that the Lockheed Co. has not been competent. Certainly it has not been efficient. The costs have been very, very high, and I wonder what consideration has been given to trying to determine, whether some other concern could do this more efficiently, and complete the job more efficiently, especially in view of the fact that the latest report we have on the plane states that it is deficient in some respects, and has had a lot of trouble with its wings, that that may have to be restructured and reworked, and there has been some degradation in its cargo carrying capacity, and so forth.

What consideration has been given to getting another manufacturer?

Mr. STENNIS. Some consideration has been given to the Senator's question. As I recall, he and I talked a little about it one day unofficially, not in debate. Several Senators have discussed this matter with others who are informed in this field, but frankly, the committee relied largely upon Mr. Packard, the Assistant Secretary of Defense. He has given a lot of attention to this matter, as shown in the unclassified part of the record, and he advised against it.

One of the main points is that there is no dispute, it seems, about Lockheed having the skilled men and the know-how; and even though there is a fracture in the wing, which is not unusual, it is a going concern, I mean the wheels are turning and the know-how is there, and to undertake a change of management and a shifting of all this would be a monstrous undertaking. My commonsense makes me back off from it, just on the surface.

Mr. PROXMIRE. That may well be. My question was, however, that it seems to me, in view of the record of Lockheed on the C–5A, that this question ought to be explored. We ought to at least have from the Department of Defense some evidence that they have given the matter consideration to the extent of discussing it, say, with Boeing and some of the other outstanding aircraft manufacturers, to see if there is any possibility that they could step in.

If this were Lockheed's plant and equipment, and they were not receiving Government progress payments that would be one thing; but it is not. It is really a Government operation, with Lockheed management providing a product that is a failure.

Mr. STENNIS. It is a part of Lockheed's nationwide operations, as the Senator knows. It happens that this is an old Government plant, that is true. But this matter is, except for the repetitious making of additional planes, almost over now. The know-how has all gone into it, and the operation, except moneywise, has been rather successful.

Mr. PROXMIRE. Are we really assured? Does the Senator feel very confident that this additional $800 million would be all that would be necessary to get us the 81 planes? Is that pretty definite and clear in the Senator's mind? Of course, he cannot make a guarantee.

Mr. STENNIS. No.

Mr. PROXMIRE. But I am saying, does he feel strongly that there will be no further overrun?

Mr. STENNIS. There is a sum to be added to the figure the Senator has mentioned. The Senator mentioned $800 million?

Mr. PROXMIRE. $800 million; yes.

Mr. STENNIS. $800 million is the best estimate that we now have as to what will be required. As the Senator says, we cannot guarantee it, but we think that is in the neighborhood of being the correct amount. That is the amount we had to admit to ourselves we were passing on, frankly, when we recommended the amount in the bill.

That whole thing, though, as I pointed out earlier in the argument as to the $200 million, is subject to negotiation, and this whole $800 million would be subject to negotiation as between Lockheed and the Air Force and the Department of Defense, as to where the line is as to whose obligation this is, and to what point.

Mr. PROXMIRE. It is clear that $800 million would not be, if we stick by the contract, the obligation of the Federal Government at all. This is an additional obligation beyond the contract, as I understand the committee report.

Mr. STENNIS. No, I do not think we can assume finally that it is going to cost the Government that much, because that is assuming that the obligation has already been defined. The committee does not agree to that, and the contractor claims that it is going to be due more than that sum under the contract, more than the Air Force claims will be due.

Mr. PROXMIRE. The words of the report—just one short sentence—are as follows:

> In other words, after the $344.4 million owed under the contract is authorized, additional funds of $800 million will be required for 50 additional planes resulting in an average cost—

And so forth.

In other words, it seems that this is the present estimate of the committee. The Senator says it may be less than that, but that is subject to negotiation; is that correct?

Mr. STENNIS. Well, we wanted to be certain to present the whole picture to the Senate. So that $800 million there, in our judgment, is the most that it will cost the Government additionally.

Now, if the Lockheed people, though, are able to prove that they are entitled to more money under the contract than the Air Force now admits, then they will have that much, whatever they prove, as a matter of right and not as a contingency. But it is going to cost the Government about $800 million more.

However, as I emphasized, Lockheed claims that it has a right to some of the $800 million under the contract, even.

Mr. PROXMIRE. So that, altogether, after we authorize an additional $344.4 million, which is what the contract calls for, then there would be another $800 million. That $800 million may partly be due under the contract, if this is the court's interpretation; but in any event, that seems to be what is required to complete the 81 planes?

Mr. STENNIS. The Senator is correct about it being the approximate amount that we think now will be required to finish the contract. Negotiation, or the court, will say how much Lockheed is entitled to under the contract.

Mr. THURMOND. Mr. President, will the distinguished Senator yield?

Mr. STENNIS. I yield to the Senator from South Carolina.

Mr. THURMOND. Mr. President, the military authorization bill is a very intricate and meticulous one. It has received the most careful consideration in the committee, and at this time, I should like to commend the able chairman for the splendid manner in which he handled this bill in the committee, and also for the succinct and, I think, comprehensive explanation that the able chairman of the Committee on Armed Services has presented here on the floor today.

Mr. STENNIS. I thank the Senator.

Mr. THURMOND. We feel that this bill has received every possible fine combing, and that it should be approved now by the full Senate.

Mr. STENNIS. Mr. President, I certainly thank the Senator from South Carolina, and in the same breath I want to thank him, too, for the very valuable aid that he has given all year in getting at the facts in the case and putting this bill together. His attendance record has been good, and he has expressed himself well, and I hope that he seeks now and obtains the floor and gives us the benefit of his version.

May I mention again our obligation and indebtedness to the Senator from Maine (Mrs. SMITH), who is certainly a big part of this bill. She attended the hearings faithfully and was at every session of the markup. With her usual good judgment, commonsense, and special preparation, we want her to be back before action on this bill is completed.

I yield the floor.

Mr. THURMOND. Mr. President, I speak in favor of the fiscal year 1971 military authorization bill and I commend the able chairman of the Senate Armed Services Committee for his succinct, yet comprehensive, explanation of this important piece of legislation.

Mr. President, notice should be taken of the absence of the distinguished and able ranking Republican on the Senate Armed Services Committee, Senator MARGARET CHASE SMITH of Maine. Senator SMITH had an operation earlier this month, but in recent correspondence with her I was pleased to learn that she is well on the way to a complete recovery.

Her counsel and leadership will be missed during the debate on the military authorization bill, but I hope and expect that she will be able to join us here on the floor prior to final passage. The scene in the Senate will not be complete until this truly remarkable lady is once again at her desk in the front row of this august body.

Mr. President, as the ranking member of the Senate Preparedness Investigating Subcommittee and one of the senior members of the full committee, I can say without fear of contradiction that few pieces of legislation have been studied reviewed, or debated by the committee members more than H.R. 17123. This thorough study was outlined a few minutes ago by our distinguished chairman.

While I support the committee bill, it is not without some misgivings and reservations. It is my opinion that this bill has been cut too much.

The Senate and Congress should not lose sight of the fact that the defense budget for fiscal year 1971 is only 34.6 percent of the total 1971 budget, the lowest percent going to defense since fiscal year 1950.

It should also be remembered that funds allocated for defense by the Nixon administration are down $9.8 billion from the fiscal year 1970 budget submitted by the Johnson administration.

Also, defense spending fell from 9.5

percent of the gross national product in fiscal year 1968 to 7 percent in fiscal year 1971, the lowest share since fiscal year 1950.

The impact of these sharp cutbacks has been felt in both the Defense Department and the defense industry. More than 640,000 employees in defense industries have been affected by the reductions of the past 2 years and 682,000 military and civilian employees have been laid off by the Department of Defense in the past 2 years.

Further, it should be noted that cutbacks in the nonpersonnel portion of the budget are even greater. Purchases of goods and contractual services will decline by over 20 percent from fiscal year 1969 to fiscal year 1971.

With this background it should be easily understood why there is reason for concern in connection with the cuts in the committee bill.

Some programs have been eliminated and others cut back without my support. We should be meeting our responsibilities for our national security in a more adequate manner.

The Senate must remember that Secretary of Defense Melvin Laird and his associates sent to Congress requests for 1971 of some $2.5 billion below last year's budget. Thus, we can see that the Defense budget is falling rapidly despite the continued engagement of U.S. forces in Southeast Asia.

The fiscal year 1971 budget submitted by Secretary Laird totaled $71.2 billion. Of this amount, $20.2 billion fell into the category of military procurement and research and development. The committee bill deals with this $20.2 billion.

Of this amount, the Armed Services Committee cut the requests to $19.2 billion. The committee shifted from the military construction account some $333 million in the Safeguard program so that all of the Safeguard costs could be dealt with in one bill. Thus, the committee made cuts of some $1.3 billion.

One final point on the figures in this budget. Of the $19.2 billion approved by the committee, only about $12 billion is for weapon procurement, the remaining $7 billion being for research and development.

Mr. President, it is worth while to call attention to the fact that when Secretary Laird presented his requests, he called it "a rock bottom budget."

While he fully recognized the obligation of Congress to examine this bill very closely and work its will, he nevertheless issued this warning:

> I believe that the National Security would be jeopardized by any further reductions in our Fiscal Year 1971 Defense budget request.

These are strong words from a former Member of Congress. I am confident that he would not have uttered them unless he felt deeply such caution should be sounded.

Therefore, I say to the Members of the Senate that we are treading on thin ice when it comes to the national security of this country as provided for in this bill. To cut further may well send us plunging into depths from which a recovery would not be easy.

It would be my hope that before any Member of the Senate offers an amendment to further cut the military procurement bill he examine very carefully the consequences of such an action. The Senate Armed Services Committee and Department of Defense should be contacted in order that the Senator have as complete a set of facts as possible, including any secret information which might bear on his amendment.

Mr. President, this bill comes to the floor with the United States still committed to more than 40 nations by treaties or other formal agreements. It is the responsibility of the Senate Armed Services Committee to see that our Defense Establishment is able to meet these commitments as well as to provide for our own defense.

There has been much talk about cutting back on defense and cutting back on military activities abroad. However, the matter of treaty obligations is within the jurisdiction of the Senate Foreign Relations Committee. We cannot cut back too much on one without cutting back on the other.

Personally, I would welcome a review of these commitments by the Foreign Relations Committee. But that is in the purview of that committee. The point I wish to make here today is that so long as these commitments exist, it is the responsibility of the Armed Services Committee to see that we have the defense strength to meet them.

Added to this requirement is the question of the Soviet threat. Today the Soviet threat is far greater than it was 1 year ago. We are scaling down our Military Establishment while the Russians are charging ahead in many areas.

They are building a naval force to control the seas by going underwater. They already have many more attack submarines than the United States. Soviet Navy ships are appearing in waters around the world.

Further, the Soviet Union has passed the United States in the number of intercontinental ballistic missiles and are building more every day as well as deploying them around that country. Their SS–9 missiles are the most powerful of any nation. The United States has not built any new ICBM's for a number of years, although we are converting our older ICBM's to make them more effective and accurate.

Mr. President, in favoring this legislation, I speak in the interests of our national security. In a period during which it is fashionable to attack the so-called military-industrial complex and defense programs, I urge caution less the Senate emasculate our country's defense.

Most of all we must not lose sight of the fact that the weapon systems we are deciding upon today may not actually enter the inventory of the services until 5 or 10 years from now. Thus, we are providing today for our defense in the late 1970's and early 1980's. Who better than the Defense Department can say what conditions might exist at that time? We must be prepared—we must assure the American people that they will not be faced with nuclear blackmail in the years ahead.

Of particular importance is the preservation of our strategic offensive capability. This is the area in which our deterrent capability can assure a long period of peace for the American people and the world. The strategic advantage we have enjoyed since the close of World War II has been allowed to decline under the McNamara policies of the 1960's. The goal then was to permit the Soviets to achieve parity with the United States in this area.

This point has been reached in many areas during the past several years but the Soviets have kept right on building and deploying ICBM's, missile launching submarines, orbiting missiles and other frightening weapons. It is clear to me that they desire superiority, not parity. If we fail to realize this situation and make unwise cuts in this bill our own generation may live under the fear of nuclear blackmail.

Mr. President, those who are attacking the military budget say they are not antimilitary. They contend their interest is merely to save money so it can go to more worthy programs. In this connection, I am puzzled by their lack of interest in examining waste in domestic programs where equally large sums of money are being spent.

No one seems interested in doing a cost analysis of programs initiated by the Office of Economic Opportunity or similar programs. I would like to see some of our domestic programs receive equal and intensive review as that being applied to the military. For several years the Congress has been shoveling out money in domestic areas where the benefits are more pipedreams than reality.

Also, Mr. President, I wish to say a word in defense of our Military Establishment. Our officers in uniform are the favorite whipping boys of critics who have shared neither their responsibilities, risks or sacrifices. They seem to forget that the man in uniform is carrying out the orders of his civilian superiors.

The vitriolic tone of this attack on the military and the weapons builders, all of whom are acting on authority from the Congress and civilian officials was demonstrated in a book review written by a former Member of this body, Senator Joseph S. Clark. This book, authored by one of our colleagues, was seen by Mr. Clark as an expose. He said:

> It exposed, with a devastating array of irrefutable facts, how an incredibly arrogant but equally stupid military-industrial complex, with little regard for integrity, has diverted the major part of our federal tax resources into a wasteful and utterly unnecessary arms race to the great damage of our domestic economy.

These comments by Mr. Clark were placed in the RECORD by another of our colleagues July 9. In referring to the Defense Department he called it a "huge money wasting Goliath." This critical chorus does little to enhance public confidence and does much to obscure the realities of today.

Mr. President, in closing, let me say that no one claims the cost of defense is cheap. It would be wonderful if we could use all this money to build houses, roads, recreation centers, parks, education facilities, and so on. But we must realize that none of these things will be safe or enjoyable in the face of nuclear blackmail.

The recommendations of the Senate Armed Services Committee were decided upon only after a most searching and far-reaching study of the threat and the alternatives. These minimum requirements are needed to deter what we know our enemy is capable of doing, not what he might do. To cut further or delay these needed weapon programs is tantamount to acceptance of mediocrity. Even worse, in some defense areas additional reductions would amount to unilateral disarmament.

Mr. McINTYRE. Mr. President, first, let me commend my distinguished colleague who is today representing the ranking minority member on the committee. I do not believe there is any committee in the Senate that operates with less partisanship than the Armed Services Committee. I have listened carefully to his remarks. I realize some of the vital questions that bother him when we begin to try to reduce what many consider to be the "fat" that has crept into the budget, but I know, speaking for the Subcommittee on Research and Development, that we have tried hard not to cut what we believe are important matters for the future. We have also tried to make the cuts and reductions as selective and as intelligent as possible.

I think, too, Mr. President, that I would be remiss if I did not say a word about our distinguished chairman, to mention the esteem which all of us on the Armed Services Committee hold for the distinguished Senator from Mississippi (Mr. STENNIS), for his leadership, his fairness, and his patience, which are such that it is really a joy and an education to work with him on what is a difficult and complex authorization bill.

Mr. President, it has been my privilege during this past year to serve again as chairman of an ad hoc Subcommittee on Research and Development of the Armed Services Committee.

Serving with me on the subcommittee have been the Senator from Ohio (Mr. YOUNG), the Senator from Virginia (Mr. BYRD), the Senator from California (Mr. MURPHY), and the Senator from Massachusetts (Mr. BROOKE).

In the performance of its duties, the subcommittee devoted over 70 hours to briefings by Defense Department officials in support of the Department's R.D.T. & E. budget estimates. These briefings were supplemented by many additional hours of informal discussion with persons outside the Department with expertise in defense matters. In addition, the subcommittee held 4 days of public hearings on S. 3003, a bill introduced by the Senator from Wisconsin (Mr. PROXMIRE) to revamp Defense Department administration of its contractors' independent technical effort programs.

The R.D.T. & E. program is perhaps the most difficult and challenging of all appropriations to understand, much less to examine and recommend for authorization.

To the layman, it represents a very substantial amount of money—$7.4 billion in this year's administration request—which too often is assumed to be utilized for vague and ill-defined "research."

To the scientist it is the seedbed of knowledge from which grows all of our superior weaponry.

To the man in uniform it is the promise of the future guns, tanks, ships, airplanes, and missiles which he will need to protect our country, our families, and our lives.

But, to those who are responsible for formulating, managing, and executing the research and development program, including the broad range of military organizations and industries which are involved, it represents at all times a balance, within limited dollars, between the basic sciences which advance man's knowledge, the building blocks of technology represented by exploratory and advanced development, the prototypes of new weapon systems which evolve from engineering development, and finally the operational developments which provide complete weapon systems for test and then employment by our military forces.

The fiscal year 1971 request includes some 495 separate and distinct programs, referred to as program elements or budget subactivities. These are divided among the Army, Navy—including the Marine Corps—Air Force, and the various defense agencies.

These 495 programs consist of literally thousands of individual projects which in turn include thousands of tasks and then subtasks. These tens of thousands of single efforts are spread by contract and grant to thousands of companies of all sizes, to colleges and universities, and to not for profit institutions to buy the best brains, skills, and ingenuity which our society produces.

The following is a list of the major categories into which these varied tasks are divided in the fiscal year 1971 request:

[In millions of dollars]

Research	369.6
Exploratory development	897.4
Advanced development	1,112.7
Engineering development	1,406.9
Operational systems development	2,341.5
Management and support	1,167.5
Emergency funds	50.0
Financing adjustment	56.0
Total	7,401.6

Before proceeding to an explanation of the committee's action on this total budget, I would like to say a few words about each of these major categories:

"Research," as its name implies, involves the advancement of knowledge in those areas of the basic sciences with potential military relevance. Contrary to popular impression, only 5 percent of the total R. & D. budget is expended on such research.

The categories of "Exploratory development" and "Advanced development" represent the next two building blocks on the way to procurement items. "Exploratory development" is really synonymous with applied research. It might consist, for example, of work on certain component parts of a possible avionics system for a new aircraft. "Advanced development" involves the final definition of subsystems of new possible weapons systems. It would be here, for example, that the new avionics system itself would finally be put together. "Exploratory" and "Advanced development" consume 12 percent and 15 percent, respectively, of the fiscal year 1971 R.D.T. & E. budget request.

"Engineering development" and "Operational system development" involve the putting together of individual subsystems into major new weapons systems. Which of the two categories a given system falls into hinges on whether a production go-ahead has been given to it by the Department of Defense. Fifty percent, or $3.7 billion, of the fiscal year 1971 R.D.T. & E. request falls into these two categories. Included in them are all the major weapons systems on which our security will depend for the next decade and more.

About 15 percent of the R.D.T. & E. budget, or $1.2 billion is devoted to "Program management and support." These funds pay for the operation, management, and maintenance of the defense research establishment. Included are the salaries of some 88,000 civilian scientific engineering, technical, administrative, and maintenance personnel who man the 130 Government-owned installations also supported by this program. Another 32,000 military personnel engaged on R. & D. work at these facilities are paid from another appropriation.

The "Emergency fund" and "Financing adjustment" involve much smaller funding—$50 million and $56 million, respectively—but considerable attention has been devoted to them by the committee.

The committee has recommended approval of the former and disapproval of the latter. Inasmuch as these decisions were closely interrelated, and because the emergency fund request was the subject of an amendment on the floor last year, I would like to say a few words about our reasoning at this time.

Emergency fund: This account is precisely what its name implies—a pool of money to which the Department can turn to meet emergencies which arise during a fiscal year and which cannot be foreseen in advance. Surely it must be recognized that emergencies—arising perhaps as a result of new data gathered by our intelligence organizations—are an inevitable part of the defense business. Unless a special fund is available to meet such emergencies, they have to be met by a reprograming of funds originally allocated to other programs. Such reprograming can result in a serious disruption of ongoing efforts, with the benefits of the uncompleted research and the services of the men conducting it being lost in the process. It is for these reasons that the committee recommends approval of the Department's $50 million emergency fund request. This action has been coupled, however, with action designed to squeeze well over $100 million of "water" from the Department's R.D.T. & E. budget.

Financing adjustment: The first part of this "squeeze" involves elimination of the financing adjustment. This $56 million request represents the Defense Department's estimate of the amount of R.D.T. & E. funds authorized and appropriated in fiscal years prior to fiscal year 1971 which will remain unobligated as of June 30, 1971. These are funds, in other words, already in the Department's hands

for which no use is planned at any time during the coming fiscal year. Nonetheless, the Department, for reasons set forth in more detail on pages 13–15 of the committee report, has requested reauthorization of these funds. Because no adequate justification of this request has been made, the committee recommends a disapproval of it.

The committee has also conducted a thorough investigation designed to uncover those programs the implementation of which has so been delayed that fiscal year 1970 funds, provided for those programs, have not been used and are available for use in fiscal year 1971. It has then reduced the fiscal year 1971 funds requested for these programs by an appropriate amount. A list of several smaller programs with respect to which this action was taken—for savings of $50.2 million—is shown on page 76 of the committee report. The same principle has played a role in the committee's action on several major weapon systems, among them SCAD and the B–1.

It is the opinion of the committee, and certainly of this Senator, that these actions have been far more effective and efficient in their elimination of essentially discretionary defense research funds than would the elimination of, or a cut in, the Department's "Emergency fund" request.

As I indicated earlier, the R.D.T. & E. budget consists of 495 individual program elements which include literally thousands of projects and tasks. Consequently, despite the familiarity of subcommittee members with many of these programs as a result of last year's work, and despite the expenditure of literally twice the time and effort this year as opposed to last, the subcommittee was obliged to concentrate on programs which fell into the following categories:

First. Large dollars requested.

Second. Large increases over fiscal year 1970.

Third. New programs in fiscal year 1971.

The subcommittee did not attempt to compensate for this inevitable lack of comprehensive coverage by directing broad percentage cuts at those areas of the budget it did not review in depth. It resisted this temptation for several reasons, and it would be well to spell them out at this time.

The first was the subcommittee's awareness of the constantly increasing Soviet research and development program. During the past decade, Soviet research and development in all areas has been growing at a rate of about 10 percent a year, while U.S. research and development across the board has essentially leveled off.

The comparison is even more dramatic when one examines only those research and development expenditures related to military, atomic energy, and space work. During the 1960's, Soviet military research and development increased by about 60 percent while U.S. military research and development increased by roughly 30 percent. And estimates for 1970 show the Soviets ahead of the United States by more than 20 percent in absolute dollar terms.

The validity of these statistics is not without question. And there is no necessary relationship between the amount of funds expended and the quality of work produced. But trends of such persistence should make one pause before slashing away blindly at areas one has not reviewed.

A closely related second reason for the subcommittee's disavowal of broad percentage cuts has been the changes in the size of the R.D.T. & E. budget in the 2 short years of the subcommittee's existence. Last year the budget submitted to Congress totaled $8.2 billion. This year's budget submission was $7.4 billion, a reduction of $800 million in dollar terms, and a reduction of even larger magnitude when the effects of inflation are considered.

The subcommittee was mindful, also, that the bulk of this reduction taken in precisely those areas it did not examine closely. The Defense Department, no less than other bureaucratic complexes, is subject to institutional pressures which often inhibit wise decisionmaking when periods of retrenchment occur. In such periods, it is a natural phenomenon for the services and the Defense agencies to do all they can to protect their largest and most prestigious programs. Cuts are focused, as a result, in the manpower area and in those basic research and exploratory development areas which have little institutional support behind them.

For all these reasons, then, the subcommittee believes that its decision to focus attention on large and fast-increasing programs was entirely proper and justified.

Not only have these large weapons system programs been less closely pruned by the Defense Department itself—they have been a major source of the past mistakes which have focused increasing criticism in recent years on our defense spending generally.

It is here that the cost overruns we have heard so much about have most often occurred. It is here that we have spent billions on highly touted new programs which offered only marginal improvements over those programs they were designed to replace. It is here that we have seen the development of systems so complex and sophisticated that they have never been able to function adequately even in the performance of their primary task. It is here that we have seen costly and undue duplication, as each service has sought its own version of a given system, to avoid reliance on similar systems in the hands of others. And it is here, it seems at times, that we have seen the development of systems, even absent duplication, which add more to the prestige of their service sponsors than to the defense of our country.

It is in the supervision of these major weapon systems developments that not only the Office of the Secretary of Defense, but the Congress as well, must have a major impact. It is on these systems that the subcommittee has focused its attention.

As a result of its investigations, the subcommittee recommended and the committee accepted a total reduction in the funds requested of $464.1 million, or 6.3 percent of the $7.4 billion requested of the Congress. This reduction was partially offset by a transfer of $79 million for the purchase of two S–3A test aircraft from the procurement to the R.D.T. & E. account, where the funds properly belonged in the first place. The resulting net reduction of $385.1 million will provide an authorization of $7.016 billion. This is $249.1 million lower than the amount authorized in the House bill, notwithstanding the impact of the funds transferred for the S–A test aircraft.

The details of the specific reductions made are set forth in the committee report, where they are addressed in far better depth than I could hope to address them at this time. I would like to highlight, however, what I regard as the most significant of these reductions.

First. A cut of $50 million from the $100 million requested by the Air Force for the B–1.

Second. A denial of the $17.6 million requested by the Army for the Cheyenne helicopter, together with a cancellation of the Cheyenne development contract.

Both of these actions are of sufficient significance that I would like to address them separately at another time.

Third. An elimination of the $15.7 million requested by the Army and Air Force for Project Mallard. Mallard is an ambitious international communications program with long term implications in the billions of dollars.

The committee believes it inappropriate for the Department of Defense to embark on an international development program of this nature and magnitude when a militarywide tactical communications system has never been developed for the military services of the United States itself and when the DOD inventory is replete with communications equipment having a lack of commonality.

Fourth. A reduction of $27 million in the $77 million requested by the Air Force for the Minuteman rebasing program. This is a program involving several options, in addition to those being explored under the Safeguard and advanced ballistic missile defense programs, for improving the survivability of our land-based ICBM deterrent.

The $31.6 million of the funds requested are for use in research on hardened silos, with hard-rock silos receiving considerable attention. Hard-rock silos do not appear to be a promising option. Not only would they be terribly expensive, but they would become increasingly vulnerable to improvements in the accuracy of attacking missiles. The committee report directs an orderly termination of hard-rock silo research. This action, if implemented, will insure that we never become committed to the multibillion dollar costs which a hard-rock silo program would entail.

Fifth. A reduction of $20 million in the $158 million requested by the Army for the advanced ballistic missile defense program. This program involves research on the frontiers of ABM technology, and the funds requested represent a substantial jump from the $110 million approved by Congress last year. The bulk of this increase, however, is accounted for by projects devoted to improved Hardsite development, and these projects are fully supprted by the committee.

Sixth. A reduction of $15 million in the $89.3 million requested by the Army for the SAM–D surface-to-air missile program. The effect of this reduction will be to postpone all engineering development work on SAM–D until fiscal year 1972. In conjunction with this reduction, the committee calls upon the Defense Department, during fiscal year 1971, to conduct an extensive review of the system's specifications, with particular emphasis on its horizontal and vertical ranges. Consideration should be given, during this review, to the performance capabilities of the Air Force F–15 aircraft which is planned to be employed in conjunction with SAM–D to assure air superiority to our Army in the field. The objective of this review should be the elimination of all inessential SAM–D capabilities which should result in reduced procurement costs if and when the system is authorized for procurement.

Seventh. A reduction of $1.8 million in the $5.7 million requested for foreign military security environments studies and of $1.3 million in the $4.2 million requested for policy planning studies. This amounts to a reduction of 30 percent in the funds requested for these two social and behavioral sciences study programs. Both of these programs were subject to criticism in last year's debate, on the grounds that the work involved could be undertaken more appropriately by the State rather than the Defense Department. It was hoped that arrangements could be developed during fiscal year 1970 for the transfer of much of this work to State. Recently, an agreement was reached for the joint State-DOD use of some $500,000 of fiscal year 1970 funds. It is the committee's expectation that its action this year will underscore the need for additional such steps both within the State and Defense Department themselves and at the Bureau of the Budget.

Eighth. A denial of the $33.6 million requested by the Air Force for contract definition and initiation of development on the propulsion, navigation, and decoy electronics subsystems of the Subsonic Cruise Armed Decoy—SCAD. While the committee does not contest the importance of this system in improving the penetration capability of our manned bombers, formal approval of the program has not yet been received by the Air Force from the Secretary of Defense, and there is no indication as to when such approval will be given. Assuming that approval is forthcoming, there are $9 million of unused fiscal 1970 funds remaining and these should be sufficient to support requirements during fiscal year 1971.

In addition to its review of the budget request, the subcommittee drafted regulatory language in three areas of interest. These provisions were also accepted by the committee.

There are three provisions dealing with the controversial area of chemical and biological warfare.

The first, section 506(a) is a reenactment of a provision in last year's bill which would continue for another year the prohibition of procurement of delivery systems specifically designed to disseminate lethal chemical agents or for the procurement of delivery system parts or components designed for this purpose. While research and development work on new binary chemical munitions will not be prohibited under section 506(a), its reenactment will insure that no binary or other chemical munitions of a lethal nature are used without the expressed consent of Congress.

A second provision, section 506(b), is an amendment to the permanent restrictions on CBW activities contained in last year's bill. Section 506(b) would insure that the disposal of biological stockpiles which will be required as a result of the President's decision of last November 25, as well as the disposal of any lethal chemical stockpiles determined to be necessary in the future, would not be undertaken until the Surgeon General of the Public Health Service had reviewed the proposed plans for their disposal and determined what precautionary measures, if any, were required to protect the public health and safety. Section 506(b) would insure also that foreign governments were notified prior to the disposal of any biological or lethal chemical agents within their countries. Section 506(b) is necessary, the committee feels, because the disposal of stockpiles was not addressed in the permanent restrictions in last year's bill.

The third provision, section 506(c), calls for a study, to be conducted by the National Academy of Sciences, into the ecological and physiological consequences inherent generally in the use of herbicides and also into the specific ecological and physiological effects which have followed from our use of herbicides as defoliants in Vietnam. Section 506(c) authorizes the use of funds authorized for the fiscal year 1971 CBW program, for use in the financing of this study. The committee believes that such a study is essential in light of the disturbing evidence which has been uncovered in recent years on the possible effects of herbicides. It commends the recent decision of the Defense Department to suspend further use in Southeast Asia of herbicides containing 2,4,5-T.

The other regulatory provisions concern Department of Defense funding of its contractors' independent technical effort and the reenactment, as section 204, of section 203 of last year's bill, prohibiting the expenditure of defense funds on any research projects which lack a direct and apparent relationship to a specific military function or operation. I would like to comment on each of these provisions more fully at a later time.

Mr. President, it has been a privilege to serve again as chairman of the ad hoc Subcommittee on Research and Development.

The subcommittee was aided in its selection of programs for detailed review by the excellent work of the Tactical Air Subcommittee chaired by the Senator from Nevada (Mr. CANNON) and that of the Bomber Defense Subcommittee, chaired by the distinguished chairman of the full committee, the Senator from Mississippi (Mr. STENNIS). In almost all instances, the R. & D. subcommittee deferred to these subcommittees for the review of research and development programs within their jurisdictions. The R. & D. subcommittee deferred, also, in the case of the Army tank program, which was reviewed in great depth by the full committee.

I would like to say a word of thanks at this time, also, to Mr. Hyman Fine of the Armed Services Committee staff and Mr. Ross Hamachek of my own staff, both of whom aided the subcommittee in its often thorough and painstaking review of this extremely complex and intricate budget.

In conclusion, I believe that the committee's actions in the research and development area will provide the Congress with the type of control of research and development expenditures which all of us so strongly desire.

Perhaps the reasons for some of the committee's actions in the area will be unclear to Senators who did not participate in formulating them.

No doubt other actions will give rise to honest differences of opinion regarding their underlying wisdom.

There will be ample time for both clarification and the joining of debate in the weeks ahead. In order that misunderstandings may be avoided and in order to facilitate the process of debate, I would greatly appreciate it if all colleagues with questions or amendments to the R. & D. portion of the bill would bring these to my attention at the earliest possible time.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield to my good chairman.

Mr. STENNIS. I want to again thank the Senator from New Hampshire for the intensive work he has done on the bill. I think his remarks today show how comprehensive that work has been. The Senator and his committee have defined in depth, I think for the first time, this massive part of the bill, covering research, development, testing, and evaluation. He has dug in and has given us a figure for the first time as to how much of it is for basic research and what is the cost of operating the extensive testing facilities that we have so that it is really an understandable item.

An evaluation of the research to be passed on is interesting. When we started out, we did not have any research and development in the bill at all. Then we first started authorizing appropriations for missiles and planes. Then we put in research for planes, missiles, and hardware.

Then we finally ended up by putting in all research. That is when it got so large and made it so difficult to analyze.

I am sure the proof of the work of the subcommitee will live for years. I know it has strengthened the research department rather than restricted it but, at the same time, it is saving money, too. I think that is a milestone in legislative history.

Mr. McINTYRE. I thank the chairman. The Senator from Mississippi already knows how I feel about working with him on the committee.

Mr. STENNIS. I certainly appreciate the Senator's feeling. It is a mutual feeling. I want the Senator to be here during all of the debate.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. McINTYRE. I yield.

Mr. PROXMIRE. I, too, commend the Senator from New Hampshire on an excellent job. He has given a clear and incisive picture of military research and development expenditures, and I think has taken a very responsible action on it.

As I understand the Senator from New Hampshire, he cut $464 million, below the President's request, if we allow for comparable figures, a cut of about 6.7 percent.

Mr. McINTYRE. That is about right.

Mr. PROXMIRE. That is a very substantial reduction. I think the Senator and his committee have made a responsible reduction.

I am interested in a statement made in the course of the Senator's speech in which he said the Soviet Union is now spending more on military research in actual dollars than the United States is.

Is that correct?

Mr. McINTYRE. It is. I am not sure about the validity of my precise figures, but I do know that Dr. Foster, who is Director of Defense Research and Engineering, is very concerned about maintaining our strong technological base, and the indications are that the Russians have been moving up considerably in this field.

As I tried to indicate to the Senator from South Carolina, this trend was always in the back of our minds. We did not want to make blind cuts of 7 or 8 or 9 percent in all areas. We tried to go to those areas when we could take a hard look and where we could operate with something more than intuition. We were always conscious of the recent research, development, test, and evaluation efforts of the Soviet Union, and we may be approaching a level of effort in research, development, test, and evaluation below which we do not want to go, particularly when we take into consideration inflation and real dollars. The Defense Department felt that the cuts in this area were very deep. Dr. Foster is quite disturbed about them.

Mr. PROXMIRE. If our level of research is lower than that of the Soviet Union, then it seems to me it is a matter of misplaced priorities by the Defense Department, because, in absolute dollars, there is $72 billion in the overall budget, and military construction, AEC and military aid spending brings overall defense expenditures up to $75 billion. The London Office of Strategic Studies has stated that Russia is spending $40 billion military total, if we adjust both for the lower cost of living and lower salaries paid in the Soviet Union and for the difference between dollars and rubles. So all together we spend almost twice as much as the Soviet Union does on our defense. Yet the Senator from New Hampshire says we spend less in absolute dollars for military research.

Military research is the name of the game. After all, if we are going to have an effective military force, we have to have military research that bears a very large share of all military expenditures.

I would think we would want to reconsider our overall military priorities, perhaps moving some of the resources we have devoted to other military areas into research.

Mr. McINTYRE. That may well be. I think what we all realize on the subcommittee is that we must maintain our technological base and do it in a most efficient manner.

Mr. PROXMIRE. I agree with that wholeheartedly.

I would like to make one other point with the Senator from New Hampshire. This refers to independent research and development. As the Senator knows, I offered an amendment last year, which was accepted in part, very graciously, by the Senator from Mississippi (Mr. STENNIS) and the Armed Services Committee, and it was held in conference. Senator STENNIS suggested I introduce a bill, on which hearings could be held. As the Senator has stated, it is enormously important—$625 million is involved. I understand 95 percent goes to 50 companies, or an average of $12 million to a company.

Of course, it is very lucrative and highly profitable to have thousands of dollars for independent research and development. There is no line item; the accountability has been vague in the past. I am delighted that the Senator, as I understand it, has made this an identifiable item and put a ceiling on it—a ceiling which, as I understand, is below the ceiling we have had heretofore. So I think this is a very commendable improvement over our past operations, and I think the Senator from Mississippi (Mr. STENNIS), the Senator from New Hampshire (Mr. McINTYRE) and other members of the committee, but especially Senator McINTYRE, who is responsible in this area, deserve a great deal of credit and the thanks of the Senate.

Mr. McINTYRE. I thank the Senator. As I indicated to the Senator privately, I shall have a more detailed statement later on I.R. & D. I will say now, however, that most of the committee agreed that independent research and development is one area where we get great value for our research dollars.

Mr. PROXMIRE. What bothers me about the independent research and development is that there is no accountability. We were not able to see what we got, and in case after case, it turned out that the money was spent on matters which have no connection whatever with the military. In one case it was spent on urban development, as I recall. I believe that if the taxpayer is paying for one purpose, he should have the money spent for that purpose devoted to it.

Mr. STENNIS. Mr. President, will the Senator yield to me further on that point?

Mr. PROXMIRE. I yield.

Mr. STENNIS. As long as we are speaking about where the credit goes, the Senator from Wisconsin is entitled to a great deal of credit on the item of research as a whole, and that specific part to which he has just referred, the independent research. In the Proxmire amendment and then in the Proxmire bill, he has not only brought a fine, intelligent focus on and presentation of it, but he has spurred us on in our work as well, and I want to publicly thank him now, as I have already done in private.

Mr. PROXMIRE. I thank the Senator from Mississippi. Surely no one in the Senate can speak more authoritatively than he on the subject of research and development.

Mr. President, what I should like to do this afternoon is try to put this bill in an overall perspective, and try to show the necessity for reductions in the bill, not only from the point of view of our military strength, but of our overall national strength in terms of our having a healthy society and a strong country, which is, of course, of fundamental importance in terms of our trying to defend ourselves.

THE MILITARY BUDGET—MISDIRECTED PRIORITIES

We have before us the military authorization bill, which covers chiefly the future procurement of planes, tanks, ships, guns, and missiles, and the funds we intend to spend for military research and development. Involved are budgetary requests for about $20 billion of the $72 billion military budget for fiscal year 1971.

But in fact we have before us a series of far broader issues. How do we really protect the security of the United States of America? How large a military budget do we need to do this? How does the military budget fit in with the domestic needs of the country and the political, as opposed to our military, needs abroad? What effect does military spending have on our economy?

We should ask what are the real capabilities of our potential enemies How strong are they and how strong can they become? Do we need all the bases we have scattered around the world in order to protect the security of the United States? What are the real purposes of many of the weapons we are asked to authorize? Are they really needed for the security of the United States or do they result from economic pressures, interservice rivalries, or the lack of control of military spending, past and present, on the part of the President, the Defense Department, the Bureau of the Budget, and the Congress itself?

What we need to ask ourselves is whether we are not spending a disproportionate amount of our treasury and our resources on the military establishment.

I say that given the need to protect the country, the capabilities of our potential enemies, the strength of our allies, the social needs we have at home, the cruel effects of excessive military spending on our economy, the requirements for prudence and efficiency in procurement, the need to provide for domestic tranquillity, and the overwhelming importance of gaining from all groups and sections of our society the fundamental support of our government and our system and the democratic processes, we are now spending far too much on the military.

It is my purpose to elaborate many of these points and to argue that issue here today. That is the setting, and in my view, the only setting in which we can

intelligently judge this bill and the military appropriations bill which will carry out the authority in this and previous bills and acts of the Congress.

OUR STRATEGIC FORCES ARE MORE THAN SUFFICIENT

The purposes of our strategic forces are, as I understand it, two in number.

We must be so strong that if an enemy launches an all-out attack on us, we can strike back. He must know that if he does this, he will destroy himself in the process. That is what is called "assured destruction capability."

Mr. President, we have that in spades.

It is unfortunate that we and the Soviet Union rely on a state of mutual terror to prevent an all-out nuclear war. Since they too have the atom and hydrogen bombs and the means of delivering them, the nature of both our deterrence and their deterrence must be such as not to goad each other into a preemptive first strike.

HUGE STRATEGIC ARSENAL

Since 1960 we have spent between $15 and $18 billion a year on our strategic nuclear forces. We have a triple deterrent. We have built up our land-based intercontinental ballistic missiles. There are now some 1,054 of these ICBM launchers.

We have built up our submarine fleet. We have a force of 41 Polaris submarines and at least some 656 SLBM launchers.

In addition to that, we now have some 581 intercontinental bombers capable of delivering nuclear warheads, in our strategic arsenal. None of this is secret. These figures are all outlined in the annual posture statement of the Secretary of Defense.

These three strategic deterrents can deliver some 4,200 nuclear warheads—what are called "total force loadings."

In addition to all of this, we have ringed the Soviet Union with a large number of medium range missiles and we have Navy and Air Force medium range bombers and other tactical aircraft which can also carry nuclear weapons.

CAPABLE OF INFLICTING HORRIBLE DAMAGE

But what do we need to provide an "assured destruction capability?" Secretary McNamara published a damage table in 1968 giving some of the assumptions on which our deterrent is based.

He believed there was an unacceptable level of damage which we could inflict on the Soviet Union after a nuclear attack on us. Such an ability to retaliate would therefore deter them from attack. This has generally been taken as a level of damage which would include 25 percent of the population of the Soviet Union and approximately 75 percent of their industry. Surely that should be sufficient to deter the Soviet Union from attacking us.

According to Secretary McNamara's table, the equivalent of 400 one-megaton delivered warheads could achieve this purpose. That number could wipe out 74 million Russians or 30 percent of their estimated 1972 population. It would also wipe out more than 75 percent of their industrial capacity. This is the horrible state of the world.

TEN TIMES NUCLEAR FORCE NEEDED TO INFLICT UNACCEPTABLE DAMAGE

Without counting medium-range missiles or bombers, or any increase in strength due to the MLRV'ing of either the Minuteman or Polaris submarines, we now have at least 4,200 total force loadings. This is 10 times the number needed to kill 74 million Russians or 30 percent of their population and to destroy 75 percent of their industry.

What I am saying, Mr. President, is that we now have 10 times the number necessary to achieve that destructive capability which Secretary McNamara defined as being sufficient to assure an effective deterrent.

I ask unanimous consent that a table made up from the annual Posture Statements giving the numbers of our launchers, bombers, and force loadings, be printed in the RECORD, together with figures from the damage table first published by Secretary McNamara in January 1968 but updated for the 1972 Russian population.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—U.S. STRIKE FORCES, DOD POSTURE STATEMENTS

	Oct. 1, 1966 (1)	Oct. 1, 1967 (2)	Sept. 1, 1968 (3)	Sept. 1, 1972 (4)
ICBM launchers	934	1,054	1,054	1,054
SLBM launchers	512	656	656	656
Total	1,446	1,710	1,710	1,710
Intercontinental bombers	680	697	646	581
Total force loadings: Approximate number of warheads		4,500	4,200	4,200

TABLE 2.—SECRETARY McNAMARA'S DAMAGE TABLE ESTIMATE OF SOVIET POPULATION AND INDUSTRY DESTRUCTION

[Assumed 1972 total population of 247 million; urban population of 116 million]

1 MT equivalent delivered warheads	Total population fatalities (millions)	Percent	Industrial capacity destroyed [percent]
100	37	15	59
200	52	21	72
400	74	30	76
800	96	39	77
1,200	109	44	77
1,600	116	47	77

MOVING TO INCREASE CAPACITY

Mr. PROXMIRE. Now we intend to increase our destructive capability. Now we are MIRVing certain of our Minuteman missiles and equipping many of our Polaris submarines with multiple weapons.

A very conservative public estimate of the additional nuclear warheads to be added to our strategic offensive weapons as a result of these actions is 5,400. This will bring the total to some 9,600 warheads by the 1974–75 period. And this does not include the additional number of warheads that could be delivered by some 4,000 tactical aircraft and medium range missiles.

DIMINISHING RETURNS

One interesting aspect of all of this is that, according to Secretary McNamara's damage table, a doubling of the number of delivered warheads from 400 to 800 does not double the damage. A doubling of the number of delivered warheads will increase the population fatalities by only 9 percent—or from 30 percent to 39 percent. A doubling of the delivered warheads from 400 to 800 hardly increases the amount of industry destroyed. It raises that figure by only 1 percent—from 76 percent to 77 percent, or a figure which is too small to be important. We double the missiles, but only raise the amount of industry destroyed from 76 percent to 77 percent, or a figure which is too small to be important.

There is, therefore, a very definite law of diminishing returns which operates with respect to the size of our nuclear deterrent.

Yet with 4,200 weapons in our intercontinental arsenal (and some believe we already have more than 6,000) plus those which can be delivered by medium range missiles or tactical aircraft, we are now moving on through this bill and other bills to increase our official nuclear force loadings from 4,200 to 9.600, or by 129 percent.

FANATICISM

As George Santayana once said, fanaticism means redoubling one's efforts after having lost sight of one's aims.

What possible reason is there to move on this way? If 400 delivered warheads will inflict an unacceptable damage on the Soviet Union, why do we need 25 times that many? Why after spending $15 to $18 billion a year to produce this massive destruction and this horrible genie, should we continue to spend $18 billion a year for these purposes?

ARGUMENTS REFUTED

There are two reasons which are often given which I think should be refuted now and refuted outright. One was made by Joseph Alsop, only this week. The other has been made on numerous occasions by the Secretary of Defense, Mr. Laird. I am certain that neither of these able men will confuse an intellectual argument with them as a personal attack upon them, as my only purpose is to attack their arguments and assumptions and not their persons.

Mr. Alsop cites the fact that the "near monopoly of nuclear weapons which this country enjoyed" at the time of the Korean War has vanished. But he also complains that:

> With feckless shortsightedness, the 5-to-1 margin in nuclear strategic weapons that this country still possessed in President Kennedy's time has also been allowed to vanish. In intercontinental missiles today, the U.S.-Soviet ratio is in fact 1 to 1.2, and it will be 1 to 1.4 in no more than a year or so.

He continues:

RATIOS MISLEADING

In short, a continous deterioration of the balance of power between this country and the Soviet Union had been permitted for some years.

There is the argument. What is the answer?

First of all, the figures and ratios may be somewhat misleading, for it appears that Mr. Alsop has left out of his calculations and his ratios our submarine and

bomber fleets, our medium range missiles, and our tactical aircraft. He talks only of "intercontinental" missiles. In addition to that, he has left out the fact that as of the latest posture report, we have 4,200 "total force loadings" as opposed to 1,350 for the Soviet Union, or one-third our number—page 102, Secretary of Defense 1971 posture statement. But let us overlook that. Let us accept the fact that his figures are accurate and are not misleading.

What are we supposed to do about it? We have 10 times the number of deliverable warheads that are needed to inflict an unacceptable level of damage on the Soviet Union. Does Mr. Alsop want us to spend billions of dollars more so that we will have 50 times instead of 10 times the number of warheads we need? And what good would that do? For a few months or years in time, we might once again have a ratio of 5 to 1 over the Soviet Union. But soon they, too, would increase their numbers to a level equal to ours.

Then both of us would have 50 times, instead of 10 times, the number of deliverable warheads needed to inflict an unacceptable amount of punishment on the other.

ENOUGH IS ENOUGH

I would think that enough is enough. We both have enough to blow up the world many times over. Why do we need more in order to match each other in unneeded and excessive capacity?

This is one place where the talk of ratios or the balance of power is both irrelevant and misleading. Enough for Mr. Alsop's argument on that point.

SOVIET FIRST STRIKE DOES NOT EXIST

But Mr. Laird has used another argument. He has said that the Soviet Union is going for a "first strike" capability, and make no doubt about it. On that basis he, too, has argued for this vast increase in nuclear launchers and warheads and other strategic nuclear systems.

But it turns out that the Soviet Union does not have nor is it going to have a "first strike" capability. A "first strike" capability is the ability to knock out our retaliatory forces and to inflict such initial punishment on us that we would be unable to deploy the weapons of our "assured destructive capability."

What Mr. Laird was talking about was the Russians' SS–9 missile, the fact that it may have multiple warheads even though they may not be "independently targetable," and its destructive capacity. But it is not a "first strike" weapon. The Soviet Union does not now have nor does anyone I know argue seriously that it will soon have a "first strike" capability.

The SS–9, if launched, could inflict damage on our fixed land-based missiles. But our submarine-launched ballistic missiles remain invulnerable. Our intercontinental bombers are about as effective as they have been in recent times, and the medium-range missiles and medium bombers and other tactical aircraft are still a powerful backup force to our main strategic systems.

When pressed on this point, Secretary Laird backed down. The Russians do not have a "first strike" capability, as it has always been defined, even with the SS–9.

WE CAN SAFELY CUT STRATEGIC BUDGET

We are now spending $18 billion a year on our strategic forces. The President's budget proposed that amount for next year. The report by Members of Congress for Peace Through Law, of which I am proud to be a sponsor, points out that we can maintain our three separate deterrent forces, keep an overwhelming and awesome assured destruction capability, assure ourselves of more than 7,000 deliverable warheads, and still cut $4 billion from the strategic budget.

That would not only be a "sufficient" deterrent but by any calculation it also would be an "overwhelming" deterrent.

In their judgment and in my judgment we could cut $4 billion from the strategic budget and remain as secure as it is possible to remain in a nuclear world.

As so many have pointed out, if we erect ABM's, MIRV our land-based missiles, procure a new manned strategic bomber, or double the number of our deliverable warheads, we do not increase our security.

As Herbert York so ably proves in his new book, "Race to Oblivion," while the military power of the United States has been steadily increasing, the security of the country has been rapidly and inexorably decreasing.

Under the proposal of Members of Congress for Peace Through Law, we could cut $4 billion from the proposed $18 billion strategic budget and still carry out the research and development for the ABM, the B–1 bomber, and the ULMS system—which, of course, is the newest underwater system and is in advance even of the Poseidon operation—and continue but not speed up the Poseidon MIRV program. All of this would be in addition to our present overwhelming nuclear capability. Why do we need more?

GENERAL PURPOSE FORCES

The Department of Defense, the chairman of the Senate committees, and the Joint Chiefs of Staff have all told us in times past that in addition to the policies for our strategic nuclear forces, we were operating on what has been called the two-plus war strategy. What that meant was that we aimed to have sufficient general purpose forces to fight at any one time a major war in Europe, a major war in Asia, plus meeting a small brush-fire situation or contretemps elsewhere.

This fact was used to justify the huge defense expenditures we have been making. When we argued that the military budget was too large, we were told that nothing substantial could be done about it until we changed our two-plus war strategy. That argument was made here on the floor of the Senate last year, during the debate on this bill, by the distinguished chairman of the Armed Services Committee, Mr. STENNIS.

SHIFT TO ONE-PLUS WAR STRATEGY

But now Secretary Laird has announced that we no longer follow a two-plus war strategy. That has been revised. We now have a one-plus war strategy.

When in turn we have asked why there are no savings in the defense budget due to the shift to the one-plus war strategy, and why the reduction in the budget figures—I will not say reduction in military spending for that has not yet occurred—reflects only the reduction in incremental costs of the Vietnam war, we are given the following answer. We are told that while the two-plus war strategy was in effect, we never appropriated the funds to carry it out. As a result, the military experts argue, the shift from the two-plus war strategy to the one-plus war strategy will not bring any actual reduction in costs. That is what they say.

ONE-PLUS STRATEGY HAS BEEN COSTED OUT

But that is not the case. There are very explicit figures for the cost of the two-plus strategy and the one-plus strategy. Mr. Charles L. Schultze, the former Director of the Bureau of the Budget, has given these costs in detail. In his book entitled "Setting National Priorities, the 1971 Budget," which the Brookings Institution published early this year, those figures are given.

The cost of the two-plus war strategy, given in 1971 prices, is estimated at $44 billion. Mr. Schultze describes three different postures and their costs. As he writes on page 25 of his book:

> First is the possibility of shifting the broad planning assumptions to allow for only one major conflict and one minor one at any one time—or shifting to a low-budget general purpose force.

Mr. Schultze then compares the cost of the one major conflict–one minor conflict assumption with the two-plus war assumption. This is what he says:

> The resulting decline in expenditures would be at least $10 billion a year (at 1971 prices) below the pre-Vietnam baseline of $44 billion, to a level of about $34 billion a year. . . .

SPENDING REQUEST $10 BILLION TOO HIGH

The 1971 budget, however, requests $43.3 billion for our general purpose forces, which is almost precisely the two-plus war figure.

In spite of the fact that the Secretary of Defense has stated that we have shifted from a two-plus war strategy to a one-plus war strategy, he and the President are requesting in the budget we have before us this year enough money to fund our general purpose forces at the level $10 billion higher than needed for a one-plus war contingency.

And this budget, I should point out, also contains $11 billion in additional funds for the incremental costs of the Vietnam war for fiscal year 1971.

If we were to genuinely move from the two-plus to the one-plus war contingency, the 1971 budget should be almost $10 billion below its present estimate.

The question is, why is this budget $10 billion above the strategic estimates on which the Secretary of Defense says it should be based? We now have a one-plus war strategy. But we have a general purpose budget which is $10 billion higher—or something approaching a two-plus war budget.

THE INCREMENTAL COSTS OF VIETNAM

In addition to the budget request for our strategic nuclear forces of $18 billion, and the $43.3 billion budget request for general purpose forces, which is $10 billion above that needed for the one-

plus war strategy, Mr. Schultze estimates that there is an additional $11 billion item in the fiscal year 1971 defense budget for the incremental costs of the Vietnam war. So far as I know there is no argument over that figure. It is essentially the same figure the Defense Department itself uses for the "incremental" costs of the Vietnam war. That is $11 billion.

All of this adds up to just a little more than $72 billion, or precisely what the President requested in his 1971 budget.

SUMMARY

The $72 billion budget the President has requested includes funds for $18 billion in strategic nuclear weapons, $43.3 billion for general purpose forces, and $11 billion for the incremental costs of Vietnam.

Far from a reduction in our overall military forces, it steps up our strategic nuclear forces by providing for phase II of the ABM, by continuing the Poseidon MIRV program, by deploying Minuteman III MIRV's, and by providing funds for a new manned bomber.

It asks for $10 billion more for general purpose forces than the one-plus war contingency should cost. This is true even though the Secretary of Defense has told us are are now on a one-plus war contingency.

What one can conclude is this:

We could cut $10 billion from the present budget and still meet every assumption on which the Secretary of Defense says it is based. We can take them at their word and take their assumptions and still cut it $10 billion.

In addition, we could cut the $18 billion for the strategic nuclear forces in this year's budget by up to $4 billion, and still have more than 15 times the deliverable nuclear weapons which could destroy 30 percent of the Russian population and 75 percent of her industry, or some 7,000 deliverable nuclear weapons.

Based on the administration's own verbal assumptions, we could have a budget of $62 billion instead of $72 billion.

Based on some additional small reduction in the proposed nuclear strategic program, but which would still increase our existing strategic strength, we could cut another $4 billion, or to a level of about $58 billion. And this total amount would include the $11 billion incremental cost of the Vietnam war.

OTHER AREAS TO CUT

There are those who will acknowledge the facts about the 1971 budget but who will nonetheless say that it takes time to shift from old assumptions, to cut back on weapons and manpower, and to bring a shift in policies. They will therefore attempt to justify this year's high level $72 billion budget with these arguments.

Of course, there is something to this. To move from the $72 billion level to a $58 billion level all at once would be a difficult job. It may well be that a smaller reduction would be more possible and practical to accomplish. But we must reduce expenditures.

In addition to the strategic assumptions on which the budget should be based, there are numerous other reasons why we can cut back and should cut back. Let us examine some of those which are not included in the assumption I have just enumerated.

OVERRUNS AND WASTE IN PROCUREMENT

We have shown through hearings and evidence over the last 18 months that there is colossal waste in the procurement programs of the Defense Department.

The General Accounting Office indicated to me last winter that on 38 major weapons systems costing $100 million or more, the increase in costs or overruns had amounted to some $20 billion. Since that time, or in a nine month period, those costs have increased by another $3.6 billion.

Mr. President, as the distinguished chairman of the committee differed with me on the conclusions regarding the increase in cost, I intend to answer the distinguished Senator from Mississippi on Monday next; but I think my original position was correct. I think we can clarify that in the discussion I expect to have with him on this issue on Monday next.

We have yet to find a major weapons system that is not at least 50 percent more than originally estimated. We have yet to find one that has been delivered on time. And we have yet to find one in which the system met its original specifications. Invariably the systems cost more than estimated, are delivered a year or two late, and fail to meet their specifications. The situation with respect to the avionics systems in the weapons is especially bad as detailed in the Stubbing report some months ago.

TIGHTEN PRACTICES

Many hundreds of millions, indeed billions, could be saved through tightening up on procurement practices. But the Defense Department seems intent on firing their efficiency experts who point out, truthfully, the increase in costs rather than changing the system to bring reform.

The imposition of uniform accounting standards could, in the estimate of Admiral Rickover, save $2 billion a year. My amendment to carry that out is in the Defense Production Act which will shortly be in conference. We must fight to keep that provision in the bill. The President supports it. The Defense Department supports it. The Budget Bureau supports it. The GAO supports it, the Senate supports it. I might point out to the Senate that that provision is in jeopardy. It might well be dropped out. It will take a fight to hold it in. It is vital to cutting back on costs.

We need to institute more competitive bidding and to increase the shameful rate of having almost 90 percent of all procurement done on a noncompetitive basis.

There is gold plating in our defense procurement. This is especially true in this age of sophisticated machines and computers and excessively complicated electronic systems. We need to simplify our weapons not only to reduce the cost but to make them work.

PROPERTY AND SUPPLY SYSTEMS

Few people realize that the Defense Department is the largest landlord in the world. It owns over $40 billion of real property based on its acquisition cost. It also holds some $162 billion in personal property, or a total well over $200 billion.

In addition to this, we have 429 major bases and almost 3,000 minor bases scattered in 30 countries throughout the world. Many of these are obsolete. Many of these were established for reasons which may have been right 20 years ago, but which are now outdated. Most of these are leased and do not show up in the real property figures.

But more than 1 million men and some 500,000 of their dependents live on them or near them. The United States hires about 250,000 foreign employees to man them. They cost the U.S. Government about $4.5 billion a year. Of this amount, it is estimated that mechanical maintenance alone costs $660 million a year. They drain about $2.5 billion from the U.S. balance of payments. The time has come when these costs must be pruned. Many of these bases should be closed down. Many of them have outlived their purpose and their usefulness.

TROOPS IN EUROPE

We have some 320,000 troops in Western Europe. The original design for NATO called for our allies to share the burdens and costs of defending Western Europe against a potential Russian attack.

Because of the ravages of the war, our Allies in the early years could not afford to contribute their share economically or militarily. But now they are prosperous. Now most of them have no balance-of-payments problems—or at least not as severe as ours have been. Western Europe has more people than does the United States. Taken together, they are as strong as we are, economically. But they still refuse to carry their fair share of either the military burden or the economic burden for the defense of Europe.

If they are unwilling to do so, why should we shoulder disproportionate burden. I therefore believe that we should withdraw a significant proportion of our troops from Western Europe—as the distinguished majority leader has proposed, with the cosponsorship of many Senators on a resolution—and do it while we continue to provide the nuclear umbrella for NATO as well as air and naval support and a substantial combat presence.

But our obligations to Western Europe have shrunk. The American taxpayer should at long last receive some reduction in this burden.

THE REAL SIZE OF THE SOVIET THREAT

There are those who will say that we cannot reduce our military forces because of the threat from the Soviet Union and China. But what is the size of that threat?

Last year the Joint Economic Committee held a series of hearings on that subject. We called in the leading experts on the Soviet Union. Our panel included both the hard liners and what might be called the soft liners. But all were experts on the Soviet Union, the most outstanding experts, I think, in the Nation.

There was general agreement that the Soviet Union's economic capacity was roughly one-half that of ours. It was agreed that she was putting a disproportionate amount of her resources into agriculture.

In these circumstances, to the degree

that she spends excessive amounts of her national product on the military, it will prevent her from increasing her industrial capacity and her productivity. Thus, while she may spend large sums on the military in the short run, if she does this for any lengthy period of time, she can do so only at reducing her general economic strength.

The Russians are not 10 feet tall. If we are 6 feet tall, then economically, the Russians are 3 feet tall. And the Chinese, in terms of their economic strength, are only 6 inches tall.

A military budget in the $60 billion range should certainly be adequate for the United States to play its proper role in the world.

ECONOMIC AND SOCIAL CONSEQUENCES

But there are additional reasons why we should cut back on military spending. Some are economic; some are social.

Economically, military spending is the most wasteful method or way to spend. When we build a house or train unskilled men, some needed goods are or will be produced or some needed service such as health or education which adds to the productivity of our people is purchased. But when we pay billions for planes, tanks, guns, ships, and missiles, no direct economic need is met. As a consequence this is the most wasteful way to spend money.

All of us agree that a certain amount of this is necessary. But we should all agree that we should do no more than we are required to do. And that means balancing our needs rather than giving every dollar to the military which they demand.

FAILURE TO MEET WAR COSTS INDUCED INFLATION

Furthermore, the failure to pay for the Vietnam war itself through increased taxes or a decrease in other expenditures, was the direct cause of our present inflation. It is hard enough to pay for a war which is popular by increasing taxes or foregoing other expenditures. It is impossible when the war is highly unpopular and vigorously opposed by a very large proportion of the society. Thus military expenditures in general are wasteful and inflationary but the additional military expenditures for Vietnam have been disastrous. The time has come to call a halt to excessive military spending. We must cut back below the President's budget and sharply below.

REORDER PRIORITIES—MEET HUMAN NEEDS

The argument for military budget costs rests not only on the size of our strategic and general purpose forces and on the savings we should make by bringing more efficiency into military procurements.

What is at stake is the very nature of our society and the well being of our people.

Excessive military spending has distorted our priorities. Billions are spent on weapons systems to meet every alleged threat while the President threatens to veto funds for schools and hospitals.

We are urged in this bill alone to bail out a company which has failed to meet every schedule, but we must fight for small sums to end poverty, to build houses.

Our lakes and streams are no longer safe to be used for the recreation needs of our people. Our cities are clogged with highways and automobiles which pollute the air, poison our lungs, and irritate our eyes.

VAST UNMET PROBLEMS

We need a minimum of 11 million new housing units now just to house those who live in rat infested, broken down, dilapidated buildings or which are highly overcrowded.

The crime rate in the country is rising at an unprecedented rate. We need more and better paid policemen. We need to speed up in our court systems. We need better penal institutions. And we need funds to attack the drug traffic.

Unemployment is high and excessive, among both blacks and whites. Conditions in the ghettos are no better and probably worse than during the riots of 1967 and 1968.

Everywhere we look there are vast unmet needs. Meantime we are asked to spend enough on nuclear weapons to double our present capacity, to be prepared to fight 2½ wars abroad, and to carry an excessive military and economic load in Vietnam.

And because of this misplaced and misdirected use of our resources and of our priorities, our society is in disarray.

THREATENS FABRIC OF SOCIETY

Excessive military spending has distorted our priorities. It has threatened the fabric of our society. It has torn the country apart.

There are vast human, economic and social needs which must be met here at home. We must reorder our priorities and reduce the excessive claims of the military in order to redress the balance and meet our glaring social problems. We must follow a course of action which cannot only protect our physical security but which can unite this country again.

The course of action which we should follow to achieve all those ends means that the military budget must be cut and cut substantially. Some of the savings should be allocated into more productive domestic needs—housing, schools, and the fight on pollution. And some of the savings should be returned to the American taxpayer who, because of rising inflationary costs for the goods he needs and rising taxes at the State and local level, has suffered a harsh and unfair burden.

In my judgment this is the way to increase the real security of the people of the United States.

Therefore, at an appropriate time during the debate, I intend to offer an amendment which would place a ceiling on the total amount which the military can spend this year. I am not talking about the total amount in this bill; I am talking about the total amount the Pentagon, the Defense Department, will be empowered to spend. I have not yet determined the exact amount, but after consultation with a number of my colleagues, I intend to take that course of action.

Mr. STENNIS. Mr. President, I wish to say to the Senator from Wisconsin that I enjoyed his remarks. I gave attention to them except when I was called to the telephone. I shall challenge the correctness of some of his conclusions, as well as his figures, but I shall look over his remarks and we will be battling over this matter in days to come.

Mr. PROXMIRE. Mr. President, I appreciate that very much. The Senator is always extremely fair and very accurate. I am somewhat shaken that he would challenge my figures but I think we can get together and determine who is right. Whether the Senator is right or whether I am right, we will both learn something and I am sure we will both benefit from it.

NOTICE OF HEARING BEFORE SUBCOMMITTEE ON EXECUTIVE REORGANIZATION

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I may be able to read into the record the following notice of hearing by the Senator from Connecticut (Mr. RIBICOFF).

The PRESIDING OFFICER (Mr. HANSEN). Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, the notice of hearing reads as follows:

NOTICE OF HEARING

Mr. RIBICOFF. Mr. President, the Subcommittee on Executive Reorganization will hold hearings on Reorganization Plans Nos. 3 and 4 of 1970 on July 28 and 29. On the first day the hearing will be in room 3302 New Senate Office Building at 10 a.m., and on the second day it will be in room 457 Old Senate Office Building at 10:30 a.m.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD a notice concerning nominations before the Committee on the Judiciary by the senior Senator from Mississippi (Mr. EASTLAND).

There being no objection, the statement by Senator EASTLAND was ordered to be printed in the RECORD, as follows:

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Juan C. San Agustin, of Guam, to be U.S. Marshal for the District of Guam for the term of 4 years, vice Francisco R. Santos, resigning.

Johnny M. Towns, of Alabama, to be U.S. Marshal for the Northern District of Alabama for the term of 4 years vice Roy Lee Call, retiring.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the Committee, in writing, on or before July 31, 1970, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

(At this point Mr. PROXMIRE assumed the Chair.)

INCREASING AID TO HIGHER EDUCATION

Mr. HANSEN. Mr. President, on behalf of the distinguished Senator from Mary-

land (Mr. MATHIAS), I ask unanimous consent to have printed in the RECORD a statement which he has prepared.

There being no objection, the statement of Mr. MATHIAS was ordered to be printed in the RECORD, as follows:

INCREASING AID TO HIGHER EDUCATION

Mr. MATHIAS. Mr. President, the financial problems of American higher education should be a matter of grave concern to all of us. A combination of factors, including soaring costs and inadequate increases in Federal support, have driven many of our finest colleges and universities into the red for the first time in their experience.

The strains being felt by private colleges in particular are illustrated in an article in yesterday's Washington Post, which reports that many of the fine institutions in Maryland are facing substantial operating deficits and are being compelled to reassess their longrange prospects.

One of our nation's greatest strengths has been our wide range of opportunities for higher education of real quality. If financial problems should significantly narrow these opportunities, we would suffer irreparable national loss. It is incumbent on us, therefore, to examine soberly the alternatives available, and to develop sound strategies for putting American higher education on a durable financial foundation. Approval of this year's education appropriations bill is a first step, but only a first step.

MARYLAND PRIVATE COLLEGES FACE HIGHER OPERATING DEFICITS

BALTIMORE.—Johns Hopkins University has announced that it faces a $4.3 million operating deficit in the coming academic year—the first major deficit in the school's 94-year history.

Hopkins is not alone. Many private colleges in Maryland, as elsewhere in the nation, are having lean financial years.

The president of Hood College in Frederick recently warned that his all-girl institution faced a deficit of up to $300,000 for 1970-1971.

Gaps between income and expenses were also reported by St. John's College in Annapolis, Loyola of Baltimore and Goucher College in Towson.

At Hopkins, Robert F. Kerley, vice president for administration, said that the projected deficit represents 4½ per cent of the university's budget of $87 million.

"At this rate, we cannot be sustained very long," Kerley said. "We'll just have to work harder. We will have to look to the private sector as never before for a commitment to higher education."

In a belt-tightening move, administrators have been asked to make "selective reductions," cutting requests for more instructors, secretaries, technicians and equipment.

Kerley said there have been sharp increases in salaries for both faculty and nonprofessional personnel. At the same time, he added, federal aid is shrinking.

Charles Elzey, treasurer of St. John's, said the liberal arts school in Annapolis will enter the coming academic year $177,000 in the red.

This, he said, is the college's largest deficit in a decade and $100,000 more than in each of the past two years.

"It just means we'll have to go out and raise that much more money," he said.

"We'll be taking a long look at expenses to see what can be cut for the following years. We may have to raise tuition again—it was $3,400 this year. We're going to put off construction of an infirmary-dormitory that was due to start in a few months."

Hood College has increased tuition, and officials there feel the school, where enrollments are dropping, may eventually price itself out of existence.

A similar fear was voiced by Rev. Daniel McGuire, vice president of Loyola, which is facing a $100,000 deficit and has raised its tuition from $1,300 to $1,500.

Elzey, Father McGuire and officials at Hood all say that state-supported institutions with lower tuition charges are becoming more attractive, especially to parents with more than one child to educate in a time of inflation.

Frederick Wehr, director of development at Goucher, said that although the girls' school has "not been badly burned yet," tuition will reach $3,500 this year, up $300.

FREE TRADE AND FAIR TRADE

Mr. HANSEN. Mr. President, in the growing debate over U.S. trade policy in both this and the other body, the local news media has cried foul at the very mention of quota legislation.

Protectionism, they call it, although the legislation proposed would not stop or severely limit imports but merely set some reasonable levels above which imports could be controlled if found to be injuring a domestic industry or its workers.

This issue has been debated for a good many years and the most recent liberalization of U.S. trade laws was in 1962 when the Trade Expansion Act was passed.

Since then we have proceeded to negotiate away what little protection our industry and agriculture had left, and the free traders keep crying for elimination of all barriers.

They would force American industry and agriculture to compete with products from all over the world with little or no customs tariffs or quota limitations on amounts that could be brought into the country.

Free trade advocates claim that any such quota laws, or even the authority granted the President to impose such quotas, would bring on an epidemic of retaliation by our trading partners in Europe, Japan and other parts of the world.

The Washington Post in its frenzy said that the President must veto the trade bill as tentatively approved by the House Ways and Means Committee; that the bill would make a major contribution to inflation; chill prospects for continued expansion of world trade, and abuse the interest of many trading partners among both developed and less developed countries. The Post was almost frantic when the committee included an amendment on oil.

Blazoned across their front page were three top stories—all on oil and its evils as imagined by the publishers of the Post. A story more than 10 years old was dragged out of their morgue and dusted off for resurrection. Even at the time of the alleged incident or since the time of the incident, any connection with the oil import program it attempted to condemn was so remote as to be absurd.

Their contention that the oil import quota system was costing the American consumer billions of dollars a year for petroleum products did not take into account the fact that foreign oil from the Middle East and North Africa now costs more delivered to U.S. east or west coast ports than domestic oil. And were the tariff plan the Post advocates in effect, another $1.35 per barrel could be added to that price.

But even should the Middle East situation stabilize and world oil prices go back to former levels, is it really a bargain?

Inasmuch as England and Western Europe are largely dependent upon Middle East and North African oil, recent events that have resulted in skyrocketing tanker rates and curtailed supplies have already caused higher gasoline and heating oil prices there. Fortunately, the United States is not largely dependent on these sources, but the effects are being felt and may result in shortages and higher prices this winter if the situation continues or worsens.

England and Europe are searching for oil and gas in the North Sea and can appreciate the prospects of more dependable sources.

In an editorial last year, the Financial Times of London commented on the Libyan coup:

> So far, at least, the change of regime seems to have been carried through peacefully and the British Government's speedy decision to recognize the new government was a wise one in circumstances where the Arab radicals have been trying to associate Britain with the deposed King Idris. The oil has also continued to flow. It is to be hoped that this state of affairs continues. However, the coup has once again demonstrated the fundamental instability and political unreliability of the countries on which Britain and most of the rest of the industrialized world, apart from the U.S., depend for oil.
>
> Secondly, security of supply should be given a higher priority than cheapness. In the short run, this means that no one country should be allowed to secure a dominant position among Britain's suppliers. In the longer run it may mean that if relatively expensive oil is discovered either in Europe's offshore water, or elsewhere—the Canadian Arctic, for instance—in a politically secure country, it should be exploited to our advantage if at all possible, even if it is more expensive than oil from the Middle East and North Africa.

So it is amazing to me, in view of recent events that have boosted some foreign oil prices above our own, that some of our own news media, economists and ecologists are not more concerned with more dependable sources of supply—even if it is more expensive than oil from the Middle East and North Africa.

Dr. Wilson Laird, Director of the Office of Oil and Gas of the Department of the Interior, was a U.S. delegate last month to the NATO Petroleum Planning Committee Conference in Brussels.

Laird, whose office is responsible for emergency petroleum planning, reported that tanker rates from the Persian Gulf to the east coast rose last week to $3.30 per barrel.

In May of 1967, before the Suez Canal was closed, the average spot tanker freight cost was 52 cents a barrel. By July, following the 6-day war, the spot rate hit $2.72. The lowest it ever got back to after that was 86 cents in April 1969.

By April of this year, just before the shutdown of Tapline halted the flow of 500,000 barrels per day of Saudi Arabian oil to the Mediterranean, the rate had climbed back up to $1.69 per barrel. The

subsequent closure of Tapline, plus the cutback in production in Libya, brought the rate to $3.30 as of last week, Laird said.

Before the most recent Libyan cutback, Laird reported, there was a "very delicately balanced but still feasible, relationship between shipping availability and requirement."

The problem is still workable, in his view, for the time being. But things are getting tighter, and the future looks ominous as relations between Arab nations and Israel worsen.

The Interior official noted that the United States is importing only about 3½ percent of its total oil supply from Arab nations, about the same as in 1967. Then, as now, East Coast refineries depended on Arab sources for about 20 percent of inputs.

But the loss of this supply, he warned would have serious local and regional problems—more serious than the bare figures suggest.

There is another difference between our ability to respond to an oil crisis today and the capability we had in 1967.

Laird pointed out:

Then, the fields in Texas and Louisiana were able to increase production by a million barrels per day over a period of 7 weeks. This adequately supplied our own requirements and eventually made 25 million barrels available to Canada and Western Europe.

Today, however, production in Texas and Louisiana is already well above the peak rates achieved in August 1967. We are caught in a bind between steadily rising production rates and declining productive capacity.

Also, a report just completed by FPC shows gathering-line bottlenecks would prevent use of 523,000 barrels per day in spare productive capacity in an emergency.

Laird said the Government does not yet know the implications of the takeover of company marketing and distribution facilities by the Libyan Government earlier this month. He added:

It doesn't take a detailed assessment, however, to know that this bodes no good for the future.

Late in June, Laird reported, the petroleum security subcommittee met with representatives of the Office of Oil and Gas, and other Federal agencies, to consider requirements and supply for national security.

A classified report of the committee's finding has gone to the Department of Defense. Laird said:

So we continue to watch and wait as the thunder continues to roll out of the Middle East.

But oil is only one part of the fight over trade legislation, although by far the most important because of national security implications. The bill started out as a textile quota bill but is now being called a Christmas tree bill. Some are saying that import quotas are not in the interest of the United States. Others are saying that addition of anything other than quotas to protect their own regional industries are not in the interest of passing the bill, as it was at first reported as tentatively approved.

I would think the New Englanders who attacked the oil amendment in the bill would, in view of the prices now prevailing for oil from the Middle East, now favor the amendment which would assure that the imports would continue to come in under quotas and not be further increased by a proposed $1.35 a barrel tariff. The tariff is presently 10 cents a barrel. That oil would now be costing more than $5.60 a barrel rather than the $4.25–$4.75 it has been delivering for. And that compares with a domestic delivered price of about $3.75 a barrel.

One of the real trade experts in Washington, D.C., O. R. Strackbein, president of the Nation-Wide Committee on Import-Export Policy, has recently made a study of the effects of import quotas on domestic prices. His study, I believe, pretty well refutes the arguments that oil product prices and prices of other products under import quota control have risen at a rate higher than the price index for all commodities.

I have been attempting to convince some of my good friends and colleagues of this fact for sometime now, and I hope Mr. Strackbein's review will be more convincing than my argument apparently has been. He includes a number of products including textiles in his study. I ask unanimous consent that Mr. Strackbein's letter to me and his review of import quotas and prices be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE NATIONWIDE COMMITTEE
ON IMPORT-EXPORT POLICY,
Washington, D.C., July 6, 1970.

Hon. CLIFFORD HANSEN,
U.S. Senate,
Washington, D.C.

DEAR CLIFF: I thought you might be interested in the attached account of prices on products that are under import limitation by quota or similar device.

The record is rather surprising, considering the general impression created by columnists, editorial writers, etc., to the effect that import quotas mean gouging of consumers.

In the paper I did not trace beef prices since 1964, which was the year the import ceiling was established. From 1964 when the average price was 18.00 the price for the first half of 1970 was 27.78, representing an increase of 54.3%. This looks like a sure case of the effect of an import limitation. However, the price of hogs rose from 14.80 in 1964 to 24.87 for the first six months of 1970. This was an increase of 68.0%. Yet, pork was not subject to an import limitation.

The data are from the Department of Agriculture.

Once more, the theory of import restriction as a price stimulus is not borne out.

With kind regards.

Sincerely,

O. R. STRACKBEIN,
President.

IMPORT QUOTAS AND PRICES—A REVIEW

(By O. R. Strackbein, president, the Nationwide Committee on Import-Export Policy, July 6, 1970)

A constant patter of comment tells us that import quotas will raise domestic prices of the products that are the subject of such quotas.

It should be possible to test the soundness of this unsubstantiated theory. To do so we should trace the wholesale price trends of products that are "protected" by import quotas compared with the price trend in general and the price on particular products that are not so "protected."

PETROLEUM

A favorite whipping boy is oil, or petroleum. An import quota was established in 1958, first on a voluntary basis, followed by a mandatory quota, effective March 1959.

The wholesale price of refined petroleum products expressed in an index form, where 1957–59 equals 100 had risen to only 100.3 in 1968 and 101.8 in 1969. A very recent rise carried the level to 104.2 in May 1970.

This compared with an index for all commodities, where 1957–59 again is 100, of 108.8 in 1968, 113.0 in 1969 and 116.8 for May 1970.

"All commodities," of course, include those on which we have import quotas. Therefore it will be desirable to compare the refined petroleum price level with that of other products that are not subject to an import quota. If we select another fuel, namely, coal, which has no import quota and should therefore not be free to move upward in price because it is not "protected," we find a sharp contrast. The wholesale price index had reached 107.1 in 1968, rose to 116.2 in 1969 and zoomed to 146.9 in May 1970.

Surely if there were an import quota on coal, the quota would be blamed for this runaway price. Obviously other factors were at work.

We find, in other words, that the wholesale price of refined petroleum increased distinctly less than wholesale prices of all commodities and very much less than the price of its competing energy fuel, namely, coal. (For confirmation, see Survey of Current Business, U.S. Department of Commerce, June 1970, p. S–8.)

COTTON TEXTILES

Another product that is the subject of an import quota or its equivalent is cotton textiles. An arrangement was made with Japan alone, effective January 1, 1957, whereby that country restricted its cotton textile exports to this country. This arrangement was superseded October 1, 1961 with the so-called Long-Term Arrangement negotiated under GATT. This arrangement covered some 30 countries and about 90% of our total cotton textile imports.

The wholesale price of cotton products (1957–59 equaling 100) was 105.2 in 1968. In 1969 it remained at 105.2 and in May 1970 stood at 105.8

Once more we encounter a very moderate price rise compared with the general commodity wholesale price-level, which, as we saw, had risen to 116.8 in May 1970. (Reference: same, p. S–9.)

Wool products, which are *not* under quota restrictions, had an index level of 103.7 in 1968, compared with 105.2 for cotton products or only 1.5 below cotton products. The index rose to 104.6 in 1969 but fell to 103.8 by May 1970. It thus stood only 0.1 higher in May 1970 than in 1968. In the case of cotton products the increase from 1968 to May 1970 was only 0.6. Thus there was little to choose between the wholesale price movement in cotton and woolen products. Yet the one was under an import quota or its equivalent while the other was not.

In the case of man-made fiber textile products there was a decline in wholesale prices since 1957–59, accounted for by increased productivity. The index stood at 90.8 in 1968 and moved lower to 89.5 in May 1970.

The downward trend of man-made fiber textile products has been of long standing. Measured on the 1947–59 base, as compared with the 1957–59 base as used here, the wholesale price in 1959 had already declined to 81.1. This was before imports reached a

significant volume. Thus the further price decline on the 1957–59 base to 89.5 in 1970 merely represented a continuation of the cost reduction process that had already dropped prices in the decade of 1949–59 by nearly 20%. (Survey of Current Business, October 1961, p. S–8).

There is nothing in this record to show that the price of cotton textiles rose as a result of the import limitation. In any event the price increase through May 1970 was comparatively modest, lagging distinctly behind the general commodity wholesale price index.

In a pamphlet recently issued by the United States-Japan Trade Council it is asserted (p. 10) that "Textile Quotas Would Have Slight Benefit but Very High Cost."

"In sum," it says, "proposed textile quotas would be enormously costly to the United States.

"Quotas would accelerate inflation, raising clothing prices to consumers.

"They would boomerang against U.S. export sales and harm the economies of port cities," etc.

Against this cry of alarm, the wholesale price trend of cotton textiles of the past ten years while these products have been under import limitation, stands as a complete rebuttal.

SUGAR

Yet another product that is under import quota control is sugar. This quota has been in effect antedating World War II.

In 1955 the retail price of sugar was 10.4¢ per lb. Ten years later (1965) the price was 11.8¢. In 1968 the price was 12.5¢. In 1969 it was 12.7¢ and in April 1970 it was 13.4¢. In 15 years the retail price increased only 28.8%. (Statistical Abstract of the U.S., 1969, Table 512, p. 350; and Survey of Current Business, June 1970, p. S–29.) Compare this increase in retail sugar prices since 1955 with the all-consumer price increase of 34.6% on the 1957–59 base, a period during which all food prices rose 32.4%—also a period during which public transportation cost rose 66.6%, medical care 63.6%. Keeping in mind that 1955, the base of our retail sugar price, antedated the index base of 1957–59 by several years, it is clear that the consumer paid distinctly less for sugar in terms of price increase than he paid for consumer goods in general, or for food in general, and much less than for transportation and medical care which were not pinched in point of supply by an import quota.

It follows that the sugar quota also cannot be used to demonstrate that import quotas raise prices unreasonably, or even as much as the rise in other prices.

WHEAT

Wheat is under a severe import restriction that permits less that 1% of domestic production to be imported, in pursuance of a limitation imposed under Sec. 22 of the Agricultural Adjustment Act in 1941.

The price of wheat (hard winter, No. 2, Kansas City) has fallen quite sharply in recent years. The price per bushel was $2.22 in 1950. In 1955 the price was $2.25. By 1960 the price had dropped to $2.00. In 1968 it had sunk to $1.46 per bushel, and in May 1970 it was $1.53.

Corn is not the subject of an import quota. The 1950 price (yellow, No. 2, Chicago) was $1.50 per bushel. In 1955 the price was down to $1.41. The decline, as in the case of wheat, continued. In 1960 it stood at $1.15; in 1968 it was $1.14 and in May 1970 it was $1.30 (yellow, No. 3, Chicago. The difference from No. 2 is very slight, as note, that in 1968 the price of No. 2 in Chicago was $1.14 while that of No. 3 was $1.11). (See Statistical Abstract of the U.S., 1969, Table 504, p. 343; and Survey of Current Business, June 1970, p. S–27.)

Comparing the price trend in wheat with that in corn we find that from 1950 to May 1970 the price of wheat dropped 31% while that of corn dropped only 13%. Yet it was wheat and not corn that was "protected" by an import quota. The wheat price dropped over twice as much in the 20 years as the price of corn.

Since 1960 the price of wheat dropped from $2.00 per bushel to $1.53 in May 1970, a decline of 23%. The price of corn, by contrast, rose from $1.15 per bushel in 1960 to $1.30 in May 1970. This was an increase of 13%. Thus while the price of the "protected" wheat dropped 23%, that of corn which was not under an import quota, rose 13%.

In comparison with other commodities the price of both wheat and corn has dropped while the other prices rose rather sharply, especially in recent years.

RAW COTTON

The price of raw cotton has also declined. The decline was greater than that of wheat and corn, dropping from some 36¢ per lb. to some 22¢, or by more than 38%. Yet raw cotton imports are limited under Sec. 22 of the Agricultural Adjustment Act to a quantity less than 5% of domestic production. (Statistical Abstract of the U.S., 1969, Table 505, p. 344.) (There is some difficulty in reconciling the Statistical Abstract prices with those in the Survey of Current Business, but the discrepancy is not sufficient to destroy the value of the comparisons).

DAIRY PRODUCTS

With a base of 1957–59 equaling 100, the wholesale price index of dairy products stood at 94.0 in 1955, at 105.0 in 1960. In recent years the price rose to 118.5 in 1966, to 127.7 in 1968 and on to 135.4 in May 1970. This was an increase of 29% since 1960, and compares with an increase since 1960 of 18.6% in wholesale price of "Farm Products, Foods and Feeds," which, of course, includes grains, on which the price, as we have seen, dropped considerably.

Dairy products enjoy an import limitation under Sec. 22 of the Agricultural Adjustment Act, and the price increase has outpaced that of other farm products, as mentioned, but did not outpace wholesale prices of many other products. Dairying has declined quite sharply per capita. Milk produced on farms was less than 1% higher in 1968 than in 1950, despite the considerable increase in population. The number of cows and heifers kept for milk declined by more than 50%. Unquestionably these factors have influenced the price of dairy products much more than the import quota.

The wholesale price of agricultural machinery and equipment on an index base of 100 for 1957–59 rose to 137.4 by May 1970. There is no import quota on this machinery and equipment. Moreover, agricultural implements are duty free! If imports exert such a salutary effect on prices the effect must have failed in this instance.

CONCLUSION

The foregoing recitation can leave little doubt that import quotas have not led to higher prices; indeed, quite the opposite. With the exception of dairy products, with respect to which other powerful factors, such as the public acceptance of oleomargarine, played a large part, the prices on products that are "protected" by import quotas have lagged distinctly behind average prices and far behind prices on some other products that were under no import quota limitation.

The cry that the imposition of import quotas would be costly to consumers is unfounded, and those who continue to raise the cry are guilty of misleading the public.

Mr. HANSEN. In joining with my New England colleagues recently in cosponsoring textile quota legislation, I said, among other things, that another fallacy in the free-trade philosophy is the argument that quota legislation is "protectionist." They say that the American consumer is entitled to the prices at which foreign producers are able to sell their wares in this country.

The notion that imports should be given priority over domestic production to the extent of bulldozing the jobs of our workers out of the way and leaving it up to us to pick up the pieces and repair the wreckage of a system of adjustment assistance is a wholly unjustifiable philosophy, and represents an amazingly harsh attitude in point of public policy. I doubt that a New York City textile worker would be willing to trade his job for a relief check in order to buy a cheaper shirt made in Japan.

That foreign producers should be able to pay wages that would be illegal in this country and then build a destructive trade on that basis with the blessing of our Government, seems incredible. Yet that is the basic philosophy of adjustment assistance. It proceeds on the wholly untenable assumption that if an American producer cannot compete with imports he is necessarily inefficient. He is guilty without trial and must take the consequences. Yet, on a relative efficiency basis, which is to say, output per man-hour or per man-year, American industry continues to lead the world. This lead is shrinking, however, and the low foreign wages combined with rising foreign technological productivity produces the foreign competitive advantage.

We cannot hope to hold our own industrially in this type of competitive climate. The fact of our competitive defeat from the persistence of lower foreign wages can no longer be concealed by slight-of-hand statistics. The trend of rising imports will force a recasting of our obsolete trade policy.

As further evidence of the need for realistic revision of U.S. trade policy, the figures recently released by the U.S. Department of Commerce show a substantial and continuing deficit in the U.S. balance of payments for the first quarter of 1970. That deficit last year amounted to $7 billion and at the rate reported for the first quarter, may well exceed the 1969 figure by the end of this year.

But even these figures do not tell the whole story. Figures used by the Department of Commerce include foreign aid shipments as exports and show imports at their foreign value without including ocean freight, insurance, and other charges. This practice is contrary to that of nearly all other leading nations and results in an understatement of actual costs of our imports by some 10 percent.

Mr. President, this country has been generous in assisting other nations, in financing the rebuilding of Europe and Japan after World War II, in furnishing the technology, money, and even manpower to many so-called emerging nations to establish agriculture and industry of their own. The next step has been that we are then expected to furnish the market for whatever it is they produce—shoes, textiles, oil, beef, electronic components, steel, and so forth.

Measured in relation to exports of all other countries American exports including foreign aid have lost ground in recent years. This means simply that exports from other countries have expand-

ed more rapidly than U.S. exports. In turn this suggests that their goods are more competitively priced in world markets. In 1960 our share of world exports was 15 percent; in 1967 it was 14.5 percent. Had our exports in 1967 enjoyed the same proportion of world exports as in 1960 we would have exported $4.6 billion more in 1967 than we did export or $35.8 billion instead of $31.2.

The irrefutable fact is that we are in a weak competitive position in world markets and in our own market vis-a-vis imports.

The trend since 1960 is unmistakable. A trade policy that was based on competitive conditions as they existed before 1960 is no longer in focus. It is unrealistic.

What does our weak competitive position suggest with respect to our trade policy?

The problem of import competition would be more acute than it is were it not for the $30 billion annual boost to our economy provided by the Vietnam involvement. Since our tariff has been cut to an ineffective level without present hope of reversal, some other instrument for control of our market and employment erosion attributable to imports must be provided.

Enactment of this legislation would provide assurance that imports, despite their cost advantage resulting from lower wages, will not be allowed to run wild and thus disrupt industry after industry. Instead of relying on first aid ministration in the form of adjustment assistance, the injury to our employment and industrial expansion would be controlled ahead of time. Imports would not be awarded the right of eminent domain in our market, but would be given the opportunity to grow in proportion to domestic consumption.

We face an opportunity to adopt a trade policy that would achieve the undoubted benefits of world trade without incurring its unfair and destructive impact on a widening front.

And I hope, Mr. President, that my colleagues from New England will recognize the fact that oil imports last year—controlled and uncontrolled—ran at the rate of almost 30 percent of domestic production. This is twice the rate of 15 percent in the proposed Ways and Means bill which would direct a study by the Tariff Commission to determine whether an industry or its workers were being injured and whether the President should invoke quotas.

I hope my good friends from New England will realize that oil workers in the 31 oil-producing States have already been injured by imports that have affected the rate of exploration and development of new sources of supply to insure our continued self-sufficiency in case undependable sources should be cut off as, indeed, they have been recently. The Senators and Representatives from these 31 States are acutely aware of the effects of oil imports on our domestic producing industry, particularly the small independent operator who, in the past, has been responsible for the discovery of about three-fourths of U.S. reserves of both oil and gas.

If my good New England friends expect the support of those who represent the 31 oil-producing States, they should certainly have as much concern for the workers in the oil- and gas-producing industry as their own textile, shoe, electronic, and sporting goods workers and their fishing industry.

Actually, none of those industries or their products could seriously affect the national security of the Nation should we become overly dependent on foreign substitutes or, at least, not to the extent that a cutoff of oil would mean to the entire U.S. economy.

And, Mr. President, I keep reading in the Washington Post and the CONGRESSIONAL RECORD of the billions of dollars the mandatory oil import program has cost U.S. consumers—some $5 billion a year according to the report of the majority of the Cabinet Task Force on Oil Import Control.

This charge is patently absurd and based on assumptions not even recommended by the majority of the task force. Other studies, Mr. President, have come to the conclusion that the program actually has had a net benefit to the Nation. One eminent economist recently analyzed this assumption in the Oil & Gas Journal. I ask unanimous consent that the analysis made by Dr. Richard J. Gonzalez, "Fiction and Fact," be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

FICTION AND FACT

(By Richard J. Gonzalez)

THE FICTION

Oil-import controls cost $5 billion a year and there is very little offset against this cost for the benefits to consumers and to national security.

THE FACT

The costs and benefits of oil-import controls can be calculated only on the basis of assumptions about what might happen if much more imported oil were used.

Since foreign oil can be delivered to the East Coast and West Coast for less than domestic crude oil, the conclusion is frequently drawn that consumers could save billions of dollars through removal of import controls on the erroneous assumption that everything else would remain the same.

Estimates that oil-import controls costs consumers about $5 billion a year appear absurd in relation to total value of U.S. crude-oil production of $10.3 billion in 1969. They are erroneous because they fail to evaluate (1) differences in transportation costs, (2) the effect on U.S. exploration and supply, (3) the higher prices for domestic natural gas that would result, (4) true economic costs to the nation, and (5) the benefits from the control program.

Domestic crude delivered to the East Coast is put at a disadvantage relative to foreign crude because it must be moved in American-flag tankers. Under current construction and labor costs, use of American-flag tankers may cost twice as much as foreign-flag tankers.

Thus, if security requires that all oil supplies to the East Coast, including imports, be moved in American-flag tankers, the cost saving from foreign oil for the East Coast could decrease by 50% from $1.50 to $0.76/bbl. This is based on a 100% increase in the transportation cost for foreign oil.

But assuming that national security is ignored and domestic oil is moved in foreign-flag tankers, the cost saving would decrease by 15% from $1.50 to $1.28/bbl if the cost of moving oil from the Gulf Coast to the East Coast drops 50%.

With import controls gone, it's most likely that foreign oil will not remain low-priced. A flood of foreign oil into this country would close down U.S. exploration and domestic reserves would dwindle as a result (Fiction-Fact, June 15). The tremendous demand thus imposed on Free World sources of oil inevitably would drive up the price of this oil.

Exploration for natural gas also would decline and the only way this could be averted would be an increase in the price of gas (Fiction-Fact, July 6). The price increase necessary to support exploration would erode any savings from imported oil by 40 to 70%.

There also are economic benefits from higher-priced domestic oil. The estimated cost to consumers of domestic vs. foreign oil is not a total loss the economy.

The report of Charles River Associates showed that cost to the nation is only 20–25% of the estimated cost to consumers from oil import controls.

Consider this situation then: if higher gas costs offset 50% of the assumed consumer savings from removing oil-import controls, and if only 20% of this cost reflects the real economic loss, then the widely quoted $5 billion consumer cost becomes a true cost to the nation of $500 million a year, an entirely different order of magnitude.

One very tangible benefit for the gas industry and consumers deserves emphasis. Gas reserves on the Continental Shelf were estimated at 34 trillion cu ft on Jan. 1, 1968, and these reserves are being produced at about 5% a year. So, about 1.7 trillion cu ft of gas produced in 1968, or 9% of domestic supply, resulted from offshore developments that would have been nonexistent but for oil-import controls. If these supplies of gas had not been available, consumers would have been forced to use less desirable and more expensive fuels.

Mr. HANSEN. In addition to this, Mr. President, those who demand more imports from Canada certainly must not realize that Canada is a net importer of oil herself and is affected by price fluctuations, such as the sudden escalation of the cost of oil from the Middle East and North Africa.

Most of Canadian production is in her western provinces, but most of her refining capacity is in her eastern provinces. Canada has no pipeline connections from her own producing areas to her eastern refineries. She imports as much oil as she exports to the United States and the price of that imported oil has suddenly gone up. Canada may, if this situation continues or worsens, find it to her advantage to use her own oil when the price differential disappears or becomes a minus rather than the plus it has been.

I do not mean to say that we should not develop a common energy policy with Canada which is, undoubtedly, our most secure source. But what I do want to point out is that Canada will certainly take care of her own needs first in an emergency, such as the 1967 embargo of Middle East and North African oil that followed the Arab-Israel war.

And I cannot conceive of the Canadians gazing benignly across the border as the U.S. Treasury rakes off a fat tariff for their oil without taking a cut for themselves. That's another fallacy of the academically inspired tariff proposal. With the ups and downs of tanker rates and the uncertainties of tomorrow in North Africa and the Middle East, we can be thankful that there were some who could foresee the risks involved in the task force—majority—proposal, and

that, finally, others are realizing that cheap foreign oil will remain cheap only so long as we do not have to depend on it.

CONCURRENT RESOLUTION DIRECTING THE SECRETARY OF THE SENATE TO MAKE CORRECTIONS IN THE ENROLLMENT OF S. 2601

Mr. BYRD of West Virginia. Mr. President, at the request of the senior Senator from Maryland (Mr. TYDINGS), I call up Senate Concurrent Resolution 75, which is at the desk, and ask for its immediate consideration. The purpose of the concurrent resolution is to make certain technical corrections in the bill which was passed yesterday in the conference report on S. 2601.

The PRESIDING OFFICER (Mr. PROXMIRE). The concurrent resolution will be stated.

The ASSISTANT LEGISLATIVE CLERK. A concurrent resolution (S. Con. Res. 75) directing the Secretary of the State to make corrections in the enrollment of S. 2601.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution (S. Con. Res. 75) was considered and agreed to, as follows:

S. CON. RES. 75

Resolved by the Senate (the House of Representatives concurring), That in the enrollment of the bill (S. 2601), to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes, the Secretary of the Senate shall make the following corrections:

(1) In the third sentence of the proposed section 11–1527(a)(3) of the District of Columbia Code (as contained in section 111 of the bill), strike out "subsections (a) and (b)" and insert in lieu thereof "subsection (a) or (b)".

(2) In section 144 of the bill, renumber the paragraphs which follow the first paragraph (12) of such section as paragraphs (13), (14), (15), (16), and (17), respectively.

(3) In section 145(f) of the bill, renumber the paragraph which follows paragraph (13) of such section as paragraph (14).

(4) In section 156 of the bill, reletter the subsections of such section which follow subsection (f) of such section as subsections (g) and (h), respectively.

(5) In section 157(c) of the bill, designate the undesignated paragraph that follows paragraph (1)(B) of such section as paragraph (2).

(6) In section 163 of the bill, reletter subsections (j) and (k) as subsections (i) and (j), respectively.

(7) In the proposed section 23–561(b)(1) of the District of Columbia Code (as contained in section 210(a) of the bill), strike out "subsection (a) of" in the last sentence.

(8) In the proposed section 23–563(b) of the District of Columbia Code (as contained in section 210(a) of the bill), strike out "No" at the beginning of such section and insert in lieu thereof "A".

PROGRAM

Mr. HANSEN. Mr. President, I wonder if the distinguished acting majority leader would give us some indication of the program for Monday and the coming week.

Mr. BYRD of West Virginia. The Senate will shortly adjourn until 12 noon on Monday next. As I recall, no Senators have secured special orders to speak on Monday morning. We will have a period for the transaction of routine morning business, after which the Senate will again proceed to the consideration of the unfinished business, the military procurement bill. It is my understanding the Senate will be debating this measure for some time.

Mr. HANSEN. I thank the distinguished Senator from West Virginia.

Mr. BYRD of West Virginia. Conference reports on various measures may be brought up from time to time, but this will be worked out by the leadership on both sides.

Mr. HANSEN. I thank the Senator.

ADJOURNMENT TO MONDAY, JULY 27, 1970

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 noon on Monday next.

The motion was agreed to; and (at 3 o'clock and 26 minutes p.m.) the Senate adjourned until Monday, July 27, 1970, at 12 noon.

NOMINATIONS

Executive nominations received by the Senate July 24, 1970:

FEDERAL COMMUNICATIONS COMMISSION

Robert Wells, of Kansas, to be a member of the Federal Communications Commission for a term of 7 years from July 1, 1970, vice Kenneth A. Cox, term expired.

Sherman Unger, of Ohio, to be a member of the Federal Communications Commission for the unexpired term of 7 years from July 1, 1964, vice Robert Wells.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 24, 1970:

OFFICE OF TELECOMMUNICATIONS POLICY

Clay T. Whitehead, of California, to be Director of the Office of Telecommunications Policy.

U.S. AIR FORCE

The following officer to be placed on the retired list in the grade of lieutenant general, under the provisions of section 8962, title 10, of the United States Code:

Lt. Gen. John S. Hardy [redacted] FR (major general, Regular Air Force), U.S. Air Force.

U.S. ARMY

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designed by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. John MacNair Wright, Jr., [redacted] U.S. Army.

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Edward Leon Rowny, [redacted] U.S. Army.

The following-named officers to be placed on the retired list in grade indicated under the provisions of title, United States Code section 3962:

To be lieutenant general

Lt. Gen. Ferdinand Thomas Unger, [redacted] Army of the United States (major general, U.S. Army).

Lt. Gen. Frank Joseph Sackton, [redacted] Army of the United States (major general, U.S. Army).

U.S. NAVY

Rear Adm. Fred G. Bennett, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

Rear Adm. Dick H. Guinn, U.S. Navy, for appointment as Chief of Naval Personnel for a term of 4 years, pursuant to title 10, United States Code, section 5141.

Rear Adm. Dick H. Guinn, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

Rear Adm. Ralph Weymouth, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United State Code, section 5231, for appointment to the grade of vice admiral while so serving.

Vice Adm. Ralph W. Cousins, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of admiral while so serving.

Rear Adm. Gerald E. Miller, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Colston A. Lewis, of Virginia, to be a member of the Equal Employment Opportunity Commission for the remainder of the term expiring July 1, 1972.

IN THE ARMY

The nominations beginning Gasper V. Abene, to be major, and ending Mary H. Yeakel, to be major, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 9, 1970; and

The nominations beginning Darrel W. Basom, to be major, and ending Wiley W. Walker, to be major, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 13, 1970.

IN THE NAVY

The nominations beginning Ralph P. Abenante, to be chief warrant officer, W–3, and ending Teresa Caruso, to be lieutenant (junior grade), which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 9, 1970.

IN THE PUBLIC HEALTH SERVICE

The nominations beginning Charles M. Bowyer, to be medical director, and ending Steven A. Coppola, to be senior assistant health services officer, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on June 22, 1970.

EXTENSIONS OF REMARKS

A GREAT AMERICAN, SPEAKER JOHN W. McCORMACK, SPEAKS OUT ON AMERICA: TODAY AND YESTERDAY

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1970

Mr. EVINS of Tennessee. Mr. Speaker, in the current issue of U.S. News & World Report, there is an extensive and excellent interview with one of the great Americans of our time—one of the great congressional leaders of all time—our beloved Speaker, JOHN W. McCORMACK.

In this interview and article Speaker McCORMACK, speaking from the historical perspective of 42 years as a Member of the House, recalls famous events and comments upon their effect and impact.

Speaker McCORMACK, for example, gave capsule impressions of our famous Presidents who served during his own service as Congressman.

These are his comments:

President Franklin D. Roosevelt—"The country needed strong leadership and he provided it."

President Harry S. Truman—"A man of strong and decisive mind and he had the capacity to make any decision, no matter how tough, that confronted him."

President Dwight D. Eisenhower—"Success as a great military leader carried that atmosphere and respect for him into the White House."

President John F. Kennedy—"A man of decisive mind with courage, as evidenced by his confrontation with Khrushchev in Berlin crisis and Cuban missile matter."

President Lyndon B. Johnson—"A man of vision, leadership—one of our outstanding Presidents."

President Richard M. Nixon—"Too early to make an appraisal—he showed courage in making decision on Cambodia."

In reviewing the highlights of his distinguished and remarkable career in the Congress, Speaker McCORMACK takes greatest pride in legislation he assisted in passing that has helped Americans realize their hopes and dreams of a better life.

Such legislation includes Social Security, minimum wage, low-cost housing, and personal service to tens of thousands of other persons who sought his assistance.

He concludes the interview:

I'm very thankful that the good Lord put me in a position where I could serve two constituencies—my people back home and the people of the United States.

Remarkable words by a remarkable man.

Because of the great interest of my colleagues and the American people in our beloved Speaker, I insert the article from U.S. News & World Report in the RECORD:

AMERICA: TODAY AND YESTERDAY AS SPEAKER McCORMACK SEES THINGS AFTER 42 YEARS IN CONGRESS

(NOTE.—What real dangers confront today's U.S.? How do they compare with the days when John McCormack entered Congress more than four decades ago? What lessons have been learned? Mr. McCormack has spent more consecutive years as Speaker than any other man. Staff members of "U.S. News & World Report" interviewed the Speaker as he prepared for his forthcoming retirement at the close of this Congress.)

Question. Mr. Speaker, how has America changed in the 42 years since you first came to Washington?

Answer. When I came here in December, 1928, as a young Congressman filling out an unexpired term, there were no serious problems to speak of. The stock market was floating along nicely and Americans by and large were enjoying life. Some of us worried a little about an overextension in construction, but nobody believed that we were heading into a business recession that would rapidly develop into a deep depression. If anybody was worrying about foreign problems, he kept it pretty much to himself.

But then the Depression did come with all its severe problems. Only those of us who actually lived through those years can know what they were like. The country turned to Franklin D. Roosevelt's leadership.

Then a notorious figure in history by the name of Hitler came across the horizon, and the questions in the field of foreign affairs became more and more important. Finally, we were attacked at Pearl Harbor and we got into World War II in 1941, and met the problem of developing our great resources and our manpower, military and otherwise.

After World War II came this challenge that still confronts us: world unrest, with two great nations—Communist Russia and Communist China—trying to undermine other forms of government and further their own cause by any means that will serve their purposes.

So, world problems have increased tremendously in importance since I first came to Washington in 1928.

Question. Are you optimistic for the future of the U.S.?

Answer. Let me answer this way:

I saw what appeasement did in the '30s, when Britain and France let Hitler get away first, with the Rhineland—thinking he'd be satisfied—then Austria. Some of us in America saw to what this arrogant aggression was leading. Winston Churchill in England certainly saw what it meant, but he was like a voice crying in the wilderness. In those days before World War II, nobody agreed with Nazism or Hitler, but so many people in England and the rest of Europe and even in America said: "Well, we can live with him."

Today, I find that there is a tendency in America to misread the significance of international Communism and its designs upon our own country. Arrogant aggression, whether under Nazism or under international Communism, isn't something Americans can ignore and live with.

Question. Is appeasement a danger to the U.S. today?

Answer. I don't think it has reached the stage that prevailed in the '30s, although it's traveling in that direction. You find more and more people are thinking and saying: "Well, we can live with Communism."

I can live with the Communists if they will leave other countries alone. If the people of the Soviet Union want to have a Communist form of government, they have a perfect right to do so. But when they try to impose their form of government upon other nations—using any means, legal or illegal or otherwise—that is where I part with them.

It is possible to have a Communist form of government and get along with non-Communist nations. We are getting along with Yugoslavia. It is a Communist nation, but also highly nationalistic.

But the Soviet and Chinese Communists are just as much bent on world domination today as they ever were. There may be tensions between the two, but they can get together overnight, and they'd both like to see the world dominated by Communism with America isolated.

Then they could fight it out to see who would be the No. 1 Communist nation.

Question. Do you see the Vietnam war as necessary to thwart the Communist strategy you have outlined?

Answer. I think you can argue whether or not we were justified in going in there in the first instance. But we are there, and we have to accept that fact.

If we leave South Vietnam under terms which constitute a peace at any price, the world will know it, no matter how we try to sugar-coat the terms. The effect on the future of the United States would be disastrous. It would be an open invitation to every nation in the free world to hedge its position by making the best terms possible with the Communist powers. And the closer a country is to Russia or China, the more that nation would have to hedge.

Few people realize that Southeast Asia is the first line of defense in the Far East for the United States. If we are forced out, it will be only a short time until we will be driven back to a continental defense line, which is Hawaii and Alaska. Some people can laugh that off. I cannot. That is why I stand for a just peace in South Vietnam—not peace at any price.

Question. Have you supported President Nixon's Southeast Asia policy generally?

Answer. I have taken the courses of action that I thought were in the national interests of the United States. I always try to support the President on foreign-policy matters, whether he is in my party or not. I would expect the same if I were in the White House. I was next in line to the President for 14 months after the tragic assassination of President Kennedy, and while I didn't want to think about those things, naturally I couldn't help asking myself during that time: "Well, what would you do, John?"

Question. Do you think the U.S. will be drawn into the Middle East conflict?

Answer. If we vacillate—take an uncertain position and show a lack of firmness—that could happen. Whether we like it or not, the free world is centered upon the leadership of the United States. If we fail to make decisions when they must be made, we will get into trouble.

I am convinced that you have to deal from strength when you are confronting the Kremlin. You can't flinch. I think President John Kennedy proved that in the Cuban missile crisis in 1962. The Russians backed down then. They have problems of their own The people over there want to live, the same as we do.

So, I say that we've got to be powerfully strong and firm. If there is another Pearl Harbor, we won't have three or four or five years to recover. The next war would be a 24-hour or 48-hour one. I do not like to think this way, but I am realistic.

But, again, I am optimistic for the future. I can see 15, 20 years from now, with the changes taking place in the world, the Soviet Communists might be pleading with us to be their friend. I'm not banking on it, but it could happen. I want to be certain America is strong enough to preserve herself during those 15 or 20 years.

Question. Turning to domestic affairs, Mr. Speaker: The Federal Government has grown

tremendously during your 42 years in Congress. Has it become too big?

Answer. Government has got to bring justice to its people. That is one of its first duties. As the United States has grown and become more and more industrial, problems have multiplied until they are very serious and challenging.

I think we are meeting those problems with what I call dynamic democracy. The progressive legislation that Congress has passed—I have in mind such things as Social Security, minimum wage, low-cost housing, etc.—is necessary for social justice in our changing society.

I can see in the near future where our problems are going to grow more and more as a result of advances in the field of science, and their impact upon the nation's economy and the ability of an individual to get a job. That's why I was instrumental in establishing a Committee on Science and Astronautics in the House so we could have a group of legislative specialists—not scientists—to help direct the transition that is bound to take place.

Question. So you feel Congress has changed with the times—
